PROCEEDINGS AND DEBATES OF THE 91st CONGRESS, SECOND SESSION

SENATE—*Tuesday, July 21, 1970*

The Senate met at 11 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty God, Lord of creation and of all life, for this Nation born in Thy providence, cradled in Thy truth, and led by Thy free spirit, we give Thee thanks. Guide and uphold the President, Members of the Senate and House of Representatives, and all in authority, that their endeavors may be righteous altogether.

Lift all consultations for peace into the higher order of Thy kingdom until all men live under the law of love in the universal kingdom of the Prince of Peace.

Lead us through the tasks of this day with eyes fixed upon Thee. We ask not for the peace of escape or the calm which ignores conflict or for deliverance from the difficult, but for the inner sureness that Thou art the rock of ages, the spring of the water of life which never fails.

Through Jesus Christ our Lord. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 21, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 3685) to increase the availability of mortgage credit for the financing of urgently needed housing, and for other purposes.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, July 20, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, when the Senators who have special orders have completed their remarks today, there be a period for the transaction of routine morning business with a time limitation of 3 minutes therein.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR YOUNG OF OHIO ON FRIDAY NEXT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the distinguished Senator from Ohio (Mr. YOUNG) be recognized for not to exceed 20 minutes following disposition of the Journal on Friday, July 24, 1970.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

WILLIAM G. STONE NAVIGATION LOCK

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1037, S. 3192.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. S. 3192, to designate the navigation lock on the Sacramento deepwater ship channel in the State of California as the William G. Stone navigation lock.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 3192

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the navigation lock on the Sacramento deepwater ship channel in the State of California which connects the Sacramento River with the Sacramento-Yolo deepwater port shall hereafter be known as the William G. Stone navigation lock, and any law, regulation, document, or record of the United States in which such lock is designated or referred to shall be held to refer to such lock under and by the name of the William G. Stone navigation lock.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-1032), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF BILL

The purpose of this legislation is to designate the lock on the Sacramento deepwater ship channel in the State of California as the William G. Stone navigation lock.

GENERAL STATEMENT

The existing project provides for a deepwater ship channel between Suisun Bay and Washington Lake, construction of a harbor and turning basin at Washington Lake and a connecting canal with navigation lock from the harbor to the Sacramento River. It is this navigation lock which would be designated the William G. Stone navigation lock.

Mr. William G. Stone spent a long and active life promoting a deepwater port of Sacramento, which he had first envisioned in 1916 and helped in the preparation of enabling legislation in 1937 which was enacted into law by the act of July 24, 1946, Public Law 525, 79th Congress. In 1948 he was named port director and served as such throughout the construction phase of the project. The new channel opened in 1962, the year Mr. Stone retired as port director. He died in October of 1969. His long and close identification which this project is deemed to render the designation appropriate.

ESTIMATED COST TO THE UNITED STATES IF LEGISLATION IS ENACTED

Enactment of this legislation will not result in any cost to the United States.

VIEWS OF THE FEDERAL AGENCIES

The Department of the Army, the Department of Interior, and the Bureau of the Budget offer no objection to enactment of this legislation.

COMMITTEE RECOMMENDATION

The committee believes it fitting and proper to name the navigation lock in the

Sacramento deepwater ship channel in the State of California in honor of the late William G. Stone, whose efforts contributed so much to development of this important project. Accordingly, early enactment of S. 3192 is recommended.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR STENNIS TODAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the remarks of the distinguished Senator from South Carolina (Mr. THURMOND) today, the distinguished Senator from Mississippi (Mr. STENNIS) be recognized for not to exceed 20 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR BAKER TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the remarks of the distinguished Senator from West Virginia (Mr. BYRD) on tomorrow, the distinguished Senator from Tennessee (Mr. BAKER) be recognized for not to exceed 30 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

DEATH OF JIM G. LUCAS, JR.—MARINE COMBAT CORRESPONDENT

Mr. MANSFIELD. Mr. President, while not unexpected, it was with a sense of deep sadness that I heard this morning of the passing of an old friend, Jim G. Lucas, Jr.

Jim Lucas was a man whom I have known since the Second World War. He was then engaged as a Marine combat correspondent and he served with the greatest integrity and dedication; qualities that characterized his every endeavor wherever his outstanding talents happened to take him.

I saw Jim many times after the war and even traveled with him to Southeast Asia during difficult periods. Needless to say, I came to admire him immensely. He was a fine man.

Of course, Jim and I disagreed on some matter, but by and large I think we agreed on most matters; certainly on the great majority of the questions we discussed.

It was not without some expectation that this outstanding newsman would come to such an untimely end. He had cancer and I understand it was considered terminal.

I visited Jim at the Veterans' Hospital in Washington on several occasions and was very much impressed with his tenacity, his courage, his sense of humor, and his deep perception and understanding. These are the attributes which distinguished him throughout his highly productive life. They were exhibited to the very end.

During his career Jim's prolific pen was responsible for some outstanding writing and he was rewarded accordingly.

Jim won the Pulitzer Prize and for a good many years served with neat distinction as a member of the Scripps-Howard newspaper chain. As a reporter he covered many subjects, but his main interest perhaps concerned the welfare of the American fighting man in all the wars in which we have engaged since Jim Lucas began his newspaper career. To repeat it was a career begun as a Marine combat correspondent in World War II. It ended early this morning. It was a career filled with achievements and rewards too numerous to mention here.

I would close only by saying that to his sister, Mrs. Mary Moore, and his brother, J. Bob Lucas, I extend my deepest condolences and sympathy and those of Mrs. Mansfield as well. Jim Lucas will be sorely missed.

I ask unanimous consent that a story covering Jim Lucas appearing in today's Washington Daily News and an editorial about his passing be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JIM LUCAS DIES HERE

Jim G. Lucas, Pulitzer Prize-winning war correspondent for the Scripps-Howard Newspapers, died early today of abdominal cancer in the Veterans Hospital here. He was 56.

Mr. Lucas began his war reporting career as a Marine combat correspondent in the Pacific islands campaigns of World War II.

For the next quarter century, in dispatches datelined around the globe, his accounts of the heroism and agony and tedium of war gained him recognition as America's best known war reporter since Ernie Pyle, also of Scripps-Howard Newspapers and one-time managing editor of The Washington Daily News.

A versatile writer who covered many other types of stories, Mr. Lucas died three days before publication of his latest book, a biography of Vice President Spiro T. Agnew.

But the assignment he most desired was that which brought him to the frontlines, and to the side of those he respected above all others, American GIs. Mr. Lucas possibly saw more actual combat and more of the maimed and dead of war than any other newspaperman in U.S. history.

His period of front-line reporting spanned 25 years, including World War II in the Pacific, and the wars in Korea and Vietnam.

Many in his profession believed him to be the greatest since Ernie Pyle in his ability to write with compassion and understanding about the American soldier, sailor or marine in battle. He was twice the recipient of the Ernie Pyle Award for writing in the Ernie Pyle tradition, the only newspaperman to be so honored.

Only once was he wounded and that lightly by a piece of shrapnel over the eye near Da Nang in Vietnam in 1964.

He believed that the "fantastic luck" which had carried him safely thru so many battles and firefights would stand by him in his bout with cancer which began with a major intestinal operation a year ago. But such was not to be.

SCOOP IN PACIFIC

Mr. Lucas first acquired journalistic fame at the bloody and epic battle of Tarawa in the Pacific in late 1943. His story, written as a Marine combat correspondent, was the first out and for three days was the only word the outside world had. It was on Tarawa that he received a battlefield promotion from master sergeant to second lieutenant and a Bronze Star. His story produced for him the National Headliners Award for the best combat reporting of 1943. He was listed as dead for a brief time on Tarawa. The dead Marine turned out to be another combat correspondent who was wearing Jim's shirt.

In all, he made eight D-Day landings with the Marines in the Pacific in World War II. Battles in which he participated included Guadalcanal and Iwo Jima.

After VJ Day, many newspaper organizations bid for his services. He joined the Scripps-Howard Newspaper Alliance in Washington and became that bureau's military correspondent.

He covered the first atomic bomb test at Bikini and in 1947 went with the late Adm. Richard E. Byrd to the South Pole.

He went to the front lines at the start of the Korean War and spent 26 of that conflict's 36 months in Korea, being present at the end of the fighting. His reporting from Korea (which included making 17 B17 bomber runs over North Korea) won him the Pulitzer Prize in 1954, as well as his first Ernie Pyle award and a flock of other honors—including the George Polk Memorial Award, the Veterans of Foreign Wars' Omer Bradley Gold Medal and the Marine Corps Reserve Officers' Association's "Not for Self But for Country" award.

After the Korean Armistice, he then went to French Indochina to cover the French war with the Viet Minh, and was based for 18 months in Hanoi. He was in Hanoi when Ho Chi Minh's forces marched in to take over the city.

After the Indochina armistice, he went to Goa to report on hostilities between the Portuguese and Indians. He went to Lebanon when President Eisenhower sent in the Marines and Army paratroops in 1958 and liked to remember that episode as "the only war I ever covered from an air-conditioned hotel room and dressed for dinner every night."

In 1959 he spent several months in Vietnam and in January, 1964—before the big American buildup—stationed himself at Can Tho, in the Mekong Delta of South Vietnam, for the first of several tours that were to constitute coverage of his last war.

WENT ON PATROLS

When U.S. Marines poured into Da Nang, Mr. Lucas shifted the base of his operations there and continued the type of reporting which won for him his second Ernie Pyle award. Even tho then past 50, he continued to go on patrols and stay up all night when events demanded, as when the Reds overran the A Shau Valley.

He returned to the United States in the summer of 1967, hopeful of returning to Vietnam despite the fact he was 53 "and youngsters could do my job better." But health never permitted a return. A book of his Vietnam columns, "Dateline: Vietnam," was published in the summer of 1966 and sold well.

Early this spring he took vacation time to write a biography of Vice President Spiro T. Agnew. It is being published by Universal

Publishing Co. of New York and was reviewed in this newspaper last Friday.

Mr. Lucas was born June 22, 1914, in Checotah, Okla. His father died when he was young and he was forced because of lack of finances to cut short his education at the University of Missouri. His first newspaper job was with the Muskogee, Okla. Daily Phoenix. After a stint as a reporter for the Tulsa Tribune, he enlisted in the Marines in 1942.

NEVER MARRIED

He never married, but once (after World War II) was engaged to a WAVE lieutenant. The story around his home office was that the romance went on the rocks because the weekend he was to visit her parents in upstate New York an emergency assignment came up. The fiancee is supposed to have said: "It's the office or me." Mr. Lucas took the assignment.

His apartment in an Alexandria highrise was literally filled with awards, scrolls and testimonials. One picture shows one of the highlights of his life: President Lyndon Johnson in September, 1966, introducing him to 100 Congressmen. LBJ had called in for Mr. Lucas to brief on Vietnam. It was the only time President Johnson asked a newsman to give such a briefing. Mr. Lucas was given a standing ovation at the close of his remarks.

He was an excellent public speaker and made scores of addresses thruout the country over the years before groups of all kinds.

He is survived by a sister, Mrs. Mary Moore of Bowie, a brother, J. Bob Lucas, state capitol reporter in Oklahoma City for the Tulsa Tribune, a niece, Mrs. Beth Marshall of Torrance, Calif., and a nephew, Peter W. Hudson of Silver Spring.

Funeral arrangements are not yet complete.

JIM G. LUCAS

One of many amazing things about Scripps-Howard War Correspondent Jim G. Lucas was that a lifetime of witnessing and writing about the tragedy of wars left him without a trace of inner hardness or cynicism.

He was, until the end, what one speaker said of him years ago in bestowing upon him some particular medal: "A truly modest man—an old Marine with a soft heart."

And he could, and did, write with the best of the journalists of any era.

He undoubtedly saw more combat than any newspaperman in U.S. history. He seemed to be always at the front—until age and a long, losing bout with cancer caused him to return from Vietnam three years ago for the last time. When, for example, Gen. Omar Bradley at a Washington banquet in 1953 awarded Jim in glowing terms the VFW's Gold Medal for conveying the feel of the battlefield in his stories, Jim was on the frontlines in Korea. When he was awarded the 1954 Pulitzer Prize for his human interest stories from Korea, he already was in Hanoi covering still another war. (He was in Hanoi when Ho Chi Minh's troops took over North Vietnam.)

Still, 25 years of frontline reporting in three major wars never shook his belief in the worth of the individual, the value of life, or the love of country.

He never married. He loved young people and there are countless stories of his help to the young, particularly young newspapermen on their first assignment to a war zone. He could, and did, oratorically wave his country's flag at the slightest provocation.

Jim Lucas was a great reporter with a rare gift for chronicling the miseries and joys, heroism and humdrum of the life of the American soldier on the frontlines in three wars.

Thousands upon thousands of ex-GIs will long remember him from the clips of his stories they have pasted in their scrapbooks.

Scores of young newspapermen in the future, we are sure, will be studying his work and seeking to emulate it—just as has been true in the case of Jim's predecessor, Ernie Pyle.

For those of us in Scripps-Howard, it has been an exceptionally rare privilege to have worked with Jim Lucas.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order the Chair now recognizes the distinguished Senator from Ohio (Mr. YOUNG) for not to exceed 20 minutes.

UNITED STATES CANNOT DUCK "TIGER CAGE" BLAME

Mr. YOUNG of Ohio. Mr. President, the American people were shocked by the discovery earlier this month of the existence of a Devil's Island-type prison camp run by the militarist Saigon regime of General Thieu and Air Marshal Ky. The human torture chamber at Conson has imprisoned hundreds of men and women locked up in dark windowless stone cells, confined five or more together in 5-by-9 stone compartments, living in filthy conditions, suffering from malnutrition and disease and enduring physical beatings and torture. From catwalks above the cells guards frequently throw lime down on the prisoners to choke them when they beg for food or water.

Cao Nguyen Loi, a 26-year-old South Vietnamese who spent more than a year in Conson wrote:

> They threw five people into this narrow cage. On the average, each person had only about two hand breadths of space in which to lie and live. The legs were shackled and held high day and night—even while eating, sleeping, washing—fastened to a metal rod about four or five meters long. They forced us to lie in silence. We couldn't sit or stir in this hot, narrow, dark cage. Even when the latrine barrel was open and leaking all over so the floor had a pasty covering, we still had to lie quietly and endure it. We were kept there continuously for the first four months.

The revelation of the Conson concentration camp is another link in the chain of proof that we are not supporting a democracy in Saigon and never have. We have been maintaining a brutal totalitarian ruling clique of military dictators whose prime interest is remaining in power, not serving the needs of the South Vietnamese people. It may be charged by some that this is no worse than atrocities committed by the Communists. That is hardly a justification for this horror. For 6 years the American people have been told they were fighting this war to prevent such things from happening.

Mr. President, Columnists Frank Mankiewicz and Tom Braden have written an outstanding article in which they point out that the United States must accept much of the responsibiliy for the atrocities at Conson. Some of the prisoners there were captured by American soldiers and turned over to the South Vietnamese. The prison camps at Conson and elsewhere are paid for largely by money from American taxpayers and are supervised by an American official.

This is a most interesting and informative column. I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES CANNOT DUCK TIGER CAGE BLAME

(By Frank Mankiewicz and Tom Braden)

WASHINGTON.—The moral justification for waging war in Vietnam grows less and less clear, and this city, despite official shrugging of shoulders about the congressional discovery of Saigon's "tiger cages," is gloomier on the war than it has ever been.

Even the evil of North Vietnam's treatment of American prisoners has lost a little of its bite. For what would we answer now to some North Vietnamese counterpart of H. Ross Perot, arriving with food parcels and requests for names?

We could only answer that we Americans don't keep any prisoners, that we do not even count those we take but turn them over immediately to the South Vietnamese, where some of them at least wind up in "tiger cages."

Officially, of course, the White House and the Pentagon are saying in effect, "We didn't know about it, but then it's not our responsibility anyhow. It's Saigon's responsibility."

But it won't really wash. Those men chained to iron bars in 5-by-9 concrete pits, doused with lime dust when they beg for water, are prisoners, some of them at least, taken on the battlefield by American soldiers.

And they are housed in jails paid for by American taxpayers—$2 million annually—supervised by an American official with the absurd title of "public safety director" who tried to deny to two inquisitive congressmen that the "tiger cages" existed.

It is essential in war to think of the enemy as evil and of "our" side as good. But as the American people have gradually discovered what "our" side is, the certainty so necessary to moral superiority has turned into a kind of shame—an aversion to the dream become nightmare.

That is why Vietnamization, which when President Nixon first produced it seemed such a handy and even noble escape route, now appears as a terrible moral reminder, destined to haunt us and taunt us until reason destroys pride.

Take, for example, two items in last week's Vietnamization news. First, we announced an additional $100 million for the South Vietnamese government as economic aid. But contrary to our usual policies in granting economic aid, this was a gift outright—no strings.

We did not ask that the Saigon government mobilize its economy for the war, collect income taxes, control prices, wages and credit. We did not even suggest that it would improve Vice President Ky's reputation in this country if his take from the Saigon race track—estimated at between $10,000 and $15,000 weekly—were used to improve prison conditions rather than delivered to him personally.

But American officials who protested on the grounds that our taxpayers were being asked to do what the Vietnamese were not, got their answer from Saigon's economic minister. He could not raise taxes, he said, because his government could not collect taxes in the countryside. Nothing could have made more of a shambles of the claim that Saigon now controls "over 80%" of the countryside.

Or take another item. We are now committed to build 20,000 houses annually in Saigon—not for civilians but for the military population. It must be counted as an irony that while mortgage money is almost

impossible at home, American taxpayers should afford a housing boom for South Vietnam.

While we are confronting the difficult moral proposition of supporting a war we don't want to fight ourselves, another moral proposition is bearing down upon us. It is called Vietnamization, and it more and more appears as a definition of support for that which is morally insupportable.

Mr. YOUNG of Ohio. Mr. President, this is a terrifying, brutal situation which has evidently been continuing for years by direction of Thieu and Ky and their militarist Saigon regime which we Americans have maintained in power. This directly concerns us and reflects upon all Americans. Are we aiding and abetting torture and unparalleled cruelty by immediately surrendering to the friendly forces of the Saigon militarist regime all prisoners taken by American GI's for them to torture and sometimes murder as was committed by General Loan? Now too late Thieu and Ky have announced that they have closed the tiger cages and will no longer permit political and other prisoners to be confined there.

Mr. President, in this connection, I ask unanimous consent that an editorial "Con Son: A Case History of Deceit" published in the Washington Post of today and a column by Washington Post Staff Writer George C. Wilson entitled "Con Son and Savaging of Truth" published on the editorial page of today's Washington Post be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CONSON: A CASE HISTORY OF DECEIT

Beware of the insufficiently diligent Vietnam fact-finder, we warned the other day, in connection with the diligence of two United States congressmen in uncovering evidence of inhuman conditions at the South Vietnamese prison of Conson Island; we were referring to the difficulty the quick visitor has in getting to the truth about any particular aspect of that war. What we had in mind was the routine effort of American military men as well as civilians, when "briefing" visitors, to put the best face on things, to show progress in an enterprise in which they are wholly absorbed, and to which most of them have deep commitments.

This is normal enough and understandable when professionals are pursuing a career and obeying orders and executing a policy which, as far as they are concerned, has been approved in the usual way by the highest authority. There is a natural tendency to produce the highest possible enemy body count because that is part of the grim game of proving progress; you wouldn't expect a regular Army colonel or a career diplomate to load a progress report to his superior with emphasis on hamlets as yet unpacified, roads still unsafe for travel, enemy havens yet to be cleared or caches of Vietcong weapons yet to be destroyed. Up to a point, any serious visitor to Vietnam, official or unofficial, expects to be presented with the bright side of the war effort, and to have to dig out the worst side if he has the time and can get some help from those who are not in the business of "briefing" visitors.

But there is a difference between this and being deceived in a gross and calculated way that is clearly what an official of the American AID mission in Saigon was trying to do to Congressmen Anderson and Hawkins while they were actually en route to Conson Island by air. The story told by George C. Wilson elsewhere on this page today is almost as shocking, in its way, as the story of Conson. For the latter is a measure of South Vietnamese morality; Conson is their prison, however much it may benefit from American aid, and in the last analysis, their responsibility. But the so-called fact sheet which the AID mission had prepared for the visiting congressmen is a measure of *our* morality, and a measure, too, of what this war has done to us. We are in Vietnam, we are sometimes told, in the role, which has become part of our postwar foreign policy, a nation-builder in which the things we stand for are supposed to rub off on emerging nations by way of fortifying them against the appeal of an alien ideology. And instead it seems to be rubbing the wrong way; instead of uplifting, *we* are being dragged down. You can make the big case for this in the bombing of innocent bystanders, or the cynicism in our lavish support for the government of Thieu and Ky. Or you can make it in a lot of subtler, less dramatic ways. But rarely is it made more plainly than in the deliberate attempt of an important official of the AID mission, who is supposed to be teaching modern penology to the South Vietnamese, to conceal evidence from U.S. congressmen of the most repressive penal practices.

At the very least, you would figure that Mr. Frank E. Walton, director of AID's Public Safety Directorate in the Saigon mission, would have been relieved of his duties by now and sent home. That would be our first suggestion, obvious as it is. But that is not where the story ought to end, because there is an abundance of evidence that in lesser ways, not so blatant, but just as pervasive, much of the official reporting on this war is systematically colored to give us false encouragement.

So our second suggestion is that Mr. Walton's "Fact Sheet" ought to be required reading for every Washington official who must make decisions about this war—as an antidote to the easy answer that only those in government have the necessary information to make decisions on. What Mr. Walton was peddling to what he hoped were unsuspecting congressmen about Conson is, presumably, what he was also telling his own superiors, who were telling it to their superiors. And so it all moves on up to Washington, where the reports pour in, stamped Top Secret and Eyes Only and bristling with authority, and become the grist of public progress reports on the war. It isn't all as crudely wrong as Mr. Walton's report, or as consciously so, of course. But the Conson "fact sheet" is nonetheless illustrative of a larger fact of life which has had much to do with the self-perpetuating nature of the Vietnam war.

CONSON AND SAVAGING OF TRUTH

(By George C. Wilson)

The revelations about the conditions in South Vietnam's Conson prison have eclipsed another atrocity of a sort—and one which the American government cannot disavow. It is the violence done by the U.S. government, through an official of the Agency for International Development, to the truth.

The story starts inside a DC–3 flying southeastward the 140 miles from Saigon to Conson Island, 60 miles off the South Vietnamese coast. In the airplane were two congressmen, William R. Anderson (D-Tenn.) and Augustus F. Hawkins (D-Calif.), (part of a 12-member House delegation appointed by Speaker John W. McCormack to find out the facts about the Southeast Asian situation) and their AID escorts. The AID men had with them a fact sheet, prepared especially for Anderson and Hawkins by the top AID official in the party—Frank E. Walton, a former Los Angeles deputy police chief, who is now in charge of the American advisory section in Saigon for the South Vietnamese national police force.

This fact sheet was dated July 2, the day of the congressmen's visit, but it was prepared in advance of course, and on the basis of Walton's first-hand inspection of the prison camp. The full text of this document is printed for your convenience at the conclusion of this article as exhibit B in this particular atrocity. Before reading it, however, it is necessary, first, to recall to mind what might be called Exhibit A—the actual findings of the two congressmen. Only with the findings freshly in mind is it possible to get the full measure of the calculated violence done to the truth in this instance by the most responsible government officials. Bear in mind, once again, that the two congressmen were handed this document on their way to the Conson prison camp, where they were to uncover by their own initiative, and clearly against the will of their official escorts, unmistakable evidence of inhuman treatment of the prison's inmates. What follows is a brief recital of their findings which have already been widely published:

Upon arrival at Conson, the Congressmen rejected Walton's suggestion that they spend their time at the island curio shop rather than the prison—"It's more like a Boy Scout camp," Walton assured them—and proceeded to tour the compounds at Conson.

The prisoners, despite the threatening presence of the colonel commanding one camp, told the Americans in desperate terms about their hunger and sickness. But the worst was yet to come. Thanks to a diagram of Conson which a former inmate had drawn for Thomas R. Harkin, a committee staffman accompanying the congressmen, the Americans recognized Compound 4 as the site of the "tiger cages." It had been rumored in Saigon that the Thieu regime threw political opponents in the cages like animals. A guard, hearing the commotion in the vegetable garden camouflaging the approach to the tiger cages, unwittingly swung open the secret door in the high wall.

Looking down through the iron gates of the tiger cages, Anderson reported, he saw people—including teen-age girls—crammed into tiny cages more cruelly than mistreated animals; lime dust was in buckets along the catwalk so it could be thrown down on prisoners to choke off any begging for food or water; one small bucket held the waste of five people in each 10 by 5 foot fetid cage.

The prisoners risked beatings and death to tell the Americans—through an interpreter which the congressmen had provided for themselves—of their misery. All the men in the cages were lying down. They explained that they had lost the use of their legs, apparently from the paralysis of being foot-shackled for months on end to bars in the cages. A young girl said she was 18 and had been picked up during an antiwar demonstration, even though she was neither a participant nor a Communist. The prisoners talked of tuberculosis; of lack of food; of lost families. The cages had an iron-bar roof but no windows.

What the congressmen saw—the first lawmakers to bring back eyewitness testimony—backed up what five former prisoners of Conson had written in a report to the South Vietnamese Assembly. Walton and everybody else in AID had access to the report. It had been submitted on June 19, 1970—before this latest congressional delegation arrived.

Cao Nguyen Loi, a 26-year-old South Vietnamese who spent more than a year in Conson, and four fellow inmates wrote the report—risking further torture.

"They threw five people into this narrow cage," "On the average, each person had only about two hand breadths of space in which to lie and live. The legs were shackled and held high day and night—even while eating,

sleeping, washing—fastened to a metal rod about four or five meters long. They forced us to lie in silence. We couldn't sit or stir in this hot, narrow, dark cage . . . Even when the latrine barrel was open and leaking all over so the floor had a pasty covering, we still had to lie quietly and endure it . . . We were kept here continuously for the first four months . . .

So much for Exhibit A; there is more evidence available, but this should be more than enough to document the appalling conditions in Conson Prison. Now for Exhibit B, the AID Mission's carefully prepared briefing paper, which was signed by the chief American police adviser, Walton, who reportedly told the congressmen that he knew about the "tiger cages" from earlier inspections of Conson. Here is what he, and by inference the American AID mission in Saigon, would have had the congressional investigators believe were the facts.

[Fact Sheet]

JULY 2, 1970.

Subject: Conson National Correction Center.

Purpose: To provide background information relating to the Conson Correction Center and to discuss problems and accomplishments associated therewith.

Facts:

1. The Conson Island National Correction Center, located in the South China Sea approximately 140 miles southeast of Saigon, is Vietnam's largest correctional institution. Established by the French in 1862 as a penal colony, it has long held a reputation of being a "Devil's Island." This reputation still prevails in spite of an enlightened and modern administration of the facility.

2. Currently, this facility is utilized for the detention of hard-core Communist criminals who have been convicted of serious offenses.

3. The Conson Correctional colony had an inmate population of 9,916 on June 1970. There are seven correctional camps within the colony with a total capacity of 9,750 inmates. Two thousand of the currently assigned inmates are classified as trusties and live outside the camps in semi-private minimum custody homes. The trusties are permitted to raise their own food and maintain a daily routine of their own choosing, but under the eyes of supervisors.

4. Conson has one Public Health Doctor. With the assistance of inmate technicians each prisoner receives annual inoculation for plague, cholera and smallpox. Schick tests are given to detect tuberculosis. Dental care is irregular from visiting VN Navy ships and U.S. DENTCAP Teams.

5. The inmates are kept busy with work projects and vocational tasks such as woodcutting, tile making, woodworking, animal husbandry, chicken and duck production and sewing. Inmates also attend classes in literacy training and all grades of formal education. Rice, papayas, coconuts and vegetables grown on the prison farm and fish caught by the prisoners supplement the diet.

6. All trusties and 75 per cent of the inmates housed in the camps are allowed supervised swimming, mail, canteen service and Correction Industry Shop Vocational Training classes. The GVN allow selected inmates to have visitors on the monthly supply ship.

7. A pre-release community of 30 homes has been built on the beach to house 300 inmates. These inmates are assigned to the community 120 days prior to release.

8. The International Committee of the Red Cross periodically inspects the prison. Their reports have generally reflected praise for the conditions observed.

9. In the opinion of Correction Advisors with lengthy U.S. penology experience, Conson is not a "Devil Island," but on the contrary is a correctional institution worthy of higher ratings than some prisons in the United States.

FRANK E. WALTON,
Public Safety Directorate, CORDS.

THAI FOREIGN MINISTER ASSERTS UNITED STATES NEAR MENTAL BREAKDOWN

Mr. YOUNG of Ohio. Mr. President, billions of dollars of American taxpayers' money have been poured into Thailand. We maintain six airbases in that country and one huge naval base. Having visited nearly every area of Thailand, I report that our airbases and, in particular, the huge naval base have been constructed evidently on a permanent basis.

Just recently, Mr. President, the Foreign Minister of Thailand, Thanat Khoman, stated that the United States is on the verge of a national mental breakdown which has affected its reliability as an ally and friend of Thailand. The Foreign Minister stated that as a result:

It seems relations between Thailand and the United States will evolve toward a more selective basis.

This Foreign Minister had the effrontery to make his statements at an American Chamber of Commerce luncheon with U.S. Ambassador Leonard Unger in the audience.

Foreign Minister Thanat is a former Thai ambassador to the United States. In fact he is the architect of the military alliance that resulted in thousands of Americans, mostly airmen and naval personnel, being in Thailand.

Foreign Minister Thanat stated:

Of all countries in Asia and perhaps the world which have cooperated with the United States few have given so much in return for American generosity as the Thai Government and people.

He stated our Government insisted that Thailand send troops to South Vietnam and volunteered to pay all expenses. Our expenditures in Thailand have been tremendous and in this connection Thanat said he resented the statements made that the U.S. Government had hired Thai mercenaries and offered Thailand a billion-dollar bribe to send troops to Vietnam. He said further that these attacks on Thailand make his country "a scapegoat on which to revenge the American frustrations and failures" in Vietnam.

Thanat was doubtless correct in his assertion that the domestic crisis in the United States growing out of our involvement in Vietnam began with the enemy Tet offensive of February 1968. Gen. William Westmoreland, then our commanding general in South Vietnam claimed and our Army intelligence made the same claim that Communists were bringing in huge numbers of troops in the nighttime opposite Khesanh and that at the onset of the Tet Lunar holiday would seek to overrun that outpost. General Westmoreland withdrew troops from other areas in Vietnam and ordered them to deploy around Khesanh. He reported that we had encircled the encirclers around Khesanh.

Then the VC struck everywhere else except at Khesanh. They invaded Saigon, penetrating the U.S. Embassy grounds after breaching the fortresslike walls of our embassy. In Saigon they held possession of our Embassy grounds for 7 hours. Fortunately, Ambassador Ellsworth Bunker escaped with his life. The VC were more intent on invading Saigon jails and releasing 7,000 political prisoners. The VC invaded and seized 37 provincial capitals of the 44 in South Vietnam. In addition to 7,000 political prisoners released from Saigon jails, the VC forces immediately upon invading 37 of the 44 provincial capitals released all political prisoners held in jail and this totaled many thousands. It is estimated that this total exceeded 50,000. No one knows how many thousands were drafted or voluntarily joined the VC armed forces.

This was at the height of the rice season. No one knows how many tons of rice were seized by the VC forces. The VC and North Vietnamese troops captured and held Hue for a month. During that period of terror they occupied the Citadel at the center of this beautiful city. During the 30 days our marines engaged in frontal attack after frontal attack on the Citadel. During these terrible frontal attacks some of our Marine battalions were decimated. The loss of life sustained by the VC and also civilians was very great. Our bombers hurled many tons of high explosives on the Citadel. The loss of life was so terrible that civilians killed by VC terrorists and VC gunfire and by our bombers were found later to have been buried in mass graves.

Finally after 30 days the surviving VC abandoned the Citadel and slipped away in the nighttime. Our Marine officers and friendly allies had failed to surround the Citadel.

It is evident now, as it should have been evident to all Americans at the time, that General Westmoreland had been outgeneraled and outwitted by the VC. There was no attack at Khesanh which he had predicted. Probably none was ever intended by the VC or North Vietnamese forces. Instead the VC assailed Saigon and 37 provincial capitals throughout South Vietnam including attacks in the Mekong Delta and other rice producing areas.

General Westmoreland at the time stated "We were outnumbered in the south." If we were, it was no doubt due to the fact that our marines, the best trained, most intelligent, and the greatest offensive fighting men in the world and with a great tradition of spearheading amphibious landings, were deployed on the defensive at Khesanh and south of Danang and Hue.

In the American Civil War, Mr. President—or the War Between the States, as the Acting President pro tempore (Mr. ALLEN) would term it—President Lincoln dismissed generals who were defeated and outgeneraled. Not one was permitted by him to ever again command a Union Army. President Johnson did not follow President Lincoln's policy as he should have done. However, he did remove General Westmoreland from com-

mand by "kicking him upstairs" to be the Army member of the Joint Chiefs of Staff in Washington. Very peculiarly, General Westmoreland claimed the Tet Lunar offensive was a great victory for the United States. Psychiatrists have a name which is applicable to this general, or any other general, who really deludes and deceives himself.

Foreign Minister Thanat correctly stated that the Tet Lunar offensive of February 1968 was "an even greater victory for the forces of National Liberation or VC than the one they reaped at Dienbienphu. I ask unanimous consent that this statement as contained in an article in the Evening Star of July 15, 1970, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THAI MINISTER ASSERTS UNITED STATES IS NEAR MENTAL BREAKDOWN

(By Peter O'Loughlin)

BANGKOK.—Thai Foreign Minister Thanat Khoman suggested today the United States is on the verge of a national mental breakdown that has affected its reliability as an ally.

As a result "it seems relations between Thailand and the United States will evolve toward a more selective basis," he said.

Speaking at an American Chamber of Commerce luncheon with U.S. Ambassador Leonard Unger in the audience, Thanat said current upheavals in American society made it "difficult for those working closely and loyally with the United States to expect a well-reasoned and balanced reaction from their disturbed partner."

Thanat, a former ambassador to the United States and architect of the military alliance that allows large numbers of Americans to be stationed in Thailand, said this feeling was shared "along the length and breadth of Asia."

His main theme was that Thailand had been unjustifiably criticized by the American press and liberal politicians for supporting the U.S. war effort in South Vietnam with troops and by granting air bases in Thailand.

"One can say without hesitation that of all the countries in Asia and perhaps the world, which have cooperated with the United States, few have given so much in return for American generosity as the Thai government and people," he said.

He said the U.S. government insisted that Thailand send troops to South Vietnam and had offered to defray the expenses of the troops to "alleviate the burden that Thailand already had to bear."

He said this agreement had been misrepresented by politicians in Washington to mean the United States had hired Thai mercenaries and offered Thailand a billion-dollar bribe to send troops to Vietnam.

Thanat asserted that the U.S. domestic crisis began with the enemy Tet offensive in 1968. By penetrating the U.S. Embassy grounds in Saigon, he added the Vietnamese reds won "an even greater victory than the one they reaped at Dien Bien Phu."

"The American public opinion, effectively aided by a chorus of TV and radio commentators, by liberal pundits of the press, self-seeking politicians and so-called intellectuals in many campuses, foundered before the coordinated onslaughts," he said.

"At the juncture, the policy of scuttle and run, distinctly emerged."

Thanat said the same group of "immature and irresponsible elements" in the United States had turned to attack Thailand as "a scapegoat on which to revenge their frustrations and failures."

S. 4102—INTRODUCTION OF A BILL INCREASING THE INDIVIDUAL INCOME TAX EXEMPTION

Mr. YOUNG of Ohio. Mr. President, the time is long past for Congress to revise our archaic internal revenue laws and effect genuine tax reform.

Despite last year's Tax Reform Act so-called, the average American continues to bear an extremely heavy income tax burden while the ultra-rich and specially privileged escape their revenue responsibility through a series of gaping tax loopholes.

In this time of spiraling inflation and soaring cost of living, it is a tragedy that the vast majority of our citizens, those earning between $5,000 and $25,000 a year, pay a higher percentage in income tax than do those whose earnings exceed $25,000.

Mr. President, an important first step toward genuine tax reform would be to increase the individual income tax exemption. Such a step would benefit more than 100 million middle-income taxpayers.

The present internal revenue plan calling for individual exemptions of $625 in 1970, $650 in 1971, and $700 in 1972 is woefully inadequate.

Therefore, Mr. President, I am today introducing for appropriate reference, a bill to increase the personal income tax exemption to $900 for 1971 and to $1,200 for 1972.

The revenue lost can easily be recovered by plugging the atrocious tax loopholes that continue to exist. It is estimated that as much as $50 billion is lost to the Treasury through income tax gimmicks of one sort or another favoring various and sundry special interest groups in our society.

These are especially appalling when we consider that a family whose breadwinner earns $3,000 a year pays out over 30 percent in taxes. This is outrageous since a family with a $3,000 income is also classified as poverty stricken.

Mr. President, I report that for nearly 12 years as a U.S. Senator and prior to that as a member of the Ways and Means Committee of the House of Representatives, I have studied the tax structure of our country and the problem of tax loopholes.

A flagrant tax loophole is the depletion allowance for oil and gas producing companies. Last year's tax legislation reduced the depletion allowance for these companies from 27½ percent to 23 percent. This inadequate reduction does but little to relieve the burden of the average taxpayer.

This exemption privilege granted to these giant corporations continues to cost our taxpayers $3 billion annually. The fact is that oil producing corporations have been paying Federal income taxes at about one-fifth the average rate of most American wage earners. Admittedly the average American family bears an extremely heavy income tax burden and oil and gas producing corporations unfortunately have been and are exempted from paying their proper share of Federal taxes.

Last December, Mr. President, I introduced an amendment to the tax reform bill which would have eliminated the oil depletion allowance on petroleum produced outside the United States. The combination of the continued depletion allowance and the foreign tax credit has made most of the oil companies' profits tax free.

For example, in 1967, one of our greatest oil producing corporations, the Atlantic Refining Co., by reason of the then 27½ percent depletion allowance, paid no income tax whatever upon its tremendous net profits for that year. This corporation has since merged with the Richfield Oil Co. and in 1968, the Atlantic Richfield Corp. paid but approximately 6 percent of its net earnings to our Government as taxes.

The deductions granted to gentlemen farmers and loopholes favoring farm corporations deprive the Treasury of additional hundreds of millions of dollars annually. The Tax Reform Act failed to effectively plug up this loophole.

At this time more than 10,000 millionaires are enjoying the luxury and the hobby of owning farms. What have they to lose if the farm operation as reported by their managers shows a deficit year after year of many thousands of dollars? This annual loss is simply deducted by the owner or owners of the farm while, of course, the value of the farm itself increases year after year. This tax loophole works to the unfair tax advantage of owners of so-called "Gettysburg farms," and it should be reviewed and dealt with in the Senate Finance Committee. Only about 1,200 gentleman farmers were affected by the tax reform legislation of last year.

Genuine income tax reform means legislation to provide some Federal income tax on bonds issued by municipalities and States. These bonds remain totally tax exempt. They are eagerly purchased by extremely wealthy men and women of our Nation and placed in their vaults. Many individuals, although their incomes may exceed $100,000, $500,000 or a million dollars a year, pay no income taxes whatever. They enjoy cutting coupons, receiving interest checks, and banking the money.

Another serious loophole is the failure to tax capital gains passed from one generation to another. This deprives the Treasury of $2.5 billion every year.

Also, it is scandalous that special treatment has been given for stock-options, accelerated depreciation on speculative real estate and payment of estate taxes by redemption of Government bonds at par instead of at the prices quoted on the open market. In recent months Government bonds have unfortunately been selling for approximately 60 percent, or less, under their face value.

Mr. President, income taxes should be levied according to ability to pay. Genuine tax reform would eliminate altogether income taxes for families with incomes under $3,600.

Adoption of my bill would be a meaningful first step toward fairness and modernization of our revenue laws.

The ACTING PRESIDENT pro tempore (Mr. ALLEN). The bill will be received and appropriately referred.

The bill (S. 4102) to amend the Internal Revenue Code of 1954 to provide for an increase in the amount of the personal exemption, introduced by Mr. YOUNG of Ohio, was received, read twice by its title, and referred to the Committee on Finance.

OUR MAN IN NORTH VIETNAM

Mr. YOUNG of Ohio. Mr. President, Robert S. Boyd, chief of the Akron Beacon-Journal Washington Bureau, recently returned from 2 weeks' traveling in North Vietnam. Mr. Boyd is one of the foremost investigative reporters in the Nation.

I ask unanimous consent that his report which was published in the Akron Beacon-Journal of June 7, 1970, be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HANOI BELIEVES NIXON INVENTED VIET WAR

(By Robert S. Boyd)

In North Vietnamese eyes, Richard Nixon is even worse than Lyndon Johnson was.

Although it was LBJ who bombed the daylights out of their country, Nixon is considered even more treacherous, stubborn and cruel than his predecessor.

They believe Nixon invented the Vietnam War.

In the Museum of the Revolution in Hanoi, which covers the 40-year struggle against French and then American intervention, there is an interesting exhibit devoted to Nixon.

It is dated 1953, and it shows him smiling and chatting with the former French puppet emperor, Bao Dai.

The caption asserts that this was when Nixon—then a freshman vice president—conceived his policy of "Using Vietnamese to fight Vietnamese."

Another display shows Nixon visiting Hanoi in the Spring of 1954, before the French defeat. He toured Dien Bien Phu on that trip.

The exhibit recalls Nixon's April 1954 speech suggesting American aid to the French—a project which President Eisenhower rejected.

In other words, Hanoi dates Nixon's "Vietnamization" plan of 1970 back 17 years—even before the French collapse.

That's how long they say the President has been trying to make South Vietnam into an American "colony" by means of Vietnamese troops.

As a general rule, American presidents are not among North Vietnam's favorite people. The last good one, in their eyes, was Abraham Lincoln, whom Ho Chi Minh admired in his youth.

It is the North Vietnam view:

Woodrow Wilson fouled up by ignoring the young Ho's plea for Vietnamese self-determination at the end of World War I.

Franklin Roosevelt showed promise, but he died before he could be of much help.

Harry Truman sold out to the French in 1946 and supported their campaign to hang on to their old colony.

Dwight Eisenhower refused to hold the promised elections to reunite Vietnam in 1956. Instead he created a tyrant, Ngo Dinh Diem, and put him in Saigon.

John Kennedy beefed up the American "advisers" and launched a "special war" of counter-insurgency against "liberation forces" in South Vietnam.

Lyndon Johnson "Americanized" the war with half a million GIs, and expanded it to North Vietnam.

And now, at the bottom of the barrel, comes Richard Nixon.

Nixon's "Vietnamization" plan is crueler than LBJ's "Americanization" of the war, said Luu Quy Ky, secretary general of the North Vietnamese Journalists Association.

"The cruelty lies in the fact that if Nixon uses the blood of other people, he will not be as economical with it as with American blood," Ky said.

Nixon is also more deceptive than LBJ, according to the North Vietnamese. Vietnamization is only a ruse to lull the American public, they argue. While cutting down U.S. casualties and costs, Nixon is actually prolonging and extending the war, they say.

The harshest indictment of Nixon I heard in my two weeks in North Vietnam came from Hoang Tung, a smiling, deceptively mild-mannered intellectual who is editor in chief of the official communist party newspaper, Nhan Dan (The People).

"Nixon has accelerated his own defeat—his political defeat at home and the defeat of his policies in Indochina," Tung said.

"Why? Because he has done things contrary to common sense. Things that even those who used to agree with him now dissent from. Things that even President Johnson dared not do."

Tung cited what he called Nixon's "escalation" of the war in Laos, the overthrow of Prince Sihanouk in Cambodia (which Hanoi claims was a CIA plot) and now the invasion of Cambodia.

Nixon even succeeded in making a Communist ally out of Cambodia's pleasure-loving Prince Sihanouk, Tung scoffed.

"We couldn't do that," he said, "but your Nixon did."

The editor noted sarcastically that Nixon undertook the Cambodian operation only days after his Secretary of State told Congress it wouldn't be done, and after a Senate committee voted against helping the Lon Nol government of Cambodia.

"Nixon acted in defiance of the Legislature," Tung said. "His acts bring much dissent. He is more unpopular than Kennedy or Johnson.

"Nixon claims his 'silent majority' supports him. But that is self-deception. The votes cast for Nixon in your last election were not meant for him to expand the war, but to end it."

Many Americans may find it poor taste for an official of a Communist dictatorship to criticize the President for failing to consult public opinion.

A number of American bomb casings that have fallen on Vietnamese soil have been derisively painted with his name.

Billboards, slogans and cartoons mock him.

And one day, in the southern part of the country, while American planes were roaring overhead on a bombing mission, a 23-year-old girl looked up and said quietly: "Nixon's airplanes."

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. In accordance with the previous order, the Senator from South Carolina is recognized for not to exceed 20 minutes.

THE OMNIBUS CRIME BILL

Mr. THURMOND. Mr. President, there can be no doubt that there is an urgent need for additional measures to combat the alarming rate of crime that is flourishing in our Nation. This is particularly true in the District of Columbia. S. 2601, the District of Columbia crime bill, provides these additional measures, and will, in my judgment, be instrumental in effecting a reduction in the number of crimes committed. However, it is unfortunate that certain provisions of this bill have been, and still are, the subject of gross misunderstanding by responsible critics and inaccurate reporting by the news media.

Mr. President, the provisions of this bill have been exhaustively studied in committee by the House and the Senate, debated on the floor and again studied by the House-Senate conference. All provisions which were deemed unconstitutional or unwise were eliminated. However, there is still controversy surrounding pretrial detention and no-knock provisions of this bill. Critics of these measures have argued that such provisions are unconstitutional and will be misused by the courts and law enforcement officials. It seems to me that a careful reading of this bill and a study of its legislative history, should dispel any doubts one could possibly have regarding its constitutionality or the fact that many safeguards were included in order that the possibility of misuse would be eliminated.

Let us first consider pretrial detention. It must be remembered that the concept of pretrial detention is not new. In 1927, a provision for pretrial detention was included in the American Law Institute's model code of criminal procedure. In the mid-1960's pretrial detention was considered by the Senate Subcommittee on Constitutional Rights and by the House Judiciary Committee. In 1966, the President's Commission on Crime in the District of Columbia recommended legislation to authorize the pretrial detention of those defendants who present "a truly high risk to the safety of the community." Since that time, other studies have been undertaken by the District of Columbia Metropolitan Police Department, the U.S. Attorney's Office, and the Judicial Council Committee To Study the Operation of the Bail Reform Act in the District of Columbia. All of these studies confirmed the fact that a system of pretrial detention was necessary to prevent dangerous criminals from committing additional crimes after being released on bail.

These studies, showing the serious problem of recidivism during bail, prompted the measure we now have before us. However, some critics argue that pretrial detention is repressive and that the courts cannot be trusted to administer its provision in a fair and impartial manner.

Section 23–1322 of the act provides in part that:

(a) Subject to the provisions of this section, a judicial officer may order pretrial detention of—

(1) a person charged with a dangerous crime . . . if the Government certifies by motion that based on such person's pattern of behavior consisting of his past and present conduct, and on the other factors set out in Section 23–1321(b), there is no condition or combination of conditions which

will reasonably assure the safety of the community;

(2) a person charged with a crime of violence . . . if (i) the person has been convicted of a crime of violence within the ten-year period immediately preceding the alleged crime of violence for which he is presently charged; or (ii) the crime of violence was allegedly committed while the person was, with respect to another crime of violence, on bail or other release or on probation, parole, or mandatory release pending completion of a sentence; or

(3) a person charged with any offense if such person, for the purpose of obstructing or attempting to obstruct justice, threatens, injures, intimidates, or attempts to threaten, injure, or intimidate any prospective witness or juror.

The act further provides that no person shall be ordered detained unless the judicial officer, who will be a judge, holds a pretrial detention hearing and finds that there is clear and convincing evidence that the person is a person meeting the requirements of section 23–1322, subsection (a), which I previously cited, and that there is no condition or combination of conditions of release which will reasonably assure the safety of any other person or the community. The judicial officer also has to issue an order of detention accompanied by written findings of fact and the reason for its entry. The accused is entitled to representation by counsel and is also entitled to testify and present witnesses in his own behalf. If pretrial detention is ordered, the accused has the right to appeal.

Mr. President, it should be evident that the rigid requirements for detention that I have just outlined are adequate to assure that misuse of this provision will not occur. I also have faith in our judiciary and sincerely believe that a judge will not sign an order for detention unless he is convinced that these requirements are met and the accused should be detained.

It has been argued that pretrial detention is unconstitutional because it is contrary to the eighth amendment of the U.S. Constitution. The language of the eighth amendment providing that "excessive bail shall not be required" does not establish a right to bail. It simply states that judges cannot require excessive bail in cases when the defendant has a statutory right to bail. In *Carlson* v. *Landon* (342 U.S. 524 (1952)), the Supreme Court stated that:

The bail clause was lifted with slight changes from the English Bill of Rights Act. In England that clause has never been thought to accord a right to bail in all cases, but merely to provide that bail shall not be excessive in those cases where it is proper to grant bail. When this clause was carried over into our Bill of Rights, nothing was said that indicated any different concept. The Eighth Amendment has not prevented Congress from defining the classes of cases in which bail shall be allowed in this country. Thus, in criminal cases where the punishment may be death, bail is not compulsory. Indeed, the very language of the Amendment fails to say all arrests must be bailable.

The case of *United States ex rel. Covington* v. *Coparo*, 297 F. Supp. 203 (S.D.N.Y. 1969) reaffirmed the Carlson case. The Court said in the Covington case that:

Congress could, without running afoul of the Eighth Amendment . . . provide . . . that persons accused of kidnaping, bank robbery with force and violence, or other serious crimes are not entitled to bail as a matter of right.

The Honorable John N. Mitchell, in an article written for the University of Virginia Law Review—Mitchell, *Bail Reform and the Constitutionality of Pretrial Detention*, 55 Va. L. Rev. 1223 (1969) states that:

Case precedent and history, therefore, belie the contention that the Eighth Amendment grants a right to pretrial release in all criminal cases, or even in all noncapital cases. When the language of the Amendment is analyzed in the historical context in which it was adopted, its ambiguity must be resolved, as in *Carlson* v. *Landon* in favor of the interpretation that although bail may never be excessive, there is no absolute right to bail.

It must also be remembered that while we are concerned about the rights of the defendant, at the same time we are concerned about the rights of society and particularly the victims of criminal acts. It is imperative that the rights of society be protected. In my opinion, this has not been the case in the past few years.

The no-knock provision in this bill has also been the object of various criticisms. The necessity and usefulness of such a provision have been questioned. It should be a well-known fact that an element of surprise is necessary in order that certain criminals be apprehended. Surprise is also essential for the seizure of condemning evidence in cases where such evidence can be easily destroyed or hidden. This provision will make it much harder for the known criminal to escape through another exit or destroy evidence needed for a conviction. It has been charged that this provision experiments with District of Columbia residents and uses them as guinea pigs before applying this law to the rest of the Nation. It has been said that this law is repressive, that it discriminates against blacks and that it resembles fascism. Mr. President, these accusations are ill-conceived, unfounded, and untrue. The facts are that a majority of the States either by case law or criminal statute have had no-knock authority for years. S. 2601 clarifies existing law and provides additional safeguards for the protection of individual privacy. For example, the probable cause standard is required before the police can enter under no-knock authority. It is also mandatory that prior judicial approval be obtained before entry without notice, when the circumstances which would justify such entry are known at the time application for a warrant is made.

Mr. President, at a time such as the present, when the crime rate is at an all-time high; when it is unsafe to walk on our streets after dark; when it is necessary to practically double the number of police in an attempt to maintain law and order, it would be easy to succumb to emotionalism and fear, and, therefore, call for measures and programs which would be unwise. I am pleased that this has not happened. The bill we have before us has been carefully considered. Safeguards have been provided which protect and balance the rights of the individual and society. The Honorable George L. Hart, Jr., judge of the U.S. District Court for the District of Columbia, succinctly stated this need for balance, in his testimony before the Senate Subcommittee on Constitutional Rights. Judge Hart stated:

Surely, it is not an easy thing to balance the interests of an individual charged with a serious crime . . . against the rights of a law-abiding citizen not to be robbed, raped or murdered in his or her home or on the streets. There are powerful and compelling arguments as to why the rights of both should be protected. I suggest a balancing is desirable which considers the rights of both, insofar as it is possible to do so. It is desirable to weigh one right against the other right, and to devise a plan, which to the greatest extent possible, will protect both.

I sometimes think that . . . we put too much stress on statistics and the rights of the person charged with a crime, and wholly ignore the human elements as they apply to the victim. In other words, we talk of the accused as a deeply concerned human being and citizen, which he is, but consider the victim only as a cold, inhuman statistic, which he is not. He, too, is a human being and a citizen deserving of consideration.

Mr. President, I urge the favorable passage of this bill through the adoption of the conference report.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. In accordance with the previous order, the distinguished Senator from Mississippi (Mr. STENNIS) is recognized for not to exceed 20 minutes.

MILITARY AUTHORIZATION, 1971

Mr. STENNIS. Mr. President, one of the two major areas in the military authorization bill which will soon be before the Senate for consideration is the research, development, test and evaluation appropriation for which $7.4 billion is requested. I believe it is the most complicated and certainly the most forward looking program of the Department of Defense. It may also be described as the spring from which flows all of the knowledge and genius that provides the United States with the most powerful and modern military forces in the world.

The Secretary of Defense and the Director of Defense Research and Engineering have called the research and development budget a "rock bottom" budget, just as they have described the entire military procurement budget. However, the committee has taken much greater pains this year in examining the many programs included under this account. The review in depth, which was conducted largely by the ad hoc Subcommittee on Research and Development, chaired by the very able Senator from New Hampshire, Senator MCINTYRE, identified specific programs in the bill which could be reduced without serious consequence. I should emphasize that these were difficult judgments which were reached after lengthy deliberation. Nonetheless, in the opinion of the committee, these reductions will have no detrimental effect on our future military capability; but to go beyond these reductions could undermine the very heart of our military technology.

REDUCTION OF ITEMS TOTALING $464.1 MILLION OR 6.3 PERCENT BELOW THE BUDGET

The committee has recommended the reduction or elimination of 52 programs

in the total amount of $464.1 million, or 6.3 percent. This was partly offset by a transfer of $79 million for two S–3A test aircraft from the Navy procurement budget which should have been included in the research and development account. The result is a reduction of $385.1 million. This will provide authorization of $7.016 billion which is $249.1 million lower than the House bill.

Mr. President, this subject matter was reviewed in great depth by an ad hoc Subcommittee on Research and Development of the Senate Armed Services Committee, ably led by the Senator from New Hampshire (Mr. McINTYRE). They identified the specific programs in this bill which, in their opinion, should be reduced.

I should emphasize that these were difficult judgments, but they were reached after lengthy deliberation. In the opinion of the committee, these reductions will have no detrimental effect on our future military capabilities.

We do believe, though, that to go beyond these reductions could undermine the very heart of our military technology. The Senator from New Hampshire will later present to this body, in as great detail as may be requested, all of the major or medium-sized items in this part of the bill.

GENERAL MISUNDERSTANDING OF RESEARCH AND DEVELOPMENT

Mr. President, there is a widespread misconception of the research and development programs which I would like to clarify as much as possible. Too often the program, all $7 billion of it, is thought to be mostly for the pay of scientists and engineers who work with test tubes and computers primarily to advance our technology. This is not so.

Of the $7 billion recommended by the committee, only 5 percent, or $0.4 billion goes to basic research. The major part of the program, involving the engineering and operational development programs totals $3.7 billion which amounts to more than 50 percent of the entire program. These programs provide for the production of development models of complete weapon systems such as the new F–14 plane for the Navy and the new F–15 plane for the Air Force, both advanced fighters, Minuteman ballistic missiles, and the Navy Poseidon, that are tested and followed later by procurement for the operating forces.

Everything, all the costs, are labeled Research and Development until the actual procurement of a weapon starts, but it is certainly an error to think of anything like a major part of those sums going into the basic research account.

Another large segment of the program, $1.2 billion or 15 percent, pays for the operation, management, and maintenance of the Defense research, development, and test organization. This includes some 88,000 civilian scientific, engineering, technical, administrative, and maintenance personnel who man the 130 Government-owned installations supported by this program.

That is a vast undertaking, Mr. President, the actual testing and evaluation, testing over and over again our vast weapons system for the air, for the sea, for under the sea, and for ground weapons of all kinds. One of our outstanding installations of that kind is Edwards Air Force Base, in California. There we have a number of test pilots who carry on every kind of conceivable testing and evaluation of these weapons before they are put into procurement. Then, as we have to make add-ons and modifications, they continue to test the weapons. It is an amazing experience to be taken through there and to be shown what a complete setup we have, and one is convinced of its necessity.

Another 32,000 military personnel who work at these activities are paid from another appropriation.

The remaining $1.8 billion provides for the exploratory development and advanced development work that bridges the gap between the knowledge gleaned from basic research and translates it into hardware that is brought together to form our complex weapon systems.

AUSTERITY OF THE AUTHORIZATION RECOMMENDED BY THE COMMITTEE

The committee recommendation is the lowest amount since fiscal year 1966, which was $6.7 billion. If inflation is taken into account, and the content of the program is put on a comparable basis, it is the lowest amount since fiscal year 1960, when it was less than $5.5 billion. I want to make the point very clear. This is the most austere program, in total dollars, in the past 10 years.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. SCOTT. I want to commend the Senator from Mississippi. I am aware of the purpose and general content of what he is discussing, and I should like to point out at this time a matter with which I am sure he will agree.

I have checked certain figures; and, whereas the budget for defense needs in 1962 was 48 percent and for human resources was 29 percent, and in 1968 the budget for defense was 44 percent and for human resources was 34 percent, now the human resources aspects of the budget have exceeded defense by 41 percent to 37 percent.

The Senator, of course, is quite right in pointing out the austerity of the budget and the fact that almost all has been squeezed out that possibly could be squeezed out. I am very glad that the distinguished chairman of the Committee on Armed Services, the man most competent to testify on these matters, is making a record as to the essential needs of the country.

We hear a great deal about the reordering of priorities, which, when translated, means, "I want what I can get for my particular crowd." Only one priority transcends all others, and that is the security and the defense of the United States—not merely this year but in this entire decade. Without protecting that No. 1 priority, no other priority will be around to enjoy.

Does the Senator agree?

Mr. STENNIS. I certainly do agree. I thank the Senator very much for his very timely remarks.

I think that this is a very austere program, as the Senator has said; but every major phase of it certainly should be fully explained and every Senator should have a chance to have it explained in such a way that it can be understood. We did not want to bring in any extra dollars. So this bill has been pursued very vigorously and very completely. I can say, on my own responsibility, that it is the most austere program in total dollars that we have had in the last 10 years.

Mr. SCOTT. I thank the Senator.

Mr. STENNIS. It is recognized generally that when military forces are being reduced and when military procurement is cut back, research and development takes on even greater importance. With fewer weapons and men, the quality of our arms must be supreme to overcome the superior numbers of our enemies. A strong and viable research and development program provides the ability to react, albeit sometimes too slowly, to this need. Nevertheless, it is the considered opinion of the committee that the reductions which we have recommended in the fact of the sober facts that I have stated before—severe financial condition of the Federal Government, priority of domestic problems, and inflation—can be sustained without jeopardy to our present or future defense posture. This opinion was reached with a full awareness of the fact that the Soviet Union is devoting more effort to military-related research and development than is the United States. We will have to examine this imbalance carefully in considering future budgets.

MAJOR PROGRAMS INCLUDED IN THE BILL

The authorization which the committee recommends will provide for a lower basic research program than in fiscal years 1969 and 1970. This is consistent with a shift in emphasis from defense to nondefense agencies, which has been recognized in the committee report. It supports the continued development of such important weapon systems as the F–14—$324 million—and F–15A—$370 million—advanced fighters, the S–3A antisubmarine warfare aircraft—$208 million—Safeguard—$365 million—B–1 advanced bomber—$50 million—Minuteman—$224 million—and Poseidon—$123 million. It provides also for initiation of development of the A–X close air support aircraft—$27.9 million.

SOME OF THE MAJOR PROGRAMS REDUCED BY THE COMMITTEE

The major reductions recommended by the Committee include such programs as the B–1 advanced bomber—from $100 to $50 million—the Subsonic Cruise Armed Decoy, called SCAD—from $33.6 million to "0"—the Short Range Air-to-Air Missile—from $37.2 million to $8.0 million—and the Cheyenne helicopter—from $17.6 million to "0".

SOVIET RESEARCH AND DEVELOPMENT EFFORT EXCEEDS THAT OF UNITED STATES

We must recognize that there are certain risks which we must assume in reducing the research and development program. There is the ominous picture of a constantly increasing Soviet research and development program. During the past few years, total Soviet R. & D. has been growing by about 10 percent per year while ours has essentially

leveled off. The comparison is even more dramatic for R. & D. devoted to military, atomic energy, and space. For example, during the 1960's the Soviet military R. & D. increased by about 60 percent while U.S. military R. & D. increased by roughly 30 percent. In absolute dollars, estimates for 1970 show the Soviets ahead of the U.S. by more than 20 percent. The simple fact is that we have been overtaken by the Soviets in total R. & D. effort expended for military, atomic energy, and space; and the gap appears to be widening. This situation cannot be tolerated for long, since our technological superiority is in danger. As I have stated before, we will have to watch this item very closely in the future.

I have been at this long enough not to be frightened by some new story about what the Soviets may be doing or what they are planning to do. We have certain ideas about what their capacity is and what they are doing, and it would be the height of folly if we did not weigh those the best we could and make certain that we are on the alert.

With respect to the research and development program, I hope Senators are close enough to it to realize that even though we might spend $100 million on a weapon that did not develop, that is not lost money, it is not waste, and certainly it does not mean that it was even in calculation. That has to be charged to the profit and loss of experimentation, the concept of finding out what will work; and you will always go forward knowing what will work when you find out that certain things will not work. That costs money, also, as Thomas A. Edison learned when he was trying to perfect the first incandescent lamp. So even though we have prospective weapons that do not work out, at the same time much is learned and much good comes from experiments we have made.

My purpose in making this short speech today on research and development is to touch upon some of the highlights and to give some idea of the percentage of this large sum of money that goes for actual basic research, how much for engineering, how much for the development of the pilot models, as they might be called, and how much for the actual testing, which is a tremendous part of putting any weapon in the field.

CONCLUSION

In conclusion, the committee believes that its recommendation will provide an austere level of funds to support only the most essential research and development programs. Measured against a rigid time frame, which averages about 7 years from the initiation of development to the delivery of fully tested weapon systems in quantity for operational use, the need for an adequate level of funds to insure a stable program each year cannot be argued. If significant changes occur in the annual authorization for research and development, the disruption of major development programs would be extremely costly, and result in undue program delays. The order of national priorities and the serious economic outlook demand the utmost prudence in the selection of those programs and weapons systems which offer the greatest promise for improving our future military capability.

Mr. President, as a final thought, I would emphasize that the heavy burden of examining the entire research and development program of the Department of Defense has been borne by the Research and Development Subcommittee under the able chairmanship of Senator McINTYRE. Senator McINTYRE will cover the research and development program in great depth in a separate statement to be presented during the course of debate on the bill. The purpose of my remarks has been to summarize and cover some of the significant aspects of this program.

Mr. President, the Senator from New Hampshire (Mr. McINTYRE) will also be here to answer questions, as will other members of the subcommittee. They will be prepared to go into any of these programs in depth. They have heard the testimony and have the facts taken from responsible witnesses to back up their conclusions and will be able to discuss the most difficult part of the bill.

We must make some allowances in there for experiments, as I said before, which do not always turn out. We have also got to make allowances for certain basic research which must go on all the time.

People have asked me many questions, such as, "Here is a weapon that is 10 years old. Why do you spend so much money to continue research and development on it?"

Because, there is continuous, progressive development to any weapon which lasts for any length of time and if we do not bring it up to date and add on the newest developments, provided the weapon can take it, it quickly becomes obsolete.

I refer to the F–4 Phantom jet, which has proven to be one of the finest airplanes and the most useful airplanes the Air Force and the Navy have ever used. They are delighted to have it. I believe that the first one came off the assembly line about 12 years ago and is still one of the workhorses for the Air Force and Navy. It is a plane which has been kept up to date and on which a small research and development program is still being carried on up until now.

The same is true with the Polaris submarine. A number of these are being converted to the Poseidon program which will carry the new missile.

I can give a simpler illustration. I remember from childhood that the Remington Arms Co. made shotguns. So did the Winchester people. They kept experimenting, experimenting, and improving. I believe that Winchester sold out and is not known by that name any more; but I am fortunate enough to possess one of the modern Remington automatics. We are all indebted to the research and development carried on by private enterprise in the relatively simple development of that weapon.

Other illustrations can be made of the Ford Motor Co., General Motors, Chrysler, and other corporations with their tremendous research and development programs which go on all the time. They cost a great deal of money.

In the case of this one department of Government, research and development does cost a great deal of money, but if we had to hire a company to do all of this for us and we had to bear the cost of creating such an organization, and so forth, it would cost us, in this instance, even more.

Mr. President, I yield the floor.

ORDER OF BUSINESS

The PRESIDING OFFICER (Mr. GRAVEL). Under the previous order, the Senate will now proceed to the transaction of routine morning business.

Mr. STENNIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letters, which were referred as indicated:

REPORT ON PROPOSED ARMY NATIONAL GUARD FACILITIES

A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting, pursuant to law, a report on the location, nature, and estimated cost of certain facilities projects proposed to be undertaken for the Army National Guard (with an accompanying report); to the Committee on Armed Services.

REPORT OF SMALL BUSINESS ADMINISTRATION

A letter from the Administrator, Small Business Administration, reporting, pursuant to law, on the disbursements made to small business firms, dated July 20, 1970; to the Committee on Banking and Currency.

REPORT ON SERVICES TO FAMILIES RECEIVING AID TO FAMILIES WITH DEPENDENT CHILDREN

A letter from the Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a report on services to families receiving aid to families with dependent children, dated July, 1970 (with an accompanying report); to the Committee on Finance.

REPORT ON CLOSED BASIN DIVISION, SAN LUIS VALLEY PROJECT, COLO.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a report on the Closed Basin Division, San Luis Valley Project, Colo. (with an accompanying report); to the Committee on Interior and Insular Affairs.

PROPOSED EXPLOSIVES CONTROL ACT OF 1970

A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to regulate the importation, manufacture, distribution, storage and possession of explosives, blasting agents and detonators and for other purposes (with accompanying papers); to the Committee on the Judiciary.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. ALLEN):

A joint resolution of the Legislature of the State of California; to the Committee on Labor and Public Welfare:

"ASSEMBLY JOINT RESOLUTION NO. 20—RELATIVE TO TEACHERS' RETIREMENT

"Whereas, The California Legislature passed teachers' retirement bills in the 1967 Regular

Session and in the 1969 Regular Session. which were not enacted into law, to grant retirement credit for out-of-state service to the mobile teacher; and

"Whereas, Approximately 50 percent of the California teachers have out-of-state service credit for which they will be penalized during their retirement years; and

"Whereas, The retirement problems of the mobile teacher are long standing in California as well as in other states; and

"Whereas, The joint NEA-NCTR task force has presented a proposal to alleviate a significant long standing problem; and

"Whereas, After due and careful consideration of the public interest, legislation has been introduced in Congress which provides for improvement of education by increasing the freedom of the nation's teachers to change employment across state lines without substantial loss of retirement benefits, through establishing of a federal-state program allowing covered teachers at least 10 years of credit for public teaching service not covered by the system; and

"Whereas, This federal legislation provides that the federal government shall provide 40 percent of the cost for funding, with the remaining 60 percent to be shared by the state or local system, or both, and individual teacher; and provides an additional amount for administration; and

"Whereas, The legislation has been referred to the Education and Labor Committee of the 91st Congress for hearing and action; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to support and enact legislation to provide for a federal-state program allowing covered teachers at least 10 years of credit for public teaching service not covered by their present retirement system; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A resolution adopted by the Tamagusuku Village Assembly, Okinawa, praying for the removal of poison gas weapons from Okinawa; to the Committee on Armed Services.

ENROLLED BILLS SIGNED

The ACTING PRESIDENT pro tempore (Mr. ALLEN) announced that on today, July 21, 1970, he signed the following enrolled bills, which has previously been signed by the Speaker of the House of Representatives:

S. 759. An act to declare that the United States holds in trust for the Washoe Tribe of Indians certain lands in Alpine County, California;

S. 1046. An act to protect consumers by providing a civil remedy for misrepresentation of the quality of articles composed in whole or part of gold or silver and for other purposes;

S. 1456. An act to amend section 8c(I) of the Agricultural Adjustment Act, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937 and subsequent legislation, so as to permit marketing orders applicable to apples to provide for paid advertising;

S. 3274. An act to implement the Convention on the Recognition and Enforcement of Foreign Arbitral Awards;

H.R. 14452. An act to provide for the designation of special policemen at the Government Printing Office, and for other purposes and

H.R. 14453. An act to authorize the Public Printer to grant time off as compensation for overtime worked by certain employees of the Government Printing Office, and for other purposes.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. YOUNG of Ohio:

S. 4102. A bill to amend the Internal Revenue Code of 1954 to provide for an increase in the amount of the personal exemption; to the Committee on Finance.

(The remarks of Mr. YOUNG of Ohio when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. STEVENS:

S. 4103. A bill to amend the Act of March 3, 1899, relating to penalties for wrongful deposit of certain refuse, injury to harbor improvements, and obstruction of navigable waters; to the Committee on Public Works.

(The remarks of Mr. STEVENS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. JAVITS (for himself, Mr. MCGOVERN, Mr. BROOKE, Mr. GOODELL, Mr. HART, Mr. HOLLINGS, Mr. KENNEDY, Mr. PELL, Mr. SCOTT, and Mr. SCHWEIKER):

S. 4104. A bill to amend the Child Nutrition Act of 1966 to strengthen and improve the school breakfast program for children carried out under such act, and for other purposes; to the Committee on Agriculture and Forestry.

(The remarks of Mr. JAVITS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MAGNUSON:

S. 4105. A bill to amend the Federal Water Pollution Control Act in order to authorize the Secretary of the Interior to incur obligations for construction grants under section 8 of such act, and for other purposes; to the Committee on Public Works.

(The remarks of Mr. MAGNUSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MAGNUSON (for himself, Mr. JACKSON, Mr. CRANSTON, Mr. HUGHES, Mr. KENNEDY, Mr. NELSON, Mr. RANDOLPH, and Mr. WILLIAMS of New Jersey):

S. 4106. A bill to amend the Public Health Service Act in order to provide for the establishment of a National Health Service Corps; to the Committee on Labor and Public Welfare.

(The remarks of Mr. MAGNUSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. HRUSKA:

S. 4107. A bill to regulate the importation, manufacture, distribution, storage, and possession of explosives, blasting agents, and detonators, and for other purposes; to the Committee on the Judiciary.

(The remarks of Mr. HRUSKA when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. PROXMIRE:

S. 4108. A bill to amend the Truth in Lending Act to protect consumers against careless and erroneous billings; to the Committee on Banking and Currency.

(The remarks of Mr. PROXMIRE when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 4103—INTRODUCTION OF A BILL RELATING TO PENALTIES FOR OBSTRUCTION OF NAVIGABLE WATERS

Mr. STEVENS. Mr. President, I am introducing legislation today which will increase the penalties for violations of the Refuse Act of 1899. This venerable law is an important part of the effort to halt abuse of the Nation's waterways.

Alaskans have witnessed the ineffectiveness of laws whose penalties are less than the value of the violation. Foreign fishermen have repeatedly penetrated American waters secure in the knowledge that fines imposed on them will be far less than the profits of their expeditions.

The Refuse Act of 1899 penalizes a different abuse of our waterways—chemical abuse. With a maximum penalty of $2,500, the act is ineffective against large-scale violators who find it profitable to break the law when the penalties are small.

About 27,000 Alaskans participate in the commercial fishing industry. Thousands more enjoy Alaska's coastline and inland waterways. Every Alaskan feels a strong commitment to keeping the Nation's waters clean. With this bill the maximum penalty will be raised to $100,000, and repeated infractions will be treated as separate violations each day they continue. For those who carelessly contaminate our waters, we must up the ante.

The PRESIDING OFFICER (Mr. FANNIN). The bill will be received and appropriately referred.

The bill (S. 4103) to amend the act of March 3, 1899, relating to penalties for wrongful deposit of certain refuse, injury to harbor improvements, and obstruction of navigable waters; introduced by Mr. STEVENS, was received, read twice by its title, and referred to the Committee on Public Works.

S. 4104 — INTRODUCTION OF THE SCHOOL BREAKFAST ACT OF 1970

Mr. JAVITS. Mr. President, for myself and Senators MCGOVERN, BROOKE, GOODELL, HART, HOLLINGS, KENNEDY, PELL, SCOTT, and SCHWEIKER, I introduce a bill entitled "The School Breakfast Act of 1970."

This bill would expand the school breakfast program by:

First, establishing the same national eligibility standards for free and reduced price breakfasts as the Congress recently enacted for the school lunch program in H.R. 515—all children at poverty level would receive free or reduced-cost breakfasts. In addition, the bill also would require that free or reduced-price breakfast be served to children from families eligible for financial assistance under Federal or State welfare programs;

Second, making the program permanent—it is due to expire at the end of fiscal year 1971 unless the authority is extended;

Third, directing all schools having a school lunch program to participate in the breakfast program after July 1, 1972, unless the Secretary determines that such participation is not possible or is not necessary to meet the nutritional needs of children in the school;

Fourth, increasing the authorization in fiscal 1971 from the current $25 million to $100 million, and to $200 million in fiscal year 1972, and such amounts as necessary for each succeeding fiscal year. Such an increase would provide a fund-

ing authorization to feed approximately 2.2 million children by fiscal year 1971 and 4 million by the end of fiscal year 1972—at present only approximately 450,000 children are receiving breakfasts and there are at least 6 million needy children in the United States;

Fifth, empowering the Government to pay the full cost of breakfast programs in the neediest schools;

Sixth, directing the Secretary of Agriculture, after consultation with the Secretary of Health, Education, and Welfare, to utilize fortified and enriched foods in the breakfast program where necessary to meet known nutritional deficiencies of children.

Seventh, requiring schools to report to State education agencies each month the average number of recipients of free and reduced-cost breakfasts during the immediately preceding month as well as provide twice a year estimates of the number of children eligible for free or reduced-cost breakfasts; and require State education agencies to report to the Secretary of Agriculture each month the average number of children who received free and reduced-cost breakfasts during the immediately preceding month in the State as well as require a statewide estimate twice a year of the number of children eligible for free or reduced-cost breakfasts—same reporting as in recently enacted school lunch bill, H.R. 515.

Eighth, directing the Secretary of Agriculture, in consultation with the Secretary of Health, Education, and Welfare and Director of the Office of Economic Opportunity, to conduct nutrition education programs utilizing mass media and audiovisual systems.

The President recently signed into law Public Law 91–248 which greatly expands the school lunch program and requires that all needy children shall receive free or reduced-price lunches. This law will go a long way toward fulfilling the President's commitment to feed 6.6 million needy children free or reduced-price meals by the end of this year.

However, I believe that we must not stop with expansion of the lunch program alone; we must continue with significant expansion of our school breakfast program, as well. A lunch alone is not sufficient for the poor child who in many instances has no breakfast at home and must go from dinner in the evening until lunch at school before he has a nourishing meal. This 18-hour timespan is unsatisfactory, even for an adult.

We must not tell the hungry child he must wait until lunch. He cannot learn, cannot be responsive, and is often apathetic when he is hungry. Also, he may often be disruptive in the classroom and classified as a "problem child" when the only problem is an empty stomach.

Therefore, I believe it is essential that both breakfast and lunch be provided to needy children. Preliminary findings of studies currently being conducted at the Tulane University Medical School in New Orleans suggest that feeding both breakfast and lunch to children provides benefits and yields responsiveness in the classroom to a significantly higher degree than does either meal alone.

It is my belief that just providing one meal to the needy child serves only as a "holding action" and only sustains him without any significant gains and improvements. We cannot hope to correct any problems of nutritional deficiencies in children as pointed out so vividly in the National Nutrition Survey by providing only a lunch—that is, only five meals a week instead of a possible and necessary 10. We must do all that we can to see that needy children get what is necessary to better their nutritional status and thereby improve their capability as students and future citizens. We are only deluding ourselves if we continuously provide funds for education when malnutrition remains a constant impediment to the successful use of those funds for improving the education of poor children. We must concurrently provide funds and programs to eliminate the crippling and devastating problem of hunger and malnutrition. This bill will go a long way toward meeting that objective so that our most precious resource—our children—will be guaranteed at least a firm nutritional foundation on which to make of themselves whatever their ambition, character, and vision will allow.

Mr. President, I feel that expansion of the school breakfast program is the next essential step in the fight against hunger in America which has seen so many advances during the past year.

I see the distinguished Senator from South Dakota (Mr. McGOVERN) in the Chamber. As chairman of the Select Committee on Nutriton and Human Needs, on which I serve as the ranking minority member, he is to be commended for his many outstanding efforts to eliminate hunger from our Nation and I am pleased that he is a cosponsor of this bill.

Mr. President, I ask unanimous consent to have the bill printed in the RECORD and I hope very much that it will have early sympathetic consideration by the Senate.

The PRESIDING OFFICER (Mr. FANNIN). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4104) to amend the Child Nutrition Act of 1966 to strengthen and improve the school breakfast program for children carried out under such act, and for other purposes, introduced by Mr. JAVITS (for himself and other Senators), was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

S. 4104

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "School Breakfast Act of 1970".

SCHOOL BREAKFAST PROGRAM AMENDMENTS

SEC. 2. Section 4 of the Child Nutrition Act of 1966 is amended to read as follows:

"SCHOOL BREAKFAST PROGRAM AUTHORIZATIONS

"SEC. 4. (a) There are hereby authorized to be appropriated for the fiscal year ending June 30, 1971, $100,000,000; for the fiscal year ending June 30, 1972, $200,000,000; and such sums as may be necessary in each succeeding fiscal year to enable schools to initiate, maintain, or expand nonprofit breakfast programs for school children.

"APPORTIONMENT TO STATES

"(b) The Secretary shall apportion the funds appropriated pursuant to this section for any fiscal year in accordance with the apportionment formula contained in section 11 of the National School Lunch Act, as amended.

"STATE DISBURSEMENT TO SCHOOLS

"(c) Funds apportioned and paid to any State for the purpose of this section shall be disbursed by the State educational agency to schools selected by it to assist such schools in financing all or part of the operating costs of the school breakfast program in such schools, including the cost of obtaining, preparing, and serving food. The amounts of funds that each school shall from time to time receive shall be based on the need of the school for assistance in meeting the requirements of subsection (d) concerning the service of breakfasts to children unable to pay the full cost of such breakfasts. In selecting schools for participation in the program, the State educational agency shall give first consideration to those schools with high numbers of children from low-income families and to those schools to which a substantial proportion of the children enrolled must travel long distances daily.

"NUTRITIONAL AND OTHER PROGRAM REQUIREMENTS

"(d) Breakfasts served by schools participating in the school breakfast program under this section shall consist of a combination of foods and shall meet minimum nutritional requirements prescribed by the Secretary, after consultation with the Secretary of Health, Education, and Welfare, on the basis of tested nutritional research. Such breakfasts shall also include such enriched and fortified foods as the Secretary determines, after consultation with the Secretary of Health, Education, and Welfare, appropriate to meet known nutritional deficiencies of the children receiving such breakfasts, without regard to whether such foods are in surplus supply. Such breakfasts shall be served without cost or at a reduced cost only to children who are determined by local school authorities to be unable to pay the full costs of the breakfast. Such determination shall be made by local school authorities in accordance with a publicly announced policy and plan applied equitably on the basis of criteria which, as a minimum, shall include the level of family income, including welfare grants the number in the family unit, and the number of children in the family unit attending school or service institutions; but by January 1, 1971, any child who is a member of a household which either (1) has an annual income not above the applicable family size income level set forth in the income poverty guidelines, or (2) is eligible for financial assistance under a Federal or State public welfare assistance program shall be served meals free or at a reduced cost. The income poverty guidelines to be used for any fiscal year shall be those prescribed by the Secretary as of July 1 of such year. In providing meals free or at reduced cost to needy children, first priority shall be given to providing free meals to the neediest children. Determination with respect to the annual income of any household shall be made solely on the basis of an affidavit executed in such form as the Secretary may prescribe by an adult member of such household.

"NONPROFIT PRIVATE SCHOOLS

"(e) The withholding of funds for and disbursement to nonprofit private schools will be effected in accordance with section 10 of the National School Lunch Act, as amended, exclusive of the matching provisions thereof.

"BREAKFAST PROGRAM PARTICIPATION

"(f) After July 1, 1972, any school participating in the school lunch program under the National School Lunch Act shall be required to participate in the school breakfast program provided for under this Act unless the Secretary determines that the participation of such school in the school breakfast program is not possible or is not necessary in order to meet the nutritional needs of the children attending such school.

"REPORTS

"(g) (1) Each school participating in the school breakfast program under this Act shall report each month to its State educational agency the average number of children in the school who received free breakfasts and the average number of children who received reduced price breakfasts during the immediately preceding month. Each participating school shall provide an estimate, as of October 1 and March 1 of each year, of the number of children who are eligible for a free or reduced price breakfast.

"(2) The State educational agency of each State shall report to the Secretary each month the average number of children in the State who received free breakfasts and the average number of children in the State who received reduced price breakfasts during the immediately preceding month. Each State educational agency shall provide an estimate as of October 1 and March 1 of each year, of the number of children who are eligible for a free or reduced price breakfast."

NUTRITION EDUCATION PROGRAMS

SEC. 3. The Secretary of Agriculture, in consultation with the Secretary of Health, Education, and Welfare and the Director of the Office of Economic Opportunity, shall conduct programs of nutrition education by mass media and audio visual systems. There is hereby authorized to be appropriated for the conduct of such program $2,500,000 for the year ending June 30, 1971, and such amounts as may be necesary for each succeeding fiscal year.

S. 4105—INTRODUCTION OF A BILL TO AMEND THE FEDERAL WATER POLLUTION CONTROL ACT

Mr. MAGNUSON. Mr. President, I introduce, for appropriate reference, a bill which would amend the Federal Water Pollution Control Act.

This year, Congress is considering the most far-reaching amendments to the Federal Water Pollution Control Act since the Water Quality Act of 1965 and the Clean Water Restoration Act of 1966. On April 28, I appeared before the Subcommittee on Air and Water Pollution and described the progress that Metropolitan Seattle has been able to make in improving water quality. The results from a plan approved in 1958 have been dramatic, but Seattle, like every other major metropolitan area in this country, has a long, long way to go to achieve and maintain consistently high water quality standards. To achieve this goal a number of significant improvements will have to be made in the statutory base underlying our water pollution control programs. Among these will be "contract authority" or some similar precommitment technique which will permit and encourage planning for the use of funds over a period of several years. This will provide a much sounder and more efficient approach for our metropolitan areas. There will have to be, also, more money. Fiscal 1971 is the last year of the 5-year program approved by Congress in 1966 and an appropriation of $1.25 billion is authorized. The full authorized amount must be appropriated and at the same time we must legislatively lay new goals for the next several years.

The first section of the bill introduced today is the authorization section for funding of the Federal assistance for the construction of municipal waste treatment facilities. The range of proposals pending before the subcommittee at the moment is from the administration's 4-year $1 billion program—for a total of $4 billion in Federal funds—to Senator MUSKIE's proposal in S. 3687 for a 5-year $2.5 billion program—for a total of $12.5 billion in Federal funds. Last year the Senate voted to appropriate $1 billion for waste treatment facilities. This figure finally had to be compromised with the House at $800 million.

This year, fiscal 1971, an appropriation of $1.25 billion is authorized. It is clear to me, and I think to each one of us who has followed the fight against pollution that we must appropriate the full $1.25 billion. At the same time, in all future years we must meet, if not exceed, $1.25 billion annually. It is my judgment that Senator MUSKIE's proposed figure of $2.5 billion is realistic, but I left the figure open in my proposal so that I would have a chance to more carefully review other alternatives that will be before the committee and which will be presented shortly to the Senate.

My testimony on April 28 before the subcommittee was also for the purpose of introducing Mr. C. V. "Tom" Gibbs, executive director of the municipality of Metropolitan Seattle and chairman of the Steering Committee of the Association of Metropolitan Sewerage Agencies—AMSA. Mr. Gibbs' very excellent statement proposed two major changes in the Federal Water Pollution Control Act.

The first of these is an amendment to subsection (f) of section 8 of the Federal Water Pollution Control Act. It would authorize a special 20 percent incentive grant for new construction of pollution abatement works by any municipality which has built sewerage projects since 1956 that qualified for Federal assistance at the time they were built but did not in fact receive the 30 percent Federal grant then authorized. The total of these incentive grants for new construction would be limited to the total amount of Federal grants for which such municipalities were short-changed over the period since 1956.

There is, of course, something basically unfair about penalizing those communities—for the most part large metropolitan areas requiring tremendous expenditures—which responded at an early stage to their local community needs and the concept underlying the Federal supporting program. Those communities did not receive the full Federal incentive grants due them under the program; this was not because of any failure on their part but, rather, because of the lack of full funding for the authorized program and the additional dollar ceiling imposed on all projects grants—an obvious discrimination against the major metropolitan areas. Those cities which have, therefore, committed their resources and in effect mortgaged their bonding and financing ability for the future in order to initiate a program of water pollution control should, in my view, be given an opportunity to continue their efforts on the same scale available for those communities which did not respond and which did not take the initiative under the early Federal programs. Such a provision would not be supportable—and it certainly would not be incorporated in the bill that I introduce today—if the proposed incentive grants were to be paid into the general funds of the community. But, under the amendment that I proposed, the incentive grants would redress the discrimination and the past failure to fund the program adequately for facilitating the future construction of authorized facilities. Under the proposed amendment, the supplemental grant could not exceed 20 percent of any new project.

Cutoff dates always create difficulties; but where, as here, participants in a Federal program have been discriminated against through no fault of their own, I think it is imperative that we find a fair, equitable, and constructive way of redressing the situation. The amendment suggested by the Association of Metropolitan Sewerage Agencies and incorporated in my bill provides a proper way of doing so.

The second change is an amendment to subsection (c) of section 23 and would permit Federal funding of projects directed toward the solution of the combined sewer problem. Large cities will only be able to deal effectively with the problem of raw sewage overflows if they can either separate the combined flows of sanitary and storm sewers so that all of the sanitary sewage can flow to treatment plants, or provide for storage of heavy combined sewer flows during rain storms which can then be spread out for orderly delivery to disposal plants.

Recent research by AMSA indicates that 27 large metropolitan complexes—most of which exceed 500,000 in population—in the United States need almost $11.7 billion in the next 10 years for waste treatment works alone. These same 27 metropolitan areas serve 32 percent of the Nation's sewered population and have performed 24 percent of the Nation's pollution control work. Unfortunately, as of last September they had received only 6 percent of the Federal funds distributed for that type of work. Another fact included in the AMSA statement is that from 1956 to 1969, municipalities of over 250,000 population, which contain more than 35 percent of the sewered population of the United States, received less than 8 percent of all Federal grant dollars for waste treatment. During the same period, cities under 50,000 population, with less than 35 percent of the sewered population of the United States, received more than 70 percent of all Federal waste treatment dollars. It is clear that a game of catch-up has to be played by the Federal Government to enable large metropolitan areas to clean up some of the Nation's dirtiest waters. The bill introduced to-

day, along with prompt funding and wise administration, will go a long way toward effective corrective action.

Finally, Mr. President, a word about two important matters which are currently being considered by the Department of Interior, Federal Water Quality Administration, and the Subcommittee on Air and Water Pollution. Mr. Gibbs, on behalf of AMSA, testified in support of river basin planning and a charge to waste dischargers for the cost of pollution abatement. These are important concepts and one which I hope the committee and the Senate will be able to give the administration guidance on handling. It is my judgment that a payment in proportion to pollution would rationalize our pricing structure and improve the efficiency of many operations. Sewer service charges, it seems to me, can make two major contributions: First, sewerage charges are capable of raising substantial funds; and, second, sewerage charges based on the volume of waste delivered will discourage the amount of waste production.

The concept of river basin planning integrates pollution control and abatement plans into a much broader perspective and will help identify priorities and include such necessary dimensions as the political, social, and economic realities of a broader area.

S. 3687, introduced by Senator MUSKIE and four of his colleagues from the subcommittee, establishes an incentive program which will encourage the development of river basin planning and the utilization of user charges. This is an appropriate means of achieving these goals.

Mr. President, AMSA's testimony helps redirect much of our energies and resources to the major metropolitan areas, which is where the problem of water quality really has to be fought and won. It is my privilege to have worked with them in developing this legislative program and to introduce it today. I urge all my colleagues to consider this measure carefully and specifically urge the Public Works Committee to include in its overall program the two major proposals envisioned by this measure.

One final word: Senator MUSKIE, Senator COOPER, and their colleagues on the Air and Water Pollution Subcommittee are to be congratulated on the comprehensive and thorough job they are doing. Controlling water pollution and improving water quality involves difficult decisions based on complex and sometimes conflicting values. It takes time and extensive homework to sort through the facts, issues, and priorities involved in achieving high water quality. The subcommittee has given this kind of time and done this kind of work and deserves the gratitude of all of us.

The PRESIDING OFFICER (Mr. SAXBE). The bill will be received and appropriately referred.

The bill (S. 4105) to amend the Federal Water Pollution Control Act in order to authorize the Secretary of the Interior to incur obligations for construction grants under section 8 of such act, and for other purposes, introduced by Mr. MAGNUSON, was received, read twice by its title, and referred to the Committee on Public Works.

S. 4106—INTRODUCTION OF THE NATIONAL HEALTH SERVICE CORPS ACT OF 1970

Mr. MAGNUSON. Mr. President, my distinguished junior colleague from the State of Washington (Mr. JACKSON) and I introduce today the National Health Service Corps Act of 1970, on behalf of ourselves, the Senator from California (Mr. CRANSTON), the Senator from Iowa (Mr. HUGHES), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Wisconsin (Mr. NELSON), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from New Jersey (Mr. WILLIAMS). Companion legislation is being introduced simultaneously in the House of Representatives by the gentleman from Florida (Mr. ROGERS) and several cosponsors, including the gentleman from Washington (Mr. ADAMS).

This legislation will establish a National Health Service Corps within the Public Health Service, in order to improve the delivery of health services to areas of urban and rural poverty where health services are now inadequate. The Corps will be comprised of selected commissioned officers of the Public Health Service and of other health professionals under civil service. Supervision of the Corps' activity will be provided by a Director, to be nominated by the President with the advice and consent of the Senate. Assisting the Director will be a National Advisory Council of 12 members. Council members will include Federal health officials, private citizens, members of the Corps itself, and recipients of health services provided by the Corps. A complete analysis of the structure and functions of the Corps will appear later in my remarks.

Mr. President, the National Health Service Corps Act is an important piece of legislation for many reasons. In offering it, Senator JACKSON and I have three basic purposes in mind. First, we want to increase the quantity and quality of health services in those areas of the country, and among those segments of the population, that need such services the most. Second, we want to revitalize the Public Health Service generally and the commissioned corps specifically by providing them with a mission to match their proud tradition. Finally, we hope in offering the National Health Service Corps Act to provide a framework within which the idealism and social commitment of our young health professionals and medical school students can be put to work, serving the most disadvantaged people in the Nation.

In introducing this legislation, I will comment individually on these three purposes, and then proceed to an analysis of the legislation itself.

I. THE DISTRIBUTION OF MEDICAL MANPOWER IN THE UNITED STATES

Mr. President, anyone who is even remotely familiar with health care programs and services here in the United States recognizes that we are in the midst of a severe manpower shortage in the health professions. The first aspect of this manpower shortage is an absolute shortage in the number of trained doctors, dentists, nurses, and other health professionals. The Appropriations Subcommittee on the Departments of Labor and Health, Education, and Welfare, of which I am chairman, has listened to the staggering statistics of this absolute shortage during our hearings over the past month. The subcommittee, the full Appropriations Committee, and the Senate as a whole will act, I hope, to provide a level of funding for the current fiscal year that will help to alleviate this shortage.

But the manpower shortage among health professionals has another facet, one that cannot be solved simply by increasing our appropriations for existing programs. This second facet involves the maldistribution of the health professionals that we do have. Physicians, dentists, and all other forms of medical personnel simply are not distributed in relation to the health needs of the United States. And so, while the Nation as a whole faces a doctor shortage, the shortages in areas of urban and rural poverty are particularly acute.

It is virtually impossible for poor communities to attract and retain sufficient health professionals to meet even their most basic health needs. Senator JACKSON and I have seen this over and over again in our home State of Washington, where isolated rural communities and the core areas of our larger cities simply do not receive a level of health care that most middle-class individuals would consider adequate. The causes of this maldistribution are no mystery—poorer communities have few attractive features for a young doctor or dentist with a family to raise—yet the consequences of inadequate health care in these communities are physically, socially, and economically crippling to our poorer citizens, and shameful for our Nation as a whole.

Many health problems that would appear routine or even trivial in more affluent communities become serious or near-fatal in those areas where access to health care is severely restricted. The diseases of poverty—high infant mortality, short life expectancies, malnutrition, anemia, and so on—are exacerbated greatly when they go untreated, and contribute substantially to the vicious circle of poverty and low economic productivity.

The National Health Service Corps will not eliminate these diseases, nor will it solve completely the massive problem of maldistribution in the health professions. At the level of funding provided in this act—about $5 million—fewer than a dozen communities across the Nation will receive care from Corps members. But this pilot project phase, if it proves successful in more adequately meeting the health needs of the poor, can be expanded easily simply by increasing the authorization provided in this act and the appropriations to match.

What the Corps will do is provide substantial infusions of medical manpower in areas with ongoing federally funded

health care programs. In some instances, the Secretary of Health, Education, and Welfare may choose to deploy Corps personnel in areas without existing health care programs, and authority is provided in the act to meet this eventuality. At this stage, however, and at this level of funding, the purpose of the act will be to demonstrate that the health care needs of the poor can be substantially met through a redistribution of health manpower.

A long-range solution to the maldistribution of health professionals will require more than a Federal program of this type, of course, and it is our hope in offering this legislation that doctors, dentists, nurses, and other health professionals who serve in the Corps will wish to continue practicing in poverty areas after their tour of duty with the Corps has been completed. One of the factors to be taken into account in assigning Corps members, in fact, will be the prospects for continued service to the community after completion of the 25 to 50 month term of service in the Corps.

The National Health Service Corps thus will help meet the problem of maldistribution of health professionals in two ways: First, it will provide an infusion of health personnel into Federal health care programs in physician-deficient areas, and second, it will provide a program whereby health professionals can serve for a time in poverty areas and determine whether or not continued service in such areas would be worthwhile as a career.

II. REVITALIZING THE PUBLIC HEALTH SERVICE AND THE COMMISSIONED OFFICER CORPS

The National Health Service Corps established in this act is to be set up within the Public Health Service. The health professionals in the Corps will be drawn primarily from the commissioned officer corps of the Public Health Service. These two facts make the Corps, even at this pilot project level of funding, an extremely significant development for both the Public Health Service and the commissioned corps.

The Public Health Service and the commissioned corps have a long and proud tradition. Founded in 1873—for the purpose of protecting our seaports from importation of communicable disease—they have undergone many protean changes during their century of existence. The Public Health Service and the commissioned corps currently do not provide direct health services except to special population groups—American Indians, merchant seamen and the Coast Guard, and Federal prisoners. These programs are worthy ones, but being limited to such programs makes the direct health care services of the Public Health Service relatively minor in comparison with the other health care programs in which the Federal Government has become involved.

Technically, of course, the Public Health Service and the Surgeon General are charged with the responsibility for administering the National Institutes of Health—NIH—the Food and Drug Administration—FDA—and the Environmental Health Service—EHS. I use the word "technically" because the de facto control of these organizations, insofar as there is centralized control and direction of their activities, lies with the Assistant Secretary of HEW for Health and Scientific Affairs. As a result, there is a great deal of confusion about what the Public Health Service is, what it is doing, what it could be doing, and why it continues in existence at all.

These doubts surrounding the role and functions of the Public Health Service have contributed substantially to a lowering of morale within the commissioned corps. Proposals have been made, from time to time, to abolish the commissioned corps entirely or to transfer its functions to other, more logical, agencies. At the present time, most commissioned corps members who do not work in the direct health services programs for Indians, seamen or prisoners spend their tour of duty in the corps performing research or administrative tasks. This conflicts with the desire of many commissioned officers to be active in providing health care commensurate with their training and interests.

The sponsors of this legislation do not believe that the commissioned corps and the Public Health Service should be allowed to wither on the vine. Neither do we feel that we can afford to wait until one study after another is undertaken to determine the future of the commissioned corps and the PHS. We feel, rather, that the commissioned corps and the PHS should be rejuvenated by assuming new responsibilities in keeping with their abilities and their proud traditions.

There is a unique camaraderie and feeling of mission among the commissioned corps that sets it aside from regular civil service. Even if this spirit is currently at a low ebb, there is ample reason—and more than ample need—to energize the commissioned corps and the PHS once again and to take advantage of these unique characteristics. This spirit should be redirected toward meeting the most challenging health problems of this Nation, not dissipated during this period of great social need.

The National Health Service Corps will not displace the other functions of the PHS, nor will it absorb an inordinate number of PHS personnel, at least during this experimental phase. But it will provide an additional mission, that of providing health care directly to those segments of the population who need it most and who are being inadequately served today. This challenging new mission can raise the morale of the commissioned corps and the PHS at the same time it benefits the people of this Nation.

III. THE NATIONAL HEALTH SERVICE CORPS AND THE "NEW" GENERATION OF HEALTH PROFESSIONALS

The National Health Service Corps has a third purpose, and that is the utilization of the idealism and social commitment that characterize so many of our young health professionals and medical school students. I have met and talked with literally dozens of these fine young men and women, as I know the other sponsors of this legislation have. Like so many other young adults with fine minds and excellent training, they are less than enthusiastic about the opportunities for social service within the established institutions of their profession. They desire instead to serve the poor, the hungry, and the needy who simply are not receiving adequate health care today, and they are wiling to sacrifice more lucrative opportunities in order to perform this service.

The National Health Service Corps will provide a framework within which these men and women can achieve the service to society that they seek. It is upon the social commitment of these young men and women, in fact, that we will be relying to produce the personnel the Corps will need. Knowing that service in the Corps is an opportunity available to them should raise the morale of these health professionals during the time they are in their professional schools as well.

Ultimately, if the Corps proves to be a successful concept in improving the delivery of health care, it is not too much to anticipate that the experiences of the Corps will be drawn upon in the evaluation and planning of both Government and nongovernmental health care programs. In this sense, the young men and women who enter the Corps will know that their performance is important for the future of health care in the United States. The knowledge that they may be aiding in the redirection of Federal and private health efforts, combined with the satisfaction of actually serving those in greatest need, will be the prime reward for Corps members and the prime incentive for those who wish to serve in the Corps.

IV. ANALYSIS OF SECTIONS OF THE NATIONAL HEALTH SERVICE CORPS ACT

In drafting the National Health Service Corps Act, an attempt has been made to allow the Department of HEW some discretion and flexibility in administering the Corps. Passage of the act should provide the Department with an opportunity as well as a directive, and its experimental nature necessitates a somewhat broad piece of legislation. The reasoning behind some of the sections of the act may not be clear on first reading, so I would like to take this opportunity to clarify exactly what we had in mind in drafting the act.

Section 399h establishes the Corps within the Public Health Service—for reasons outlined in part II of my remarks—and defines the mission of the Corps, "to improve the delivery of health services to persons living in communities or areas of the United States where health personnel, facilities, and services are inadequate to meet the health needs of the residents of such communities and areas." The same section further states that priority shall be given to those urban and rural areas where poverty conditions exist. As I explained above, poverty and physician deficiency tend to go hand in hand in such areas.

Section 399i deals with the staffing of the Corps. As I noted earlier, the Corps will be composed of both commissioned officers of the Public Health Service and other civil service personnel. All Corps members will serve for a period of 25 months, with the option of extending their tours of duty for a period not to exceed another 25 months. The purpose of having a 25-month tour of duty is to allow a 1-month transition period within which incoming personnel can work with

outgoing personnel in order to facilitate a continuity in patient care and other duties. For those members of the Corps who wish to follow their tour of duty with more schooling, this section provides the right to petition for release from the Corps at the end of 24 months. The purpose of not allowing Corps members to serve more than 50 months is to provide an incentive to Corps personnel and to the agencies or communities within which they serve to find positions outside the Corps that will allow them to continue serving the poor. Part of the purpose for the Corps itself, after all, is to encourage health professionals to locate permanently in areas with inadequate health care. We assume that a Corps member may serve in more than one community during a 50-month tour of duty, but that by the end of that period both the Corps member and a community within which he has served should be in a position to determine whether or not the individual is willing and able to undertake a long-range commitment to a needy community.

Section 399j provides that the Director of the Corps shall be appointed by the President, subject to the advice and consent of the Senate. Establishing the Corps under a Director will give the Corps a stature similar to other Federal health agencies, and will serve to emphasize the importance that Congress attaches to this program even in its pilot project phase.

Section 399k establishes the manner in which Corps personnel may be utilized. Under part 1 of this section, Corps members may be used to supplement manpower in ongoing direct health care programs of the Public Health Service, meaning all programs within the Department of Health, Education, and Welfare. Part 2 specifies that Corps personnel may also be used in any direct health care program of other Government agencies, such as the Office of Economic Opportunity's programs or those of the Department of Housing and Urban Development, or direct health care programs whose costs are underwritten by Federal funds. The practical effect of these two parts is to allow the Secretary to deploy Corps personnel to any direct health care program that is ongoing and funded, in whole or in part, from the Federal Treasury.

Part 3 of section 399k authorizes the Secretary to utilize Corps personnel "in any other health care activity, in furtherance of the purposes of this act." The purpose of this part is to allow the establishment of health care programs where none presently exist, should this be something that the Director of the Corps and the Council feel to be of value. The applicability of this section would undoubtedly arise in rural areas where no federally funded program currently provides health services, yet where the Director and Council feel a pilot project would be useful. This part provides that the Secretary will establish some fee-for-service mechanism in the event a project is established under this part, such revenues as may be collected being used to partially defray the cost of the Corps operations. Under the other two parts of this section, no fees will be collected by the Corps, as Corps members will be serving in programs with fee mechanisms of their own. Insofar as the activities of Corps members under these two parts may contribute to more fees being paid into the program within which they are serving, such fees will continue to be paid into the general revenue of those programs. The purpose of the Corps is to provide health services, not to collect fees, but under each of these parts a built-in precaution exists against the diversion of fees that might otherwise go to private practitioners.

Section 399 establishes the National Health Corps Advisory Council. The composition of this 12-member Council is, in my opinion, one of the most exciting features of this legislation. Not only will the Council have three HEW officials and three private citizens, but it will also include three members of the Corps itself and three recipients of health care services provided by the Corps. This will insure the representation, at the highest level of decisionmaking, of both those individuals who serve in the Corps and those individuals who will be served by it. In addition, the Secretary conceivably might choose to appoint some or all of the private citizens from the ranks of the poor. As I will mention in a moment, this mechanism insures a double representation of the poor, both on the Council and on the 314(b) planning agency whose recommendations will be taken into account in assigning Corps personnel.

Subsection (b) of section 399 provides that members of the Council shall serve for 3 years, shall be eligible for reappointment, and shall not be removed except for cause.

Subsection (c) outlines the functions of the Council. These include the establishment of guidelines with respect to utilization of the Corps, and the directive to advise and consult with the Director generally concerning the operation of the Corps. The Council may also assist the Surgeon General in the selection of Corps personnel, and will be responsible for approving all assignments of Corps personnel.

Under this same subsection, the Council is assigned the responsibility of establishing criteria to determine which areas or communities are to receive assistance from the Corps. In establishing such criteria, the act directs the Council to take into account at least five factors. The first of these factors is the community's need for health services. The second is the willingness of the community—including the program within which the Corps will serve—to assist and cooperate with the Corps and its mission; this provision will insure that administrative restrictions—such as hospital visiting privileges—from various sources in the community will not impede the Corps' operations. A third factor to be taken into account in establishing criteria for utilization of the Corps is the prospect for utilizing Corps personnel within a community after their tours of duty are complete. This is necessary to provide an incentive for the community, and the program within which the Corps member may serve, to facilitate the retention in the community of those Corps personnel who may desire to continue serving the community following completion of their tour of duty. The knowledge that assignment of Corps personnel to the program and the community in the future may hinge in part on the postservice opportunities provided for Corps personnel who have served the community in the past should encourage communities who desire Corps assistance to take positive steps toward finding permanent positions for Corps members.

A fourth factor in establishing these guidelines will be the recommendations of the 314(b) comprehensive health planning agency responsible for the area or community under consideration. These agencies not only have responsibility for the planning of health programs within their areas of jurisdiction, but through their heavy representation of poor people, insure that all health programs are consistent with the needs of those who are to receive services from them.

Finally, the recommendations of all medical personnel in the community or area under consideration for assignment of Corps personnel will also be taken into account. This insures that private practioners, State medical societies, and other relevant organizations and individuals will not be ignored in the making of decisions affecting utilization of the Corps.

Section 399m (a) waives the manpower ceilings on both the commissioned corps and the Department of HEW, to the extent that the number of individuals in the Corps exceeds either of these ceilings. Section 399m (b) waives the restriction on the utilization of Public Health Service facilities and personnel for the provision of direct health care, provided the waiver is exercised only for Corps activities. This provision will allow the use of Public Health Service hospital facilities for pilot projects, if the Director and Council wish to do so. The subsection also provides that the Corps may lease or purchase facilities in order to provide health care; this is to allow some flexibility in the event that the Council approves assignment of Corps personnel to a program or community whose facilities would be unable to accommodate the personnel assigned.

Finally, section 399n authorizes the appropriation of $5,000,000 annually to carry out the purposes of this act. This sum might be spent to provide, for example, for 75 commissioned officers and 150 civil service personnel within the Corps—at a cost of $3.8 to $4 million—and for some minor leasing arrangement with respect to facilities and supplies. This sum is hardly sufficient to effect any sweeping changes in the health of our Nation's poor, but if spent judiciously, could provide sufficient care in selected pilot project areas to allow some determination as to the feasibility and desirability of the National Health Service Corps concept.

V. CONCLUSION

The purposes of the National Health Service Corps, and the manner in which it will function, have now been described in some detail. Further explanations will be forthcoming from other sponsors of this legislation here and in the House of Representatives.

In closing, I wish to make an appeal for the objective and openminded consideration of this legislation both within Congress and beyond. At first reading, some individuals or groups may perceive in this legislation a threat to established institutions or a barrier to future innovations. Closer inspection of the bill and its provisions will reveal that nothing of the sort is intended or contained within it. The National Health Service Corps is, frankly, an experimental concept, and one that may lead to many different conclusions about the nature of health care in the future. In and of itself, however, the National Health Service Corps is not incompatible with any current or potential national policy on the delivery of health care; it is not a threat to the manpower needs of the Department of Defense; it will not hamper, nor be hampered by, abolition of the doctor draft or the introduction of national health insurance. The National Health Service Corps is not an attempt to structure the health policies of the U.S. Government, nor need it be subjected to a public-against-private debate that inevitably occurs whenever innovations in health care are suggested. Its only purpose is to serve the health needs of the poor, and to provide us with a body of knowledge from which we may find more effective ways to serve those needs on a major scale in the future.

Let us not judge the Corps in advance. Let us create it, fund it, and observe its performance. Then let us draw our independent conclusions about its value and what it tells us about the future. At the very worst, by creating the Corps and setting it in operation we will have provided some health care to those who need it most, and we will have demonstrated to the poor that we truly are concerned about improving their condition. And if the Corps should fare better than this—as I hope and believe it will—its creation will have been a major step in meeting the crisis in health care that we face as a Nation today.

Mr. President, I ask unanimous consent that the complete text of the National Health Service Corps Act be printed in full at the conclusion of my remarks.

The PRESIDING OFFICER (Mr. SAXBE). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4106) to amend the Public Health Service Act in order to provide for the establishment of a National Health Service Corps, introduced by Mr. MAGNUSON (for himself and other Senators), was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

S. 4106

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Health Service Corps Act of 1970".

SEC. 2. Title III of the Public Health Service Act is amended by adding at the end thereof a new part as follows:

"Part J—NATIONAL HEALTH SERVICE CORPS

"ESTABLISHMENT OF NATIONAL HEALTH SERVICE CORPS; FUNCTIONS

"SEC. 399h. (a) There is established in the Service a National Health Service Corps (hereinafter in this part referred to as the 'Corps') which shall be under the direction and supervision of the Surgeon General.

"(b) It shall be the function of the Corps to improve the delivery of health services to persons living in communities and areas of the United States where health personnel, facilities, and services are inadequate to meet the health needs of the residents of such communities and areas. Priority under this part shall be given to those urban and rural areas of the United States where poverty conditions exist and the health facilities are inadequate to meet the needs of the persons living in such areas.

"STAFFING; TERM OF SERVICE

"SEC. 3991. (a) The Surgeon General shall assign selected commissioned officers of the Service and such other personnel as may be necessary to staff the Corps and to carry out the functions of the Corps under this part.

"(b) Commissioned officers of the Service in the Corps, and other Corps personnel shall be detailed for service in the Corps for a period of 25 months. An individual detailed to the Corps may voluntarily extend his service in the Corps for a period not to exceed an additional 25 months. An individual shall have the right to petition the Director (appointed pursuant to section 399j of this part) for early release from service in the Corps at the end of 24 months of service therein.

"DIRECTOR OF THE NATIONAL HEALTH SERVICE CORPS

"SEC. 399j. The Corps shall be headed by a Director who shall be appointed by the President, by and with the advice and consent of the Senate. It shall be the responsibility of the Director to direct the operations of the Corps, subject to the supervision and control of the Surgeon General.

"AUTHORITY OF SECRETARY TO UTILIZE CORPS PERSONNEL

"SEC. 399k. The Secretary is authorized, whenever he deems such action appropriate, to utilize commissioned officers of the Service and other personnel detailed to duty with the Corps to—

"(1) perform services in connection with direct health care programs carried out by the Service;

"(2) perform services in connection with any direct health care program carried out in whole or in part with the Department of Health, Education, and Welfare funds or the funds of any other department or agency of the Federal Government; or

"(3) perform services in connection with any other health care activity, in furtherance of the purposes of this act. Should services provided under this subsection require the establishment of health care programs not otherwise authorized by law, the Secretary is authorized and directed to establish mechanisms whereby recipients of such services shall pay, to the extent practicable, for services received. Any funds collected in this manner shall be used to defray in part the operating expenses of the Corps.

"NATIONAL HEALTH CORPS ADVISORY COUNCIL

"SEC. 3991. (a) There is established a council to be known as the National Health Corps Advisory Council (hereinafter in this section referred to as the 'Council'). The Council shall be composed of twelve members appointed as follows:

"(1) three members from the Department of Health, Education, and Welfare, serving outside the Corps, to be appointed by the Secretary;

"(2) three members appointed by the Secretary from private life;

"(3) three members detailed to duty with the Corps, at least two of whom shall be commissioned officers of the Service, to be appointed by the Secretary; and

"(4) three persons who have received more than minimal health care services from the Corps, to be appointed by the Secretary after the Corps has been in operation for a period of at least 120 days and to be appointed from geographically dispersed areas to the extent practicable.

"(b) Members of the Council shall be appointed for a term of three years and shall not be removed, except for cause. Members may be reappointed to the Council.

"(c) It shall be the function of the Council—

"(1) to establish guidelines with respect to how the Corps shall be utilized and to consult with and advise the Director generally regarding the operation of the Corps;

"(2) to assist the Surgeon General, at his request, in the selection of commissioned officers of the Service and other personnel for assignment to the Corps, and to approve all assignments of Corps members;

"(3) to establish criteria for determining which communities or areas will receive assistance from the Corps, taking into consideration—

"(A) the need of any community or area for health services provided under this part;

"(B) the willingness of the community or area and the appropriate governmental agencies therein to assist and cooperate with the Corps in providing effective health services to residents of the community or area;

"(C) the prospects of the community or area for utilizing Corps personnel after their tour of duty with the Corps;

"(D) the recommendations of any agency or organization which may be responsible for the development, under section 314(b), of a comprehensive plan covering all or any part of the area or community involved; and

"(E) recommendations from the medical, dental, and other medical personnel of any community or area considered for assistance under this part.

"MANPOWER LIMITATION SUSPENSION

"SEC. 399m. (a) Commissioned officers of the Service detailed to service with the Corps and other personnel employed in the Corps shall not be included in determining any limitation on the number of personnel which may be employed by the Department of Health, Education, and Welfare.

"(b) Notwithstanding any other provision of law, the Corps may, to the extent the Secretary determines such action to be feasible, utilize the facilities and personnel of hospitals and other health care facilities of the Service in providing health care to individuals as authorized under this part, and to lease or purchase such other facilities as may be required to carry out the purposes of this act.

"AUTHORIZATION FOR APPROPRIATIONS

"SEC. 399n. There is authorized to be appropriated the sum of $5,000,000 annually to carry out the provisions of this part, for the fiscal years of 1971, 1972, and 1973."

Mr. JACKSON. Mr. President, I wish to commend my colleague from the State of Washington (Mr. MAGNUSON) for his explanation of the bill that he and I have jointly introduced today.

We have worked closely on this National Health Service Corps concept for months. We have discussed our ideas with officials from the Department of HEW, members of the commissioned corps of the Public Health Service, senior officers of the Service, doctors, and medical school students. We know from these discussions that there is support for our proposals.

More importantly, we know that there is a great need for our proposal—a need that is not being met today and a need that will not be met in the future unless action is taken. Senator MAGNUSON and I have seen this need, not merely in a mass of statistics, but face to face in our own State of Washington. From the small logging towns and the tiny Indian fishing communities to the crowded neighborhoods of our inner cities, we have seen the need for this legislation. Even in our relatively affluent State, we have seen vast areas with little or no health services available, and we have seen hundreds of our constituents wracked by malnutrition and the diseases of poverty.

The poor and the isolated in our State are not unique in their need for health care; similar and even worse conditions exist in nearly every county in this Nation. In every corner of the land, poverty breeds ill health and ill health perpetuates poverty. Most Americans never see the diseases of poverty—malnutrition, anemia, high infant mortality, and low life expectancies—in their immediate communities, but this low visibility cannot obscure the statistical facts.

Fifty percent of the poor children in America have never had a polio shot or any other form of vaccination to protect them against this dreaded disease.

Two-thirds of our poor children have never seen a dentist during their lifetime.

At least half of the mothers who give birth in poor or isolated areas receive no prenatal care whatsoever.

The statistics go on and on; so does the subculture of poverty in America and the ill health that attends it. Those who speak of the need to make the poor productive, of taking them off the welfare rolls and getting them on the payrolls, must realize that little or no progress can be made in this respect until the poor and the isolated are provided a decent standard of medical care.

If a child's growth is stunted, if he cannot stay awake in class or if he is constantly ill, he cannot be expected to get ahead in life, or even to keep up. If a grown man is crippled unnecessarily by a disease that could easily have been cured, he cannot earn an adequate living for his family. If a mother is overly susceptible to illness, she cannot meet the demands of raising a family. To those without an adequate standard of health care, the promise of equal opportunity is a hollow one indeed. As President Nixon has said:

> Many of the problems of the poor are the product of ill health and many have serious medical consequences. We have already begun to develop new mechanisms for helping the poor pay medical costs, but now we must further improve our methods for delivering health services (to them) . . .

The National Health Service Corps is an experimental attempt to deliver those health services to the segment of our population that need health care most desperately. The Corps will not be operating on a huge scale, nor will it solve this health care distribution problem by itself. What the Corps will do is to provide us with greater practical experience in meeting the health care needs of the poor. It is on this experience that we will have to draw in the years ahead, whether the ultimate answer lies in the governmental or private sector, or somewhere in between.

THE NATIONAL HEALTH SERVICE CORPS AND THE MEDICAL MANPOWER NEEDS OF THE DEPARTMENT OF DEFENSE

Senator MAGNUSON has described, in his remarks, the purpose and functions of the National Health Service Corps. He has stated that the Corps will not conflict with the medical manpower needs of the Department of Defense, and it is to this point that I will address the next portion of my remarks.

The Department of Defense needs a substantial number of health professionals. At the present time, for example, approximately 16,000 physicians are serving this Nation in the military. About 6,000 of the 9,000 doctors graduating from medical school each year are absorbed by the Defense Department, and most doctors are certain to serve in the military at some stage in their careers.

Even with these great needs, however, the Department of Defense has assented to, and Congress has authorized, alternative service for a limited number of health professionals. More than 700 doctors, dentists, and other health professionals satisfy their military obligation each through service in the commissioned corps of the Public Health Service. Commissioned officers of the Service serve for at least 2 years and are part of, not exempt from, the doctor draft. The functions these commissioned officers normally perform have been detailed in Senator MAGNUSON's remarks.

During the middle 1960's, the medical manpower needs of the Defense Department grew considerably on account of the war in Vietnam. Many doctors were wrenched from private practice and their growing families in order to meet this need. As one method of minimizing the disruption to the medical community caused by the war, Congress in 1967 amended the Selective Service Act to limit the assignments of commissoned officers of the Public Health Service. This amendment, section 6(a)(2) of the Selective Service Act of 1967, insured that commissioned officers would serve only in the areas of greatest need; in previous times they had been assigned a variety of posts that clearly rated less priority than service in the military or in those areas specifically designated by Congress.

The National Health Service Corps Act is consistent with both the letter and spirit of section 6(a)(2). It is also consistent with the criteria for selective service satisfaction laid down by the Acting Surgeon General in October of 1967, which stated in part that assignments satisfying military obligation in the Service must be:

> a. (. . .) located organizationally within an office or bureau of the Public Health Service . . . under its supervision, and . . . paid from Public Health Service operating funds.
>
> b. (. . . those requiring) the performance of functions which carry out a responsibility vested in the Public Health Service by law.

The National Health Service Corps meets these criteria, although the responsibility to be vested in the Public Health Service will come from this law itself.

Legally, then, the Corps is consistent with the military manpower requirements of the Department of Defense. Even more importantly, the number of health professionals within the Corps will not detract from the military's needs. Even if we ignore the fact that the military's medical manpower needs are declining and may decline more precipitously in the near future, the absolute number of commissioned officers who could be detailed to the Corps at the $5 million level of funding is approximately one-half of 1 percent of the total number of physicians in the military at the present time. Moreover, some of these officers would be ineligible for service in the military—women and those who had previously satisfied their military commitment—and others would come from a reshuffling of officers already in other service assignments. The number of health professionals serving in the Corps who might otherwise serve directly in the Department of Defense would not be more than 80 or 100 at any one time, and probably not more than 30 or 40. Since service in the Corps is for a minimum period of 25 months, the annual diversion from the military might thus be as low as 15 to 20 doctors and dentists. At a time when abolition of the doctor draft and a volunteer army are under consideration, and when proposals have been made to transfer care of military dependents to private health service facilities, these few doctors seem a small price to pay for creation of the National Health Service Corps.

CONCLUSION

The National Health Service Corps is thus consistent with, and no threat to, the medical manpower needs of the Department of Defense. As Senator MAGNUSON has pointed out, it need not be a threat to any other institution, policy, or program.

The Corps can and should be described in more positive terms, however, and this can be done quite simply. The Corps will provide health services to those in greatest need. It will represent a challenging new mission for the Public Health Service. It will offer an opportunity to those upcoming health professionals who truly desire to serve their country. If for these reasons alone, the Corps is more than worthy of congressional approval. The prospect that the Corps may teach us how to redirect our health efforts, both public and private, is an even more exciting and compelling reason for acting swiftly on this proposal.

Mr. KENNEDY. Mr. President, I am pleased to cosponsor the National Health Service Corps Act of 1970, introduced today by the distinguished Senator from Washington (Mr. MAGNUSON). As chairman of the Appropriations Subcommittee on the Departments of Labor and Health, Education, and Welfare, Senator MAGNUSON has been one of the foremost advocates of better and more adequately funded health programs in the Nation, especially in the area of health manpower. The legislation introduced today is a tribute to his leadership in the field of health, and I hope that it will receive early action by Congress.

A National Health Service Corps will be an important step forward toward alleviating what is perhaps the most serious aspect of our overall health crisis—the worsening shortage of health manpower. Indeed, at bottom, our crisis in health is essentially a crisis in manpower. The need is urgent for more physicians, more dentists, more nurses, and more allied health professional and technical workers. We must develop new types of health professionals and paraprofessionals. We must make far more efficient utilization of our existing health manpower. Only if we succeed in these efforts will we be able to free our physicians and other highly trained health experts to carry out the skills for which they have been trained. In far too many cases, highly trained physicians spend the overwhelming majority of their working day in tasks that do not require their specialized medical skills.

One of the most promising methods of easing the shortage of doctors is to train new types of health workers to perform nonspecialized tasks, thereby freeing physicians for other, more urgent needs. We must develop a broad new range of allied health professionals, such as paramedical aides, pediatric assistants, community service health officers, and family health workers.

At a number of our universities, imaginative new programs are under way to train medical corpsmen from Vietnam as physicians' assistants. In Senator MAGNUSON'S own State of Washington, for example, hospital corpsmen are being trained for 3 months in the medical school and then sent into the field for 9 months further training in the offices of private physicians. A similar program now exists at Duke University. These programs are unique in their emphasis on combined training in the classroom and in the field. They are programs that must be greatly expanded if we are to meet the urgent demand for more and better trained health manpower.

The need is especially clear in the case of the shortage of doctors. Our low physician-population ratio means that unsatisfactory medical care is a way of life for large numbers of our people in many parts of our Nation. The family doctor—the general practitioner—is fast disappearing, and is on the verge of becoming an extinct species. At the present time, only one out of four of the Nation's physicians is engaged in the general practice of medicine. Three out of four are specialists, most of whom accept patients only on a referral basis. Simply to meet the demand that exists today, it is widely known that we need 50,000 more doctors, and 150,000 more nurses.

To make matters worse, the geographic and social distribution of our doctors is highly uneven. This is the area where the National Health Service Corps will make its greatest contribution. Two-thirds of the physicians in America serve the more affluent half of our population. In some States, to be sure, the physician-population ratio is higher than the national average of 130 doctors per 100,000 population. In Washington, D.C., for example, the ratio is 318. In New York it is 199; in Massachusetts, 181.

In 16 States, however, the physician-population ratio is far below the national average. In Alaska and Mississippi, the ratio is an abysmal 69, or about one-half the national average. In Alabama, it is 75. Even in Texas, it is only 106. Clearly, therefore, extremely large groups of our population are receiving seriously inadequate medical care because of the shortage of physicians.

The problem is especially critical with respect to the health needs of our urban and rural poor. For too many of the poor, the only doctor they know is the cold and impersonal emergency ward of the municipal or county hospital. For too many of our citizens, the family physician has disappeared, to be replaced by the endless and depressing waiting rooms of hospitals built at the turn of the century.

Nowhere are the inequalities of our society more obvious than in the sickness of our poor. We know that our affluent few can buy the world's best medical care. But all too often it is care provided in modern medical towers looking out on urban landscapes condemning thousands of citizens to a lifetime of disease, under some of the worst medical care anywhere in the world.

In the United States today—the wealthiest Nation in the history of man—millions of our citizens are sick. And they are sick because they are poor. Their sickness is the shame of America. Of all the faces of poverty, the sickness of the poor is the ugliest. Of all the effects of poverty, it is the sickness of the poor that we could attack most easily, had we the will.

In areas of urban and rural proverty in the United States, medical care is available but only if one travels far enough, waits long enough, and endures the crowds, the inconvenient hours, the understaffed facilities.

The National Health Service Corps will help to solve these serious problems. I believe it is one of the most important steps we can take if we are to meet the critical need for health manpower in depressed areas. Once young Corps physicians are exposed to the problems of health care in poverty areas, I believe that a significant number of them will be encouraged to remain and dedicate their careers to this service, to the lasting benefit of the health of America.

Mr. NELSON. Mr. President, I am very pleased to sponsor this legislation establishing a National Health Service Corps with my distinguished colleagues.

Under this plan, teams of medical professionals and paraprofessionals would be sent into city and rural poverty areas to upgrade the medical care now available there.

It is loosely patterned after the National Teacher Corps program, which Senator KENNEDY and I originally proposed in 1965. It is my firm belief that this health care program is destined to meet with the same overall acceptance by professionals in the medical field as well as the people to be served as the Teacher Corps has enjoyed over the past 5 years of its operation.

Despite dramatic medical advances and the investment of billions of Federal dollars, we are on the brink of a national health crisis with thousands of families in urban ghettos and residents in poverty stricken rural areas unable to obtain adequate health and medical care.

The health resources of the Nation have been badly misallowed. Highly trained personnel and highly specialized medical equipment have been clustered in shiny new medical centers, isolated from the needs of many citizens in the inner city and rural towns.

The National Health Service Corps could substantially correct the present maldistribution of medical manpower by using local volunteers, paraprofessionals, and professionals in community clinics and other facilities serving the citizens of urban and rural regions.

Physicians serving in the program would become members of the U.S. Public Health Service as commissioned officers and would fulfill their military obligation. Nurses and other health care personnel would be recruited by the Public Health Service for assignment by the U.S. Surgeon General to serve in various areas of the country.

A National Health Corps Advisory Council, comprised of Government representatives, private citizens, and recipients of service by the Health Corps, would develop the policy governing the selection of personnel and their assignment to areas inhabited by medically needy.

In addition to projects in city ghettos, the Corps personnel could be used in health care programs serving Indians, migrant workers, Headstart children, people in model cities neighborhoods and expanded programs based in Public Health Service hospitals, neighborhoods health clinics, and community mental health clinics.

Our young doctors, nurses, and other medical personnel should be given the opportunity to share in the satisfaction of public service through participation in a National Health Corps. Their counterparts in the educational and legal professions have already displayed their social consciousness by flocking to work in the National Teacher Corps and neighborhood legal services program.

Implicit with this manpower plan is the need for expansion of neighborhood health clinics and hospital satellite centers, the development of improved means to transfer patients to facilities with better medical resources and a reassessment of priorities in government health programs.

Local community residents, trained by medical personnel in local hospitals, could be mobilized as health workers to inform their neighbors about family health practices, preventive medicine, and the accessibility of health care while others could prepare for new career positions in the health field.

Without a comprehensive revision of the organization and delivery of health and medical care, millions of citizens will continue to receive no care at all or very marginal care at best.

As medicine becomes more and more specialized, there are fewer and fewer general practioners available to serve the

routine medical needs of the public. Less than 2 percent of today's medical graduates enter general practice.

When confronted with a relatively minor ailment, such as a cold or sprained ankle which could be normally treated at a doctor's office, many city residents must travel to the emergency room of a city hospital to receive medical attention.

These noncritical cases clog the emergency facilities and become a wasteful burden on the efficiency of the hospital's operation.

While this program will improve the allocation of the medical manpower we have available in our Nation, we cannot avoid confronting the overall physical shortage problem in the United States. It seems to me that Congress should consider the establishment of a National Public Health Academy as a source of trained personnel to serve the medical and health needs of our Nation.

Such an institution could aim its efforts at recruiting promising students from low-income families, who would be mostly likely to return and serve the medically needy after their training. Students at the academy would receive a full Government-financed medical education in exchange for an established term of service in regions faced with acute medical needs.

S. 4107—INTRODUCTION OF BILL TO REGULATE THE IMPORTATION, MANUFACTURE, DISTRIBUTION, STORAGE, AND POSSESSION OF EXPLOSIVES, BLASTING AGENTS, AND DETONATORS AND FOR OTHER PURPOSES

Mr. HRUSKA. Mr. President, on March 26, 1970, I introduced, on behalf of the Attorney General, S. 3650, a bill designed to strengthen the Federal criminal laws concerning the illegal use, transportation, and possession of explosives.

As I reported to the Senate on June 17, 1970, S. 3650 is before the Senate Judiciary Subcommittee on Criminal Laws and Procedures, which, under the leadership of Senator MCCLELLAN, is processing the legislation promptly and expeditiously. Enactment of this legislation is important to the success of the efforts of the law-enforcement agencies who are trying to cope with the rash of bombing incidents which the country is suffering.

The Senate Government Operations Permanent Subcommittee on Investigations, which is also chaired by the distinguished Senator from Arkansas, has been holding hearings concerning the wave of bombings and terrorism throughout the United States. I am informed that witnesses have described in vivid and sometimes gory detail the results of the atrocious and intolerable activities of the terrorists who are responsible for most of the incidents. The magnitude of the problem is demonstrated by the results of a survey of bombing incidents reported to the Treasury Department by law-enforcement agencies throughout the country. During the period of the survey, January 1969 to April 1970, more than 4,000 bombings resulted in deaths of 43 persons and in property damage totaling $22.6 million. In all there were more than 40,000 bombings, attempted bombings and bomb threats during the period of the survey.

Today, on behalf of the Secretary of the Interior I introduce a bill which complements S. 3650 by controlling the distribution of explosives and thus making it more difficult to obtain explosive materials.

The bill would require all importers, manufacturers, and dealers in explosives to be licensed by the Secretary of the Interior. It would require commercial users of explosives to obtain permits from the Secretary, while at the same time it would permit the casual user to purchase explosives within his own State or a contiguous State. However, the bill would require positive identification of all purchasers of explosives.

Other features of the legislation would prohibit the sale of explosives to minors, felons, fugitives from justice, drug addicts, and mental defectives; would provide for strict regulations on the safe storage of explosives; and would provide penalties of up to 10 years imprisonment for violations of the provisions of the bill.

I ask unanimous consent that a copy of the letter of transmittal from the Secretary of the Interior to the Vice President be printed in the RECORD along with the text of the bill and a section-by-section analysis.

The PRESIDING OFFICER (Mr. SAXBE). The bill will be received and appropriately referred; and, without objection, the bill, letter, and the section-by-section analysis will be printed in the RECORD.

The bill (S. 4107) to regulate the importation, manufacture, distribution, storage, and possession of explosives, blasting agents, and detonators, and for other purposes, introduced by Mr. HRUSKA, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S. 4107

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Explosives Control Act of 1970".

FINDINGS AND PURPOSE

The Congress finds that the manufacture and distribution of explosive materials has a significant effect on interstate or foreign commerce and that the misuse of explosive materials significantly interferes with the normal flow of such commerce. The Congress hereby declares that the purpose of this Act is to reduce the hazard to persons and property arising from misuse and unsafe or insecure storage of explosive materials. It is not the purpose of this Act to place any undue or unnecessary Federal restrictions or burdens on law abiding citizens with respect to the acquisition, possession, storage or use of explosive materials for industrial, mining, agricultural or other lawful purposes, or to provide for the imposition by Federal regulations of any procedures or requirements other than those reasonably necessary to implement and effectuate the provisions of this Act.

SEC. 2. Title 18, United States Code, is amended by adding after Chapter 39 the following chapter:

"CHAPTER 40. IMPORTATION, MANUFACTURE, DISTRIBUTION AND STORAGE OF EXPLOSIVE MATERIALS

"Sec. 841. Definitions.
"Sec. 842. Unlawful acts.
"Sec. 843. Licensing.
"Sec. 844. Penalties.
"Sec. 845. Exceptions: Relief from disabilities.
"Sec. 846. Additional powers of the Secretary.
"Sec. 847. Rules and regulations.
"Sec. 848. Effect on State law.
"Sec. 849. Separability clause.

"DEFINITIONS

"SEC. 841. As used in this chapter—

"(a) 'Person' means any individual, corporation, company, association, firm, partnership, society, or joint stock company.

"(b) 'Interstate or foreign commerce' means commerce between any place in a State and any place outside of that State, or within any possession of the United States (not including the Canal Zone) or the District of Columbia, and commerce between places within the same State but through any place outside of that State. 'State' includes the District of Columbia, the Commonwealth of Puerto Rico, and the possessions of the United States (not including the Canal Zone).

"(c) 'Explosive materials' means explosives and blasting agents.

"(d) 'Explosives' means any chemical compound, mixture, or device, the primary or common purpose of which is to function by explosion; the term includes, but is not limited to, dynamite and other high explosives, black powder, pellet powder, initiating explosives, detonators, safety fuses, squibs, detonating cord, igniter cord, igniters, and any explosives as shall be listed by the Secretary in a list he shall publish and revise at least annually in the Federal Register.

"(e) 'Blasting agent' means any material or mixture, consisting of fuel and oxidizer, intended for blasting, not otherwise defined as an explosive and in which none of the ingredients is defined as an explosive, provided that the finished product, as mixed for use or shipment, cannot be detonated by means of a No. 8 test blasting cap when unconfined.

"(f) 'Detonator' means any device containing a small detonating charge that is used for initiating detonation in an explosive; the term includes, but is not limited to, electric blasting caps of instantaneous and delay types, blasting caps for use with safety fuses and detonating-cord delay connectors.

"(g) 'Importer' means any person engaged in the business of importing or bringing explosive materials into the United States for purposes of sale or distribution.

"(h) 'Manufacturer' means any person engaged in the business of manufacturing explosive materials for purposes of sale or distribution or for his own use.

"(i) 'Dealer' means any person engaged in the business of distributing explosive materials at wholesale or retail.

"(j) 'Permittee' means any user of explosives for a lawful purpose, who has obtained a user permit under the provisions of this chapter.

"(k) 'Secretary' means the Secretary of the Interior or his delegate.

"(l) 'Published ordinance' means a published law of any political subdivision of a State, which the Secretary determines to be relevant to the enforcement of this chapter.

"(m) 'Crime punishable by imprisonment for a term exceeding one year' shall not mean (A) any Federal or State offenses pertaining to antitrust violations, unfair trade practices, restraints of trade, or other similar offenses relating to the regulation of business practices as the Secretary may by regulation designate, or (B) any State offense classified

by the laws of the State as a misdemeanor and punishable by a term of imprisonment of two years or less.

"(n) 'Licensee' means any importer, manufacturer or dealer licensed under the provisions of this chapter.

"(o) 'Distribute' means sell, issue, give, transfer or otherwise dispose of.

"UNLAWFUL ACTS

"SEC. 842. (a) It shall be unlawful for any person—

"(1) to engage in the business of importing, manufacturing, or dealing in explosive materials without a license issued under this chapter.

"(2) knowingly to withhold information or to make any false or fictitious oral or written statement or to furnish or exhibit any false, fictitious, or misrepresented identification, intended or likely to deceive for the purpose of obtaining explosive materials, or a license, permit, exemption or relief from disability under the provisions of this chapter.

"(3) other than a licensee or permittee knowingly—

"(A) to transport, ship, cause to be transported, or receive in interstate or foreign commerce any explosive materials, except that a person who lawfully purchases explosive materials from a licensee in a state contiguous to the state in which the purchaser resides may ship, transport or cause to be transported such explosive materials to the state in which he resides and may receive such explosive materials in the state in which he resides.

"(B) to distribute explosive materials to any person (other than a licensee or permittee) who the distributor knows or has reasonable cause to believe does not reside in the state in which the distributor resides.

"(b) It shall be unlawful for any licensee knowingly to distribute any explosive materials to any person except—

"(1) a licensee,

"(2) a permittee, or

"(3) a resident of the state where distribution is made or a state contiguous thereto.

"(c) It shall be unlawful for any licensee to distribute explosive materials to any person, who the licensee has reason to believe intends to transport such explosive materials into a state where purchase of such explosive materials is prohibited.

"(d) It shall be unlawful for any licensee knowingly to distribute explosive materials to any individual who:

"(1) is under twenty-one years of age,

"(2) has been convicted in any court of a crime punishable by imprisonment for a term exceeding one year,

"(3) is under indictment for a crime punishable by imprisonment for a term exceeding one year.

"(4) is a fugitive from justice,

"(5) is an unlawful user of marijuana (as defined in section 4761 of the Internal Revenue Code of 1954) or any depressant or stimulant drug (as defined in section 201(v) of the Federal Food, Drug, and Cosmetic Act) or narcotic drug (as defined in section 4721 (a) of the Internal Revenue Code of 1954), or

"(6) has been adjudicated a mental defective.

"(e) It shall be unlawful for any licensee knowingly to distribute any explosive materials to any person in any state where the purchase or possession by such person of such explosive materials would be in violation of any state law or any published ordinance applicable at the place of distribution.

"(f) It shall be unlawful for any licensee or permittee willfully to produce, distribute, or receive explosive materials without making such records as the Secretary may by regulation require, including, but not limited to, a statement of intended use, the name, date, place of birth, social security number or taxpayer identification number, and place of residence of any natural person to whom explosive materials are distributed. If explosive materials are distributed to a corporation or other business entity, such records shall include the identity and principal and local places of business and the name, date, place of birth and place of residence of the natural person acting as agent of the corporation or other business entity in arranging the distribution.

"(g) It shall be unlawful for any licensee or permittee knowingly to make any false entry in any record which he is required to keep pursuant to this section or regulations promulgated hereunder.

"(h) It shall be unlawful for any person to receive, conceal, transport, ship, store, barter, sell, or dispose of any explosive materials knowing or having reasonable cause to believe that such explosive materials were stolen.

"(i) It shall be unlawful for any person to store any explosive material in a manner not in conformity with regulations promulgated hereunder by the Secretary. In promulgating such regulations, the Secretary shall take into consideration the class, type and quantity of explosive materials to be stored, as well as the standards of safety and security recognized in the explosives industry.

"(j) It shall be unlawful for any person who has knowledge of the theft or loss of any explosive materials from his stock, to fail to report such theft or loss within 24 hours of discovery thereof, to the Secretary and to appropriate local authorities.

"LICENSES AND USER PERMITS

"SEC. 843. (a) An application for a user permit or a license to import, manufacture or deal in explosive materials shall be in such form and contain such information as the Secretary shall by regulation prescribe. Each applicant for a license or permit shall pay a fee to be charged as set by the Secretary, said fee not to exceed $200 for each license or permit. Each license or permit shall be valid for not longer than three years from date of issuance and shall be renewable upon the same conditions and subject to the same restrictions as the original license or permit and upon payment of a renewal fee not to exceed one-half of the original fee.

"(b) Upon the filing of a proper application and payment of the prescribed fee, and subject to the provisions of this chapter and other applicable laws, the Secretary shall issue to such applicant the appropriate license or permit if—

"(1) the applicant (including in the case of a corporation, partnership, or association, any individual possessing, directly or indirectly, the power to direct or cause the direction of the management and policies of the corporation, partnership, or association) is not a person to whom the distribution of explosive materials would be unlawful under section 842(d) of this chapter;

"(2) the applicant has not willfully violated any of the provisions of this chapter or regulations issued hereunder;

"(3) the applicant has in a State premises from which he conducts or intends to conduct business;

"(4) the applicant has a place of storage for explosive materials which meets such standards of public safety and security against theft as the Secretary by regulation shall prescribe; and

"(5) the applicant has demonstrated and certified in writing that he is familiar with all published State laws and local ordinances relating to explosive materials for the location in which he intends to do business.

"(c) The Secretary shall approve or deny an application within a period of forty-five days beginning on the date such application is received by the Secretary.

"(d) The Secretary may revoke any license or permit issued under this section if in the opinion of the Secretary the holder thereof has violated any provision of this chapter or any rule or regulation prescribed by the Secretary under this chapter, or has become ineligible to acquire explosive materials under section 842(d). The Secretary's action under this subsection may be reviewed only as provided in subsection (e)(2) of this section.

"(e)(1) Any person whose application is denied or whose license or permit is revoked shall receive a written notice from the Secretary stating the specific grounds upon which such denial or revocation was based. Any notice of a revocation of a license or permit shall be given to the holder of such license or permit prior to or concurrently with the effective date of the revocation.

"(2) If the Secretary denies an application for, or revokes a license, or permit, he shall, upon request by the aggrieved party, promptly hold a hearing to review his denial or revocation. In the case of a revocation, the Secretary may upon a request of the holder stay the effective date of the revocation. A hearing under this paragraph shall be at a location convenient to the aggrieved party. The Secretary shall give written notice of his decision to the aggrieved party within a reasonable time after the hearing. The aggrieved party may, within sixty days after receipt of the Secretary's written decision, file a petition with the United States Court of Appeals for the district in which he resides or has his principal place of business for a judicial review of such denial or revocation, pursuant to title 5, U.S.C. 701–706.

"(f) Licensees and permittees shall make available for inspection at all reasonable times their records kept pursuant to this chapter or the regulations issued hereunder, and shall submit to the Secretary such reports and information with respect to such records and the contents thereof as he shall by regulations prescribe. The Secretary may enter during business hours the premises (including places of storage) of any licensee or permittee, for the purpose of inspecting or examining (1) any records or documents required to be kept by such licensee or permittee, under the provisions of this chapter or regulations issued hereunder, and (2) any explosive materials kept or stored by such licensee or permittee at such premises. Upon the request of any state or any political subdivision thereof, the Secretary may make available to such state or any political subdivision thereof, any information which he may obtain by reason of the provisions of this chapter with respect to the identification of persons within such state or political subdivision thereof, who have purchased or received explosive materials, together with a description of such explosive materials.

"(g) Licenses and permits issued under the provisions of subsection (b) of this section shall be kept posted and kept available for inspection on the premises covered by the license and permit.

"PENALTIES

"SEC. 844. (a) Any person who violates subsections (a) through (h) of section 842 of this chapter shall be fined not more than $10,000 or imprisoned not more than ten years, or both.

"(b) Any person woh violates any other provision of section 842 of this chapter shall be fined not more than $1,000 or imprisoned not more than one year, or both.

"(c) Any explosive materials involved in or used or intended to be used in, any violation of the provisions of this chapter, or any other rule or regulation promulgated thereunder, or any violation of any criminal law of the United States, shall be subject to seizure and forfeiture and all provisions of the Internal Revnue Code of 1954 relating to the seizure, forfeiture, and disposition of firearms, as defined in section 5845(a) of that Code, shall, so far as applicable, extend

to seizures and forfeitures under the provisions of this chapter.

"EXCEPTIONS; RELIEF FROM DISABILITIES

"SEC. 845. (a) This Act shall not apply to:

"(1) the transportation of explosive materials via railroad, water, highway, or air when such transportation is regulated by the United States Department of Transportation and agencies thereof;

"(2) the use of explosive materials in medicines and medicinal agents in the forms prescribed by the official United States Pharmacopeia, or the National Formulary;

"(3) the transportation, shipment, receipt or importation of explosive materials for delivery to any agency of the United States or to any State or political subdivision thereof;

"(4) small arms ammunition and components thereof;

"(5) black powder in quantities not to exceed five pounds; and

"(6) the manufacture under the regulation of the military department of the United States of explosive materials for, or their distribution to or storage or possession by the military or naval services or other agencies of the United States; or to arsenals, navy yards, depots or other establishments owned by, or operated by or on behalf of, the United States.

"(b) A person who has been indicted for or convicted of a crime punishable by imprisonment for a term exceeding one year may make application to the Secretary for relief from the disabilities imposed by this chapter with respect to engaging in the business of importing, manufacturing, or dealing in explosive materials, or the purchase of explosive materials, and incurred by reason of such indictment or conviction, and the Secretary may grant such relief if it is established to his satisfaction that the circumstances regarding the indictment or conviction, and the applicant's record and reputation, are such that the applicant will not be likely to act in a manner dangerous to public safety and that the granting of the relief will not be contrary to the public interest. A licensee or permittee who makes application for relief from the disabilities incurred under this chapter by reason of indictment or conviction, shall not be barred by such indictment or conviction from further operations under his license or permit pending final action on an application for relief filed pursuant to this section.

"ADDITIONAL POWERS OF THE SECRETARY

"SEC. 846. The Secretary is authorized to inspect the site of any accident, or fire, in which there is reason to believe that explosive materials were involved, in order that if any such incident has been brought about by accidental means, precautions may be taken to prevent similar accidents from occurring. In order to carry out the purpose of this subsection, the Secretary is authorized to enter into or upon any property where explosive materials have been used, are suspected of having been used, or have been found in an otherwise unauthorized location. Nothing in this chapter shall be construed as modifying or otherwise affecting in any way the investigative authority of any other Federal agency.

"RULES AND REGULATIONS

"SEC. 847. The administration of this chapter shall be vested in the Secretary. The Secretary may prescribe such rules and regulations as he deems reasonably necessary to carry out the provisions of this chapter. The Secretary shall give reasonable public notice, and afford to interested parties opportunity for hearing, prior to prescribing such rules and regulations.

"EFFECT ON STATE LAW

"SEC. 848. No provision of this chapter shall be construed as indicating an intent on the part of the Congress to occupy the field in which such provision operates to the exclusion of the law of any state on the same subject matter, unless there is a direct and positive conflict between such provision and the law of the state so that the two cannot be reconciled or consistently stand together.

"SEPARABILITY CLAUSE

"SEC. 849. If any provision of this chapter or the application thereof to any person or circumstance is held invalid, the remainder of the chapter and the application of such provision to other persons not similarly situated or to other circumstances shall not be affected thereby."

SEC. 3. Nothing in this Act shall be construed as modifying or affecting any provision of—

(a) The National Firearms Act (chapter 53 of the Internal Revenue Code of 1954);

(b) Section 414 of the Mutual Security Act of 1954 (22 U.S.C. 1934), as amended, relating to munitions control;

(c) Section 1716 of title 18, United States Code, relating to nonmailable materials;

(d) Chapter 39 of title 18, United States Code; or

(e) Chapter 44 of title 18, United States Code.

SEC. 4. The Secretary shall, within ninety days of the date of enactment, publish the proposed regulations required by the provisions hereof and shall begin enforcement of such act and regulations after the expiration of one hundred and twenty days from the date of enactment.

SEC. 5. The Federal Explosives Act of October 6, 1917, 40 Stat. 385, as amended (50 U.S.C. 121–143) and as extended by Act of July 1, 1948, 40 Stat. 671 (50 U.S.C. 144), and all regulations adopted thereunder are hereby repealed.

SEC. 6. There are hereby authorized to be appropriated such sums as are necessary to carry out the purposes of this title.

The letter presented by Mr. HRUSKA is as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., July 20, 1970.

Hon. SPIRO T. AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed is a draft of a proposed bill, "To regulate the importation, manufacture, distribution, storage and possession of explosives, blasting agents and detonators and for other purposes."

We recommend that this bill be referred to the appropriate committee for consideration, and we recommend that it be enacted.

The ease of access to explosive materials have been a definite factor in the recent destructive bombings and bomb threats which have disturbed the peace and tranquility of the country and interfered with commerce between the States. Today, the United States of America is one of the few industrial nations of the world which does not control explosives at the Federal level. The Department of the Interior has determined from a recent survey that, in at least 35 of the 50 States, regulation of explosive materials is either weak or nonexistent. Therefore, this legislation is vital to protect the public interest.

This legislation will provide effective checks on the procurement of explosive materials for illegal use throughout all the 50 States. Additionally, it would supersede the Federal Explosives Act, December 26, 1941 (55 Stat. 863), which is operative only in time of war or national emergency, and which, in the light of present technology, is inadequate.

The proposed legislation operates through a system of licenses and permits. Licenses will be required of all manufacturers, importers and dealers. Permits will be required of all users who depend on interstate commerce to obtain explosives. An exception is made for the user who can satisfy his demand by purchase within the State or a contiguous State.

The proposed bill requires positive identification in all transactions of explosives, and requires both licensees and permittees to keep certain records. Persons under 21 years of age, drug addicts, mental defectives, fugitives from justice or persons indicted for or convicted of certain crimes cannot lawfully acquire explosives.

The storage of explosives will be regulated and all persons with explosives must report loss or theft within 24 hours.

The proposed bill makes it a Federal offense to falsify records, or make false statements to obtain explosives, to sell explosives in violation of State law and to traffic in stolen explosives.

This legislation will, we believe, significantly reduce the hazard presented by the misuse, both deliberate and inadvertent, of explosives, while assuring controlled access by lawful users.

The Office of Management and Budget has advised that this legislative proposal is in accord with the program of the President.

Sincerely yours,

WALTER HICKEL,
Secretary of the Interior.

The section-by-section analysis presented by Mr. HRUSKA is as follows:

SECTION-BY-SECTION ANALYSIS

Section 1 states that the manufacture and distribution of explosives significantly affect interstate commerce and that the purpose of the Act is to reduce the hazard from misuse and improper storage of explosives.

Section 2 amends title 18 U.S.C. by adding a new chapter 40 containing sections 841 through 849.

Section 841 contains definitions. The critical definitions are: "explosive materials" which means, briefly, any chemical compound the primary or common purpose of which is to function by explosion; [This definition will be periodically construed by the Secretary of the Interior in a list published in the *Federal Register,*] "licensee" which means a manufacturer, importer or leader licensed under the Act; and "permittee" which means a user holding a permit issued under the Act.

Section 842 sets forth, in subsections (a) through (j), the following unlawful acts:

Subsection (a) prohibits any person from dealing in explosives without a license, from making false statements to obtain explosives, and if the person is not a "licensee" or "permittee" from transporting explosives in interstate commerce except from States contiguous to his State of residence, or to transfer explosives to a non-resident of the State in which he resides.

Subsection (b) prohibits any licensee from distributing any explosives to any person except 1) a licensee, 2) a permittee, or 3) a resident of the State of distribution or a contiguous State.

Subsection (c) prohibits licensees from distributing explosives to any person who the licensee has reason to believe intends to transport them into a State where their purchase is prohibited.

Subsection (d) prohibits distribution of explosives to any individual who is under 21, has been convicted or indicted for a crime punishable by imprisonment for a term exceeding one year, is a fugitive from justice, a drug addict, or a mental defective.

Subsection (e) prohibits distributing explosives to any person where the purchase or possession by such person of such explosives violates any local law or ordinance.

Subsection (f) requires licensees and permittees to keep records of transactions involving explosives.

Subsection (g) prohibits deliberate falsification of such records.

Subsection (h) prohibits traffic in explosives known or believed to have been stolen.

Subsection (i) requires storage of explosives in compliance with regulations issued by the Secretary of the Interior.

Subsection (j) requires reporting theft of explosives within 24 hours after discovery.

Section 843 provides conditions for the issuance of licenses and permits. It prohibits their issuance to persons 1) prohibited from buying explosives, 2) who have willfully violated any provisions of this chapter, 3) who do not have a business premises, 4) who do not have adequate storage facilities, or 5) who are not certified as being familiar with applicable State laws and local ordinances. The Secretary may revoke any license or permit immediately upon violation of any of the above conditions. The section provides for a hearing procedure and judicial review upon the denial or revocation of a license or permit. The section also provides for the inspection by the Secretary of records and storage facilities and for the posting of licenses and permits.

Section 844 provides a maximum penalty of $10,000 and 10 years in jail and for confiscation of any explosives used in violation of law.

Section 845 exempts transportation of explosives subject to Department of Transportation regulations, medicinal use of explosive materials, Government and military use, and small arms ammunition and small quantities of black powder. This section also provides that the Secretary may relieve persons indicted for or convicted of crimes from disabilities imposed by the Act.

Section 846 authorizes the Secretary to investigate fires resulting from explosives.

Section 847 confers administrative responsibility on the Secretary of the Interior and authorizes him to prescribe necessary rules and regulations after public notice and opportunity for hearing.

Section 848 makes it clear that State laws regulating explosives are not preempted unless they are in direct conflict with the Federal law.

Section 849 provides for severance of any provision held invalid.

Section 3 makes it clear that the Act does not affect certain other specified laws.

Section 4 provides 90 days for the publication of proposed regulations and 120 days before enforcement begins.

Section 5 repeals the Federal Explosives Act of 1917.

Section 6 authorizes appropriations.

S. 4108—INTRODUCTION OF FAIR CREDIT BILLING BILL

Mr. PROXMIRE. Mr. President, in the last two sessions Congress has taken the side of the consumer in demanding fair credit practices. The 90th Congress insured the full disclosure of the cost of credit when it passed the Truth-in-Lending Act which I introduced. More recently the Senate passed two bills I sponsored, S. 823 and S. 721, which will extend the provisions of truth in lending.

When passed by the House, S. 823 will establish certain Federal safeguards over the activities of credit reporting agencies in order to protect against arbitrary, erroneous and malicious credit information. S. 721 will prohibit the unsolicited mailing of credit cards and limit the liability of consumers on cards which are lost or stolen.

However, there remains one large area of lending abuses—credit billing. Two credit billing problems have become increasingly bothersome in recent years. The first problem concerns those companies which have demonstrated that their systems are completely incapable of correcting even the most simple billing errors. The second problem concerns "the shrinking billing period" or the practice of those creditors who send periodic billing statements to consumers just a few days before or even after the payment due date. This practice causes the placing of unfair finance charges on the consumers' account balance.

It is time, Mr. President, that Congress insist both that companies give prompt and efficient service upon receiving notices of errors in consumer accounts and that companies mail their billing statements well in advance of the payment due date. To this end I am today introducing the fair credit billing bill. This bill would amend the Truth-in-Lending Act to protect the consumer against careless and erroneous billings and the unfair harrassment which can accompany them.

Mr. President, I, like many of my colleagues, have received hundreds of complaints from consumers who have had to spend months and even years trying to correct companies' billing mistakes. Many consumers have had to spend many times the amount of the error in their account attempting to get it corrected. They have had to spend dozens of hours writing letters and telegrams and talking on the phone. Is this fair? Is it fair for the consumers to have to pay for the errors of the company?

Companies claim that errors are extremely rare. Well, Mr. President, I have found few people who have not had a problem with a credit misbilling. And just a sampling of my mail for the last few days is enough proof that the problem is not so rare as to be insignificant.

One gentleman wrote to ask me to help him get his name off a national "stop charge" list. His name was placed there a month ago after a computer added an erroneous $1 charge to the man's account. But the most frightening thing about the gentleman's story is that the only item he ever had charged to this account was a $5.39 gas bill. For charging $5.39 and asking the company to correct a dollar overcharge this gentleman's credit privileges are in severe danger. As he said in pleading with the company to correct their error:

> How can I be assured that due to your actions, my name will not be left hanging on a perhaps then obsolete "stop charge list" posted in a small isolated service station in Bar Harbor, Maine or Monck's Corner, South Carolina, which in turn could logically refuse my family service and/or cause untold embarrassment.

One Wisconsin housewife wrote to ask my help in straightening out her clothing store account. Three months ago she asked the company to correct an overcharge in her account. They said they would issue her credit for the amount in error. But since then she has received two other erroneous statements and one "reminder notice." She is rightfully afraid that her credit standing may be endangered by the company's inefficiency in correcting their error. She wrote the company noting:

> I think a lot more good will be achieved if your computers could credit figures to an account as fast as it can charge figures to an account.

One businessman wrote to me to ask my help in getting his credit card account canceled. Since February he has been writing and phoning the company, one of this country's largest, with no results. The company continues to add an extra 50 cents on to the man's account every month as a late charge on the very membership fee the man refused. The man wrote to the company:

> Since your computer will not take note of this fact, my dog with apparently more sense and more wit, has taken the matter in her own mouth. If this does not make your keypunch aware, nothing will.

So far the company has not shown any more awareness.

A western food production consultant wrote to tell me how he is still trying to correct an error that occurred in his account in November of 1968 when he paid a deferred charge in advance. His payment was credited to someone else's account and despite dozens of phone calls and letters the company has failed to correct their mistake.

Mr. President, these are just a few of the letters I have received in the last week from consumers who have been troubled by their inability to get satisfactory adjustments on their credit accounts. I cannot help wonder how many other consumers are blackmailed by the pay up or else notices into paying the disputed amounts on their accounts. Recently, I testified before the National Commission on Consumer Affairs on the subject of computerized billing practices and the failure of companies to respond to notices of error in their accounts. I ask unanimous consent that that testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR WILLIAM PROXMIRE

Mr. Chairman, it is an honor to testify before this Commission during its important hearings on the consumer credit industry.

In the last two sessions, Congress has made giant strides toward correcting unfair credit practices. The 90th Congress passed the truth in lending bill which I introduced. That bill insures the full disclosure of the cost of credit. In recent months I have sponsored two bills which have passed the Senate and which are major extensions of the truth in lending act. Bill S. 823 would establish certain Federal safeguards over the activities of credit reporting agencies in order to protect against arbitrary, erroneous, and malicious credit information. Bill S. 721 would prohibit the unsolicited mailings of credit cards and limit the consumer's liability on cards that are lost or stolen.

An additional area in which the consumer is being victimized and upon which the Congress has taken no action is the area of credit billing.

Mr. Chairman, I'm sure that many of us have a favorite anecdote we like to tell about a run-in we've had with a computerized misbilling. Because of our positions, most of us have probably been rather fortunate in having the billing error quickly corrected. However, for the average American consumer who is not a public official, a computer misbilling can turn into an unbelievable nightmare of past due notices, calls from collection

agencies, long waits on the telephone and threats of bad credit ratings.

Many of this country's largest and most prestigious credit card companies have shown themselves to be completely incapable of correcting even the most simple billing error. Many consumers have had to spend months and even years to clear up the companies mistakes.

A New York businessman spent over 15 months trying to correct a charge he received for six flights for one flight he had cancelled.

A Milwaukee advertiser spent five months trying to convince American Express to cancel his card.

A Washington State doctor spent six months trying to correct an error on a billing involving a truck rental.

And an award for persistence certainly should go to the man from Virginia who battled for 21 months to have a $14 mistake corrected. His is a story so unbelievable, Mr. Chairman, I ask that it be included in the record of this hearing.

Of course, the companies claim they give prompt and personal attention to all replies—that only in a rare instance do they let customer inquiries slip by. One company official has been quoted as saying "Sometimes of course we make mistakes. A $90 a-week clerk gets under pressure and gets in a hurry. There are controls, and it shouldn't happen but it does." However, some of the cases that people have come to me with are so fantastic as to suggest that either firms have no systematic procedures for handling errors or are attempting to blackmail consumers into paying debts they did not incur.

As one consumer asked me "Does it not seem unfair that American Express had made the error and remains penalty free, while I am forced to expend money and time to correct their errors? Obviously American Express does not care."

I'd like to give this Commission just one of the many incredible accounts I have received of unresponsive conduct by large American companies in replying to consumer complaints of an incorrect billing.

Mr. James Kurtz, a member of a prestigious national law firm, received a statement from the Diners Club on November 15, 1968. Noting that the bill contained a $207 charge for an airline ticket he had never purchased, Mr. Kurtz paid the total of the bill minus the $207 dollar error and wrote Diners of their error on December 4.

On January 3, 1969, Kutz received a computer notice that his account was past due. Four days later a form letter came in the mail thanking Kurtz for his recent payment but telling him he had to pay the full amount of each monthly bill.

Undismayed and still confident the matter could be settled with a minimum of inconvenience, Kurtz wrote his second letter to Diners on January 13. He told Diners that because he had been on vacation he had been unable to respond to their latest bill dated December 18 or the computer past due notice of the 3rd of January. He also told Diners that his December bill compounded the error by adding still another extra $207 charge and that he was paying all the charges on his account but those which were in dispute.

Three days later he received a telegram to contact the Diners collection department. This was followed immediately by another form notice advising him to deduct the amount in question until he heard from Diners. In a telephone call and a confirming letter Kurtz told Diners he was paying all but the amount in question on his December bill and Diners agreed this was satisfactory.

However, the January bill arrived immediately thereafter and contained a third extra airline charge for $207. Kurtz wrote back to tell of the rapidly growing error by a computer which was apparently out of control. The Diner's computer was now claiming some $621 in debts that Kurtz had not incurred.

Diners replied with another form letter thanking Kurtz for his recent payments but warning his card might be cancelled if he did not pay the full bill. Immediately Kurtz placed a collect call to Diners. The gentleman at Diners who took the call said he was sympathetic, termed the whole story "fantastic" and agreed to straighten it out as soon as possible. But, the call was followed by yet another past due notice from the relentless and seemingly vindictive computer.

The February bill came and to Kurtz's surprise was only $414 in error. Once again Kurtz took the time to send a letter off to Diners pleading they correct the error. His plea was met by another past due notice.

Several weeks later another computer "pay up or else" notice came in the mail. Kurtz responded with still another letter of explanation.

Finally on May 2nd Diners sent a letter telling the tired Mr. Kurtz that the company was checking with Braniff and American Airlines to find out who was responsible for the erroneous billing. A little over a month later Braniff sent Kurtz a letter affirming that the billings Kurtz had received were in error. A copy of this letter was sent to Diners and Kurtz himself sent a letter to Diners just to make sure they understood the Braniff position.

However, when Diners gave Kurtz a credit on his account it only did so to cover one of the remaining two $207 charges still in question. Enclosing a copy of all previous correspondence to date Kurtz sent off another letter to Diners. Diners responded by calling Kurtz's wife and explaining that Kurtz did owe the Club the remaining $207 in question. Furious Kurtz replied to Diners in a letter and once again sent copies of all his previous correspondence. No response came back from Diners.

Getting desperate Kurtz decided to call Braniff. Braniff confirmed both in that call and a subsequent letter to Diners that the mistake was not Kurtz's and that a disagreement between Braniff and American over the ticket charges had been settled. That letter from Braniff to Diners was dated November 18, 1969, one year from the original error. However in all bills since November Kurtz has received the erroneous charges and furthermore Diners has refused to send his 1970 Diners card renewal.

Finally on May 22 of this year Kurtz, after writing several Congressmen, received a letter from Diners apologizing and explaining that a credit would be issued for the remaining $207 error and the $66 service charge that had accrued on that error. It took Mr. Kurtz 18 months and a mountain of correspondence to straighten out a simple computer mistake. Today Kurtz is still anxiously waiting for both the cerdit and his 1970 Diners card.

In reply to his latest request for a new card Kurtz received a form letter which read "Thank you for your recent inquiry. We will give it our prompt attention."

This experience, which bears a close resemblance to a Kafka novel, is by no means untypical. I and other members of Congress have received numerous complaints of a similar nature.

Is it fair to expect the consumer to have the patience of Job, the legal skill of Edward Bennett Williams, and the resources of General Motors in order to get a bill corrected? Mr. Kurtz's experience is not the rare occurence the Credit Card Companies would have us believe. In at least one respect Mr. Kurtz was lucky. Many consumers find their credit cards cancelled on the basis of mistaken billings. Others find that their credit ratings have been seriously damaged by the companies' mistakes. When S. 823 passes, consumers will have the right to correct their adverse credit ratings but this should not keep up from shifting some of the responsibility for computer mistakes where it rightfully belongs—with the credit card companies.

Mr. Chairman, there are over 50 million people in this country buying on credit. The companies can say that they have only one percent or five percent or even one tenth of one percent error and that would be too much. One percent error rate would still be half a million errors. Can we expect a half a million or even 50,000 people a year to have to pay for the carelessness of credit companies?

There are those who point to the problem and say that the computer is the source of the error—that all the good the computer does more than makes up for its errors. But, Mr. Chairman, would we tolerate a one percent of one-tenth percent error rate in the computers that manage air traffic or that guide moon rockets or that prescribe drug amounts in hospitals? If the computer system is at fault we have the technology to correct the system. I think the consumer has a right to demand that companies improve their computer systems.

Another possible explanation is that the managements of these companies are hiding behind their computers. They might be unwilling to employ additional staff to handle the large volume of complaints. For example, one large credit card company receives over 40,000 inquiries a week from its customers and admits it is running far behind in answering this mail. It seems to be easier for companies to deny service which is rightfully due their customers—by explaining away the errors (if they explain them at all) as the result of the "computer billing cycle," or "system errors" or "coding mistakes." Besides, after months of fighting many customers give up and pay the amount in dispute rather than risk destroying their credit rating or continue a tiring and expensive campaign of phone calls, letters and telegrams. Why should the companies want to change their bad billing practices when they might be making a handsome profit off of them?

Last Tuesday morning a member of my staff attempted to reach the gentleman who had signed one of the past due notices for one of my constituents. For over half an hour he searched for Mr. S. Finkelman. He was asked numerous times for an account number but that seemed not to get him any closer to Mr. Finkelman.

I think that this commission should request testimony from S. Finkelman, and all those other infamous people who sign past due notices, including B. Jeffries, M. Brown, L. Fowler, J. King, L. Bush and a host of others. It might reassure the public to know that there are people who are at least supposed to be correcting their billing errors—assuming of course that Mr. S. Finkelman and his counterparts are real live human beings and not computer parts. Certainly not the least objectionable part of current billing practice is the failure of companies to reassure customers that if the machine can't handle their problems a good old fashioned human being will. Companies are treating there customers almost as if they were a part of the computer billing system.

Mr. Chairman, it is time that companies begin treating their customers if not with some respect then at least with a semblance of efficiency. What do I think can be done to correct current billing practices—especially as they relate to the use of computers?

I have hoped, Mr. Chairman, that the industry would devise controls that would insure responsible conduct. There are those in the computer industry who have made moves in this direction. The American Federation of Information Processing Societies in a recent conference under the chairmanship of William Wirtz called for a broad national certification program for computer personnel and a code of ethics and public responsibility. They further proposed the for-

mation of a special body to help enforce the code and assist the public. I endorse these proposals and would hope the computer industry pushes ahead rapidly toward their implementation.

However, Mr. Chairman, I do not believe this to be nearly enough. It is time the Congress stepped in on behalf of the consumer to demand responsible conduct on the part of credit billing companies. To this end I will in the near future introduce legislation that will shift the responsibility and cost of credit billing errors from the consumer to the industry. It is time that American companies be made to pay for their mistakes.

In the last two years the Federal Government has sided with the consumer in demanding responsible credit practices. The truth in lending act was indeed a major landmark. But we must now act to protect consumers who are harrassed and/or ignored by credit billing companies. As Mr. Kurtz discovered, one small error can turn into a punishment rivaling that of Prometheus. Congress owes it to the American consumer to demand more of credit lenders. It is not super human efficiency we are demanding—just a bit of public responsibility.

We need to borrow a phrase from these credit companies and say to them, on behalf of the American consumer, "Do not fold, bend, or mutilate."

Mr. PROXMIRE. The bill I am introducing today is aimed at insuring that consumers can get prompt corrections on their credit accounts. The fair credit billing bill would require that within 10 days after receipt of a notice of error in a consumer account a company would have to acknowledge receipt of the notice. This notice would give the consumer proof that the company was attempting to correct the error. If a consumer failed to get the 10-day acknowledgment he could then take such measures as would be necessary to insure that the company received his notice of error, such as sending the notice by registered mail.

The fair credit billing bill would further require the company to either make the correction and send a corrected statement to the consumer or explain why the original statement was correct within 60 days of receipt of the original notice of error.

If the creditor failed to send the 10-day acknowledgment or failed to adjust the account within 60 days, he would forfeit the right to collect the amount the consumer stated to be in error. Furthermore, if the consumer could then prove that an error had taken place, the creditor would be liable for actual damages, treble punitive damages, and reasonable attorneys fees.

In order to insure that consumers are aware of their rights under the fair credit billing bill, companies would be required to notify consumers of these rights on their monthly billing statements as well as when the account is initially opened.

Now there are those who will ask—why do we need such legislation when the consumer is not now legally responsible for any amount in error on his account? Well, Mr. President, those of us who have been faced with a computerized billing error know that while the consumer is in the right and not legally responsible, he is still subject to severe harassment. Companies will threaten his credit rating and even wrongfully damage it. They will cancel his credit card and send numerous "pay up or else" notices.

A contested billing quite often becomes a contest in perseverance between creditor and consumer with the resources strongly favoring the creditor. It is time the Federal Government insisted the credit billing companies promptly reply to customers' billing error notices or else be made to pay for their inefficiency. This is what the fair credit billing bill will do.

The other unfair credit practice I feel must be dealt with immediately is the problem of the "shrinking billing period." Normally creditors allow a customer 30 days from the billing date to pay the full "new balance" owed and thereby avoid any additional finance charge. However, when creditors do not send billing statements promptly the effect is to reduce the time the consumer has to pay the bill without incurring any extra finance charges. Some companies have even been sending the bill after the date due. Others have reduced the payment period to 25 days even though the billing cycle runs 30 days and the annual percentage rate is computed on a 30-day period.

Two States have recently passed laws requiring companies to send statements a certain number of days before the end of the billing cycle, and the FTC has taken notice of the growing problem of the shrinking billing period. In a consumer credit policy statement it notes that:

> The Truth in Lending Act and implementing Regulation Z do not now set forth any specific time within which creditors are required to send period billing statements to their customers. However, the Commission feels that the law contemplates that the periodic billing statement should be mailed in time to give customers a reasonable opportunity to have the payment posted before the end of the period within which finance charges may be avoided. . . .
>
> Continued abuses in connection with this problem could result in formal Commission action in individual instances, as well as the Commission's recommendation for strong corrective legislation.

Mr. President, I feel this problem demands strong corrective legislation. So in the fair credit billing bill I am hoping to make mandatory what truth in lending already contemplates—that companies give open end credit account customers time to pay their accounts without incurring a finance charge. The bill provides that statements must be mailed by companies 21 days prior to the date by which payment must be made in order to avoid the imposition of a finance charge. It is time that the Federal Government stretched the shrinking billing period.

These two problems—the shrinking billing period and the failure to respond to notice of error are two serious injustices facing the American consumer. They have been allowed to go on too long—while the companies promised that their systems were being corrected and perfected. These systems, most of them computer systems, cannot be allowed to become a permanent excuse behind which the creditor can hide from his responsibilities. Mr. President, I am introducing the fair credit billing bill with the hope that Congress can press the American credit companies into treating the consumer less like a computer and more like a human being. As I said before the National Commission on Consumer Finance, we need to borrow a phrase from these credit companies and say to them, on behalf of the American consumer, "Do not fold, bend, or mutilate."

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD and that the bill be received and appropriately referred.

The PRESIDING OFFICER (Mr. SAXBE). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4108) to amend the Truth-in-Lending Act to protect consumers against careless and erroneous billings, introduced by Mr. PROXMIRE, was received, read twice by its title, referred to the Committee on Banking and Currency, and orderd to be printed in the RECORD, as follows:

S. 4108

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Fair Credit Billing Act".

SEC. 2. Section 127 of the Truth in Lending Act (15 U.S.C. 1637) is amended—

(1) by adding at the end of subsection (a) a new paragraph as follows:

"(8) The protection provided by chapter 4 to an obligor under any such account in the event of an erroneous billing.";

(2) by adding at the end of subsection (b) a new paragraph as follows:

"(11) The rights of the obligor and the obligations of the creditor under chapter 4 in the event the obligor believes there is an error in the statement of his account and gives written notice thereof to the creditor."; and

(3) by adding at the end of such section a new subsection as follows:

"(d) A finance charge may not be imposed under an open end credit plan for any period unless a statement of the outstanding balance upon which the finance charge for that period is based is mailed at least twenty-one days prior to the date by which payment must be made in order to avoid imposition of that finance charge."

SEC. 3. The Truth in Lending Act (15 U.S.C. 1601–1665) is amended by adding at the end thereof a new chapter as follows:

"CHAPTER 4—CREDIT BILLING

"SEC. 161. Notice of error.
"SEC. 162. Liability of creditor.

"NOTICE OF ERROR

"SEC. 161. If a creditor, having transmitted to an obligor a statement of the obligor's account in connection with an extension of consumer credit, receives a written notice from the obligor in which the obligor—

"(1) directs the attention of the creditor to an amount shown in the statement as owing from the obligor which the obligor believes to be in error in whole or in part,

"(2) indicates the amount by which the amount shown in the statement is greater or less than the sum believed to be owing to the creditor by the obligor, and

"(3) sets forth the reasons of the obligor for the belief that an error has occurred, the creditor shall—

"(A) not later than 10 days after the receipt of the notice, send a written acknowledgment thereof to the obligor, and

"(B) not later than 60 days after the receipt of the notice and prior to taking any action to collect the amount, or any part thereof, believed to be in error—

"(i) make appropriate corrections in the account of the obligor and transmit to the obligor a statement of his account which has been revised so as to show the corrections, or

"(ii) send a written explanation to the obligor setting forth the reasons why the creditor believes the account of the obligor was correctly shown in the statement.

"LIABILITY OF CREDITOR

"SEC. 162. Any creditor, having received a notice from an obligor as provided in section 161, who fails to comply with the requirements of that section—

"(1) forfeits any right to collect from the obligor the amount shown in any statement of the obligor's account which the obligor believes to be in error and specifies in such notice in the manner prescribed in clause (2) of such section, including any finance charge or other charge imposed by the creditor in connection with the amount so specified; and

"(2) if such amount is in fact an error, is liable to the obligor in an amount equal to the sum of—

"(A) the actual damages sustained by the obligor as a result of the failure of the creditor to comply with such section;

"(B) $100 or three times the amount referred to in paragraph (1), whichever is the greater; and

"(C) in the case of any successful action to enforce the foregoing liability, the costs of the action together with a reasonable attorney's fee as determined by the court."

SEC. 4. This Act takes effect upon the expiration of 180 days after the date of its enactment.

SENATE JOINT RESOLUTION 222—REFERRAL OF A JOINT RESOLUTION

By unanimous consent, the joint resolution (S.J. Res. 222) granting the consent of Congress to the States of New Jersey and New York for certain amendments to the Waterfront Commission compact and for entering into the Airport Commission Compact, and for other purposes, introduced by Mr. JAVITS (for himself and other Senators) on July 16, 1970, on today, July 21, 1970, was referred to the Committee on the Judiciary, then to the Committee on Commerce for not to exceed 30 days when reported from the Committee on the Judiciary.

(The remarks of Mr. JAVITS when he made the unanimous consent request appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF BILLS

S. 3724

Mr. McGEE. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senators from Utah (Mr. BENNETT), Oregon (Mr. HATFIELD), Kentucky (Mr. COOK), and California (Mr. MURPHY), be added as cosponsors of S. 3724, my bill to amend the Internal Revenue Code with respect to ammunition recordkeeping requirements.

The PRESIDING OFFICER (Mr. SAXBE). Without objection, it is so ordered.

S. 3752

Mr. PEARSON. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Texas (Mr. YARBOROUGH) be added as a cosponsor of S. 3752 to amend the Fair Packaging and Labeling Act to require the disclosure by retail distributors of unit retail prices of consumer commodities, and for other purposes.

The PRESIDING OFFICER (Mr. SAXBE). Without objection, it is so ordered.

S. 3867

Mr. NELSON. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Indiana (Mr. HARTKE) and the Senator from South Dakota (Mr. MCGOVERN) be added as cosponsors of S. 3867, to assure opportunities for employment and training to unemployed and underemployed persons, to assist States and local communities in providing needed public services, and for other purposes.

The PRESIDING OFFICER (Mr. SAXBE). Without objection, it is so ordered.

S. 4092

Mr. BYRD of West Virginia. Mr. President, at the request of my senior colleague, Senator RANDOLPH, I ask unanimous consent that, at the next printing, the names of the Senator from Montana (Mr. METCALF), the Senator from Iowa (Mr. MILLER), and the Senator from Illinois (Mr. SMITH), be added as cosponsors of S. 4092, to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure that United States requirements for low-cost energy will be met, and to reconcile environmental quality requirements with future energy needs.

The PRESIDING OFFICER (Mr. SAXBE). Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF A CONCURRENT RESOLUTION

S. CON. RES. 74

Mr. MUSKIE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Rhode Island (Mr. PELL) be added as a cosponsor of Senate Concurrent Resolution 74 to affect the treatment of prisoners in South Vietnam.

The PRESIDING OFFICER (Mr. FANNIN). Without objection, it is so ordered.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, July 21, 1970, he presented to the President of the United States the following enrolled bills:

S. 759. An act to declare that the United States holds in trust for the Washoe Tribe of Indians certain lands in Alpine County, Calif.;

S. 1046. An act to protect consumers by providing a civil remedy for misrepresentation of the quality of articles composed in whole or part of gold or silver and for other purposes;

S. 1456. An act to amend section 8c(I) of the Agricultural Adjustment Act, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937 and subsequent legislation, so as to permit marketing orders applicable to apples to provide for paid advertising; and

S. 3274. An act to implement the Convention on the Recognition and Enforcement of Foreign Arbitral Awards.

ADDITIONAL STATEMENTS OF SENATORS

MORE WHOLESOME MEAT

Mr. MATHIAS. Mr. President, a man may be known by his friends, but a bill in Congress is usually known by its opponents. The Mathias amendment to encourage higher sanitary standards and more wholesome products for meat consumers is now opposed by the larger scale organized packing plants which today dominate 85 percent of the interstate meat business.

Two weeks ago this Chamber took an important step toward eliminating an anomaly in the Federal meat inspection laws by adopting an amendment to double the amount of money available for the support of State inspection programs and to make sure that all meat which passes inspection at the level of Federal standards is available for shipment in interstate commerce. This amendment, if accepted by the conference committee now considering the Department of Agriculture appropriations bill, will provide further incentive to States to upgrade their meat inspection programs and to assure that those State programs which meet Federal standards stay up to that level.

But now, the handful of interests which today occupy the interstate meat market, and who apparently do not want the consumer to have the benefit of a bigger meat supply, are critical of our effort.

I appreciate the concern of consumers and organized consumer groups that all meat—both that which is processed under State inspection and that which is procesed under Federal inspection—is safe for human consumption. This is certainly the goal which we all seek to attain: a full supply of healthful meat products for the American consumer.

It is exactly this goal which the Mathias amendment will help to bring closer. For if meat is processed in a plant operating under standards certified as equal to Federal standards and the products coming from that plant must be equal to the products coming from plants which are inspected by Federal agents, the standards are the same, therefore the meat products are equally healthful.

Why should this meat, inspected in States operating at standards equal to the Federal level, be restricted to the market of a single State? We have a great opportunity here to expand the volume of wholesome meat available to the national market, by encouraging higher standards through expansion of the grant program.

The housewives of America need a spokesman in this matter. They want better meat for less money. While no one has an Aladdin's lamp to wish such a result into reality, this provision will set forces in motion that will help bring it about. The single spokesman for a consumer group who has complained was obviously not informed about the increase in grants to States to foster high-

er standards in State as well as Federal inspection systems. And an increase in the meat supply in the national market could be expected to bring about some decline in the distressingly high level of meat prices.

I am confident that the apparent misunderstandings about this provision will be cleared up and that the joint conference committee now considering this bill will act in the interest of the more than 200 million American consumers by including this key provision in the final version.

McGOVERN ASKS ROLE FOR PALESTINIANS IN MIDEAST TALKS

Mr. KENNEDY. Mr. President, yesterday the Senator from South Dakota (Mr. McGOVERN) addressed himself thoughtfully to the problems of peace in the Middle East. In the course of his remarks he presented several new proposals which merit, I believe, careful consideration by members of the Senate and by the administration.

I ask unanimous consent that relative to the Senator's speech, an article published in today's New York Times, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 21, 1970]

McGOVERN ASKS ROLE FOR PALESTINIANS IN MIDEAST TALKS

WASHINGTON, July 18.—Senator George S. McGovern, seeking to meet criticism that he is dovish on the war in Vietnam and hawkish on the Middle East, outlined proposals today for a Middle Eastern settlement, including participation of Palestinian refugee organizations in Arab-Israeli negotiations.

In a Senate speech, the South Dakota Democrat reaffirmed his earlier support for supplying more American jet aircraft for Israel, but asserted that such a step itself was inadequate for promoting peace in that region.

Calling upon the Administration to make known its proposals for an "equitable solution," he spelled out several proposals of his own:

Israel should start allocating funds for an escrow account to compensate Arab refugees for loss of their land in Palestine as a result of the 1948 Arab-Israeli war. "The feeling of the Palestinians that they have unjustly lost their homes and property is perhaps the most important single source of tension and conflict in the Middle East," he said. "A unilateral act of Israel recognizing that fact could be the greatest single step toward peace."

Before any negotiations begin, the Arab Government should "accept responsibility for acts of aggression committed from bases" in their territories, and thereby assume responsibility for the terrorism of Palestinian commando groups.

As part of an ultimate peace settlement, Israel as well as the Arab states "should be willing to accept the presence of United Nations forces on their territories." Israel has not agreed to this in the past. Removal of such forces should be under the control of United Nations agencies, not individual governments, to prevent a repetition of the situation created by the United Arab Republic's demand in 1967 that United Nations peacekeeping forces leave its territory.

The United States should supply more jet aircraft to help maintain Israel's deterrent power, "but such aircraft should not be made available for forays over Arab territory for the purpose of sustaining the limited but real war which has persisted since the six-day conflict in 1967."

Aides explained that Senator McGovern had sought to introduce an element of moderation into current Washington discussion over the Middle East, fearing that otherwise the Senate "might get swept up in the emotions of the moment" and grant excessive authority to the Administration, as Mr. McGovern felt was done with regard to Vietnam in 1964.

Staff members also said that Senator McGovern had drafted his speech to answer criticism that he took a hard pro-Israeli line on the Middle East while on Vietnam he was dovish. On several points, he appeared to have offered suggestions that had not previously been made by any member of Congress.

Although both the Johnson and the Nixon Administrations have asserted that repatriation of roughly one million Palestinian refugees and compensation for their losses should be a part of any over-all Middle Eastern settlement, neither Administration has advocated participation of Palestinian organizations in Arab-Israeli negotiations.

Israel is opposed to such a step, and some Arab Governments have been hesitant about it. At the moment, the most militant Palestinian organizations themselves are disdainful of negotiations, but some diplomatic observers consider this only a tactic. Mr. McGovern suggested that the Palestinian groups be represented in Middle Eastern peace talks only if Arab Governments proposed such a move.

SOCIAL SECURITY AMENDMENTS

Mr. MOSS. Mr. President, the Senate will soon have before it for consideration the House-passed social security bill. This bill which reflects the many months of hearings by the House Ways and Means Committee is presently before the Finance Committee of the Senate.

As it stands, the social security bill of 1970, by and large, is a good bill making important improvements in the structure and administration of the social security program. Some of these positive proposals include:

First. A 5 percent across-the-board increase in social security benefits effective January 1971. For the average retired single worker this means that his check will increase from $116 to $121.80 monthly. Average benefits for a retired couple would be raised from the present $196 to $205.80.

Second. A liberalization of the retirement test to permit beneficiaries under 72 to earn up to $2,000 annually before having their social security earnings reduced. Under present law the reduction takes place after an individual earns $1,680.

Third. An automatic cost-of-living adjustment mechanism beginning in 1972 which would provide that social security payments would be automatically raised for each 3-percent increase in the Consumer Price Index.

Fourth. The allowance of widows to receive 100 percent of their deceased spouse's benefits instead of the present 82½ percent. Under this proposal the average widow's benefits will increase nearly 21 percent from $102 to $123 monthly.

Mr. President, the House-passed bill—H.R. 17550—also makes major changes in the medicare and medicaid programs. Some of these changes include:

First. The proposal that persons presently ineligible for part A, the hospital insurance portion of medicare, be allowed to enroll for coverage at the rate of $27 a month.

Second. Removal of the present provision in the law that requires that an elderly person enroll in part B of medicare—supplementary medical insurance—within 3 years after becoming eligible.

Third. The proposal giving power to the Secretary of Health, Education, and Welfare to terminate payments to physicians found to be guilty of program abuses, including overcharging, furnishing inferior, harmful or excessive services, or making a false statement to obtain payment.

Fourth. The proposal directing the Secretary of Health, Education, and Welfare to establish specific periods of time for hospitalization after which time the patient would be presumed to require services in a nursing home. A similar provision would apply to posthospital home health services.

Fifth. Making Federal funds available at the 90-percent level to the States to establish mechanized claims processing and information retrieval systems. Federal funds are to be made available at the 75-percent level for the operation of such systems.

Sixth. The inclusion of a 25-percent bonus to the States over present Federal matching—commonly at the 50-percent level—if the State will make use of medicaid home health services instead of providing services in a nursing home.

Seventh. The reduction of Federal matching by one-third after an individual in a medicaid nursing home has received 90 days of care and further reductions in Federal matching funds with the continued tenure of the patient.

Mr. President, it is patently obvious that the Social Security Amendments of 1970 represent a potent package with far-reaching effects. I believe the primary thrust of these amendments is positive but I do take exception to two of the proposed amendments to medicaid.

To deal with the positive side first, surely there can be no one who could disagree with the present need for a 5-percent increase in social security benefits. This amount will barely cover the increase in the cost of living from December 1969, when the last increase was voted by the Congress through January 1971, when the new increase is to take effect.

By the same token, there should be few who would argue with the proposition that periodic increases in social security payments should come automatically to keep up with increases in the cost of living as indicated by the Consumer Price Index. Almost every major labor-management contract today contains such a clause. Why then should our senior citizens be forced to carry the full burden of our accelerating inflation. There is little logic in requiring the Congress to come to the rescue of our seniors with this kind of a stopgap increase every year; the process should be automatic.

At this point, Mr. President, let me say what I have said so many times before:

Social security payments, even with the proposed increase, will continue to be inadequate. Reportedly, more than 50 percent of our seniors have only their social security checks to rely on, with outside incomes dropping sharply in recent years. With the proposed 5-percent increase the average elderly couple on social security would be receiving a check for $205.80 monthly, or a total income of $2,469 a year.

This annual income total falls far below the dollar amount which, according to the Department of Labor's Bureau of Labor Statistics, would be needed by a retired couple to maintain a moderate standard of living. At the beginning of 1970 a retired couple was found to need at least $4,320. Clearly, a retired couple whose only income is a social security check cannot afford a moderate standard of living. Indeed, the total income of $2,469 would put the average retired couple well below the BLS budget level for a "lower" standard of living.

This income crisis, which confronts our elderly as their number grows and their discontent multiplies, has been well documented by this year's report of the Special Committee on Aging entitled: "Developments in Aging 1969." We must do more to provide our seniors with a proper income which would go a long way toward restoring their self-respect and place in society.

Perhaps the best place to start in this regard is by taking another look at the retirement test which tells a senior that he is free to work but that his social security check will be cut back if he earns more than $1,680 a year. This year's proposal in raising the test to $2,000 is a step in the right direction, but I continue to have preference for my own bill which called for raising the retirement test to $2,520 a year or $210 a month.

Assuming that the presently proposed 5-percent increase is passed and the average retired couple can count on an income of $205.80 monthly, and assuming that my proposal is adopted so that a retired person could earn up to $210 monthly without penalty, the average retired couple would have a potential income of about $5,000 yearly. This would compare favorably with the 1970 BLS total of $4,320 which is needed by a retired couple to maintain a "moderate" standard of living.

Another positive feature of the proposed bill would allow widows to receive 100 percent of their deceased spouse's benefits instead of the present 82½ percent. My mail reflects that this is one badly needed change, too long neglected.

Moving from the consideration of proposals dealing with the economic needs of the elderly, I have a few comments on those amendments which relate to the medical and health needs of the elderly.

Mr. President, as chairman of the Subcommittee on Long-Term Care of the Special Committee on Aging, I have been conducting a series of hearings on the problems inherent in the medicare and medicaid programs. When these hearings are completed I expect to issue a report to the Senate with my recommendations. On April 10, I addressed the Senate decrying the step-by-step dismantling of the medicare nursing program and giving my extreme dissatisfaction with retroactive denials of claims and again on April 16 calling for the implementation of the Moss amendments of 1967.

At this point, I say again that when the claims of patients ostensibly settled can be ordered reopened and reevaluated retroactively in the light of newly announced criteria, and providers can be forced to pay back sums now deemed improvidently granted, there exists serious questions of equity and due process. The new bill provides minimum protection against these retroactive denials when it calls for the Secretary to establish a set of presumptions as to which patients are deemed compensable under the medicare nursing home program and for how long.

Few could take issue with other proposals of H.R. 17550 which expand the accessibility of these programs and which provide Federal funds to aid States in setting up modern claims-handling procedure.

The provision giving power to the Secretary of Health, Education, and Welfare to terminate payments to physicians found guilty of program abuses such as furnishing inferior services, or submitting false claims for payment, should be acceptable. I state my own view that most of the physicians who participate in the programs do so in good faith and render excellent services. The enforcement mechanism here will be the real test of the wisdom of this amendment.

Mr. President, let me now cover those amendments I find objectionable and to give my reasons for my beliefs.

A few months ago the President told us that he was going to propose the abolition of 57 agencies in the Government that had outlived their usefulness. Sandwiched in that proposal, curiously, was the suggestion that the Federal Government is not now, nor should it ever be, in the position of financing long-term care. The reference was made in terms of the medicaid program which sees the State and the Federal Government sharing the cost of keeping a patient in a nursing home.

In California a nursing home operator received $14 a day for a medicaid patient—medicaid is the word of universal usage although California calls its program Medi-Cal. The Federal Government contributes $7 of this total toward care of the patients.

That this amount—$14 a day—is unreasonably low is obvious and was confirmed by our recent San Francisco hearing. The fact is that most States have this kind of unreasonably low rate of reimbursement. States complain that they are hard pressed in this day and age to raise their share of the money to match Federal outlays.

Against this background comes the suggestion from the administration that long-term care is a local and State responsibility. With the action of the House of Representatives, on May 21, it has become much more than a suggestion; it has come near to being the law of the land.

I make reference to section 225 of the House-passed bill which commands that the Federal matching for any nursing home patient in the medicaid program will be reduced by one-third after 90 days and continue to be reduced with the patient's continued tenure in the nursing home.

The proposal appears to be based on the notion that people who are in medicaid nursing homes 90 days can be rendered well enough to get along with simply personal care after that. This is an erroneous assumption.

An old person sick enough to need the full spectrum of skilled nursing care probably never can be made self-sufficient. The function of the nursing home for these infirm elderly has historically been to comfort and to prevent further deterioration. The medicaid program in this respect can be distinguished from the medicare program, which was intended to be postoperative and posthospital. The medicare program, perhaps in theory, would lend itself to set numerical limits on number of patient days, and so forth, but in practice this idea has caused problems.

Another provision also objectionable is the 25-percent bonus which is given to the State in the event it elects to treat the patient through its home health services, rather than through its nursing home system. In the case of California again, the State ordinarily would pay $7 and receive a matching $7 from the Federal Government to make up the total of $14 a day paid to nursing home providers. If the State elected to treat a patient, instead, through its home health services, the share by the Federal Government jumps 25 percent. In this case the Federal Government would pay $10.50 and the State of California would pay $3.50. The assumption here seems to be that services rendered in the private home will be cheaper. The problem here is that over 50 percent of the patients presently on the medicaid roles have no family and no home. What some envisage, then, is purchasing old hotels and buildings and creating artificial homes by the State and then bringing in home health services to take advantage of the additional 25-percent bonus in Federal matching funds.

To my way of thinking, these services may be much more expensive than anyone has yet contemplated, since there is such a strong incentive for the States to make use of home health agencies. Let me make it clear that I do not oppose home health where appropriate—hardly so, since it was my 1967 amendments to the Social Security Act which required that the State set up home health agencies under medicaid.

To put it as plainly as possible, I feel that we are trying by these two unhappy provisions to set the type and site of care through fiscal gimmickry. Are we not really just using the Federal matching moneys to reward and punish, on the basis of monetary and fiscal considerations?

To my way of thinking the proposed amendment to limit the Federal matching after 90 days is a poor way to eliminate those who do not need medical care—call them custodial—from those who need such service in a nursing home.

If such is really the goal of the Government, might it not better be accomplished by the implementation of the Moss amendments of 1967, one of which calls for the States to set up regular programs of medical review. These medical review teams would travel through the States' nursing homes and make evaluations about the type and quality of care, the appropriateness of the site. Their recommendations would then be carried out, hopefully with benefit to the patient and the Government. The idea is to insure that every patient is where he needs to be and that he receives the kinds of services he needs. This decision should primarily be made on the basis of evaluating medical evidence and by an experienced group of professionals. The decision should not be made blindly by the Congress on the basis of financial considerations.

The hardships on nursing home operators if the Federal matching is reduced after 90 days is obvious since most are reluctant to take medicaid patients now as rates continue to be woefully low.

The hardships to the patients who need medicaid care and are pushed into intermediate care institutions perhaps, or into boarding houses, receiving little if any personal care, creates a desperate picture.

I would hope that Congress would conclude that we have responsibility to long-term care patients and reject the proposal to cut the Federal matching after 90 days of care. At the same time, I ask for more prompt implementation of my 1967 amendments by HEW to improve the quality of care for those who are presently in these medicaid institutions.

THE COURAGE OF WOMEN WHO WAIT

Mr. GRIFFIN. Mr. President, to those who wait anxiously for word of their loved ones, an hour seems a day and a day seems like an eternity.

It takes unusual courage to face the apparent hopelessness which each day of such a life presents. The depth and strength of this courage can often be measured only in terms of length—how long one has lived with uncertainty and depended on faith and hope for sustenance.

Yet, this unusual courage is not rare here in America. Right now, today, there are hundreds upon hundreds of American women—the wives and mothers of prisoners of war—in whose daily lives fear and anxiety are companions. They do not know whether their husbands and sons are alive or dead. They do not know whether, if alive, their husbands and sons are well or wounded, crippled or whole, whether starving or fed.

Somehow, these gracious and loyal women have managed to maintain a calm demeanor, and have attempted to go on with the business of life in as normal as possible.

Great credit is due them. But we owe them more than that.

We owe every possible effort to determine the fate of their men in North Vietnam. We also owe it to do all we can to bring home as quickly as possible, those who are alive.

THE DRUNK DRIVER

Mr. MOSS. Mr. President, of the many tragic aspects of alcoholism, none is more dangerous to society than that of the alcoholic behind the wheel. All too often the drunk driver kills or maims not only himself, but kills or maims other, completely innocent people.

A particularly fine article on the toll exacted by the drinking driver and what America is trying to do about it was published in the Christian Science Monitor of July 16. I ask unanimous consent that it be printed in the RECORD.

My request reflects my continuing interest in the battle on alcoholism, an interest I have had ever since my days as a city judge in Salt Lake City. I have joined the Senator from Iowa (Mr. HUGHES) and the Senator from New York (Mr. JAVITS) in sponsoring the most sweeping Federal legislation ever introduced to combat alcoholism, S. 3835. The vast importance of the bill and of other efforts to control the drinking driver are discussed with perception and force in the Christian Science article. I commend it to the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALCOHOLISM BEHIND THE WHEEL

(By Guy Halverson)

MILWAUKEE.—A confused and lonely 21-year-old Florida woman races alone through a stormy night on a motorbike. An alcoholic since her teen-age years, she is drunk. Rain and wind slash against her as she tightens her grip on the bike's handlebars. She looks up and in an instant of blurred recognition sees the glare of headlights from a vehicle racing directly at her. She is hurled across the highway and a human life is wasted.

The woman is one of about 70 million Americans who both drink and drive. Of these, millions are either problem drinkers or chronic alcoholics.

Clearly, alcoholism itself underlies much of the spiraling liquor-related accident toll on United States highways. And the toll won't be cut until Americans start to cure this deeper problem.

Efforts in this direction are producing results in some instances:

Here in Milwaukee, at another moment in time, a silver-haired business executive strides quickly toward a massive building. The renewal he feels inside shines as bright as the spring day. The man is a recovered alcoholic, and this day is his last at an outpatient clinic at the privately funded DePaul rehabilitation hospital.

FRAGMENTARY RESPONSE

But in general, response by government and the public to the alcohol problem is only fragmentary and all too often lethargic and ineffective.

The drunk driver, safety experts insist, reveals only one aspect of the blotch of alcoholism that stains so much of American society. Divorces, shattered families, frequent home and industrial accidents, and mounting crime all testify to it. Industry loses over $2 billion annually to alcoholism in absenteeism and shoddy work.

"The central truth," says Sen. Harold E. Hughes (D) of Iowa, chairman of the special Senate subcommittee on alcoholism and narcotics, and himself a reformed alcoholic, "is that we must make up our minds to launch an all-out, adequately funded attack on the problem of alcoholism in America if we are to make significant reductions in the deaths and maimings on our highways. . . ."

Most safety experts agree there must be a sharp about face in the permissive attitudes about liquor now sweeping the land:

The mass media, in particular, must stop glamorizing drunkenness by identifying it with good humor and sophistication.

The home, the church, the school must do a better job of acquainting young people with the dangers and risks of drinking.

Employers, work associates, and relatives must stop overprotecting alcoholics who desperately need attention—not the hidden isolation that is often a sure passport to self-destruction and tragedy for others.

Courts must be given greater flexibility in dealing with drinking drivers. The present system—which seeks to control driving behavior through reliance on legal sanctions alone—is a failure. Modern rehabilitation facilities and techniques are sorely needed in almost every major community in the nation.

The problem of alcoholism and liquor abuse seems almost overwhelming in its complexity and ubiquity. In one of the nation's largest metropolitan areas I walked into the office of the local sheriff to discuss highway safety and found him seated behind his desk with a highball in his hand. It was 2 p.m.

MOST NEGLECTED PROBLEM

In another city a local traffic safety council official could hardly keep his eyes open during our interview because of the drinks he had had during an afternoon meeting. He finally had to have a relative come and drive him home.

No matter where one goes—to the office of a police official, a safety expert, a highway engineer—the conversation inevitably swings around to a discussion of alcoholism. Yet, as John W. Gardner, former Secretary of Health, Education, and Welfare, has pointed out, alcoholism, the nation's No. 3 health problem, is also its most neglected. Alcoholism treatment lags far behind treatment for drug abuse, which touches a much smaller percentage of the population.

Alcohol is the most used—and widely abused—drug in society.

Health officials insist that alcoholism is a disease, not just a behavior problem as was assumed for so many years. Between 6 and 20 million people are believed to be chronic alcoholics or problem drinkers with a compulsive dependence on liquor. But there is also a staggering multiplier effect that adds a tangled new dimension to the problem. Every alcoholic, the experts say, directly affects up to three relatives. Thus, up to 60 million people in this country may be immediately touched by alcoholism. That would mean one out of every five homes.

For years the public stereotype of the problem drinker was that of the skid-row derelict. But, says William M. Moore, Jr., executive director of the National Council on Alcoholism, "only about 3 percent of all alcoholics are derelicts. Most are the type of people you might meet anywhere in society—wage earners, homeowners, housewives, professional people."

Take what happened one day here. The local office of Alcoholics Anonymous received a frantic call that a woman, plainly drunk, was about to slide behind the wheel. AA called the local sheriff who dispatched a car. The woman was pulled from her vehicle be-

fore she could drive it off. It was a bus for elementary school children.

MANY DIFFERENT TYPES

Studies of drinking drivers clearly indicate that many are chronic alcoholics or longtime problem drinkers. Indeed, most studies show the typical drinking driver involved in a fatal or near fatal accident to have a blood-level content far above levels associated with normal social drinking.

Yet, when one talks about the "drinking driver" one is really talking about many different types of drinkers:

1. The chronic alcoholic or problem drinker who is suspected of causing perhaps the largest chunk of all fatal accidents.

2. The social drinker, whose blood level usually registers less than most problem drinkers, but still accounts for an important share of highway mishaps.

3. The novice drinker or occasional drinker, whose inexperience with liquor is a contributing factor to some accidents.

4. The young drinker. Some studies suggest that the youthful drinker is causing an increasing number of highway accidents. Of the first 10 auto fatalities this year in Michigan, for example, all were under age 26, and liquor was a factor or suspected as a factor in nine of the cases.

How does one stop these people from mixing their drinks with driving?

In most courts throughout the U.S., judges are still heavily dependent on punitive legal sanctions—fines, license suspensions and revocations, or jail sentences. But because of the hardship on the offender, whose livelihood is often dependent on use of his vehicle (particularly in the Western states with their large distances), juries and courts are reluctant to impose stiff sentences. Moreover, prosecutors, acutely aware of public sentiment, carefully weed out thousands of marginal cases each year, even though they know the defendant is guilty of a road violation. Or they deliberately seek a lesser charge, such as "reckless driving," instead of "driving while intoxicated."

"HEALTH-LEGAL" APPROACH

The resulting "control system" is just not working. In Chicago several months back, a 28-year-old man was slapped with a $20 fine and court costs for staggering drunk in front of a stream of cars at a busy intersection. The very next night he was again arrested—this time for drunk driving.

Last year some 300,000 drivers had their licenses suspended or revoked. Yet, it's believed that as many as 200,000 of them continued to drive illegally.

What's needed, say many jurists, is a multipronged attack on the drunk driver—a "health-legal" approach, as Lyle Filkins of the Highway Safety Research Institute of the University of Michigan has dubbed it. On the one hand, judges should be allowed to impose stiff sanctions for those drivers who respond to punishment—such as social drinkers, occasional drinkers, and young people. On the other hand, rehabilitation should be available for those drivers who need a change in drinking behavior more than driving behavior.

And that's the rub. Few jurists today have any place to send the problem drinker for rehabilitation.

In many cities I found businessmen and teen-agers, problem drinkers, and hard-core derelicts all thrown indiscriminately together into grim drunk tanks. In one Southwest city I found a middle-aged man lying face down on a concrete floor where he had tumbled from a bunk.

PROGRAMS JUST NOT ENOUGH

There are only about 200 facilities of varying types around the country to handle the problem drinker, including halfway houses and clinics. Only about six cities have major detoxification centers, including important installations at Washington, St. Louis, and Des Moines. Even more significantly, only about six cities have comprehensive treatment programs, including Minneapolis, Atlanta, and the private DePaul program here in Milwaukee.

The federal response has so far been spotty and piecemeal.

The main thrust to date, most experts feel, come out of the National Center for the Prevention and Control of Alcoholism in the Department of Health, Education, and Welfare. Budgeted at around $4 million annually, the program has dealt with the research, education, and treatment areas.

Rehabilitators maintain that the programs are just not enough. More money is spent each day on liquor purchases in the U.S., they say, than the entire federal government spends on alcoholism treatment in the course of an entire year.

A measure recently introduced into the Senate by Senator Hughes, along with Sens. Jacob K. Javits (R) of New York and Frank E. Moss (D) of Utah, would earmark a more realistic amount of $435 million over a three-year period for a comprehensive alcoholism program, including grants for construction of facilities by state and local communities. It would set up a control agency located most likely in the National Institute of Mental Health (that section is being hammered out in committee as of this writing). The measure would require establishment of prevention and treatment programs for federal employees and armed forces personnel, and also provide that group health and disability policies for federal employees must include alcoholism.

The Hughes bill (S3835) in effect supersedes an earlier, less comprehensive bill introduced several years ago by Senators Javits and Moss. The newer Hughes-Javits-Moss bill has so far snapped up endorsement from close to 50 senators, including a spectrum as diverse as Sens. George Murphy (R) of California, Charles H. Percy (R) and Ralph Tyler Smith (R) of Illinois, and John J. Sparkman (D) of Alabama.

PROPONENTS OPTIMISTIC

Proponents of the Hughes-Javits-Moss bill are optimistic of passage during the next year. They note that the Hill-Burton hospital construction bill—enacted over a veto by President Nixon last month—contained a provision establishing new priorities for treatment of alcoholism within hospitals. In the past most hospitals have tended to shun the alcoholic. The Hill-Burton Law, rehabilitation enthusiasts assert, shows that a national consensus is building toward a broad-based federal rehabilitation program.

The new $18 million program under way at the Office of Alcohol Countermeasures in the Department of Transportation is also geared in great part to an identification—and then control—of the problem drinker. Under the program, announced June 26, demonstration grants have been awarded to a number of communities around the nation: the state of Vermont; Marathon and Sheboygan Counties in Wisconsin; Nassau County in New York; Washtenaw County in Michigan; King County, Washington; the cities of Eugene and Portland, Ore.; Denver; Seattle; Albuquerque, N.M.; and Charlotte, N.C. DOT officials hope the roster can be upped by an additional 20 localities next year.

The imaginative program—a small, but important first step in the control of the drinking driver—will test out some 50 or 60 countermeasures, including use of chemical agents that cause the drinker to react unfavorably when he imbibes alcohol, tying gas station operators into special traffic grids so they can check license numbers of motorists suspected of being intoxicated, and even special buzzer devices on the cars of drinking drivers that may be activated due to erratic driving conditions.

INDICTMENT OF ADMINISTRATION'S SCIENCE POLICY

Mr. KENNEDY. Mr. President, the latest issue of Nature, one of the world's most respected scientific journals, contains a slashing indictment of the administration's science policy. As chairman of the Special Subcommittee on the National Science Foundation, I, too, have been concerned with the recent cutback in Federal support for basic scientific research. I, therefore, urge every member of Congress to read the Nature article. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TUNE WITHOUT A PIPER

Washington stands in relation to American science as does Brussels to the European Economic Community. Without the bureaucracy there would be no science, especially now that it is tacitly although not explicitly acknowledged that government must provide financial support for science. Moreover, the doings of the bureaucracy have a fascination of their own, not merely for those directly involved. Yet there is a sense in which the bureaucracy is irrelevant to American science. Nobody in Washington in this past six months has helped to identify a new initiation factor for the translation of DNA into RNA, or has with his own hands fashioned a new kind of laser. It is tempting to hope that the bureaucracy will, like the old-fashioned Marxist state, one day wither away. Within the EEC, there is some reason to hope that Brussels will become increasingly irrelevant as the objectives of the Treaty of Rome become realities, but unfortunately it seems as if the influence of Washington on American science has come to stay.

The bureaucracy will not go away. The best that can happen is that it will somehow be improved. The past six months have been a vivid demonstration of how muddled are the ways of Washington in administering an amount of money so large that many other governments must consider it extraordinary wealth. One way and another, something like $2,000 million find their way each year into basic research outside the direct influence of government laboratories, and even this is only one-eighth of what the Federal Government as a whole spends on research and development each year. Government expenditure on research and development in the United States is, in short, comparable in size with the whole of government expenditure in Britain. No wonder that some people suppose that the inefficiency with which research funds are administered is immaterial.

Until January this year, the notion that inefficiency is tolerable had many supporters. Now, however, it is plain that many vigorous fields of research are being damaged by the way in which policy is made—or, rather, unmade—in Washington. Whether the Princeton-Pennsylvania accelerator, which cost $40 million to build, which has been operating for only about two years and which had already gathered its research groups of young people, will be able to keep going for the next academic year remains to be seen. Administration officials seem now willing to acknowledge that it was needlessly severe to have trimmed the budget of the Atomic Energy Commission in such a mindless fashion, yet an unpalatable truth that no less a person than President Nixon gave the impending closure of the laboratory as an example of his fiscal prudence, and that it will be necessary to find some face-saving formula before the laboratory can be given the

meager $1 million that would now be needed to keep it going for another year.

Tangible signs like this of how the budget restrictions have begun to bite into academic research in the United States are only the tip of the iceberg. It is more serious that many of the new ventures on which American universities would now naturally embark are being postponed not so much for lack of funds as for the lack of the promise of them. Radio astronomy is the most spectacular example of this dereliction of ambition. Three years ago, a panel under Professor R. H. Dicke of Princeton University provided a list of half a dozen projects on which money could usefully be spent, and singled out the project to provide a new surface for the Arecibo radio telescope in Puerto Rico as the cheapest and in many ways the best buy. In spite of this, however, the $3 million needed for the Arecibo project found their way into the current budget only for the financial year which has just begun. The more ambitious projects on which people have set their hearts remain in limbo.

The temper of Washington's reaction to these developments is well illustrated by the argument of one White House official in the past few months that no harm will be done if the United States "gives other nations a chance to shine" in some parts of science. In the last resort, of course, what determines a nation's prowess in some chosen field is not the amount of money which it decides to spend but its ability to recruit bright people. This is a point which has, in the past few months, been put forcefully and eloquently by Mr. P. Haggerty, the chairman of Texas Instruments. But actually to opt out of a field of research which is exceedingly relevant to much of what other agencies in the United States are trying to accomplish is quite a different issue. Are the administrators trying to make a virtue out of budgetary necessity?

Why is there such a muddle? The short answer is that there is nothing in the Administration that could pass for a policy towards science and technology. Some time ago, the OECD searched for what would have been called elsewhere the country's science policy, and concluded that in the United States "there is not one science policy but several." This is a kindly flattery. The truth is that, on several important questions which lie at the roots of the conduct of science in the United States, the Federal Government has not had the time or the inclination or the wit to make up its mind. The result is that important matters on which the Administration should give a lead are left to be decided by the tug of war in which the several agencies of government are habitually engaged and by the necessarily wayward arguments of Congress.

If this should seem a harsh judgment, the case of the government's curious attempt to do away with graduate traineeships in the early weeks of 1970 is a sufficient proof of indolence or worse. Graduate traineeships in the terminology of the National Science Foundation are the financial awards to graduate students in the gift of selected graduate schools at universities up and down the country. The NSF also makes available graduate fellowships which are awarded by competition among undergraduates and which are tenable at the university of the student's choice. When the budget of the National Science Foundation appeared in February this year, it was immediately apparent that the customary allowance for traineeships was missing, and so people looked quickly at the other parts of the federal budget in which the equivalents of traineeships are usually to be found. The amount allowed for National Institutes of Health traineeships was unimpaired, but the University Support Program with which NASA has encouraged the universities on a declining scale in the past few years had disappeared altogether, as had all new money in the Department of Defense budget. Only with the beginning of the annual ritual of congressional inquiries into the federal budget did it become known, from spokesmen of the NSF, that the Administration had decided that would-be graduate students in science and technology should find other ways to keep themselves in graduate school, that the NSF's dependents would not be affected in the academic year immediately ahead and that the NIH had been able to resist successfully the Administration's point of view—largely, it seems, because of the personal intervention of Mr. Robert Finch, the then secretary of Health, Education and Welfare.

This sorry tale has a number of curious features. In the first place, no spokesman of the Administration has ever sought in public to justify the decision. The Bureau of the Budget seems to have been the driving force behind the proposals, and there has been a good deal of talk about the rightness (and wrongness) of requiring graduate students to keep themselves at university by means of loans—a potentially important device which is not yet working as smoothly as people hope. In practice, however, the NSF is frankly unhappy with the situation; Dr. William McElroy, the new director, says that he is prepared to go along with the decision only on condition that there is a careful review of how things are working within the course of a year. Yet, in all the discussion, nobody has seen fit to mention the way in which the Administration's decision flies in the face of the powerful arguments put forward merely a year before by the National Science Board, in a report which asked for such an explicit commitment of the Federal Government to the support of university research that a substantially larger proportion of the money for university research would be supplied by means of earmarked grants to institutions and not by grants for particularly research projects.

In other words, the Administration has rejected the National Science Board's argument, but has done so inarticulately, not bothering to say why. In Washington, where a low profile is something enviable, this may seem sensible enough. Why should one of the Administration's spokesmen—Dr. L. DuBridge, for example—choose to justify such an unpopular and irrational decision when called on to make one of his several public speeches when he can talk about the evils of pollution instead, and win friends, not enemies? The tragedy, of course, is that nobody bothers to ask what can be the effect of all this on the next generation of graduate students and on the universities which, a few years ago, took the then administration at its word and behaved as if it were their patriotic duty to turn out more PhDs.

For those with long memories, the contrast between now and the heady late fifties is almost bizarre. Then, higher education in the sciences became overnight a cherished part of the apparatus of state—a commodity of which there could not be too much. Now it is a kind of tribute which the government pays the universities more or less as if it were to prevent them from lapsing entirely into anarchy. One of the unexpected happenings of the past few months has been the way in which Dr. DuBridge, a card-carrying hot-gospeller for basic research when he went to the White House eighteen months ago, now comports himself as just another pragmatist.

To an outsider, the gulf which now exists between the Administration and the academic community is not merely remarkable but alarming. How, one wonders, can the country carry on if such a great proportion of the intellectual community insists on talking about Cambodia and not physical chemistry or nuclear physics? The signs of trouble first came more than two years ago, when evidently level-headed people, some friends but many acquaintances, would spend fifty minutes out of a precious hour denouncing the then president and his Vietnam policy and merely ten minutes saying what they had been up to. By now, the same people are much more intimately involved in the intricacies of campus or national policy—the ABM and all that. Perhaps this is what Vice-President Agnew means when he talks of the radicalization of the campuses. The truth is, however, that a visitor to the United States must now acknowledge that the academic community, the scientific community, included, is much more absorbed in political and social questions than it used to be. Moreover, he must be prepared for the outspoken scorn of a great many people for the Administration's claim on public attention. If the objective is merely to stop the war, no harm may be done. To be sure, it is exceedingly distracting for serious scholars. If the disaffection goes deeper, the capacity of American governments to govern may be in question.

Vietnam apart, the past few months have also provided a series of causes why the Administration and the scientific community should be at odds. Muddles like that about traineeships are dwarfed by the extraordinary way in which the Administration seems to have been powerless to mitigate the effects of the Mansfield Amendment to the past fiscal year's military appropriations bill on the pattern of spending on pure science. To be sure, the Mansfield Amendment was finally attached to the military budget only in December 1969, by which time the budget for the current year must have been more or less decided, but this does not explain why the agencies of the Federal Government were busily pruning their research budgets to fit in with the new doctrine that the defense establishment and even the other mission agencies should not support basic research without there being any apparent effort, elsewhere within the government, to count up the cost of the cast-off projects. After all, there was nothing in the chain of argument leading to the Mansfield Amendment which could reasonably have convinced the Administration that Congress had suddenly become hostile to basic research. The, complaint more simply was that it is illogical that a good deal of the United States effort in pure research should be a kind of by-product of military defense. The Administration's failure to count the cost—estimated to be the best part of $50 million—is not so much a failure of public administration but a weakness in simple arithmetic.

It is inevitable that this failure should have damaged the standing of the Office of Science and Technology with professional scientists. Rightly or wrongly, the office has acquired in the past decade the unique distinction of being at once a source of private advice to the President and a focus for the expression of public opinion by professional scientists. The failure of the office to rise in the defense of academic science against the simple arithmetic of the easy—and conveniently thrifty—interpretation of the Mansfield Amendment is one from which its reputation will easily not recover.

A part of the trouble is that the present holder of the office, Dr. DuBridge, is not the kind of fellow who is able to create the illusion of being a means by which the scientific community can make its voice heard in high places. He is too shy, even gauche, for that. Everybody admits that he is honest, diligent and willing to cooperate in all kinds of causes, from that for the banishment of teratogenic herbicides to the need not to overload the electricity generating system during the air conditioning season. Yet even now, after eighteen months of hard work, the kindest thing that is said of him is that he is a much better science adviser to the President than some of the candidates originally suggested. To be sure, Dr. DuBridge is the first of five science advisers to have held office while the budget has not been growing

quickly, but it is probably fair to say that at this stage in the game, most of his predecessors would either have felt themselves exercising some real influence on the system or would have given up. Dr. DuBridge has soldiered on at a job in which he insists a great deal of valuable committee work is being carried on. What has happened, for reasons bigger than himself, is that the time has passed when a single mandarin in the White House could be at once courtier and professional representative.

It is only fair to add a list of the reasons why the character of the Office of Science and Technology must now change. First, the days of the mandarins are over—no federal agency worth its salt would now pretend to be able to do its job without independent scientific advice of its own. If the science advisers of the sixties had to be conjurers to make a mark, those of the seventies would have to be wizards. But how valuable as an initiator of science policy can the Science Adviser be if the rest of the Administration to which he belongs is unwilling to listen? Finally, the growth of agencies such as the National Science Foundation and organizations such as the National Institutes of Health has shifted interest away from the Office of Science and Technology and from the President's Scientific Advisory Committee. To be sure, OST and PSAC still have useful work to do, but it is bound to be less glamorous work than in the fifties. This tendency is bound to mean that there will in future be fewer channels by means of which the views of professional scientists on the technicalities of military defense can be carried to a wider public—this, no doubt, is why people who have things to say about the ABM or MIRV are eager to turn up before congressional committees to say their pieces. If the Office of Science and Technology has ceased to be the constituency representative, however, there is no certainty that the National Science Foundation—the logical successor—is yet equipped to fill this role. The past six months have shown how much a part of the Administration the foundation really is. The same period has shown what a weathercock it can be. It was the National Science Foundation, no less, which introduced to a committee of Congress a witness who said, without any obvious trace of sarcasm, that "ecology is not a discipline but an attitude of mind" at a time at which the foundation was especially anxious to draw attention to what it planned to do for the improvement of the environment. It is the same foundation which has just spent $50,000 on a research project by two medical students from Stanford University which is intended to suggest ways in which newspapers and broadcasting stations may be able the more effectively to "cover the deterioration of our environment".

To say all this is not to make fun of what has been the quite proper concern in the United States about the condition of the physical environment. The complaint is merely that the National Science Foundation has not instinctively become a source of philosophy and of measured judgment on the environment but, rather, an earnest follower of other people's fashions. It is only fair to say that this may be a reflection of the anxiety of the new director to squeeze the last nickel out of the Bureau of the Budget, and there is probably also a great deal of truth in Dr. McElroy's frequent statement that the time has gone when American taxpayers are willing to spend money on scientific research which does not somehow solve practical problems. But in circumstances like these, is it not for the National Science Foundation to spend more of its energy on a demonstration that even supposedly conventional forms of basic research—high energy physics, for example—are in their runny way as relevant to the needs of modern society as all the half-baked attempts at mathematical modelling of ill-defined ecosystems which now come on top of the list for grants of public money?

The fashion for anxiety about the environment, now rapidly on the wane, seems to have been welcomed enthusiastically in Washington not for its own sake but because it is one issue on which politicians can make common cause with at least some of the younger generation. To be sure, there is every reason why arrangements should quickly be made to prevent municipal authorities and industrial enterprises from using the rivers as sewers; there is a great need for vigilance about the use of possibly teratogenic or carcinogenic chemicals and serious cause to fear that unbridled use of the undeveloped land remaining in the United States, vast though its acreage may be, will be disastrous for flora, fauna and even people. But are these not matters which have been dealt with in many other industrialized nations without all the cries of doomsday which have echoed about Washington in the past few months? Why should not the familiar legal instruments of public administration provide at least a good foundation for a campaign to improve the environment? A part of the trouble in the United States is, of course, that there are serious limitations on the power of the Federal Government to enforce uniform standards of good practice on the whole country, and, at the local level, the advocates of cleaner environment are also strongly opposed to the higher taxes needed to pay for sewage treatment plants. At the same time, the Federal Government clearly shrinks from some of the financial implications of its policy to tempt local authorities along desirable paths by means of financial subsidies. These, however, are essentially political problems even if, in the long run, technology may help to simplify some of them. The Washington establishment has done its reputation very little good by going along with the easy assumption, in the past few months, that an urgent programme of scientific research should be the mainspring of the movement for cleaner surroundings. This observer, at least, has been dismayed to see how readily sober men will argue, when challenged, that exaggeration is often necessary for the swift mobilization of public opinion. Fair play, Dr. DuBridge has been one of the few stalwarts.

The ideal, of course, is that the National Science Foundation should itself become the source of levelheaded opinions on what can and cannot be accomplished by scientific research. As things are, however, the NSF is neither big enough nor sure enough of itself to function in such a way. The National Science Board is better placed, with its responsibility not merely for guiding the policy of the NSF but for giving advice on questions of scientific policy to anybody in the federal government prepared to listen. And, true to the form set with its first report on the national importance of graduate education, the National Science Board did this year produce an eloquent document arguing the case for continued financing for research in the physical sciences. As with the previous document, however, the Administration's reception of this report was marked by its indifference. The truth, it seems, is that if an agency of the federal government wishes to help with the making of science policy, it must first be well placed politically or must enjoy a healthy budget.

So what about the National Academy of Sciences? Does that have the leverage required to ensure that the funds available are spent to the best advantage? A year ago, after the election of Dr. Phillip Handler as president, it may have seemed as if the academy would have an increasingly powerful influence on events. And it remains an observable fact that Dr. Handler is alone among the Washington dignitaries in being prepared to make a public speech without a written text. In reality, however, the academy has been slow to move into the vacuum which exists. In the past few months, much of the academy's energy seems to have gone into questions of the relationship which it should have both with engineers and professional medical people. The academy continues to undertake studies on specific problems—the extension of the runways at New York's airports and the assessment of the safety or otherwise of food additives now on the Food and Drug Administration's list of substances "generally recognized as safe", but the Committee on Science and Public Policy seems to be making heavy weather of responding to the strains of the past few months.

May it therefore be for Congress to spell out what should be done? If it were not for the impending departure of Mr. Emilio Q. Daddario, the chairman of the House of Representatives subcommittee on science, research and development, who is almost certain to become governor of Connecticut in November, there might be some reason to hope that his committee could have had a continuing and beneficial influence at least on the development of institutions. Mr. Daddario's committee, for example, was principally responsible for the legislation by means of which the National Science Foundation now enjoys a greater degree of independence than in the past. Inevitably, however, it has been itself exposed to some of the popular pressures both for a better environment and for finding some way of "living with technology", as the saying goes. The committee's proposal that there should be established a much larger institution than the NSF to be responsible for close on half of the basic research at present supported by the Federal Government has a great deal to commend it even if nobody in authority has so far seen fit to risk an opinion. It will be interesting to see if the same cause is taken up by Senator Edward Kennedy, Mr. Daddario's most likely successor in Congress as champion of organized science.

In the last resort, the most serious complaint which can be sustained against the Washington establishment is that it is cruelly indifferent to many of the good ideas which abound. The excuse which the administrators tend to fall back on is that there are limits to the degree of innovation that Congress will find acceptable. But is this really a sufficient reason why the Atomic Energy Commission should continue to spend almost as much on physical research, mostly in high energy and nuclear physics, as the National Science Foundation can afford to spend on research of all kinds? Is it really credible that high officials of the Administration should have been unable even in a year of tightening budgets to find room for the kind of financial support needed to keep radio astronomy, or organic chemistry, moving along? Outsiders are sometimes hard pressed to know what is in charge—the machine or those who are supposed to administer it.

Unhappily, the administration of American science reflects little of the sharpness and flair which mark much of what goes on in the laboratories even when people's energies are more than ever bound up in extramural activities of one kind and another. The bureaucracy is not so much malevolent as weak and even dull. Because no amount of wishful thinking will make it go away, the best that can be hoped for is that it will be strengthened and enlivened. A concentration of responsibility for basic research in an organization much like the National Science Foundation would be a step in the right direction, but this organization would then have to be managed, like NASA and the National Bureau of Standards, with the skill and flair of an agency which knows where it is going.

ALASKAN STUDENT URGES RESPONSIBLE APPROACH TO UNIVERSITY REFORM

Mr. STEVENS. Mr. President, the degree of sensitivity of some of our young people to the very difficult issues of the day has at times astounded me, but nothing has astounded me so much as a paper that was recently sent to me by my good friend Ken Davis, of Anchorage, Alaska. His son Randy Davis is in the ninth grade at Odle Junior High School. The paper is entitled "Prospects of University Reform."

Wallace Collins, who is a teacher at Odle Junior High School, stated in a letter:

The entire paper is just as it was originally written.

I submit this paper with the views of a ninth grade student on the problems related to university for two reasons. First, it is, as Mr. Collins stated, representative of the feelings of many young people today. Secondly, I call particular attention to Randy's paper because of the views that he has expressed. He said:

I feel that I am logical enough to realize (as apparently many student radical groups have not) that you cannot tear down and build again in the same day.

Randy Davis also said:

For any truly significant changes in the eductional structure to be made the student must recognize that the university is a place of learning, not a showcase for activities unrelated to education. The student must also recognize the fact that for any advances to be made, he must concentrate on learning, make it his sole reason for attending the university, and not to use it for a political bandwagon or as an athletic field for violent athletic activity.

I ask unanimous consent that the complete text of Randy Davis' paper be printed in the RECORD.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

PROSPECTS OF UNIVERSITY REFORM

While I do not now, nor have I ever supported the actions against the American university carried out by violent radical groups, it is essential to realize that while the university is the most sophisticated of the educational systems, with this increased sophistication comes vulnerability to organizational problems. These problems cannot be solved in a short span of time because their nature has been born in the hundreds of years of history of the university. While I could not hope to provide a satisfactory solution to all of the problems, I do hope that by providing a general outline for improvement, the solution would remain flexible for difference among individuals.

The most basic problem is: should the universities attempt to produce something original in their students or continue to modify and increase the student's previous knowledge? Obviously, the first solution would be the best one. The prospect of a society in which there is creative thought not limited to artists or writers is tremendous. While this situation would be very desirable. I am afraid it lies in the lost realm of all Utopias; that is, not quite ever reaching the goal. The reason I feel this way is that it is almost impossible to teach creativity. Certainly, it can be developed and expanded, but how could you teach creative thought to a non-creatively inclined group. Not that the only problem is with the students, but many of our greatest teachers are not too creative; while they have a gift for explaining and clarifying what is already known to them, they have trouble teaching independently. For the majority (of students, teachers, and subjects) a state where the student is *told* what he needs to know and then is forced to develop some degree of imagination is the most (and only) logical solution. It is supposed that by the university level, the student has developed enough mental ability to enable him to begin to develop superior logic and to a certain extent, imagination.

Another of the basic difficulties is the question of where the reform should be originated. In other words, on who should the responsibility for the design of change fall, student or administration. I feel that the responsibility lies with the students because social reform must start at the bottom of the social scale, not at the top. Also, since the students outnumber the faculty, it is logical to deduce that the university reform program should be designed by the group best suited to design a program that would involve the majority group. I feel a person himself is the best organizer of his own affairs. Another way to state it is that since the faculty has already been educated, the program should be oriented toward those who have not yet completed their education. I do not wish to imply that the sole function of the faculty and, above all, the university, is to be placed at the feet of the students to use as they wish, creating programs that may endanger the function of the university as an educational institution. It is important to realize that the prime flexibility of a university should be designed with the learning requirements of the student in mind. It is unfortunate that this type of reform may not be possible for some time because a program of this kind would require considerable intellectual maturity on the part of both students and faculty, and in many recent cases I have not seen evidence of any of the maturity needed to make this system work. I also, feel that a large percentage of today's university students are too involved and susceptible to outside influences that are not logically connected with the learning process. While I do not wish to argue about the practical value of such groups, I do not feel that the place (or stage, as you wish) for their rather bizarre activities is on the university. For any truly significant changes in the educational structure to be made, the student must recognize that the university is a place of learning, not a showcase for activities unrelated to education. The student must also recognize the fact that for any advances to be made, he must concentrate on learning, make it his sole reason for attending the university, and not to use it for a political bandwagon or as an athletic field for violent athletic activity.

The co-working of the universities departments is crucial because if the departments of related subjects cannot work together, the knowledge level will drop. With the many new sciences opening up, many new opportunities for inter-related sciences have appeared. Imagine the difference in available skill if you had four students from inter-related subjects all working on the same problem compared to having four students all from the same subject working on the same problem. The working of inter-related subjects is being worked within the graduate schools (to some extent), but while students are waiting to graduate, they are losing the time to gain precious knowledge. Knowledge cannot be confined into neat little Pythagorean rectangles; it must be allowed to flow freely and expand, like a gas. If its expansion is restricted, the faculty does not suffer, only the students; and the students are the point of education. If this change is realized, tomorrow's intellectual leaders will have to possess one quality that the vast majority of them do not have today. That quality is the ability to work together, to see the problem another person's way. If this is possible, then Man would have taken his biggest step forward since he learned to communicate with his fellows.

As I have stated before, these reforms would not come easily or in a short time. I feel that I am logical enough to realize (as apparently many student radical groups have not) that you cannot tear down and build again in the same day. Not only would these reforms require changes in the society's view of the university, the student's view of the university and the faculty's view of the university, they would also require changes in the general views of society toward education and the uses of the increase in available knowledge. Like all powerful things, knowledge must be used without malice or vengeance toward people.

Also, the universities must quit jockeying for position in terms of prestige; i.e., the Ivy League, by putting less importance on educational value and more on how many senators or presidents went there. I feel that the Ivy League and related schools are in the same state as the decline of the Roman Empire—proud and unwilling to accept defeat. It is interesting to note that in the last 20 years the majority of the large cheating scandals have involved students of the so-called "exclusive" schools. This is an indication that perhaps the student's academic interest is lagging due to the false security that their parents have money and they are Ivy League.

"The university is harder to re-organize than a cemetery".—Warren Bennis.

FISCAL STABILIZATION BOARD

Mr. BELLMON. Mr. President, one of the provisions of S. 4056, my bill to establish a Fiscal Stabilization Board, calls for the creation of a special fund which could be used to stimulate or slow down the economy. Some skepticism has been raised as to the practicability of such a fund, particularly as it relates to disposition of moneys during a period of downward tax adjustments.

It is interesting to note that an anti-inflation bill approved by the West German Parliament this month contains a similar provision.

Mr. President, I ask unanimous consent that an article published in the New York Times concerning the bill be printed in the RECORD for the benefit of Senators who are interested in fiscal and monetary reform.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BONN VOTES A SURCHARGE ON TAXES TO CURB INFLATION

BONN, July 11.—The West German Parliament approved today a Government bill to combat inflation through a number of tax measures, including a 10 per cent refundable surcharge on personal and corporation taxes.

The vote ended a two-day special session in the Bundestag, or lower house. The Bundesrat, or upper house, is expected to approve the legislation Wednesday.

The legislation was unanimously supported in the Bundestag by the deputies of the governing Social Democratic and Free Democratic parties. Almost all deputies of the opposition Christian Democratic party abstained.

DEPUTIES RUSHED BACK

To attend the special session convened two weeks after the start of the summer recess, deputies had rushed back to Bonn from places as far away as Latin America and Africa. Two Social Democratic deputies

motored 700 miles through the African bush to catch a plane to Bonn.

Key element in the new law legislation is the temporary 10 per cent surcharge on withholding and corporation taxes as well as on taxes on the self-employed. The surcharge, designed to curb demand, would be levied from August 1 to July 1, 1971, and would be repaid to taxpayers by March 31, 1973, at the latest.

Another provision is for a six-month suspension of tax write-offs on capital investments. The Minister of Economics Karl Schiller said Wednesday that postponement of industrial investments and reduction of individual spending through tax increases would take an estimated $2.5-billion to $2.8-billion out of the economy.

OPPOSITION'S POSITION

Speakers for the Christian Democratic party accused Chancellor Willy Brandt's Government of placing an undue burden on taxpayers in the interest of economic stability. They generally supported the surcharge on taxes and other anti-inflationary steps under the Government bill, but they demanded that the surcharge be repaid one year earlier with interest.

In reply to an attack by Franz Josef Strauss, the conservative Bavarian politician, the Economics Minister expressed the hope that the Bundesbank, West Germany's central bank, would soon ease its tight credit policy in response to the Government's anti-inflationary action. Mr. Strauss had blamed what he called the Government's "miserable economic policies" for rising prices and interest levels.

The central bank, a supporter of Mr. Schiller's fight for unpopular tax measures to stabilize the economy, has maintained a bank rate of 7.5 per cent since March. The rate caused spiraling interest rates and price increases of up to 25 per cent in some fields, notably the construction and steel industries. Consumer prices, however, rose by only 3.8 per cent in the last twelve months, a recent report said.

LETTER FROM VIETNAM

Mr. GRIFFIN. Mr. President, recently I received a thought-provoking letter from Sp4c. Michael J. Emeott, who is serving in Vietnam with the 4th Infantry Division.

I believe the comments and observations of this young man deserve attention; accordingly, I ask unanimous consent that his letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 12, 1970.

DEAR SENATOR GRIFFIN: I have spent the last 16 months in Vietnam. I have worked during this time all over Vietnam and went to Cambodia last May. I have worked both in the field and now in a CP. Some men very close to me have lost their lives over here.

I'm very interested in politics and worked during the campaigns in 1968. Shortly I'll be leaving the service and plan to once again become active in politics. Until I can obtain a voice in governmental affairs as strong as yours, I would like the use of yours. Someone must convince the American people that we are not a second rate power; that our soldiers are not a band of murderers who go from village to village and slaughter other human beings.

Every time I pick up a magazine or newspaper, listen to the radio broadcasts, all I hear about is "Vietnam Massacres," student protests, etc. Our publications, and the entire news media, are laying the groundwork for the destruction of America; they are brainwashing the people. Never do we hear of our country doing good; only, instead we hear of strikes by teachers, truck drivers, newspapers, airlines, railroads; the morality of the war in Vietnam; inflation; criticism of the government.

The enemy in Vietnam does not need to propagandize the American soldier. Our own people tell us we should not be here, that we are doing wrong. Many of the propaganda leaflets we find distributed by the VC and NVA are quotes from Americans. Much of the supplies we find here in the Central Highlands are made in the United States and sent over by groups such as the Black Panthers and SDS. I know this is true because I have seen these items with paper saying whom they were "donated" to and by whom.

Our morale is high only because we know that the protests are by a minority of our people. But why must they be given so much attention? Put their actions on the back page of newspapers and magazines; don't spend 15 minutes of a 30-minute newscast glorifying their actions.

Take the publicity from them and they are defeated. If they want a free country, they are certainly going about it the wrong way. Let them use the channels open to them in government.

Freedom of speech can be abused and to put a halt to the abuse we may have to amend the Constitution and should that ever be done we have lost the principles and ideals our country was founded on. It is time the news media reported the news and not just news that profits the pocketbook.

MICHAEL J. EMEOTT.

HEALTH CARE AND FINANCING

Mr. HRUSKA. Mr. President, earlier this month I noted in our daily papers news stories concerning a tax-financed national health insurance program for all citizens suggested by the Committee for National Health Insurance, sponsored by the United Automobile Workers Union. A bill to create such a program is to be introduced in the Senate later this month. Called a health security program, it was described in the Washington Post as a proposal which "could radically change the way medicine is practiced" in the United States.

I, for one, am not in favor of changing the way medicine is practiced in this country. I have the feeling that most of my fellow citizens would agree. Our doctors are among our great national assets. Their contribution to the welfare of the entire Nation would be difficult to match. The amount of time physicians devote to the cure and care of indigent patients is often overlooked. The tremendous advances in medical science which have been acomplished by dedicated men and women in order to insure a long and healthy life for all Americans are too often forgotten.

Health care and the financing of that care in the Nation are not perfect. Even the American Medical Association has recognized this by proposing its own plan for "Medicredit," based on a sliding scale of Federal tax credits. But the solutions to these problems do not necessitate a complete Federal takeover of medical care in the United States.

Our experience with medicare illustrate, all to vividly, the problems which are created by Federal intervention in the health field. Rising costs, declining quality of care, destruction of the close patient-physician relationship are but a few of the results.

There is an additional consequence which has drawn little attention: the erosion of the morale of the physician himself. Rather than the respected professional he once was, a doctor now sees himself as society is unfortunately coming to see him: as a skilled technician whose services can be freely bought just as a computer operator or an audit mechanic. Those who suggest that such a change is permissible do not understand the time-honored bond that has tied physician and patient together; they do not foresee that the consequence will be fewer men and women of extraordinary talent entering the medical profession and a resulting decline in the health care given our citizens.

There is no easy or inexpensive path to the practice of medicine. All too many young people who feel a calling to this most demanding profession ultimately find they do not have the patience and dedication it takes, or that they are not willing to make the necessary sacrifices.

It may not be generally realized in the large metropolitan areas, but small communities in the Midwest have a serious shortage of doctors. No comprehensive health plans devised by man will solve the medical problems of these communities, without the presence of more doctors.

It should be apparent, Mr. President, that any revisions of our Nation's medical program should contain as an integral factor the means of stimulating more young people to the practice of medicine. Unfortunately, I fear too many of the proposals being put forth today tend to discourage them from entering the practice and to this extent aggravate our medical care problems rather than solving them.

In line with these thoughts, I cite an address given by J. Whitney Kelley, M.D., past president of the Nebraska State Medical Association, and one of Omaha's outstanding practicing physicians. This thoughtful speech was his valedictory as president of the association, and in it he speaks for himself and not for the association. I ask unanimous consent that the relevant portions of Dr. Kelley's statement be printed in the RECORD so that Senators may have the benefit of some ideas which might not have occurred to them before.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

FINAL REPORT OF PRESIDENT, NEBRASKA STATE MEDICAL ASSOCIATION

(By J. Whitney Kelley, M.D.)

Up to now I have written my presidential pages always bearing in mind that I was speaking for the doctors in the state. This time I am speaking for myself.

The physicians of Nebraska have kept faith with their patients and have maintained their fees at the same or a lower level than ever increasing costs of living. In spite of this, and in spite of the need to work more than sixty hours a week, the doctors have taken time to realize that some of our population are hard put to meet the medical expenses. That group of people who are in the lower, middle income bracket are not eligible for Medicare or Medicaid. At the

same time they do not have adequate income to pay the health insurance policies necessary to be adequate to cover the increased costs of new lifesaving discoveries in medicine.

These people are in need of help and they need it badly. The answer suggested by some people is nation wide health insurance. The physicians would prefer to care for the people in the traditional way absorbing the loss themselves in order to retain their dearly beloved doctor-patient relationship.

If, however, the Government decides for political reasons that nation wide health insurance is the answer, then let us do it through already existing health and accident insurance companies. They know how to do it and would save the Government millions of dollars. For example, in 1969, the administrative costs of Medicare alone were $287,352,000.00. This, ladies and gentlemen is 4.3% of the total amount of money dispensed. It costs $95,053,000.00 for Medicaid. This is 4.1% and they're proud of their record. The banks operate on an eighth of one percent and the loan companies, who are middle men, operate on a half of one percent.

If nationwide health insurance is to be the answer, the premiums could be paid by deductions from income tax for those who could afford it. The Federal Government could pay the premiums for the group whose income was too small. These funds could come from Social Security sources and relieve the Government of a new, large, wasteful agency.

Should they choose to do it on a Federal basis, however, reducing the physicians to common vendors that in name, they have already called us, they should be aware of the risk they take. The doctors are on a short fuse and they had better find it out.

Merely a few alterations in the Constitution of the A.M.A. could bring about a change which would make the association a guild or a union. Reuther and his committee of a hundred have seen that laws have been put through Congress to protect the rights of bargaining for unions. With this change in the A.M.A., in this manner if we are to be servants of the Government, we could take advantage of these laws which protect with our rights.

We could demand a right to collective bargaining, a forty hour week, vacations with pay, retirement funds at sixty-five and other fringe benefits. This would cut the number of doctor hours spent by over a third and the politicians should be aware of it. They would be haunted by the spectre of the strike of the Belgian physicians of three years ago and the recent strike of 30,000 Argentine doctors which took place in March of this year.

The politicians know so little of the dedicated feelings of physicians that they probably would feel that this strike would be alright and they would do the same if pushed hard enough. They think only in terms of power. You and our patients know that American physicians are very unlikely to resort to such ends. We are much too devoted to the principles of service to our patients to cause them to suffer because of the mistakes of self-seeking politicians. These same polticians don't know this however, because they do not have the same degree of dedication. Let them beware because a doctor has a limit to his patience if he's pushed too hard.

You know, we think these problems are ours alone. I'm going to read for you a poem which was written 400 years ago by Eucrecius Cordis, a Ph.D. at the time.

"God and the doctor we alike adore,
But only in trouble and not before.
The trouble, or both alike are requited,
God is forgotten, and the doctor slighted."

RISK OF DEATH THROUGH NEGLIGENCE

Mr. BELLMON. Mr. President, a recent Associated Press story reports on a near tragic mistake in connection with the case of Lance Cpl. Robert E. Madewell of Muskogee, Okla. According to the story, Corporal Madewell, who had been severely wounded by shrapnel, was being put into a bag to be shipped home as dead when he moaned. He was subsequently rushed to an operating room and is now recuperating from his injuries in the Veterans' Administration hospital at Muskogee, Okla.

This near tragedy raises grave questions as to the procedures used by the military in ascertaining the condition of injured servicemen.

According to the published report, Corporal Madewell had been pronounced dead in the field by a "young medical corpsman." I have serious doubts that young medical corpsmen have either the experience or the medical knowledge required to make decisions of such a serious nature.

Therefore, I have today written the Secretary of Defense, Hon. Melvin Laird, asking for a full report on the procedures used in these life-or-death situations. In the case the policies seem to be inadequate, it may be necessary for Congress to take action to assure that no serviceman, regardless of the extent of his injuries, may run the risk of dying through negligence. We must be sure that any American fighting man, wounded in the line of duty, who still has the breath of life in him, will not have that life snuffed out by a callous or careless act by an untrained or inexperienced corpsman.

The men who are called upon to serve the Nation on the field of battle make the greatest possible human sacrifice, and they deserve every chance for survival. Along with other Members of Congress, I deplore careless or inept conduct by the officers or officials charged with the safety of these men, and I believe that Congress has a responsibility to make certain that every safeguard is taken.

Mr. President, I ask unanimous consent that the news story and the text of my letter to Secretary Laird be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON AGRICULTURE AND FORESTRY,
Washington, D.C., July 21, 1970.

Hon. MELVIN R. LAIRD,
Secretary, Department of Defense,
Washington, D.C.

DEAR MR. SECRETARY: Enclosed is a copy of an Associated Press story, concerning a report that Lance Corporal Robert E. Madewell, of Muskogee, Oklahoma, was being put into a bag to be shipped home as dead, when it was accidentally discovered that he was still alive. Corporal Madewell is now recuperating in the Veterans Hospital in Muskogee, Oklahoma.

This is a shocking report and it raises the question as to the reliability of methods used by the military service in ascertaining the condition of wounded servicemen. As this article shows, such a determination is truly a life-or-death matter.

According to the report, Corporal Madewell had been pronounced dead in the field by a "young medical corpsman." It occurs to me that a decision of this magnitude should not be made by young medical corpsmen, but only by experienced, commissioned medical officers.

I would appreciate a full report as to the authorized procedures in cases of this nature.

Sincerely,

HENRY BELLMON.

MOAN FROM INSIDE BAG SAVES "DEAD" MARINE

(By Randolph Schmid)

MEMPHIS, TENN., July 17.—The Marines were zipping up one of the many canvas bags used to send back bodies from Vietnam when they heard a moan.

It came from Lance Cp. Robert E. Madewell of Muskogee, Okla.

"They were putting me in a bag to ship me home as dead when I moaned, so they rushed me right into the operating room," Madewell explained Thursday at a Naval hospital here.

Madewell had lain for six hours in a morgue, pronounced dead in the field by a young medical corpsman.

Soon he hopes to go home with a medical discharge from the Marines and to receive treatment at a veterans' hospital in Muskogee.

Asked about Vietnam, Madewell commented: "I have no desire to go back."

He described the Vietcong as villagers whom the troops meet in the daytime, but who go around throwing grenades and setting booby traps at night.

It was one of these traps that wounded the 20-year-old Oklahoman. "The shrapnel hit me all over," he said.

He was struck in the jugular vein and the femoral artery. "They say you usually have only 60 seconds to live when you're hit either place," he added.

It all happened on a patrol in pursuit of the Vietcong. A trainer and dog ahead of Madewell stepped on the trap and the explosion sprayed him with three dozen pieces of shrapnel.

Madewell didn't know that he had been pronounced dead until after he had been brought here, following surgery and 10 days in a coma in Vietnam.

His memory is a little hazy yet, and his voice falters, but he can move about on crutches and has made one trip home to visit his parents.

Madewell, a star high school football player, says he hopes he can return to school. "It all depends," he said, "on what my speech and memory turn out to be."

A SOUND ANALYSIS

Mr. DOLE. Mr. President, July 1, the distinguished Senator from Idaho (Mr. JORDAN) focused his considerable talents of analysis and vast reservoir of wisdom on one of the most publicized and vital areas of concern to our Nation today—the conflict in Southeast Asia. In the manner which has characterized his 8 years of service in this body, his approach is clear sighted, free from emotionalism, and eminently sensible. Too often these qualities are lacking in many of the news presentations and some of the public debate of these issues.

I believe Senator JORDAN's thoughts would be of considerable value to any serious student of national and world

affairs. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THOUGHTS OF LEN B. JORDAN

Before Cambodia, a fair degree of public consensus seemed to exist about Vietnam policy. Large numbers of Americans approved the administration policy of withdrawal of forces from Vietnam, which would give the South Vietnamese a fair chance to carry the burden after we left, but which would not make Americans responsible for the outcome.

Most Americans seemed reasonably satisfied with the prospect. No target date existed for completing our withdrawal but 115,000 troops had already been withdrawn with the promise of an additional 150,000 in another year. Thus it was assumed that complete withdrawal could be achieved in the same orderly fashion. Reaction to the Cambodian operation undermined this consensus. Vocal opinion polarized between pleas that we accept defeat and get it over with, or that we set our sights on all out victory. I do not consider them to be realistic options because neither in my opinion, offers a basis for restoring the previous consensus and without consensus there can be no effective Vietnam policy.

The problem is how to restore that lost consensus. Revived again, in loud and angry tones, are all the questions about our original involvement and doubts about the credibility of our disengagement. Viewed strictly as a tactical military maneuver the probability is that the Cambodian "surgical operation" has sufficiently upset the North Vietnamese Vietcong setup so that it cannot retaliate in any meaningful way for several months after the monsoon season is over. Left unanswered at this moment is what is our long range Vietnam policy. The American purpose ought to be to return its focus to Vietnam.

If the Cambodian operation is a success and we escape long range Cambodian involvement, the framework will have been set for a return to the original consensus for disengagement in an orderly manner.

What should be the U.S. role in Vietnam after planned withdrawals are completed in early 1971 which would reduce pre-Nixon forces in Vietnam by about 50 percent. Two alternatives emerge and the choice between them hinges largely on how we see our long term purpose:

(1) One view is that we shall not permit either Russia or China to become the dominant power in Asia. If this is our purpose we should make sure, beyond any doubt and by whatever U.S. effort is required, that a noncommunist South Vietnam survives for the foreseeable future—in much the same way as we are committed by our presence in Western Europe, to insure that communism does not take over that area. This means that our forces might be in Vietnam for a long time. We have been in Europe since World War II.

It is hard to see a national consensus being built around the proposition that we should maintain a substantial military presence in Vietnam for years to come. Personally I can not endorse this concept.

(2) An alternative view is that our purpose should be to give the South Vietnamese time and opportunity to take over from the United States, while recognizing that the ultimate responsibility is theirs. Under this view, it should be possible to continue to reduce our military presence steadily and to set a date—say late 1972—by which time our obligation would have been discharged and U.S. withdrawals could be completed.

Secretary of Defense Laird has announced publicly that South Vietnamese forces will replace all U.S. combat troops by mid-1971. I support this goal believing it to be both realistic and desirable in terms of bringing our nation back together.

This schedule could be stretched out if the other side tried to take advantage of our withdrawals by stepped up attacks on U.S. forces; or it could be compressed if the other side agreed to mutual de-escalation before we withdraw. Total withdrawal should not be made without complete release of all American prisoners of war now held by the enemy.

I choose the latter course because I believe that this course has the best chance to provide a durable peace. In effect it would be restoring and implementing what I understand the Nixon doctrine to be. Let us not forget: President Nixon is the President who has been reducing forces in Southeast Asia, not building them up.

In support of the Nixon doctrine there are many advantages. With a definite withdrawal schedule established, it will be possible to reorder spending priorities of our national budget and to provide a definite timetable for achieving some of the domestic goals which are presently either unattended or simmering on the back burner. A national commitment for disengagement by a time certain would go a long way to restore America's confidence in America's traditional objectives. Those objectives are better and equal opportunity in education and employment for all our people, better health, better housing, better environment, and a sound dollar that will encourage thrift both nationally and personally.

When I speak of traditional objectives I do not limit these to solely what government can do. I speak rather of those national and traditional objectives which are the combined goals of both the public and the private sectors as well as the hopes and aspirations of each of us as human beings and Americans.

As long as the U.S. commitment in Vietnam is open-ended we cannot proceed with definite programs to achieve these objectives.

WE'D RATHER DIE THAN GO BACK

Mr. GURNEY. Mr. President, on July 26, 1970, a few jet-age miles south of Florida, a Communist regime in Cuba celebrated the 11th year of its rule over a once-progressive and free people. The din of this totalitarian affair strikes a discordant note in minds of free people everywhere.

We cannot—I will not—let this Communist noise go unchallenged. Mr. President, a well-known and respected American journalist recently spent many days in Miami where she spoke—in their own language—with recently arrived Cuban refugees. Their words are eloquent testimony. They reveal not only the minds of free Cubans but their hearts as well and their dedication to liberty. Many have literally risked their very lives to gain the freedom of our shores. This is the one free election that has taken place in Cuba in the last decade: the election of thousands of Cubans to flee their homeland and the oppressive Castro regime.

Mr. President, I ask unanimous consent that the article published in the Washington Daily News of July 13, 1970, be printed in the RECORD, so that the words of free Cubans will be heard. I also ask unanimous consent that Miss Prewett's followup article, published in the Daily News of July 15 be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CUBANS CONTINUING DARING ESCAPES

(By Virginia Prewett)

Freedom House Reception Center, near Miami, Fla.—The six young Cubans were still children when Castro took power. Now they are from twenty to twenty-four years old. Last weekend they were picked up by an Esso tanker ten miles off Florida, floating on a raft made from four liberated truck inner tubes.

They were six days at sea and rowed an estimated 200 miles. Their bread and sugar washed overboard. They exhausted their six cans of condensed milk and had no food or drink the last two days. Four are workmen—mechanics—and two are students.

"We decided to die in the water rather than go back to Cuba," said one. Three had been in prison for previous escape attempts.

A similar group of five was picked up two days before them. Unnoticed except by Cubans, these young men continue to escape by a route many times more deadly than going over the Berlin Wall. Castro has held power over ten years. Why are the young so desperate to escape?

"The life there is impossible to describe," said one. For their families' sakes, names cannot be published.

"There's no present, no future," said another. "You can't plan anything, make something of yourself. Your family is always hungry. In Havana, only food from the little pizzerias make it possible to keep going. People fall on the street from hunger—it's always called something else."

$365 MILLION YEARLY

But Russia subsidized Castro with over $365 million yearly. Where does this go?

"Into arms," answered one, and the others nodded.

Each in turn tells details of Castro's system. Looming over all is the fact that the regime can have you picked up and shot without charge, trial or appeal. This is the "paredon"—the firing squad.

Next is the organized terror and the organized chivvyingo of the people by an elite who gain privileges for doing the harassing.

"If you don't show positive toward communism in frequent tests," said one, "you can't be a student, you go to work camps, you're finished. They're always setting traps. People are afraid to sit on their front steps in the evening, because an informer might say 'Juan Such-and-Such is an idler." You can't trust anybody, not even your brother."

BIG ACTION NEEDED

Yet the escapees insist that if some big action were aimed at Castro, "95 per cent of Cubans would turn against him, even in the military."

"It's the terror," they repeat over and over. For the oppressors themselves are under constant pressure and surveillance.

"Cuba is fully of crazy people, talking to themselves," said one youth. "The fear, the long lines for food and everything, the constant frustration on every detail of life—even my mother mutters to herself around the house."

And the regime compounds frustration "to keep people busy."

"You go to a doctor, you just get sent on to another, and another, and another—without medical help. They change the bus routes frequently and you can spend half a day hunting for a bus to get you somewhere."

ALWAYS PRESSING

The youngest broke in: "You have to fill out questionnaires, what movies you like, what you think of the United States, what leaders you like. They're always pushing, pressing, probing."

"All labor in Cuba is forced labor," said another. "Yet everybody does as little as possible. It's the only way you can resist. But the

communist are always trying to force, force, force . . ."

It cannot be described, they tell us. "You cannot breathe in Cuba," they say.

A LITTLE BIT OF HEAVEN—IN EXILE

(By Virginia Prewett)

MIAMI.—The Cuban community here is unique even in a country long receptive to refugees. For it is a reconstituted capital for Free Cuba, it is a dynamic society that is modifying even the culture around it.

Economically, it is one of the world's fastest growing communities. When Castro seized power in 1950, Cubans here numbered 27,000. Now they are nearly 300,000. Official records show that about 19 per cent were professional people in Cuba and 78 per cent fishermen, farmers, office workers, sales personnel and skilled an semi-skilled workers. More than 80 per cent were under 50 years old on arrival.

These vigorous working people left Cuba with only the clothes on their backs in protest against Castro's tyranny. They have built a community with its own restaurants, Chamber of Commerce, Rotary, Lions and other civic and professional clubs, its social clubs, Boy Scouts, rep company, a ballet now gaining international recognition, hospital, clinics, nursery schools, newspapers, radio and TV stations and a strong network of informal community assistance.

The centrist Party of the Authentic Revolution (in exile) convened here recently to plan the future of a liberated Cuba. Havana's well known American Club is alive and well-known in Miami.

Around half the families in this hard-working community have bought homes. Cubans own about 6,500 businesses, mostly family enterprises.

When the exiles began to move into the residential district where most of them live, it had been proclaimed "blighted." They have renewed it without an official program. Today it is repainted, clean, neat and attractive. Crime and unemployment rates run below average.

Cuban students, many holding full-time jobs, make well above average scholastic records in Florida universities. The nation's "most outstanding high school student" for 1969 was a Cuban student here.

The Miami Cubans do not wall themselves off from the white and black people around them. Some say white leaders fear that the Cubans and blacks will eventually combine to dominate local politics; hence, white efforts to promote strife between Cubans and blacks. Keenly aware, Cubans do not intend for such strategy to succeed.

Cubans contribute generously to the Miami United Fund. They buy local bond issues and have representatives to work with Dade County community planners. A recent market study shows that 63 per cent do their shopping at "Americano" stores—the Grand Union, Food Fair and Kwik Chek. Similarly, 80 per cent buy clothes at Miami department stores like Burdine's and Sears Roebuck.

Free Cuba's capital is democratic both economically and socially. The family income of 60 percent ranges from $300 to $600 monthly. Less than 8 per cent make over $10,800 a year. Here a former supreme court judge may run an elevator. He is treated with the respect due his former station. And the unschooled newcomer who operates the next car is treated courteously, too.

The Cubans are making more than an economic contributions to Miami. They are sympathetic and helpful among themselves. Resort cities like Miami always suffer from an abrasiveness between the permanent and tourist populations. But Cubans are happy to be free. They carry over their courteous, will manners into the "Americano" culture. And they are making Miami a pleasanter place to be.

TELLING THE ENEMY TOO MUCH

Mr. FANNIN. Mr. President, during the debate on the Cooper-Church amendment, the question was often raised whether we must be required to tell the enemy what we will or will not do in Southeast Asia. The lives of our American soldiers are at stake.

I invite the attention of Senators to a discerning editorial published in the San Francisco Examiner of July 5, 1970, and I ask unanimous consent that it be printed in the RECORD:

There being no objection, the editoral was ordered to be printed in the RECORD, as follows:

TELLING THE ENEMY MUCH TOO MUCH

President Richard Nixon faced the nation on Wednesday evening.

He also faced a battery of professional newsmen who also faced the nation.

In short, all were front and center on the world stage.

Each word and each facial expression was instantaneously received on hundreds of millions of TV sets around the globe.

By friend and foe alike.

Here was dramatic proof of the open processes and freedoms of the American way.

The assignment of the newsmen was to ask probing questions with the objective of obtaining presidential answers that would reveal headline making developments in foreign policy.

All of the participants performed well. President Nixon showed remarkable strength, knowledge, courage and competence in responding to the far-ranging questions of his able interrogators.

It was a demonstration that could not be contemplated by the leaders of any of the Communist nations of the world.

We salute the President for his courage, candor and convictions.

We salute Howard K. Smith, Eric Sevareid and John Chancellor for their competent handling of a serious and complex assignment.

As newsmen we are inclined to applaud this open report to the people.

However, as concerned citizens we question the need and propriety of revealing so much to those who would destroy us.

We are in a limited war in Asia. We are faced with a festering war in the Middle East. We are threatened with the possibility of a war of global proportions by enemies who have made clear their determination to dominate the world.

Should the President of the United States—the Commander-in-Chief of our military forces—be required to tell our enemies what we will and will not do on the battlefield?

Would Hanoi not be less comfortable if it did not know whether or not we would strike again into Cambodia?

Would Hanoi not be more nervous if we had not ruled out landings in North Vietnam?

Would Hanoi be less inclined to play the waiting game if they were not assured we would reduce our fighting force by 150,000 men in the next twelve months?

Would Hanoi not be more concerned if we had not openly ruled out a blockade of Haiphong; a bombing of the dikes of the Red River; the use of nuclear weapons?

Piece by piece, report by report—in Senate hearings and interviews with cabinet leaders—the enemy has been told hundreds of our plans.

We need take none of the actions we have ruled out but we should not foreclose the options.

We have seriously reduced our options. The enemy has reduced none of his.

He acts without interviews. He acts without global discussions. He acts with confidence that slowly but surely the United States will shackle and limit its own power so that he can be sure of victory.

The intellectuals and liberals in our society who have forced so many full disclosures by our President should be intelligent enough to know the great danger inherent in such disclosures.

In a declared war our open society does not hesitate to invoke military censorship and to ask news agencies and sources to restrain voluntarily from revealing any information that might help the enemy. In today's explosive world situation such voluntary restraints are no less desirable.

This deadly game cannot be played successfully with the cards face up only on our side.

FUEL AND ENERGY SHORTAGE

Mr. BELLMON. Mr. President, last Thursday, the distinguished senior Senator from West Virginia (Mr. RANDOLPH) presented a thoughtful and well-documented statement concerning the possible fuel and energy shortage facing the country, and pointing up the need for a Commission on Fuels and Energy to be established at the Federal level to formulate policy for solving the energy crisis. I was pleased to join the Senator as a cosponsor of this effort.

The seriousness of this situation as it affects natural gas and petroleum, which are among our most important sources of energy, is emphasized in articles published recently in the Oil and Gas Journal. The articles further support the necessity for action to avert shortages of these vital resources.

Mr. President, I ask unanimous consent that the articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

FPC REGULATION OF GAS IS A "DRY HOLE"

The FPC's natural gas regulation has resulted in a regulatory "dry hole" and has failed the "practical test" established in the Commission's 1965 Permian Basin area-rate decision, Federal Power Commissioner, Carl E. Bagge has declared.

In a speech at Midland, Tex., before a joint meeting of the Permian Basin Petroleum Association the West Texas Geological Society and the Natural Gasmen of the Permian Basin, Commissioner Bagge said:

"Here in the Permian Basin the Federal Power Commission, in its first area-rate decision, established a test of the efficacy of producer price regulation."

It was not a theoretical test, he said, and did not involve econometric models or the expert testimony of numerous economists and petroleum engineers.

"It was a simple test. The test involved an examination of the functional effectiveness of the decision based solely upon the supply of gas elicited by the price which was established," he said.

"Practical" test failed. He noted that in the Permian Basin decision the Commission said: "The separate prices we fix herein for new gas-well gas in the Permian Basin should serve to furnish a practical test of whether in fact it will result in bringing forth additional supplies."

"It has been 5 years since we established that practical test for ourselves," Bagge said. "Can anyone seriously contend that we have passed the test when the intrastate market has preempted the sales of gas in the Permian Basin?"

"I think that if we are candid, it must be acknowledged that we have failed the 'practical test' established in Permian. We are obliged to conclude that cost-based, area-rate making has been demonstrated to be unworkable. The urgent need for squaring producer prices with the realities of the market should be clear to the most zealous advocates of producer price regulation," Bagge said.

Urgency on gas supply. "In our present national gas supply situation, there can be no room for any party's effort to gain personal, political, or legal victories simply for the sake of victory itself," he asserted. There is too much at stake, he added. In fact, "it appears to me that it would help if all concerned would swallow a little pride."

Bagge said adequate supplies of gas at reasonable prices "are indispensable to the public interest. Too much emphasis has been placed in litigation, posturing, and polemics by all parties during the past decade of producer regulation.

"Now is certainly the time for all parties to cooperate in a unified effort to provide protection, without the trappings of unbridled contentiousness, to the gas consumer we are all bound to serve."

"Unfettered" market needed. "It appears to me that we have been drilling regulatory dry holes," Bagge asserted. "We should, as you producers do, now shift to a more productive location. The point is that we are obliged, in discharging our responsibilities, to examine our regulatory drilling efforts and make some basic decisions concerning where we go from here."

He said "we are obliged, therefore, to establish the policies now which will permit the inevitable ascendancy of market forces to operate in such a way as to work for the public just as they do in most other areas of our economic life.

"This, in the final analysis, can only be achieved if the market can operate unfettered by regulation and if, prior to that time, government policies are evolved which will affirmatively enlarge the supply base by broadening the base supply and increasing the supply sources."

Bagge's original bombshell. Earlier this year, Commissioner Bagge called for the end of regulation by the Federal Government of natural gas prices at the wellhead.

In address to the Midwest Gas Assn., he said "the time has come for the FPC to extricate itself from the strictures of the existing methods of regulating independent gas producer prices." He said "cost-based, area-rate making has been demonstrated to be unworkable."

IT'S TOO LATE TO AVERT U.S. GAS SHORTAGE, INDUSTRY LEADER SAYS

F. Randolph Yost, president of Pan American Petroleum Corp., said in Tulsa last month that adequate increases in natural gas prices by the Federal Power Commission would set off a boom in exploration and development.

But, warned Yost, such action could not avert a gas shortage in the United States. Even shipments from Alaska and Canada will be inadequate to meet U.S. demand during the next decade.

A gas pipeline from Alaska's North Slope could bring in much new supply, but it would amount to only 3 to 4 percent of predicted demand by 1980.

The basic supply problem, Yost said, is that FPC has cut prices of natural gas below the point that provides producers with the incentives needed to drill. Incentives have been "so poor over a long period" that supply problems can't be corrected quickly.

BIG GAS PRICE INCREASE NEEDED TO SOLVE SHORTAGE

There's no doubt now that the stage is being set for an eventual increase in wellhead prices of natural gas.

Pressure of an energy crisis finally is making the truth clear to all: Producers must earn more hard cash from their gas to encourage them to dedicate present reserves to interstate markets and step up exploration for new gas reserves.

More gas is the answer to the energy shortage. FPC members, gas distributors, and even the general public are becoming reconciled to a pricing solution for inadequate supply.

But one overriding question is not being discussed openly: the size of a price increase needed to bring forth more gas.

It's time to discuss the point, because the truth is a big increase is mandatory. A token price increase just won't bring forth enough new gas. It will take a significant increase to encourage gas exploration. And such an increase actually will be cheaper for the consumer.

There's danger that the FPC is thinking in terms of a modest increase, say somewhere in the lower edge of a 2–5¢/Mcf scale.

The FPC allowed Phillips 2¢/Mcf above guidelines in selling its casinghead gas from Powder River basin. And when inviting producers to file for price increases above Permian ceilings, FPC staff indicated increases of 3 to 5¢/Mcf will be favorably considered.

The commission certainly is on the right track in reopening Permian rates. That in itself shows a measure of courage which, however, isn't matched by the feeble price signals being set up to producers.

It will take at least 5¢/Mcf for producers just to catch up on rising costs since the original Permian decision. A recent Humble study shows that inflation has cost producers the equivalent of 3¢/Mcf. The cut in percentage depletion cost them another 2¢/Mcf.

An increase between 10 to 20¢/Mcf probably will be needed to set off any significant upward trend in exploration. This will be strong medicine to regulators and perhaps to an unprepared public. It means the industry has a big job ahead to develop pertinent economic data for upcoming rate hearings so there's no misunderstanding among regulators or the consuming public on the price incentives necessity.

At 10 to 20¢/Mcf higher, gas still is cheaper than any alternative fuel. And even if the producer gets no price increase, gas is going to cost the consumer more. With declining supply, pipeline throughput will drop. Pipeline costs, as a result of inefficient use of facilities, will rise. The carriers then will need higher rates to recover these costs. The consumer thus will pay more—and still get less gas.

On the other hand, a wellhead price increase big enough to bring up larger gas supply will allow carriers to pack pipelines and move gas cheaper. The consumer will pay more for gas, but he will be getting more fuel. He won't pay more and get less fuel.

Timid pricing won't solve the gas shortage.

It will take courage to make the big price move. But that's still the cheapest route for the FPC to get more energy to the consumer.

LOOK WHO'S IN FAVOR OF RESTRICTING IMPORTS NOW

(By Gene Kinney)

Events have a way of confounding policymakers and would-be policy-makers, and nowhere is this more evident today than in oil-import controls.

New England consumers and politicians still look to increased imports under a tariff system as the key to lower product prices. But the tide seems to be turning against the tariff scheme recommended by the Cabinet Task Force on Oil Import Controls. This despite the fact that the chairman of the President's Oil Policy Committee and the chief White House aide on the subject are still in the tariff camp.

There are two main reasons for changing attitudes. One is the growing problem of energy supply, now properly considered a crisis.

It has brought home the folly of some past policies—premature reliance on atomic energy at the expense of coal, and restriction of natural-gas prices until supply has dried up.

The other reason is the dangerous situation in the Middle East. Arab-Israeli tensions and government-industry conflicts make insecure sources seem still less certain.

Together, these developments have had a sobering effect on public officials. The need to encourage development of domestic energy sources sticks out more obviously than ever.

In the present tight tanker market, advocates of imports as a means of breaking U.S. prices are getting an education. Past imports of No. 2 oil haven't lowered prices. The grant of 40,000 b/d in regular quotas to terminal operators probably won't either. Indeed, these terminal operators may have trouble finding a foreign supply this winter—especially at cut-rate prices they were expecting.

And, who would ever believe that the delivered cost of foreign oil on the East Coast would exceed domestic prices? But that's the present situation, lending weight to the arguments of those who say cheap foreign oil will remain cheap only so long as we don't have to depend on it.

In this atmosphere, the key staff members who wrote the task-force report have taken pains to tell petroleum economists privately that they have been badly misunderstood. Professors Phillip Areeda and James McKie stress the report's finding that imports should be limited to protect national security—although their first proposal was for unlimited imports. And drive prices down? They favored no such thing, despite clear language in the report to the contrary. Would they support an increase in domestic prices to $4/bbl if necessary to develop reserves? Why, yes.

As we say, events have a way of confounding policy-makers, and to an even greater extent, would-be policy-makers.

SOARING TANKER RATES FELT IN U.S.

The bottom has dropped out of market for U.S. import tickets amid soaring tanker rates and tightened worldwide crude supply.

And no relief is in sight, industry sources say, until two things happen. One is restoration of Libyan production, which has been cut by 400,000 b/d, according to U.S. Government officials keeping tabs on the situation. The other is a return to service of Trans-Arabian Pipe Line, which was delivering 500,000 b/d to the Mediterranean before shutdown for repairs in Syria.

Prospects for a favorable change in either situation look bleak, at least in the near future. U.S. officials expect the Libyan cutback to continue or worsen as long as the export price dispute persists between the host government and the producing companies. Arab-Israeli tensions offer little encouragement that the Syrian Government will permit repair of Tapline, according to the State department.

The loss of almost 1,000,000 b/d of oil west of Suez and close to western Europe markets has strained tanker capacity and sent spot rates skyrocketing. Replacement of this supply with long-haul oil from the Persian Gulf around South Africa takes six to eight times the tanker capacity.

The impact is being felt both in western Europe and the U.S., although U.S. dependence on Eastern Hemisphere oil is slight. Tanker capacity was rather tight before recent developments, partly due to rapidly rising demand. Hence the jump to world scale plus 280% under the added strain of the Tapline closing and Libyan curtailment.

TICKET VALUES SLUMP

One result has been an almost overnight destruction of the market for import tickets, especially in Dist. 1–4.

Inland refiners with licenses to exchange with East Coast refiners for domestic crude have seen the demand disappear in the past 3 weeks. Some inland refiners are protected by a 1-year contract.

Others which hadn't yet made a deal for the second half are finding that spot tanker rates have priced foreign oil out of the U.S. market temporarily. One importer last week calculated the delivered cost of Persian Gulf oil to the U.S. East Coast at $4.50/bbl—$1.25 for the oil, and $3.25 for freight. Another estimate placed the cost at $4 to $4.25.

A third major importer calculated delivered costs of Arabian light (34°-gravity) at $4.985, with a posted price of $1.80, freight of $3.08, and duty of 10.5¢, but noted the posting is shaded by as much as 55¢/bbl. A comparable figure for Kuwait 31°-gravity crude is $4.825, including $1.59/bbl posting, $3.13 freight, and 10.5¢ duty. This posting is shaded by up to 44¢/bbl.

That compares with $3.75/bbl for Gulf Coast oil delivered to the East Coast.

One major importer last week estimated the value of an import ticket had dropped from $1.40/bbl—the price it paid for first-half exchanges—to 30¢/bbl.

A second importer placed the ticket value at zero. This refiner is turning to the Gulf Coast for oil needed beyond the foreign supply covered by its own import quota.

If the situation continues, inland refiners will find themselves in a bind, both for crude oil and money. In a normal tanker market, the inland refiner has been able to make an exchange deal within a month or two, at a profit of $1.25 to $1.50/bbl.

If there was some delay, he could take the ticket to the bank and obtain a loan, with the import right as collateral. It was both a source of crude and financing, usually providing the margin of profit for a small corporation. Now both are jeopardized.

Major integrated companies who usually take the tickets now need a part of the domestic supply they normally exchange to replace temporarily expensive foreign oil.

Although U.S. crude stocks are said to be ample or even high, the situation has turned quickly so that buyers are finding little available.

Pipelines full. There will be a mounting pressure for higher August allowables in Louisiana and Texas.

But inland refiners fear this may not solve their supply problem.

Pipeline space from the Southwest to the Midwest, they say, is at a premium. Some additional crude could be moved via Capline to the Chicago area, one refiner told the Journal, but additional Texas oil may have to move via water into the Midwest.

An Oklahoma crude buyer told the Journal that the tight pipeline situation has always been around. But recent actions in the Middle East and on Canadian imports have emphasized the situation. He said the only pipeline capacity available that he knew of was from the Rockies going east.

Capline, he said, has the line size but not the pumping and "it will take time to take care of this problem."

However, some help could come from Texas, if the usual comments are any indication. For one, Mobil Pipe Line can handle 10,000 b/d additional now, but tomorrow it may be chocked full.

Mid-Valley Pipeline, which has a 240,000-b/d line running from Longview to Lima, Ohio, is filled to the last drop. The five shippers using the line have committed more to the line than it can move.

However, Mid-Valley has a stop-gap expansion in the works, but is holding off on any big projects to see if the capacity-crush will last. "We ran for years at less than full capacity," a spokesman said.

Canadian imports boost? The department of Interior is already hearing mounting demands for an increase in the 395,000-b/d ceiling for imports from Canada east of the Rockies.

Refiners explain that pipeline capacity is available in the Interprovincial-Lakehead system to boost deliveries into the Great Lakes area.

Moves to loosen Canadian quotas will require action by the President. The oil import appeals board has a small kitty available for hardship cases. But this volume won't be enough to satisfy demand caused by any significant diversion of Southwest and Gulf Coast crude to the East Coast.

A SINCERE EXPRESSION OF PATRIOTISM

Mr. MAGNUSON. Mr. President, I recently received a letter from my principal appointment to the U.S. Military Academy in 1948, Henry Purcell III. Lieutenant Colonel Purcell in his letter dated July 4, 1970, indicated that he was on his way back to Vietnam to command an infantry battalion in combat.

Mr. President, rarely have I read a more sincere expression of patriotism than this letter. In order to share Colonel Purcell's letter with the Senate, I ask unanimous consent that it be inserted in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TAMPA, FLA., *July 4, 1970.*

HON. WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: Twenty-two years ago you gave me the greatest opportunity of my life, by assigning me a principal appointment as a cadet candidate to the United States Military Academy.

Since then I have attempted in my work to repay you and my country for that chance to become deeply involved in the life and work of our nation. I have been fortunate. Since my graduation from West Point in 1953, I have been thoroughly schooled in military matters, to include a year at the US Army Command and General Staff College at Fort Leavenworth. I have become fluent in the Turkish language and interpreted for the Vice President, then Mr. Lyndon B. Johnson, and for the former US Ambassador to Turkey, Mr. Raymond Hare. Through our association as graduate students at Princeton University, I am on close terms with the only Arab citizen of Israel with a degree as Doctor of Philosophy and who is a Professor of Politics at the University of Tel Aviv. As advisor to a Vietnamese Infantry Regiment, I assisted in bringing about changes resulting in greater accomplishment at less expense in terms of time, material, and human lives. My most recent assignment allowed me to participate in the formulation of United States strategy for the Middle East.

I am now on my way back to Vietnam to command an Infantry Battalion in combat. I believe I can achieve the mission and also save lives. I leave behind a wonderful family who are not anxious to see me return to combat. Nevertheless they understand why I must seek out and not avoid this obligation; they respect my decision to volunteer.

Senator Magnuson, I wanted you to know that your 1948 West Point principal appointee, without reference to various positions on the war being debated in the United States Senate, recognizes his responsibility to serve his country, and is doing so willingly and without reservation.

Very respectfully,

HENRY PURCELL III.

STRATEGIC WITHDRAWAL FROM VIETNAM

Mr. FANNIN. Mr. President, the American people are proud of the military men who have served our country so well. Most Americans feel a debt of gratitude to them.

Members of Congress participate in this proud record by their recommendations of fine outstanding men, carefully chosen from among their constituents, to enter our military academies.

Yet, some of the proposals which have been before Congress indicate a lack of confidence in the system. They tend to involve Congress in the day-to-day details and particularly the timetable of a strategic withdrawal from Southeast Asia by which the President hopes to hold to a bare minimum the number of American casualties that will be involved before all American troops are withdrawn.

Mr. President, Mr. George M. Hill, an attorney in Phoenix, Ariz., has ably expressed this concern in a letter to me. I ask unanimous consent to publish in the RECORD an excerpt of Mr. Hill's letter:

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

I think it must be acknowledged that the President and his military advisers are now engaged in a strategic withdrawal. The objectives of that withdrawal are to return to the United States at the earliest possible time the greatest number of soldiers we now have in Vietnam with the least number of casualties.

In carrying on that strategic withdrawal the President has available to him all of those officers in the Army, the Navy and the Air Force whose education and training throughout their active lives has been devoted to the study and practice of warfare, including strategic withdrawals.

Congress, in its wisdom, in providing for the military security and welfare of the United States, created our military institution at West Point. It also created our naval academy at Annapolis. It did at a much later date, following the consummation of World War II, provide for the establishment of the Air Force Academy in Colorado. The wisdom of Congress in establishing these military institutions has been proven in every conflict, large and small, in which our country has been engaged militarily.

All members of Congress have some familiarity with the capabilities and the intelligence of those young men who are accepted by the military schools because the members of Congress have some part in their approval and appointment.

While the Cooper Church Amendment purports to be just simply an avowal of cooperation with the President, who has set a timetable with relation to our withdrawal from Cambodia, it is in truth and in fact a condemnation of the right of the President to rely on the products of those military schools which Congress has provided and maintained for the purpose of making available to the President the most highly-trained and capable military men in the world.

While the purported purpose of the Cooper Church Amendment is to just simply provide a timetable with relation to the Cambodian withdrawal to which the President must adhere, it is in reality a direct attack upon our whole military system.

Surely no one can question that the President, with relation to Cambodia, was acting after he had at least received the benefit of

the advice and recommendations of our senior military officers.

CONSTITUTIONALITY OF THE WAR IN VIETNAM

Mr. CRANSTON. Mr. President, in at least two recent court cases, *Orlando* v. *Laird*, 70 C 745 (E.D.N.Y. 1970) and *Berk* v. *Laird*, No. 900 (2d Cir. 1970), where servicemen challenged the right of the Army to send them to fight, and perhaps die, in a war that they believe to be unconstitutional, the Nixon administration has advanced a disingenuous argument that Senators should be aware of.

The administration argues that Congress ratified the Vietnam war by appropriating the funds which were used to conduct that war. In addition, the administration argues that the Congress ratified the war by passing two Selective Service Acts under which young men were drafted and sent to Vietnam.

This argument in effect stands the Constitution on its head. The Constitution creates a system of government where it is the function of Congress to authorize executive action, except where the Constitution reserves the power to act to the executive branch. Congress is also empowered to appropriate money for all governmental action, whether it be initiated by Congress or the Executive.

But the Nixon administration's constitutional theory suggests that the executive branch may take any action that it wishes, subject only to a congressional veto in the appropriation process. The dangers inherent in this radical theory can be illustrated by the Cambodian invasion.

President Nixon invaded Cambodia, relying on his authority as Commander in Chief, without congressional authorization and in disregard of the commitments resolution passed by the Senate last year.

The lesson to be drawn from this experience is that President Nixon's constitutional theory overturns the historic balance of power between Congress and the Executive. The most ironic aspect of the administration's argument in the two cases I mentioned is that the precedent they cite to support their argument, upon careful reading, refutes it. The Government cites *Ex Parte Endo*, 323 U.S. 283, to support their theory of implied ratification by appropriation, but in that case the Supreme Court rejected the argument that Congress ratified the Executive's detention of admittedly loyal Japanese-Americans in camps by appropriating funds for such purposes. The Court avoided a constitutional issue by interpreting the detention law as not authorizing the detention of admittedly loyal Americans.

To justify the Executive's action in continuing the Vietnam war, a court would have to find that the language in the appropriations or Selective Service Acts cited was equivalent to a declaration of war. This finding would be difficult in light of the Court's admonition in Ex Parte Endo that to be a valid ratification, "the appropriation must plainly show a purpose to bestow the precise authority which is claimed"—*Ex Parte Endo*, 323 U.S. at 303, note 24.

Given the current debate over this country's Vietnam policy, one can hardly say that Congress has granted precise authority to wage war in Indochina. Whenever appropriations for the war come up for a vote, supporters claim that we cannot abandon our boys who are fighting there. Many Congressmen vote for the appropriations for that reason. Other Congressmen vote for the military appropriations bill so that our forces can be withdrawn safely from Vietnam at the earliest possible date.

To say that a Congressman ratifies the continuation and expansion of the Vietnam war when he votes for appropriations to protect American servicemen as they are withdrawn is a cruel deceit. It makes as much sense to argue that the Department of the Interior could grant leases to drill in the Santa Barbara Channel in the absence of explicit congressional authorization and relying only on congressional passage of the general appropriations for the Department of the Interior's ongoing activities.

Mr. President, I intend to make a more detailed statement on the legal issues involved in the Indochinese war in the near future, but I wanted to raise these questions now so that the Senate can ponder them during the forthcoming debate on the military authorization bill.

DISTRICT OF COLUMBIA CRIME

Mr. MATHIAS. Mr. President, I wish to remind Congress of our responsibility in facing and dealing with the serious crime problem in the District of Columbia, since Congress has chosen to retain virtually exclusive governmental authority within the District.

To this end, I ask unanimous consent to have printed in the RECORD a list of crimes committed within the District yesterday as reported by the Washington Post. Whether the list grows longer or shorter depends on Congress.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

THREE ROB HOTEL IN DOWNTOWN DISTRICT OF COLUMBIA

A downtown Washington hotel was held up early yesterday by three armed men who also robbed two employees before tying them up and escaping with an undetermined amount of money, police said.

George J. Olivier, front desk clerk at the Claridge Hotel, told police the gunmen entered the hotel at 820 Connecticut Ave. NW shortly after 3 a.m. He said one of them placed a revolver at his back, warned, "Don't turn around," and took his money and watch.

Another gunman robbed the bell boy, Anthony A. Roman, of his watch and wallet and then helped his companions empty the cash drawer, according to police.

Olivier said the trio forced him at gunpoint to lead them to the hotel safe in the basement, ordered him to open it and removed the money and checks.

After handcuffing Olivier and Roman and tying them to each other, police said, the armed men ran out of the hotel and escaped.

In other serious crimes reported by area police up to 6 p.m. yesterday:

ASSAULTED

Kenneth E. Sullivan, of Washington, was treated at Washington Hospital Center for a gunshot wound in the upper right arm that he suffered about 6:55 p.m. Sunday when a man in a blue car drove past him at 14th Street and Park Road NW and fired one shot at him.

Evelyne Clark, of Washington, was treated at Washington Hospital Center and released after an unseen gunman shot her in the right thigh as she was about to enter an apartment building shortly after midnight Sunday.

Thomas Price, of 1352 Wylie Ct. NE, was treated at Rogers Memorial Hospital after he was struck in the face during a fight with a man wielding a lead pipe in his garage at about 7:50 p.m. Sunday.

Belinda Baker, of Washington, was treated at Hadley Hospital for head injuries she suffered when she intervened in a fight in the park in the 200 block of Wayne Place SE. Miss Baker told police a woman hit her with a stick about 8:30 p.m. when she tried to break up a fight.

Zebulon Shaw, of Washington, was treated at George Washington University Hospital for injuries she suffered about 1 a.m. when she was attacked by a man as she was leaving a friend's house at 5th and E Streets NW. Her assailant hit her in the head and body and fled on foot.

ROBBED

Spencer Carl Mammett, of Washington, a driver for Dream Maid Ice Cream. Co., was held up about 9:15 Sunday by a man wielding a revolver who approached him while he was selling at the corner of 32d Street and Ely Place SE. Waving his gun, the man said, "This is a stickup or whatever you want to call it, so just give me the money." After taking a cardboard box containing a large amount of cash from the vendor, the gunman ran towards Minnesota Avenue SE.

Albert Richard Webster, of Washington, was beaten and robbed about 11:10 p.m. Sunday by two men who confronted him in the 4300 block of Deane Avenue NE and asked for change for a dollar bill. After Webster handed them the change, they demanded, "Give us the dollar back." One of them then began hitting Webster while the other man took his wallet.

Kenneth Lingelbach, of Jutland, N.J., was held up about 12:15 by two men who approached him in the 2100 block of New Hampshire Avenue NW. One of them drew a knife, demanded money and held Lingelbach at bay while his companion took the money from the victim's pockets.

Fariborz Nazerian, of Washington, was beaten and robbed about 9:15 Sunday by three youths who surrounded him at 4th and Farragut Streets NW while he was selling ice cream. One of them held Nazerian while the others took the money from his pockets and fled east along Farragut Street.

Esso Service Station, 4650 South Capitol St. SE, was held up Sunday by a young man armed with a gun who drove into the station in a white car and told the attendant, "Give me the money and the gun that you carry." When the attendant replied he had no gun, the driver said, "Just give me the change carrier and the money." After taking a large amount of cash, the gunman drove from the station. The car was later recovered in the 4700 block of 1st Street SW.

Bernice Lorene Bookman, of Washington, was held up while she was working in the Bolling Air Force mess hall, Portland Street SE, by three youths. About 9:30 p.m. the trio approached her and one of them, pointing a handgun at her, demanded, "Lady, I want your purse." After grabbing her pocketbook, the youths fled.

James Fletcher, of Washington, was treated at Rogers Memorial Hospital for injuries he suffered during a robbery about 4 a.m. Sunday. Two young men attacked him from behind on 10th Street NE, knocked him to the ground and kicked him in the face. They took his wallet and papers and fled on foot.

William Barry, of Washington, was beaten and robbed about 11:05 p.m. Sunday by a

man who approached his car at 11th and I Streets NW and asked him for a ride. The man then entered Barry's auto, hit him in his face and body and kicked him. After removing the bills from Barry's pockets, the assailant got out of the car and escaped.

Larry Kelly, of Fairmont Heights, an employee of the Riggus Construction Company, 4225 Grant St. NE, was held up about 9:45 p.m. Saturday by a man who approached him from behind on the street near his office and warned, "Don't move." He then pulled out a handgun and ordered, "Give me your money." Grabbing Kelly's wallet, the gunman fled on foot.

Regis K. C. Morgan, of Washington, was held up about 6:05 p.m. Sunday by three youths who surrounded him on the 11th Street Bridge and asked, "Got any money?" When Morgan said he did not, the trio began hitting him and forced him to surrender his wallet, then fled across the bridge.

Lorenzo Garner, of Washington, was held up about 2:15 a.m. Sunday by two youths, one brandishing a gun, who confronted him in the 600 block of 21st Street NE and asked if he had any money. Grabbing Garner's cash, the pair fled.

John Bailey, of Washington, was held up shortly after 11 p.m. Sunday by three youths who approached him as he was getting out of his car in a parking lot in the 600 block of Division Avenue NE. One of them pointed a handgun at Bailey and ordered, "Sit down." While the gunman held him at bay, the other two took his wallet, watch and car keys. The trio then took Bailey's auto.

Jimmie Carr, of Washington, was held up about 11:15 p.m. Friday by three men who attacked him in the 1300 block of H Street NE and forced him into a nearby alley. After hitting Carr with a revolver, the man took the money from his pockets and fled on foot.

James E. White, of Washington, was held up near his home in the 800 block of Longfellow Street NW about 10:10 p.m. Sunday by two youths, one concealing a gun in his pocket. The pair forced White to hand over his watch and money.

Arthur Williams Lewis, of Washington, was held up shortly after 9 p.m. Saturday by three men who approached him at the intersection of Deane and Division Avenues NE. One of them pointed a revolver at Lewis and ordered, "Okay, dad, let me have it." While the gunman held him at bay, a second man took the wallet from his pocket. He removed the money, returned the wallet to Lewis and fled with his companions.

Linda Hebel, of Washington, was beaten and robbed about 5:45 p.m. Sunday by a youth who yoked her in the 300 block of 4th Street SW and knocked her to the ground. After beating and kicking his victim, the youth took her pocketbook and fled on foot.

James Pervis, of Washington, was held up about 12:10 a.m. Sunday by two youths who confronted him at 3d and Bates Streets N.W. Drawing a handgun, one of them said, "This is a holdup." After grabbing Pervis' wallet and watch, the youths escaped.

Charles W. Bell, Jr., of Bowie was held up Sunday by two youths who approached his truck at 7th Street NW. One of them pointed a revolver at Bell while the other youth took the change carrier from his belt and the bills from his pocket.

Larry James Graham, of Arlington, was held up about 9:55 p.m. Sunday by three youths who approached him as he was entering his car in the 700 block of E Street SE. The trio attacked him from behind, took his gold watch and wallet and fled on foot.

George Moran, of Washington, was held up about 11:20 p.m. Sunday when he drove a young woman to a house in the 500 block of F Street SE. She entered the house and returned with three men, all armed with handguns. One of them opened Moran's car door and ordered him to get out of the car. After taking his money and watch, the gunmen drove off in his station wagon.

John Kossow Fireworks, New York and West Virginia Avenues NE, was held up about 7:15 p.m. Sunday by a man armed with a revolver who approached the clerk and demanded, "Give me your money." After taking a large amount of cash, the gunman entered a gold car and escaped.

Steve Hallmark, of Oklahoma City, Okla., was held up about 3 a.m. in an apartment house in the 1300 block of 10th Street NW by a young woman and a man who said he had a gun. The couple forced Hallmark to give them two diamond rings, with a total value of $2,800, his $600 watch and $45 in cash.

STOLEN

Approximately $700 in cash was stolen between 5 p.m. Friday and 8:30 a.m. Monday from a safe at the Lawrence D. Rose and Company office at 212 West Virginia Ave. NE during a burglary in which the main office was ransacked.

Cartons of milk and soft drinks were stolen between 10 a.m. Friday and Monday morning from Lewis Elementary School, 300 Bryant St. NW. Burglars who looted the walk-in freezer ransacked the entire building.

Two manual typewriters and three IBM electric typewriters, with a total value of $500, were stolen before midnight Sunday from the Peoples Involvement Corporation, 651 Florida Ave. NW.

RECENT ADDRESS BY THE HONORABLE JOHN A. HANNAH, ADMINISTRATOR OF AID, AT PUEBLA, MEXICO

Mr. COOPER. Mr. President, on July 17 the Honorable John A. Hannah, Administrator of the Agency for International Development, delivered an address at the University of the Americas at Puebla, Mexico, entitled "Looking to the Developing Countries for Answers."

In his address, Dr. Hannah points out the role that increased educational opportunities can play in assisting developing countries to solve many of their problems on their own initiative.

Dr. Hannah's statement is thoughtful and timely and merits the attention of Senators who are interested in this subject matter.

Mr. President, I ask unanimous consent that Dr. Hannah's remarks be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LOOKING TO THE DEVELOPING COUNTRIES FOR ANSWERS

I

President Lindley, Distinguished Citizens of Mexico, Members of the Board of Trustees, Members of the Faculty, Honored Guests, Ladies and Gentlemen.

The dedication of a new university campus involves more than paying homage to bricks and mortar. It is a celebration of progress and of promise for the future.

Today we mark the beginning of a new era for this University. From its beginnings in 1940 as a small city college primarily for students from the United States, the University of the Americas has grown to a full-fledged university of about 1,000 students from 42 countries, with one-third of the student body citizens of Mexico.

This new campus is a harbinger of future growth. It opens doors—not only to buildings—but to opportunities to carry forward and accelerate the momentum of the past. The soul or the spirit of a university is not defined by its buildings. This new campus provides a setting in which that spirit can expand and flourish.

This dedication is doubly felicitous. It combines pride in the past with hope for the future. It is an important occasion and I am honored by your invitation to participate in it.

Congratulations are due to those who have made this dedication today possible. The Agency for International Development played a part, but the primary credit goes to the Jenkins Foundation for their financial support, to President Lindley, to the Board of Trustees and to the Faculty of the University for their energy and leadership, and to the Mexican Government for its support.

II

The growth of the University of the Americas takes place in an auspicious context. For the past thirty years, Mexico has been one of the fastest growing, most dynamic societies in this hemisphere and indeed in the world. We who are primarily concerned with development recognize that Mexico's achievement in maintaining a real GNP growth rate of 6 to 7 percent annually for almost 30 years is a record matched by few countries. We are impressed by the fact that your GNP is much larger than that of many other countries with much larger populations.

Mexico is a leader among nations in its progress in national development. It serves as a model for other less well advanced countries. Mexico has much human talent and technical expertise, and a body of development experience rare in Latin America. We hope that in the near future Mexico will expand its program to make some of this skill and experience available to aid other Latin American countries. A contribtuion of this sort could help speed the process of hemispheric development. It would impart new energy and meaning to the pattern of partnership which binds the countries of North and South America. The ranks of aid donors would be broadened; a precedent of importance would be established.

III

Mexico's position in the vanguard of developing countries has implications beyond the opportunity it offers to asssit others, less well advanced countries. Your country is now, and will continue to be, among the first to confront some of the "second generation" problems occasioned by the development process itself. I refer particularly to inequalities which the initial stages of development generally seem to heighten, not diminish.

Development always proceeds unevenly. Urban areas and urban facilities grow more rapidly than rural ones. Some geographic areas in a country, favored by climate, topography, natural resources, or better than average leadership, move faster than others. In farm communities the new seeds and fertilizer often go first to large farmers who can buy them on the commercial market.

We see this pattern working in many parts of Asia today. The income from the recent spurts in cereal grain production there too often seem to be accruing first to large landowners and farmers who can afford the investment in water, fertilizer and other inputs which the new technology requires. This tends to widen the gaps in income.

Uneven patterns of development introduce new elements of instability into the social fabric. New, relatively affluent cities grow up anxious to preserve their wealth. The existence of this new wealth in a few areas whets the appetite of those in surrounding areas. Social tensions increase rather than diminish.

This is not a new phenomenon. Wealth tends to beget wealth and economic power tends to concentrate. Still it is a vexatious problem: how to stimulate growth efficiently while at the same time ensuring that the benefits of growth are widely shared; how to move the country forward without creating tensions that threaten to tear it apart.

This problem will loom as a central problem of the 1970's as development accelerates and as rapid population growth enlarges the pool of those demanding to participate in and benefit from development. Those in the forefront of development will, of course, face it first.

This is a difficult probelm for which there are now few ready answers. In the United States, we now recognize that large segments of our people have not participated adequately in the growth of our economy. We are seriously searching for better ways to bring these people into the mainstream of the economic process. Their children need better education opportunities. Better housing, better health care, better jobs, are all a part of the problem.

Yet we have a mature economy. It should be relatively easy to rechannel some of our resources to benefit the less fortunate. This task is even more difficult in an economy which has only recently begun to grow. Here the question is how to distribute the fruits of growth without chocking off that growth.

The developing countries face some uncharted frontiers in the 1970's—problems for which the developed world has no ready models; problems which will demand innovation, imagination, and a fair measure of hard work to solve.

It is in this sense then that I suggest that Mexico has a chance to become a model for other developing countries. Some of the problems of unequal development now confront Mexico as it does other leaders in the development process. To the extent that Mexico finds effective means to ease these problems, it will stand forth as a model and pioneer for other less developed countries to follow.

IV

Is this relevant to education and for the University of the Americas? The answer is yes.

Education too faces some uncharted problems in the 1970's. And while there are friends in the developed countries who are willing to give time, funds and talent to assist in solving some of these problems, we have few ready made answers that we are sure are the right answers.

To state the problem simply, education in most of the developing world faces problems of numbers—the forbidding arithmetic of supply and demand.

Demand for education will accelerate in the next ten years. Between 1965 and 1980, the size of the 5 to 14 age group in Europe is expected to remain constant; in the United States to increase by 13 percent; and in Latin America and other developing countries to explode by some 50 percent or more. This presents a bleak picture—especially considering the prodigious expansion of the school systems in the past decade. In Latin America, for instance, primary school enrollment increased by 62% and secondary school enrollments by 194% between 1960 and 1969. Yet, with all the increase in schooling, while there were some 27 million school-age children in Latin America out of school in 1960, in 1968 the total out of school had grown to 28 million due to rapid population growth.

To finance past expansion, education budgets have been rising at least twice as fast as GNP in most of the hemisphere and more rapidly than this in some countries. Virtually all countries in the developing world will face a heightened confrontation in the 1970's between the public demand for education and the availability of resources for this purpose. Inevitably there will come a point at which outlays for education will have to be correlated with increases in public revenues.

The funding squeeze in the next ten years will be tightened further by the expansion of the school system which has occurred in the last two decades. Most of the past expansion has occurred in primary schools. As more and more students graduate from these schools, pressures to expand the secondary school system will increase. The average annual expenditure for a primary school student in all of Latin America for instance, is about $42.00. To put the same student through secondary school costs four or five times as much—from $155 to $210 per year.

Beyond this gloomy arithmetic, there are indications that the scarce education dollars that are available are not being used most efficiently. Drop-outs are a problem in this hemisphere and throughout the world at all levels of education. Rural areas head the list. In some communities less than 5 percent of the students who begin the primary school finish it. Often 50 percent drop out between the first and second grades. Drop-outs in secondary education are also high, as are drop-out rates in universities.

Side by side with the high drop-out rate is another unsettling phenomenon: the educated unemployed. Often those who do make it through the education system emerge to find that their skills are too rudimentary to permit them to perform effectively in a job or that they are equipped with skills for which there is little demand. In some countries the education system has not geared itself to produce graduates with the skills and competencies required in that country. The educational system has not recognized its true role of not only providing educated graduates, but trained personnel who will be able to find jobs in the local societies.

What conclusion do we draw from these statistics?

One answer often given is to cut back the school system in order to provide better quality education for the relatively few. This elitest proposal is ruled out from the start. All over the developing world, education is seen as the path which the downtrodden and disadvantaged can lift themselves out of the mire of backwardness.

Education has been declared a basic human right in the U.N. Declaration of Human Rights. Seeking to restrict the supply of educational opportunity is not tenable.

These statistics do, however, seem to point to the conclusion that the traditional school system needs to be reviewed. Expansion of traditional education in traditional schools may not meet the educational needs of the less developed countries in the 1970's. New and better answers must be sought.

The search for these answers is just beginning. Some ideas, of unproven effectiveness, are being tossed hopefully about.

Among them there is the notion that non-formal systems of education might well play an increasingly significant role. Non-formal education is a dignified title for a miscellaneous assortment of educational tools including: in-service training, work-study programs, extension and correspondence courses, worker participation programs, planned radio and TV teaching programs, and many more. Rather than attempting to provide years of traditional primary and secondary schooling for all children, possibly non-formal school programs might be better. In many countries large, varied non-formal systems exist, but we have too little knowledge of their effectiveness.

Break-throughs in educational technology may open doors to significant improvements in education in less developed countries. Exploitation of sophisticated tools such as TV, radio, computers, satellites, tapes and films, hold promise both of improving the quality of education and making it accessible to vast numbers of people. The whole system of transmitting knowledge in all its familiar forms—classrooms, teachers, books, logical arrangements and so forth—require re-examination. There is the possibility for marked improvements in pedagogical techniques which can make the learning process far more efficient.

Recognizing the need for leaders especially equipped for dealing with the complex issues of economic and social development, some educators are beginning to think of a new type of university—a development university directed toward equipping young people to cope with the development problems of their nations and emphasizing the rewards of services to one society rather than putting first emphasis on personal affluence or prestige.

The over-riding purpose of such a university would be to relate its curriculum to the political, social, and economic problems of development. The students could spend a proportion of their time off campus engaged in practical problems of development. The university's research program would be directed to key development problems—population, improvement of rural life, problems of urban growth, the whole area of preserving and maintaining a climate with clean air, clean water, recreational areas, and all the rest that can make life in the future satisfying and meaningful. There are many theoretical and practical problems with this concept of a university, but it is worth exploring further.

The point to underline here is that these are but suggestions—glimpses of the future. There are as yet no answers. The solution does not lie in exporting to the developing countries a mirror-image of the education system in the developed countries. Although the developed countries may offer assistance, the solution will hinge largely on the energy and creativity which the developing countries themselves apply to these problems. The University of the Americas could have a role to play in this process. The dedication and drive which has stimulated its growth and produced this new campus can and should be used to help forge answers to the mounting educational problems of the less developed countries.

The development process is turning full circle. In the early days, it sometimes proceeded on the assumption that we in the developed world had the answers, and that the task of development was to hurry poorer nations along the same paths we had traveled. Experience has taught us otherwise. It is not necessarily advantageous for the developing countries to ape the forms and patterns of those that call themselves developed. It is not impossible that something better could be developed—avoiding many of the unhappy outcomes we can easily see in the affluent society. The developing countries face problems unique to them. There is much in their indigenous cultures that should be preserved.

My thesis today then is that relatively advanced countries like Mexico can and should be the creative leaders in solving these problems. Your rapid advance endows you with talent and funds. Your success in solving past problems imparts confidence in your ability to solve future problems. As leaders in the development train, you have an opportunity to create the models which other less well-advanced countries can follow.

The effect of this is to alter the relationships between developed and the more advanced developing countries. The normal distinctions between developed and less-developed don't apply here, although the developed countries will continue to offer assistance.

In the words which I've used as the title of this speech—they are "looking to the developing countries for answers." To the extent that development proceeds on this basis, it will be—more than ever before—a cooperative venture and a partnership of equals.

It is my hope that this University of the Americas will develop a wide horizon of usefulness as it charts its new future.

The future will have many problems and few answers. What man has made—he can improve.

We salute this University and wish for it

a long life of useful service to Mexico, to the Americas, and to the world.

SINGING SAM RABORN, TUCSON, ARIZ.

Mr. FANNIN. Mr. President, on a visit to Arizona, I attended a dedication ceremony and had the opportunity to visit with one of the old friends of many Members of the Senate.

Many Senators will recall the wonderful pleasantries that Rufus Sam Raborn so readily expressed. Singing Sam Raborn, as he is known among his friends, now is living in Arizona, at Tucson.

He is a Texas-born West Virginia gospel singer we welcome to Arizona.

Mr. President, I ask unanimous consent that there be printed in the RECORD an article published in the Tucson Daily Citizen of July 11, 1970. Appropriately it is headlined, "Singing Sam Has Retired To Tucson, But Won't Quit."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SINGING SAM HAS RETIRED TO TUCSON, BUT WON'T QUIT

(By S. C. Warman)

Singing Sam Raborn—the Texas-born West Virginia gospel singer whose career as a baritone began more than 50 years ago in the era of Evangelist Billy Sunday and is still going strong in the days of Evangelist Billy Graham—will be a guest singer tomorrow at Tucson Baptist Temple.

Rufus Sam Raborn has been making his home in Tucson for almost a year, and he and Mrs. Raborn have joined the Baptist Temple congregation of the Rev. Louis W. Johnson, 1525 S. Columbus Blvd. The service will be at 11 a.m.

While Raborn readily admits his 75th birthday is coming Nov. 26, he adds: "But my voice is still only 50 years old." And he has the energy and enthusiasm of a much younger man.

He was born in Hillsboro, Tex., the son of an evangelist, and attended Baylor University in 1915–16. He moved to Mannington, W. Va., and became associated as a singer with the late Homer Rodeheaver, the famed song leader of Billy Sunday's evangelism party.

He remained in Mannington 25 years until he went to Beckley for 12 years. There he became a friend of Robert Byrd and helped launch his political career in the West Virginia Legislature and finally into the U.S. Senate.

Sen. Byrd made his bid for public attention playing a guitar on Rodeheaver radio religious music programs.

For the 10 years before coming to Tucson, Raborn lived at Silver Spring, Md.; served on the staff of the U.S. Senate, and made frequent guest appearances on Washington radio programs.

He was called the songleader of the Senate. At Easter and Christmas when church choirs were at the Capitol for religious music festivals, Rodeheaver was master of ceremonies.

A World War I veteran, Raborn survived the influenza epidemic at Camp Lee, Va. The West Virginia American Legion three times made him department chaplain and voted him "convention soloist for life." In 1934 he was songleader and soloist for the Kiwanis International Convention.

A few years later he was on a coast-to-coast NBC radio network as soloist on the Wheeling Steel Hour.

Raborn did one crusade with Billy Sunday. He substituted for Rodeheaver during meeting in Charleston, W. Va., about 1931. During a Billy Graham Crusade at Washington, Raborn said he joined the choir. Cliff Barrows noticed him and put Raborn in a special men's section of the chorus.

Among the outstanding preachers for whom Raborn has served as songleader were Dr. George W. Truit, pastor of the First Baptist Church of Dallas, when on evangelical tours; Dr. J. Frank Norris of the First Baptist Church at Fort Worth and Dr. B. R. Lakin.

Mr. and Mrs. Raborn live at 6161 E. 21st St.

NATIONAL GOALS RESEARCH STAFF URGES BALANCED POPULATION REDISTRIBUTION POLICIES

Mr. PEARSON. Mr. President, this past weekend the White House released a report by the President's national goals research staff entitled "Toward Balanced Growth: Quantity and Quality."

This is an interesting and useful document. It does not attempt to recommend a specific set of policies for the future but it does identify the principal areas which will require major policy decisions in the future and discusses some of the factors and alternatives which policymakers will likely have to deal with. The first such policy area with which the report deals is entitled, "Population Growth and Distribution." The staff concludes that the question of population growth may or may not become a major policy issue, depending upon the trends in birth rates over the next few years. They point to the possibility that we may be approaching a zero population growth period.

However, this report does point out quite vigorously that we are going to have to deal very seriously with the question of the distribution of our population. The report states—

On this point there is no argument. Too many Americans have seen the sorrowful face of the deteriorating central city, the awesome pattern of suburban sprawl, and the sullen stagnation of the small town.

And at another point the report states—

Our population has been concentrating increasingly, not only in cities, but more and more proportionately into a few rather large urban masses. This has resulted in a lowering of the quality of life in both urban and rural areas.

The report concludes that unless corrective action is taken the concentration of our population in a relatively few metropolitan areas will continue. It indicates that if present trends continue almost all the population growth in the next few decades will be concentrated in the 12 largest urban regions and that at least 50 percent of the total population will be found in three great metropolitan belts: Boston-Washington, Chicago-Pittsburgh, San Francisco-San Diego.

Thus, the staff concludes:

The country faces an important though very difficult and complex choice: whether to allow existing trends to shape the future distribution of population, or whether to seek a different spatial distribution of the population by means of decisive public policy.

Mr. President, I believe that the national goals research staff has quite properly pointed to population distribution as a major public policy concern of the future. And I hope that this report will help to stimulate and expand the debate that is already going on in this area.

For several years now a number of us in Congress have been calling attention to the fact that the distribution of our population is becoming needlessly and dangerously tilted toward the major metropolitan centers and away from the small communities. We have urged that a commitment to expand economic and social and cultural opportunities in the smaller towns and cities and farm communities of rural America should be of highest national priority. We have argued that the great problems of the cities are intertwined with the problems of rural America. We have argued that one of the policy questions that must be dealt with in dealing with the crisis of the cities is that of how to keep more and more people from crowding into them.

Mr. President, for my own part, I have suggested several rural community development policy initiatives including: the Rural Job Development Act, first introduced in 1967 and reintroduced in 1969 as S. 15, the Rural Community Development Bank bill (S. 3607), and the Rural Development Highways Act of 1970 (S. 3986). Several of my colleagues have proposed additional policy innovations.

Therefore, those of us in the Congress and outside Government who have been concerned with this problem the past several years welcome this contribution by the President's national goals research staff. I hope this will serve to encourage additional action here in the Congress and equally important, I hope that it will serve to encourage the administration to begin to identify and propose concrete policy initiatives of its own.

NATIONAL COUNCIL OF THE CHURCHES OF CHRIST CONTRIBUTES TO GENOCIDE CONVENTION RATIFICATION

Mr. PROXMIRE. Mr. President, in the past few weeks, advertisements have been published in many of the major newspapers in our Nation, urging the defeat of the Genocide Convention. Unfortunately, these advertisements have been based on emotional and illogical arguments.

Rational, concise, and reasonable discussion is absolutely vital on this issue. The Foreign Relations subcommittee which held hearings on the Genocide Convention this past spring heard many well reasoned statements on both sides of this issue. One of the most cogent appeals for ratification of the treaty came from the statement submitted by Mrs. Theodore O. Wedel, of the National Council of the Churches of Christ of the U.S.A.

Mr. President, I ask unanimous consent that exerpts from the statement be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

NATIONAL COUNCIL OF THE
CHURCHES OF CHRIST IN THE U.S.A.,
Washington, D.C., April 23, 1970.

Senator FRANK CHURCH,
Chairman, Special Subcommittee on the Ratification of the Genocide Convention, Senate Foreign Relations Committee, New Senate Office Building, Washington, D.C.:

Now that President Nixon has salvaged the convention from its 20-year limbo, the Senate has an opportunity to redeem the nation's earlier inaction by consenting to ratification. Speaking on behalf of the National Council of Churches, I urge most strongly that this be done. The fact that 75 nations have ratified the Genocide Convention and that the United States is not among that number is not only "anomalous", as the Secretary of State has described it; it is also rather scandalous.

In view of the fact that the President believes ratification would be in the national interest, and that the Secretary of State and Attorney General agree that there are no constitutional obstacles to ratification, there appears to be little validity to the claimed legal basis of the opposition to ratification. In fact, the ABA Section on Individual Rights and Responsibilities has approved a report, I understand, stating that none of the legal objections raised both in 1949 and again today stands up to careful analysis. In addition, the President has said in his message to the Senate that affirmative action "will demonstrate unequivocally our country's desire to participate in the building of international order based on law and justice." There is a strong implication in his message that such a demonstration is necessary if the United States is to maintain its credibility on human rights issues.

It was ten years ago, in June, 1960, that the National Council of Churches first declared its conviction that "the Genocide Convention, which the United States signed in 1948, should be ratified without delay." This statement was made in the context of expressing a broader belief, based on both practical reason and the mandates of the faith we hold, that "the United States Government should renew and invigorate its leadership in the promotion of human rights." Since there seems to have been at least a partial abdication from that leadership role since 1948, I would like to reiterate that conviction and that belief on behalf of the National Council of Churches.

Ratification would be fully in keeping with our nation's traditions and principles and with its support of the Universal Declaration of Human Rights. Failure to ratify would be interpreted in some quarters, rightly or wrongly, as tacit admission of some U.S. involvement in acts condemned by the Convention and could only cast doubts on our commitment to justice. I urge your subcommittee, the Senate Foreign Relations Committee, and finally the full Senate to give their approval to ratification of the Genocide Convention.

Sincerely,

Mrs. THEODORE O. WEDEL.

HON. J. FIFE SYMINGTON

Mr. MATHIAS. Mr. President, the Caribbean is a place of tranquil waters and idyllic islands, but we should not forget that it is also the birthplace of hurricanes. A political hurricane that could have assumed significant proportions was recently dispersed in its infancy by the prompt and decisive actions of the Government of Trinidad and Tobago. The Prime Minister and his colleagues displayed great vigor and skill and are to be much congratulated for abating the storm.

Of necessity, one of the men in the eye of this incipient hurricane was the Honorable J. Fife Symington, U.S. Ambassador to Trinidad and Tobago. His alert reaction to the crisis, the climate of understanding and helpfulness he created which made it possible for the Government to seek his assistance, and the low personal profile he maintained all confirm President Nixon's good judgment in appointing him to this delicate post.

One of the best accounts of the crisis in Trinidad was published in the Evening Star of April 22 and April 23, 1970. I ask unanimous consent that they be printed in the RECORD. The facts will speak for themselves in detailing the important role played by Ambassador Symington.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

U.S. SHIPS CALLED IN TRINIDAD RIOT; TWO CRAFT TO AID U.S. CITIZENS IF NEED ARISES

(By Jeremiah O'Leary)

An American naval and Marine task force today was churning across the Caribbean toward Trinidad where 1,000 U.S. citizens may have to be evacuated because of civil disturbances and a mutiny by nearly half of Trinidad's armed forces.

Three deaths were reported during outbreaks of violence in Trinidad last night that grew out of the arrest of 13 black power leaders, the Associated Press reported. And shooting broke out in Port of pain, the Trinidad capital, again today.

The State Department asked the Department of Defense last night to send the "minimum necessary force required to evacuate 1,000 persons" from the troubled island nation.

The Navy's Caribbean ready force immediately ordered the helicopter-carrier Guadalcanal and the amphibious assault ship Spiegel Grove to sail toward Trinidad from waters near Puerto Rico.

ENVOY SEES PRIME MINISTER

Prime Minister Eric Williams notified Ambassador J. Fife Symington Jr. of the armed forces mutiny yesterday, and the envoy relayed his concern about the safety of the 1,000 Americans to Washington.

Williams, a former professor at Howard University before he became prime minister of the one-time British colony, also notified London of the tense situation and requested British assistance.

State Department sources said they understood a British frigate normally stationed in the Caribbean also was steaming toward the island on the north coast of South America.

There has been considerable political and labor unrest in Trinidad in recent weeks. At least some of the problem is attributed to a growing black power sentiment in Trinidad and several other predominantly black former British colonies in the West Indies.

LABOR TROUBLES

Williams also has been having trouble with Trinidad's labor unions as an outgrowth of chronic unemployment and underemployment. The situation came to a head yesterday when the crowds went on a rampage in downtown Port of Spain.

Then, Washington sources said, the mutiny took place among the 700-man Trinidad and Tobago Regiment, the island's only military force.

Eighty soldiers of the regiment mutinied and captured 300 other soldiers, including 10 officers, to hold as hostages.

The mutineers also seized control of the regiment's ammunition dump at Chaguaramas, the former U.S. naval base on the outskirts of Port of Spain.

Later, according to authoritative reports reaching here, 200 of the hostage soldiers joined with the 80 original rebels and sent word that they wanted to talk to the prime minister.

TWO ARE KILLED

(United Press International report that the mutineers fought with loyal troops who tried to take back the base. One man on each side was reported killed.)

Indications from Trinidad were that the mutineers, nearly half of the Trinidadian military force, were demanding the release of several people who were arrested in yesterday's rioting and also were seeking changes in the government of Trinidad.

A meeting was arranged for 5:45 p.m. yesterday but Washington was informed that the session never took place. It was at this point that Williams—as the prime minister of a nation within the British Commonwealth—asked for British help.

He also conferred with Ambassador Symington and it is assumed that the ambassador asked for standby assistance from the U.S. Caribbean fleet because of the uncertainties in the situation.

Washington sources said the trouble spot is approximately 30 hours away from Puerto Rico by surface vessel and that the U.S. task force is expected to arrive in Trinidadian waters by tomorrow morning.

Officials said no decision would be made about carrying out an evacuation of U.S. civilians until the situation clarifies.

The Guadalcanal and other vessels of the Caribbean ready force carry a batallion of Marines which could be quickly moved ashore by helicopter in any troubled situation.

Sources indicated there was no thought of an American intervention in the Trinidad crisis, such as was ordered by President Lyndon B. Johnson in 1965 when civil war broke out between units of the armed forces of the Dominican Republic. Dispatch of the American task force last night was a precautionary move, sources said, and was deemed prudent because of the possibility that fighting might break out between the loyal and mutineer forces of the Trinidadian regiment.

(According to the Associated Press, the violence broke out yesterday when police tried to bring the 13 arrested black power leaders to the military camp at Tiburon Bay in order to ship them aboard coast guard boats to Nelson Island, a small detention prison off the coast.

But when they arrived at the camp, police were turned back at its gates by army guards and forced to take their prisoners back to town, according to reports.)

TRINIDAD AIDE AND REBEL CONFER; TWO SEEK TO END CRISIS AFTER ARMY MUTINY

PORT OF SPAIN.—A rebel army officer has begun negotiations with Attorney General Carleton Phillips of Trinidad to end a two-day mutiny at the Chaguaramas army base, unofficial sources said today.

The situation at the base 11 miles north of Port of Spain was not clear.

The army said it had the situation under control and that some rebels, demanding a bigger voice for black persons on the island, had fled into the hills to wage guerrilla warfare. But other sources said the mutineers still held the base.

The death toll in the violence rose to six today when police shot and killed a man who was trying to blow up a power substation on the outskirts of the city. At least 40 rebels were reported wounded in fighting at Chaguaramas.

U.S. ARMS BROUGHT IN

Blacks make up about 43 percent of the population of Trinidad and Tobago and the current unrest began yesterday when black power advocates led violent demonstrations

in the streets demanding more power in government.

At least 60 army troops mutinied in support of the black power movement and seized the arms and ammunition depot at Chaguaramas.

The sources said one of the rebel officers, Lt. Rex La Salle, began negotiations with loyal units today to end the mutiny. Prime Minister Eric Williams' residence would neither confirm nor deny the report.

U.S. arms and ammunition were landed yesterday for loyal troops whose own supplies were seized by rebels. Government sources said British Commonwealth troops from Jamaica and Guyana had landed to help put down the mutiny.

CURFEW IS RELAXED

The government relaxed its nationwide dusk-to-dawn curfew to cover only Port of Spain and San Fernando, the two biggest cities.

Piarco international airport was opened this morning. It was closed earlier under a state of seige declared by the government.

Sporadic gunfire erupted in the slum section of the capital after nightfall yesterday and a fire destroyed four buildings and seven vehicles at Camp Ogden, an army outpost six miles from Chaguaramas.

Six U.S. ships with 2,000 Marines aboard stood offshore to evacuate the approximately 1,000 American residents and additional tourists if necessary.

In Washington, the State Department said the United States was selling the small arms to Trinidad for cash at the government's request.

ARMS ARE LISTED

The department said the arms included ten 81-millimeter mortars, 200 81-mm. shells, 75,000 rounds of ammunition for general purpose machine guns, 7,500 rounds of 9-mm. ammunition, 100 two-inch mortar smoke bombs, 50 81-mm. smoke bombs and 50 machineguns.

Department aides indicated Prime Minister Williams had granted approval for U.S. landing parties, to come ashore for the express purpose of evacuating U.S. citizens, if that should become necessary.

But they discouraged the notion that the United States, at this point, has any intention of intervening in Trinidad in the manner in which it did in the Dominican Republic in 1965.

From London, the British Defense Ministry announced it has alerted two guided missile frigates in the Caribbean for possible emergency duty.

VENEZUELA ASKED TO HELP

Trinidad's ambassador to nearby Venezuela, George Daniel, told newsmen in Caracas that Williams has asked Venezuela for help, too, "on the same principles he requested (aid) from the United States and England."

Daniel told newsmen "the soldiers who staged the small army revolt have taken to the mountains, carrying along ammunitions and all sorts of weapons from the Chaguaramas base and arsenal. . . .

"Their idea might be to start a guerrilla operation against the established constitutional order."

Daniel made his remarks shortly after speaking by telephone to Williams, who kept silent on the uprising.

UNEMPLOYMENT NOTED

The ambassador attributed the army revolt to the "well-cemented intranquility which has been exploited by black power elements among students and the unemployed."

An unemployment rate of 25 percent among the island's blacks led to street demonstrations beginning in March. A protest Tuesday led to the outbreak of fighting and the uprising in the army.

"The control of our economy and industry in foreign hands has led to well-grounded indisposition," Daniel said. "This explains part of what is taking place right now."

Trinidad, about the size of Rhode Island is the most southerly of the West Indies islands. The Chaguaramas arsenal was one of the former U.S. Navy bases obtained by the United States from Britain in exchange for 50 destroyers after World War II.

ADDRESS BY MARITIME ADMINISTRATOR ON GREAT LAKES-ST. LAWRENCE SEAWAY

Mr. GRIFFIN. Mr. President, two important steps in the development of commerce through the Great Lakes-St. Lawrence Seaway were taken last week. The first came in an address by Maritime Administrator Andrew Gibson at a July 15 luncheon sponsored by the American Shipbuilding Co. Mr. Gibson announced an affirmative policy of promoting waterborne commerce in the Great Lakes when he stated:

Beginning today, it's my hope that by working together the Great Lakes maritime industry and the Maritime Administration can effectively achieve a more productive, more modern and more profitable Great Lakes fleet, one better able to meet the needs of Great Lakes shippers today and tomorrow.

The second important step was a first-hand look at the Great Lakes, from Cleveland to Sault Ste. Marie, by the Administrator aboard an ore carrier. To my knowledge, this is the first such tour of the Great Lakes ever taken by a Maritime Administrator.

Recently, I wrote to Mr. Gibson pointing out that none of the ships proposed as a result of the Maritime Administration's design competition conformed to the limitations of the seaway locks. Consequently, I was particularly pleased by the recognition indicated in Mr. Gibson's address of the need to tailor the design of at least one ship developed in the competition—the multipurpose *Kennebec* class of Bath Industries—in order that it will be suitable for seaway transit. Furthermore, in response to my letter, Mr. Gibson indicated that the Maritime Administration has developed, in addition to the *Kennebec* design, a general purpose cargo ship capable of traversing the seaway.

Mr. President, in addition, I am pleased that research efforts are going forward to strengthen ships for an extended-season operation, and that a Chicago office of the Maritime Administration is being opened to work directly with maritime industries in the Great Lakes region.

Mr. President, I ask unanimous consent that the text of my letter of June 23, the text of a letter dated July 8 from the Administrator, and the text of his address at the Cleveland luncheon be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

JUNE 23, 1970.

Hon. ANDREW E. GIBSON,
Administrator, Maritime Administration,
U.S. Department of Commerce,
Washington, D.C.

DEAR MR. GIBSON: The maritime bill which has passed the House of Representatives and is pending before the Senate Commerce Committee includes a provision designating the Great Lakes as a fourth seacoast.

Such a designation makes applicable to the Great Lakes an obligation imposed upon the Secretary of Commerce, through the Maritime Administrator, under Section 210 of the Merchant Marine Act of 1936, for "the creation of an adequate and well-balanced merchant fleet, including vessels of all types, to provide shipping service essential for maintaining the flow of the foreign commerce of the United States. . . ."

Furthermore, since the Great Lakes-St. Lawrence Seaway System has been designated as an essential trade route, the Secretary is required under Section 211 to determine "The type, size, speed, method of propulsion and other requirements of the vessels . . . which should be employed in such services or on such routes or lines . . . with a view to furnishing adequate, regular, certain and permanent service. . . ."

In the light of this legislative framework, my staff has reviewed the various ship plans which resulted from the recent Maritime Administration design competition. While the resulting ships undoubtedly will make a substantial contribution to most of the American merchant marine, we find that the overall dimensions of the mid-range bulk carriers are such that it would not be possible for them to transit the Seaway and thus be of use in the Great Lakes.

You are aware that although there has been a growing use of the Great Lakes ports by modern European ships, there has been a steady decline of use by American vessels in foreign trade.

I would very much appreciate it if your staff would review the proposed plans to determine if sufficient modification could be made in the designs to permit their ready availability for Seaway use. I shall appreciate hearing from you at your early convenience.

Sincerely,

ROBERT P. GRIFFIN,
U.S. Senator.

U. S. DEPARTMENT OF COMMERCE,
Washington, D.C., July 8, 1970.

Senator ROBERT P. GRIFFIN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GRIFFIN: This is in response to your letter of June 23, 1970, in which you refer to the legislative framework dealing with the creation of an adequate and well balanced merchant fleet with special reference to the Great Lakes-St. Lawrence Seaway System. You indicate that the overall dimensions of the mid-range bulk carriers, the design of which resulted from the recent Maritime Administration design competition, appear to be such that it would not be possible for them to transit the Seaway.

As you have suggested, a review of the designs by our staff indicate that the Kennebec class can be sailed through the St. Lawrence Seaway and is designed to carry ore, bulk or general cargoes. This versatile ship has a beam of 75' with an overall length of 570' having a deadweight capacity of 21,000 tons in ocean service. Due to limited Seaway draft conditions, the capacity through the Seaway must of necessity be somewhat less. However, by adding approximately 160' to the length, the capacity of the ship under Seaway conditions would be approximately 20,000 DWT and under ocean conditions could carry 27,000 DWT. Ships for Great Lakes operation alone, excluding the Seaway, can of course be considerably larger.

In addition, the Maritime Administration has developed an 18 Knot 74' beam general purpose cargo ship with alternate ocean capacities of 15,000 to 19,000 DWT depending upon length. Under limited Seaway draft conditions, these tonnage capacities would be somewhat less, however the bale cubic capacities are very high. Enclosed is a brochure describing this design.

Of equal importance to the availability of

these aforementioned designs is our policy of considering construction subsidy support for ships other than those developed in our recent CMX design competition. Any operator or group of operators who require specialized designs and who wish to construct a series of modern ships under our new program will receive the same consideration as those applicants who consider our new standard designs to be more suitable. Our goal is to develop a competitive merchant marine.

A review of the 1969 Great Lakes foreign trade indicates that 97% of the total inbound cargo came from the United Kingdom/Continent, Mediterranean and the Far East, while 83% of all outbound cargo went to the same areas. The predominant cargoes were animal feeds, corn and wheat, oil seeds and nuts, iron and steel scrap, steel plates and sheets, alcoholic beverages, and large quantities of foodstuffs. The majority of the foreign flag ships now carrying these commodities are reasonably modern breakbulk ships with speeds of 15–16 knots. It would be our evaluation that the Kennebec class multipurpose ships or the MarAd design might prove attractive to U.S. flag operators providing they are able to book the cargo.

As already stated, we stand willing to work with all interested operators or to consider alternate designs considered more suitable to carry Great Lakes cargoes. If I can be of further assistance, please let me know.

Sincerely,

A. E. GIBSON,
Administrator.

REMARKS BY A. E. GIBSON, MARITIME ADMINISTRATOR

I am told that if my visit today does not actually represent the first journey of a Maritime Administrator to the Great Lakes, at least such visits have been so rare that no one can remember the last occurrence, and it must be obvious that past maritime policy has contributed much of the underlying reason for this conspicuous absence.

The Merchant Marine Act of 1936, which has been, and will continue to direct United States maritime affairs until the enactment of new legislation anticipated later this summer, was specifically designed by the Congress to provide this Nation with a merchant fleet which could be "sufficient to carry its domestic waterborne commerce and a substantial portion of the waterborne export and import foreign commerce . . . [and] capable of serving as a naval and military auxiliary in time of war or national emergency."

Although this is a far reaching directive the administration of the Act has dictated that virtually all of the effort and assistance go to the preservation of the essential trade routes in foreign commerce and therefore there has been relatively little attention paid to contract carriers engaged in the transportation of bulk cargoes, which represent so much of the Great Lakes traffic.

Given such emphasis, it is not surprising that over the years the lines of communication between the Maritime Administration and the shipping community on the Great Lakes have been virtually non-existent.

My presence here today is to provide evidence that it is our desire to establish a closer and, hopefully, a mutually beneficial relationship for the future. The recent installation of Admiral Trimble as President of the Lake Carriers Association, provides this Region and the industry with an exceedingly able and knowledgeable individual with whom we in Government can effectively work, and I congratulate those responsible for being able to persuade him to lead their organization.

During the 1968 election campaign, Richard Nixon laid the groundwork for his future maritime program. This was a proposal of far reaching significance and it was the direct outgrowth of his concern for our maritime well-being. In it, he fully recognized the problems of the Great Lakes. The President said at that time:

"Unsubsidized sectors of our merchant fleet must be given attention so that they too can replace their deteriorating fleets in the immediate future. Included in this category are . . . the Great Lakes operators who daily face competition from their government-assisted counterparts.

"Although the Eisenhower administration provided the United States with a fourth seacoast, through the St. Lawrence Seaway, the [past] administration has chosen to turn its back on this inland network of water transporation. Certainly [this] segment of our merchant marine can be stimulated by tax incentives. . . . The United States, in turn, can expect [it] to make a capital commitment in new ships and facilities."

Throughout that remarkable speech, President Nixon outlined a definite plan of action to bring about a reversal of the steady decline that our merchant marine has suffered for too many years.

In developing the actual provisions and machinery to carry out the President's directives, those of us in the new Administration faced many problems, one of the major ones being the direction and emphasis with which we would focus our effort. We believed that the fleet required to carry our foreign commerce must have the top priority. The disappearance of two-thirds of this fleet in the next few years was too large a problem to be deferred. That our order of priority was correct was dramatically borne out earlier this year when the British underwriters proposed increased insurance rates for cargo carried on ships 25 years or older. By this one directive, had it been allowed to be implemented, the resulting higher rates would have driven some 250 of our present 650 ship fleet engaged in foreign trade from the sea lanes. Fortunately, we were able to forestall the implementation of this scheme, but the handwriting is on the wall.

With domestic trades protected from direct competition through our cabotage laws, we believed that this would at least give us some breathing space to get the foreign trade fleet on the road to modernization before turning our attention to the domestic fleet and this was reflected in the enabling legislation sent to the Congress last December.

During the course of the extensive hearings, particularly through the untiring efforts of our host George Steinbrenner and Admiral Hirschfield, until his recent second retirement the distinguished head of the Lake Carriers Association, through the continuous concern expressed by the Great Lakes delegation in the Congress, such as Ohio's able, hardworking Representative Charles Mosher, it became apparent that the problems of the domestic operators on the Great Lakes would have to have immediate attention. The Congress therefore advanced the time table and has provided the avenues into which this effort is to be channeled. We in the Administration are prepared to carry out their mandate.

As the proposed legislation now stands, it contains three major provisions that offer substantial assistance to the Great Lakes operators.

First, the bill would allow for the creation of tax deferred construction reserve funds for the financing of new ship building. This was the primary benefit sought by your Association, and Mr. Steinbrenner, in his testimony, estimated that this provision could double the number of ships planned for construction on the Lakes in the next 5 to 10 years.

This is a most significant provision and its utility is well illustrated by those subsidized operators who have previously held this privilege. The fact that this liner fleet is the most modern segment of our merchant marine is due in large part to the ability to set aside funds for rebuilding their fleet which would otherwise have been paid as taxes. That this ocean fleet contains many of the most productive and competitive ships in world liner trade provides conclusive evidence that the reserve funds have been effectively utilized, and I am sure that your efforts in the coming years will be equally well directed.

The second provision that will assist you in the ship replacement program is the expansion of the Ship Mortgage Insurance program. We have asked the Congress to raise the ceiling on the amount of insurance that can be written from the present $1 billion to $3 billion. Because of the financial strength of many of the Great Lakes owners in the past, such mortgage insurance has never been utilized, but in this day of abnormally high interest rates its use is becoming almost essential to obtain the required financing at anything approaching reasonable rates.

The third provision of the new legislation specifically designed to benefit this region would recognize that foreign trade within the Great Lakes is subject to the same competitive pressures as other foreign trade and therefore entitles the operator to the same aid and consideration as those steamship companies competing in other areas. The proposed new legislation corrects this previous omission and establishes the Great Lakes officially as our Fourth Seacoast.

With the enactment of the new legislation these provisions will be available to assist you to modernize your fleets and more effectively compete with your Canadian counterparts.

In his message to Congress delivering the new maritime plan, the President characterized it as a "challenge and opportunity." He challenged the American ship operating and shipbuilding industries to gain their former pre-eminence and again become a vigorous part of the American economy. To achieve this, this program will provide the necessary opportunities through an expansion of the shipbuilding program, through extension of tax deferred reserve funds, and through a revised and extended operating subsidy system.

A significant improvement in U.S. flag participation in our trade and lower shipbuilding costs are expected in return for the increased-Government support. This level of support is not intended to shore up uneconomical operations either in ship construction or in ship operation, but to provide added incentive for improving the efficiency with which ships are built and cargo is moved. We believe opportunities exist here in the Lakes as in other areas to make improvements that will lead to the development of increasingly productive ships. The two giant ore carriers being built on Lake Erie are examples of the application of such improved technology. Bigger and faster than previously existing ships on the Lakes, they have modern internal cargo handling equipment that can do for the movement of bulk cargoes what the container has done in revolutionizing the movement of packaged goods in our international trade.

To help the shipyard industry to achieve the President's goals, we are revising our procurement procedures to create an environment in which the strengths and benefits of the private enterprise system can be more readily achieved. In this connection, we have departed from past practices in which the shipyards had no control over the designs of the ships they built.

Under the Nixon program the shipyards will develop the designs, providing them with the opportunity to eliminate costly frills and the incentive to develop innovative features that will attract buyers. In contrast to past practices where the shipyards were called upon to build a small number of ships of a given design, we will consolidate orders of

identical ships to enable the yards to build them in series.

In addition as a departure from previous practices, in which contracts were awarded on the basis of firm, fixed prices, the shipyards will be given the latitude to negotiate price with prospective customers.

Surely, the Government, the taxpayer, the ship operator and the ship builder will benefit from these new procurement procedures.

In reference to design development, the Maritime Administration commissioned two shipyards to develop preliminary designs of the vessel types that will be required to increase U.S. foreign trade carriage in this decade. A total of 13 basic designs were developed by these contractors.

We have worked closely with Senator Robert Griffin of Michigan and his staff in the ship designs study to be sure that some of the ships developed under this program would possess the characteristics for successful Seaway operation, with the result that the Kennebec class—a multi-purpose carrier designed by Bath Iron Works Corporation for the carriage of ore, bulk and general cargoes—is ideally suited for Great Lakes-Seaway service. This versatile ship has a beam of 75 feet. an overall length of 570 feet and a deadweight of 21,000 tons in ocean service. An elongated version of this class is available to operate as a 20,000 deadweight ton ship in Seaway service and 27,000 ton in ocean service and as such closely resembles the most modern ships recently built for Great Lakes operations. I refer to the French vessel *Eglantine* and *Nanfri* of Norwegian registry.

We will shortly fund several research projects that can conceivably have a measurable impact on your future. Two of these projects are directly aimed at lessening some of the constraints on your operations.

One project calls for a study of the effect of railroad rate structures on the shipment of export cargoes through Great Lakes ports. We are interested in determining the loss of business to ports, operators, or shipbuilders, caused by existing rate practices and we hope to determine the probable effect on the Great Lakes area should the rail freight rate structure be revised. I am pleased to note the recent actions on the part of a railroad and a shipping company to reduce such inequities. The decision of the Illinois Central Railroad to offer unit-train rates on coal moving to South Chicago for reshipment by vessel to utility plants around Lake Michigan is a hopeful sign. The Oglebay Norton contract with the Niagara Mohawk Power Corporation to ship coal from western Lake Erie ports to the company's power plant north of Buffalo is another. This is a clear indication that given a chance to compete fairly the economies of water transportation for bulk commodities must inevitably prevail.

We will also assist in research into the requirements to ice-strengthen vessels in the Lakes to enable them to navigate the Lakes for an extended season. This is a project we intend to have in operation by the coming winter and it is intended that the results of these efforts will be made available as soon as possible so that they can be incorporated in future designs.

In the last few minutes I have tried to briefly sketch the possible effect of the new maritime legislation for the Great Lakes and some of the future possibilities concerning your shipping which we at Maritime are exploring. In both areas we welcome your interest and cooperation.

In closing, I would like to point out one further area in which I believe more of the Government's and your attention could profitably be devoted. The hinterland surrounding the Great Lakes is one of the most productive regions in this country. As our economy continues to expand, we can expect this area to share in the growth of our international as well as our domestic commerce. The tremendous potential of this region in terms of future industrial development and consequent transportation demands is of great importance. I believe that now is the time to start planning to meet the needs of the next decades. Complete and accurate market analyses and forecasts for potential services are required, for the ships we build today must be able to serve the needs of commerce in the decades ahead. We will shortly announce the opening of a Chicago office to directly work with the maritime industry to aid in this effort and again we will count on your assistance to make this activity truly productive.

Later today, together with Paul Trimble, I plan to board a Great Lakes ore carrier for a firsthand look at your great inland ocean to see for myself at least part of America's Fourth Seacoast. Beginning today, it's my hope that by working together the Great Lakes maritime industry and the Maritime Administration can effectively achieve a more productive, more modern, and more profitable Great Lakes fleet, one better able to meet the needs of Great Lakes shippers today and tomorrow.

BATTLE OF THE MONOCACY

Mr. MATHIAS. Mr. President, the city of Washington and the Federal Government have good reason to recall with gratitude the Battle of the Monocacy fought on July 9, 1864. The encounter in Maryland of Union and Confederate forces saved the National Capital from a raid if not ruin, saved the Government from a severe setback, and spared the Union a devastating blow to morale.

A recent retelling of the story of the Battle of the Monocacy, written by Paul A. Haley, was recently published in the Post, of Frederick, Md., on July 11, 1970. I ask unanimous consent that it be printed in the RECORD as a reminder that the security of the Capital has always depended on the actions of brave men.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BATTLE OF MONOCACY FOUGHT 106 YEARS AGO

(By Paul A. Haley)

Exactly 106 years ago July 9 at Monocacy Junction on both sides of the river from which it takes its name occurred one of the decisive battles of the Civil War.

In fact, it is not too much to say that the bloody conflict staged there that day in the view of several thousand Frederick residents who flocked to neighboring vantage points to watch the spectacle saved the nation's capital from being captured by the troops of Lieut. Gen. Jubal A. Early.

No less an authority than the Union commander in chief, General Ulysses S. Grant, makes this statement in the history of the war which he wrote years later as he lay dying of cancer of the throat at Mount McGregor in the Adirondacks.

He says:

"There is no telling how much the salvation of Washington hung on the efforts of General Lew Wallace leading his forlorn hope on the banks of the Monocacy at Frederick.

"However, had General Early been one day earlier in arriving at the gateway of Washington he might have taken over the city before the reinforcements I sent to man the forts from City Point had time to arrive.

"He lost this precious day in overcoming the courageous but greatly inferior forces Gen. Wallace assembled at Frederick.

"In fighting this losing but decisive battle, General Wallace contributed more to the cause by the defeat of the men under him than often falls to the lot of a commander with a greatly superior force who wins a victory."

In telling the story of the Battle of Monocacy, it is necessary to paint in broadly the status of the opposing armies of the North and South in the summer of 1864.

General Grant with some 100,000 finely equipped Union troops had brought to bay in the fortifications in front of Petersburg south of Richmond and the gateway to that capital of the Confederacy about 75,000 Confederate troops under the brilliant, daring, and resourceful General Robert E. Lee.

The war between the North and the South had become a conflict of attrition. Grant with superior numbers and an apparently inexhaustible supply of manpower in the north to bring in as reinforcements was relentlessly wearing down the inferior forces of Lee whose manpower reserve from the South was virtually exhausted.

In this situation, the war was militarily lost, and Lee knew it. It was only a question of time until Grant with his superior force and his ability to lose two or three men to Lee's one would at some point crack the constantly thinner Confederate defense lines at Petersburg and thereby open wide the gates of Richmond.

In this extremity, General Lee and Jefferson Davis played for time.

A presidential election was due in the fall in the Union States which were badly divided as Grant's death toll constantly mounted as he probed at the lines of Lee.

Even Lincoln despaired. He went so far about this time as to write a memorandum to himself and have it signed sight unseen by all of his Cabinet. He then quietly filed it with his papers where it was not brought to light until after battlefield victories of the summer and early fall changed the picture so that he was triumphantly swept back into office.

Lincoln's memorandum, however, said:

"As of this date, it appears that the Union cause will lose in the fall elections and that the Democrats will elect General McClellan with his peace program. In that event, it will be necessary for me to secure the co-operation of McClellan to bring the war to a close before his inauguration because he will never achieve it afterwards."

It was in the light of this hope of Lincoln's defeat and a negotiated peace which the South would win the greater part of its aims that General Lee and President Davis decided upon the audacious step of attempting to force Grant to loose his bulldog grip on the Petersburg defense line by sending General Early up the Shenandoah Valley to attack Washington.

They knew that following the promises of General Grant to keep steam up in several transports at City Point on the James River so that he could dispatch troops to protect Washington that President Lincoln had reversed his policy of four years of keeping a strong army between that city and Richmond and had denuded the forts ringing the nation's capital of all but a few thousand convalescent soldiers, workers in the government bureaus, and a handful of militia.

The defenses of Washington consisted of 53 widely separated forts ringing the city. To properly man them and handle the heavy artillery required a force of 40,000 men.

At best in the summer of 1864, there were only 7,000 of these convalescents and scrub troops available.

Douglas Southall Freeman, probably the greatest historian of the Civil War from the point of view of the South, points out that following the death of Stonewall Jackson, there was not a commanding officer with sufficient audacity and sheer guts to tackle such an assignment as Lee offered him except the fiery Jubal Early.

From his thin Petersburg defense lines, Lee took 10,000 poorly equipped infantry of

whom two-thirds, including many company officers, were without shoes.

He also gave Early cavalry and heavy artillery units adding up to some 4,000 additional troops.

With this tiny force of 14,000 men, Early was given the assignment of invading Maryland, capturing either Baltimore or Washington, as seemed most feasible when he got to Frederick, and freeing 17,000 Confederate soldiers held prisoners of war at Point Lookout for whom he carried rifles in his trains so that they could support his attacks.

The invasion was so pitifully undermanned that, as usual, the northern intelligence refused to credit the slimness of the force.

Detectives attached to Grant's Army reported to Washington that Early was invading with 35,000 trained troops and 15,000 cavalry, although anyone with even a superficial knowledge of the military situation of the South in the summer of 1864 would have known this to be impossible.

Early advanced rapidly over the soft dirt roads of Virginia which proved no hardship to his shoeless troopers, all of whom planned to get re-shod in Frederick.

He crossed his army over the Shepherdstown and Williamsport fords of the Potomac and attempted to capture the Union army of General Franz Siegel at Harpers Ferry.

Siegel's Germans—"I fights mit Siegel"—hastily evacuated the town, however, for the commanding Maryland Heights and Early knowing that occupancy of Harper's Ferry was impossible without command of the Heights abandoned his efforts and headed for Washington by way of Boonsboro, Middletown, and Frederick.

He diverted General John McCausland's cavalry long enough, however, to make a dash for Hagerstown, where on a threat to burn the town they collected $20,000 in gold from the frightened citizens.

It is time now to turn to the defensive efforts of the Union forces in Maryland and Washington.

In command at Baltimore was General Lew Wallace of Indiana, much more famous and successful later as a novelist—he wrote "Ben Hur"—than as a field commander.

Although commanding the department of Baltimore, he had less than 2,500 soldiers, most of them inexperienced, as Grant, again, had tapped the trained men for service at Petersburg.

Receiving word from Washington that Early was on his way up the Valley with his invasion army, General Wallace, small as his force was, at once entrained for Monocacy Junction at Frederick.

He realized that it was at Frederick that Early would have to tip his hand and indicate whether he contemplated an attack on Washington or Baltimore.

Here he established his headquarters at a block house beside the Baltimore and Ohio Railroad bridge and hearing that Col. David R. Clendenin, in command of some 236 Union cavalry troops, was scouting at the mouth of the Monocacy, he sent for him, informed him of Early's expected arrival, and ordered him to advance to the peaks of the Catoctin and attempt to check the Confederate army outside Frederick until reinforcements could arrive.

Col. Clendenin went out the National Road to the peak of the Catoctins and looking over the Middletown Valley saw Early's advance troops consisting of General Bradley T. Johnston's cavalry advancing from Middletown.

There was a slight clash between the opposing horsemen, but Col. Clendenin, obviously out-classed, finally had to disengage and retreat into Frederick City.

Fortuitously during the ensuing night, the Sixth Division of Grant's Army led by Gen. James R. Rickets and comprising some 5,000 seasoned troops, which had landed in Baltimore from their transports from the James River, came immediately to Monocacy Junction to swell General Wallace's little army.

What had appeared hopeless before, now gave promise of at least inflicting some damage on the invaders and possibly changing their minds about continuing to either Washington or Baltimore.

General Wallace determined to give battle. He posted Rickett's seasoned troops on the hills and bluffs overlooking the Monocacy southwesterly from the old wooden bridge over what is now Route 355 or the Washington Turnpike and his line of battle extended for about a mile.

The 2,500 un-seasoned troops and militia which General Wallace had brought with him initially he formed in line of battle to defend the main road to Baltimore, giving them what he considered a less dangerous post as he believed, and correctly as it eventuated, that Early aimed at Washington and not Baltimore.

They had not long to wait. On the morning of July 9 as the sun came up in a huge ball of fire presaging one of the hottest days of the summer, General Early's army was firmly in possession of Frederick City.

His bare-footed troopers at once raided every shoe store in the city and remedied this deficiency at the expense of the Frederick merchants who had to take their pay for the shoes in worthless Confederate money.

Meanwhile the commanding general had not been inactive. Hastily calling the mayor and city council into his tent he informed them that unless they immediately paid him $200,000 in gold as tribute that it was his intention to burn the city.

With the more or less willing co-operation of the city's banks, the Frederick officials assembled the $200,000 and paid it over, thereby incurring a municipal debt which was not paid off for nearly a century.

Closely interrogating the few southern sympathizers in Frederick City whom he could contact, General Early was told that General Wallace was in his pathway at Monocacy Junction with 2,500 men, but unfortunately for him, his informants were not aware of the arrival during the previous night of Rickett's seasoned 5,000 veterans.

Shortly after 9 A.M., General Early sent his artillery out of Frederick City towards Monocacy Junction and when they reached a commanding eminence they opened fire at random on the southern banks of the river.

One of the shots opening the battle struck a blockhouse along the railroad line and killed two men of the 151st New York Regiment who were stationed there with a small company as sharpshooters.

Under cover of his artillery, Early now dispatched a skirmish line toward Washington on the fields of the present battlefield.

He also dispatched sharpshooters who took possession of a barn on the Best farm located on the west side of the Monocacy a short distance from the wooden bridge on the turnpike to Rockville and Washington.

Still under the illusion that he had only to contend with the untrained militia assembled by Gen. Wallace as he had been told by the southern sympathizers in Frederick City, Early viewed the impeding battle as merely a matter of brushing aside a few pestiferous flies and pushing on to Washington where the gold in the Treasury Department inflamed the desires of both he and his little invasion army.

The sharpshooters proceeded to make it very uncomfortable for the some 300 members of the 10th Vermont Volunteers who General Wallace had located near the wooden bridge over the Monocacy.

Meanwhile the Union general was still not positive that the thrust was to be at Washington instead of Baltimore. Great clouds of dust arising from the Baltimore turnpike had obviously been thrown up by either the cavalry or infantry of Early's forces. If it was the former, it merely denoted a raid, but if it was infantry, the skirmishing along the Washington turnpike might be merely a feint to mask a drive at Baltimore.

Within an hour Union sympathizers from Frederick City making a wide detour to escape detection by Early's forces rode up to General Wallace to inform him that the dust on the Baltimore Turnpike was caused by the latter's dispatching of Generals Rodes and Johnston's cavalry toward that city in an attempt to reach and free the 17,000 Confederate prisoners at Point Lookout.

This confirmed the Union general's original thesis that Early's raid was aimed at the jackpot—Washington—not only the nation's capital but also the repository of its cash to wage war, the home of its President and the one city whose capture might so dishearten the North that immediate peace would be offered.

Particularly, reflected Wallace, was this true if Early carried out his announced threat of burning both the Capitol Building and the White House as the British had done in the War of 1812.

And General Wallace had also been informed by emissaries from Washington sneaking into his lines the night before that a steamer under forced draft waited in the Potomac to take President Lincoln and his entire Cabinet to Philadelphia if Early managed to overcome the pitiful convalescents in the forts ringing the city.

Wallace's thoughts were not very optimistic as he waited for the mounting Early attack to hit his 2,500 militia guarding the wooden bridge over the Washington turnpike and the 5,000 seasoned men commanded by General Ricketts laying down in the breast high corn growing so lusciously in the fields on the west side of the Monocacy toward Frederick City.

The morning wore on with the skirmishing line of Early pushing further out from Frederick and nearing the banks of the Monocacy.

Just before noon with the aid of his powerful glasses General Wallace could make out a long line of infantry led by a band and proudly flying their regimental flags filing out of their camp grounds in Frederick City toward the flat farmlands bordering the Monocacy about two miles away where battle was about to be joined.

Meanwhile occupants of the farms in the immediate pathway of the converging armies had all taken refuge in the stone basements of their homes.

A nine-year-old boy, Glenn H. Worthington, who was many years later to be a judge of the Frederick County Circuit Court and write the history of the battle as he viewed it from a basement window of his farm home, relates that as soon as the large contingent of Confederate infantry was observed by General Wallace that he became convinced that it was time to destroy the wooden bridge over the Monocacy on the Washington Turnpike.

Kindling had been previously gathered by some of the 2,500 militia converged at this strategic crossing and in a matter of minutes the bridge was a mass of flames.

Wallace had been unable to do anything to impede passage over the stone Jug Bridge on the Baltimore Turnpike because of its construction but he had cut the main link to Washington at its intersection with the turnpike which is now Route 355.

Observing the fire, Early and his lieutenants in command of the infantry halted for a council of war.

They at once determined that they would now have to locate the various fords of the Monocacy and after driving back what they still thought merely an insignificant militia force barring their way gain access to the Washington road by this method.

While the Confederate infantry waited for orders, Early sent General John McCausland

with some 1200 picked cavalry troops to force the ford on the Worthington farm.

Because the growth of brush and trees on the western side of the Monocacy was rather dense until it reached the lush fields of growing corn on the Worthington farm, McCausland was screened from General Rickett's 5,000 men of the Sixth Division who were posted on the edge of the river to prevent a crossing at the Worthington Ford.

Anticipating a brief "brush" and a conclusive breakthrough, General McCausland dismounted his cavalry, leaving one third to hold the horses of the 800 with whom he prepared to attack on foot.

With only their general and his flag-bearer mounted, the McCausland troops proceeded their charge across the cornfield between the Worthington and Thomas farms.

Here, lying down in the corn behind the dividing fences, were stationed the 5,000 seasoned and tense troops of General Ricketts, who, the only mounted figure visible on field, sat his horse as impervious to nerves as a wooden statue.

McCausland's men, unsuspicious of danger, came on rapidly.

Other than a quiet "steady now, men," General Ricketts said nothing, until the attacking force had reached a position less than 150 yards from the division fence behind which his troops lay.

Then with a quiet, "Give it to them, boy," the general gave the order which caused all of the Union troops to jump to their feet and fire point-blank into the advancing cavalry of McCausland.

The result was slaughter. John Worthington, father of the battle's historian, who observed it from the sanctuary of his nearby barn called it in after years, "a massacre."

With the terrific firepower of the Union veterans, McCausland's charging cavalrymen were completely blotted from view by the powder smoke resulting from their heavy fire. Scores were killed outright. Others were gravely and sometimes mortally wounded.

According to Worthington, who was an unwilling witness to the tragic scene, frightened Confederates dragging their muskets, cursing, and in some instances crying fled the field and retreated back to the barn in which he was hidden in the hayloft.

Many of them accused their officers of leading them into an "ambush" and swore that they would make another attempt to gain the Washington road.

It was sometime later and the day was advancing before General McCausland and his officers were able to rally the survivors for another attack but in this they were repulsed with still more serious losses.

"Militia, Hell," the surviviors indignantly shouted at McCausland as they again rallied but in diminished numbers in the Worthington barnyard. "Them's veterans!"

While General McCausland's abortive attempts to reach the Washington road had both been unsuccessful, they served the purpose of point out to General Early where the major opposition forces were located at the Worthington ford.

He at once instructed Major General John J. Breckenridge, a former vice president of the United States, to bring up the division of General John B. Gordon and with a heavy infantry attack achieve that which the cavalry had been unable to accomplish.

Gordon's men made an impressive sight as they filed out of Frederick City down to the Buckeystown Road and then assembled for the attack through the bloody cornfields of the Worthington and Thomas farms.

The Worthington meadows provided a fine place for General Gordon to maneuver his troops into position for the attack. The slender and dynamic Georgian was in his element as he delivered an eloquent address to his soldiers, who were also mostly from Georgia, and charged them to fight for the honor of their state.

The Confederates moved forward spiritedly with their customary blood-chilling Rebel yell but like McCausland they met with a savage repulse.

Brigadier General Evans leading the advance was mortally wounded as he tumbled from his horse and as the confused survivors retreated the bodies of some 50 dead Confederates and more than 100 badly or mortally wounded men lay in the corn.

General Gordon at once sent a courier to General Early at his observation post midway between Frederick and the battlefield asking for reinforcements and General Terry was sent forward with an additional 5,000 infantry.

It was the impetus of this new force bolstering the lines of General Gordon after through General Rickett's defenses and forced him into a stubborn retreat toward Urbana.

Fighting vigorous rear-guard actions, the Union troops surrendered the field, with Rickett's troops trying to cover Washington and General Wallace moving backward toward Baltimore.

The carnage on field was horrifying to behold. According to Judge Worthington, who with the impetuosity of any nine-year-old boy, was all over the field, more than 50 Union dead lay in the yard of Gambrill's Mill. Another Union Hospital was set up at the nearby Yaste property and couriers raced into Frederick City with urgent pleas for surgeons and nurses.

A Confederate Field Hospital was also set up on the Worthington property. The Confederate slain was particularly high in officers. Their total butcher's bill for the four charges through the corn came to 245 killed and 434 wounded.

The Federal death toll was 123 and they had 603 wounded and missing in action.

While General Early was anxious to be on his way to Washington, it required the remainder of the day to bury the dead and give such aid as was possible to the wounded.

He then made the bitter decision to abandon his wounded on the field and trust to the kind-hearted people of Frederick City to care for them. Time was running out for Early in his bid to capture Washington and ambulances loaded with wounded would have still further bogged down his march.

It was dawn, however, before the battered invasion army of General Early resumed its trek to the nation's capital.

Under the rays of another scorching sun which cost him several hundred stragglers en route and an early halt for the night at Rockville, the Confederates received by spies from Washington City the disquieting news that on the previous day the remainder of the veteran Sixth Division from Petersburg had arrived by steamer at the Potomac Wharfs and were starting their disembarkation and march into the forts ringing Washington.

This was bad news for General Early but he determined to push on from Rockville by Viers Mill Road the following day and passing through Silver Spring get as close as he could to Fort Stevens on Georgia Avenue in Washington and by pushing forward a skirmishing line determine just how strongly the city was held.

As he approached the fort the following day, however, Old Jube found his worst fears confirmed.

As he says in history which he wrote in his declining years:

"I determined to make an assault but before we could carry it out a study of the fortifications and their strongly manned parapets disclosed that the enemy had been strongly reinforced.

"I knew that they had been strongly reinforced with the entire Sixth Division of Grant's army and after consultation with my division commanders, I became satisfied that such an assault, even if successful, would be attended with such sacrifice as would insure the distruction of my whole force before victory could have been attained.

"And if unsuccessful, I would have equally lost my entire army. I, therefore, reluctantly determined to withdraw."

After burning the summer home of Postmaster General Montgomery Blair in Silver Spring, and rounding up more than 1,000 cows and 500 horses from the lush Montgomery County farms, Early retraced his steps crossed the Potomac at White's Ford, and although lackadaisically followed by Union troops, made his way unmolested down the Valley of Virginia to Staunton.

The loss of a day at the seemingly inconsequential Battle of the Monocacy had deflected his aim.

The significance of the battle in the history of the Civil War has not gone unnoticed by historians. In fact, they have given it a higher rating as a strategic victory of great importance to the North than have the people of Frederick County.

In the late 1800's Congress passed a totally inadequate appropriation of $5,000 by which part of the Monocacy Battlefield was acquired and over the years various energetic and patriotic Frederick citizens have tried to have it set apart as a park but their efforts have been futile.

On the scene of the conflict the States of New Jersey, Pennsylvania and Vermont erected monuments to the memory of their brave men who gave their lives in the cornfield that the nation might live.

And on the 100th anniversary of the Civil War, the Daughters of the Confederacy dedicated a monument to the soldiers of the South on the verge of Route 355 on the edge of the battlefield.

Although the slain of both sides were first buried on the scene where they fell, they were later transferred to Mount Olivet Cemetery, where they sleep side by side untroubled by the division of the nation which the past century rather than healing seems to have accentuated.

As previously related, Frederick City paid a $200,000 ransom to save the community from the torch and over the years the city government has again and again implored Congress to repay the money. In the past all such efforts have been in vain.

But at the request of the Mayor and Board of Aldermen, Senator Charles McC. Mathias and Congressman J. Glenn Beall Jr. have filed a new bill. Under its provisions the city would receive not only the original $200,000 but the accumulated interest of the past 106 years totalling to a tidy sum just under $1 million.

Times have changed. Money seems to be much freer on Capitol Hill than it was in the dying years of the last century. Who can tell? Miracles sometimes happen and the Mathias-Beall bid may yet bring Frederick City an unanticipated bonanza.

CONCLUSION OF MORNING BUSINESS

Mr. MANSFIELD. Mr. President, is there further morning business?

The PRESIDING OFFICER (Mr. GRAVEL). Is there further morning business? If not, morning business is concluded.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate.

The PRESIDING OFFICER (Mr. GRAVEL). The Chair lays before the Senate the unfinished business, which the clerk will state.

The bill clerk read as follows: The report of the Committee of Conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE SHOULD DEFEAT UNCONSTITUTIONAL DISTRICT OF COLUMBIA CRIME BILL

Mr. YOUNG of Ohio. Mr. President, the District of Columbia faces a crime crisis of momentous proportions. Serious crime is increasing at the rate of more than 20 percent a year. District residents and tourists visiting the Nation's Capital fear for their lives. Streets in the downtown area are virtually deserted after dark.

Strong and effective action is needed to meet this mounting crisis. Those of us in this Chamber are painfully aware of that. All of us work in the District of Columbia. Most of us live here. Members of our families and our staff members have been among the victims of crime.

Every Senator wants to see the crime rate fall. All of us hope that the Nation's Capital, which is one of the most beautiful cities in the world, will once again be a safe place to live and work. We are not debating whether something should be done about crime. We are debating what should be done about crime.

The Senate acted wisely last September, just 2 months after President Nixon submitted his recommendations, by enacting constructive and comprehensive court reorganization legislation. Since that time the bill has been twisted into almost unrecognizable form by the House of Representatives and only partially salvaged by conference committee. The result is that the Senate court reform bill has been emasculated of its meaningful provisions and fused onto a virtual Pandora's box of repressive, vindictive, unconstitutional legislation.

The District of Columbia crime bill in its present form contains, among other things, authority for preventive detention of those who might commit a crime if released on bail, extremely permissive authority for no-knock searches, broad and general wiretap provisions, stiff mandatory sentences, and cruelly vindictive juvenile offender procedures. This bill, as reported by the conferees, is bad legislation. No hysteria over rising crime rates can justify its passage.

Perhaps the most dangerous and offensive aspect of the bill before us today is the so-called preventive detention provision. This blatantly unconstitutional proposal authorizes the imprisonment and punishment of persons for crimes which they have not yet committed and may never commit. It is totally repugnant to American tradition. It is a clear violation of the fifth, sixth, and eighth amendments to the U.S. Constitution.

Mr. President, we Americans have every right to be proud of those first 10 amendments to our Constitution which we affectionately term the Bill of Rights. They were written on the demand of those patriots who had fought and won the War for Independence. When the Constitution was first drafted and reported there was an uproar from the home of every patriot who had fought in the Revolutionary War. No ratification of the Constitution could have suceeded except by the adoption of the Bill of Rights, which is so dear to all American people.

The fifth amendment clearly states that:

> No person shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law.

Preventive detention is a flagrant violation of that guarantee of due process. The most fundamental principle of due process is the presumption that a man is innocent until proven guilty beyond a reasonable doubt. Under our system of justice, the Government cannot deprive a man of his liberty, and should not deprive a man of his liberty, on the basis of a mere accusation or assumption that he has committed a crime or is likely to do so.

However, the proposed preventive detention law will permit the imprisonment of individuals on the claim of probable guilt and dangerousness and the jailing of those individuals for 60 days without trial. Suspects, regardless of the court's ultimate verdict, will have been jailed not for actual crimes but for crimes a judge thought they might commit if permitted to remain free.

Mr. President, these are the tactics of a police state. They are totally foreign to our concept of justice.

The right of an accused person to have the effective assistance of counsel for his defense, clearly provided in the sixth amendment, would be virtually destroyed by preventive detention. Access to counsel and the opportunity to participate in preparing a defense would be severely restricted. The measure provides for a suspect's temporary release "for good cause." This provision is meaningless, however, because release is only at the pleasure of the custodial official while the accused is in the custody of a U.S. marshal—a condition hardly conducive to contacting a lawyer or prospective defense witnesses.

Perhaps the most direct affront to the Constitution of the United States inherent in preventive detention is its disregard of the eighth amendment, which guarantees that "excessive bail shall not be required."

Bail has traditionally been used to assure the appearance of a criminal suspect at trial. If bail is set at a level higher than necessary to insure appearance of a criminal suspect at trial, it is obviously excessive.

With the preventive detention rule, a suspect would not have the opportunity for any bail whatever—whether excessive or not. Excessive bail and preventive detention are therefore identical in effect. They constitute an equally unjust and unconstitutional assault on the eighth amendment.

Preventive detention is manifestly unconstitutional. Furthermore, assuming for the sake of argument that it would be sustained by the courts, it is an impractical procedure and contrary to sound law enforcement procedures.

The most crying need in the fight against crime is reform of our court systems. Speedy trials, firm determination of guilt or innocence, and swift sentencing for the guilty would do more than anything to cut into the growing crime problem.

Mr. President, as a former chief criminal prosecuting attorney of Cuyhoga County, Ohio, who has tried hundreds of murder cases, I know something about criminal law. In 1 year alone, in the court of highest jurisdiction in Ohio, the common pleas court, I tried 218 felony cases, including murder, manslaughter, robbery, and rape cases. Those 218 cases went to the jury. So I know something about criminal law.

As a former chief criminal prosecuting attorney of Cuyahoga County, Ohio, I believed then as I do now that certain punishment like a shadow should follow the commission of a crime. Yet, the preventive detention procedure would add special hearings onto the already clogged court calendars. The practical effect would be devastating. The overwhelming majority of criminals not being detained would roam the streets longer as court backlogs increased. Justice would be delayed even further. Justice delayed is justice denied. Presently in the District of Columbia courts, justice is too long delayed in many, many instances.

Mr. President, officials of the Law Enforcement Assistance Administration of the Department of Justice have released an enlightening and informative study on bail reform. This study was initiated by officials of the Justice Department many months ago after they had proposed its preventive detention legislation. Usually, officials in any administration search out the facts, assess the problems, and then develop a legislative solution to meet them. In this case, the Justice Department and the Attorney General, a Wall Street lawyer, and senior partner of the President of the United States, an expert on municipal bonds—who as a lawyer never appeared in court to try a criminal case or to prosecute a criminal case—did just the reverse.

Attorney General Mitchell and his underlings, in effect, shot an arrow into the air, and then worked feverishly to paint a target around the spot where the arrow landed.

Interestingly enough, the Justice Department study proves just the opposite of what Department officials claimed. The study shows that of all persons charged with felonies, only 7 percent are rearrested for a second felony. Only 5 percent of those originally charged with a violent crime are rearrested for another violent crime.

The figures apply, of course, to arrest

only. The rates for actual guilt and conviction of the crimes charged would be even lower, because frequently juries, in their wisdom, bring in verdicts of not guilty.

If preventive detention is enacted into law, judges will be placed in the position of determining the one person out of every 20 or 25 accused who they believe may commit a second felony or violent crime. No mere mortal can be expected to perform such an act of prophecy. It is an immense power which our judges have never had and should not now be given.

Mistakes would certainly be made. Those who would be jailed under false pretenses would suffer irreparable harm. Sixty days of detention prior to trial would in most cases cost the individual his livelihood. Absence from home would severely cripple family relations. Worst of all, subjection to the physical and psychological degradation of jail life would create criminal tendencies, or aggravate any such tendencies which exist.

Crime in the District of Columbia is a serious problem requiring strong, effective legislation. No Senator or no Representative feels more strongly than I that such legislation should be enacted into law as soon as possible. However, the crime problem will not be solved by unconstitutional laws designed to fulfill election promises which should never have been made. It will not be solved by abandoning the Bill of Rights.

Mr. President, preventive detention would not prevent crime; it would only prevent justice.

Even if preventive detention were the only flaw in the District of Columbia crime bill, the Senate would have good reason to defeat that bill. But it is not. The crime package reported by the conferees contains a rash of other ill-conceived and ill-advised features. Many of these were considered before by the Senate District Committee and were wisely rejected. Many others have never before been presented to the Senate at all.

One of the most dangerous of these provisions is the section which authorizes no-knock searches and seizures. Over hundreds of years man has treasured the right to privacy in his own home. Our long common-law tradition has guarded this right. In the early days of the common law, the principle was laid down that a man could use any means necessary to prevent another person from intruding on his home without his consent. Those patriots who drafted our Bill of Rights strengthened the common law provisions by guaranteeing in the fourth amendment to our Constitution:

> The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

If we enact the District of Columbia crime bill with its no-knock authority, we will be making it legal for officers of the law to enter the homes of our citizens in the same manner that burglars enter them. The conference bill does not merely codify existing no-knock procedures as its supporters claim. Rather, it authorizes no-knock breaking and entering under new and far broader circumstances than have previously been recognized. No-knock entry would be authorized where circumstances at the time of breaking and entering would give an officer probable cause to believe that notice is likely to result in the evidence being easily and quickly destroyed or disposed of, is likely to endanger the life or safety of the officer or another person, is likely to enable party to escape, or would be a useless gesture. Using these flimsy standards of probable cause and likelihood, the number of no-knock entries by police is certain to increase substantially, bringing on all the dangers of shoot-outs between police and citizens seeking to protect their homes from unknown intruders. In 1958 in the case of Miller against the United States, the Supreme Court declared:

> Every householder, the good and the bad, the guilty and the innocent, is entitled to the protection designed to secure the common interests against unlawful invasion of the house. The petitioner could not be lawfully arrested in his home by officers breaking in without first giving him notice of their authority and purpose.

Mr. President, this bill very savagely denies to Americans the right to believe that their home is their castle. We derive our law largely from England. William Pitt was a man who recognized that eternal vigilance was the price of liberty. He stood on the floor of Parliament and opposed a proposal to allow no-knock entry on the around that it was necessary to enforce the tax laws of England. He said that a man's home is his castle, and he proclaimed that:

> The poorest man may in his cottage bid defiance to all the force of the Crown. It may be frail; its roof may shake; the wind may blow through it; the storms may enter, the rain may enter,—but the King of England cannot enter; all his forces dare not cross the threshold of the ruined tenement!

That is something precious that we have inherited from England, and yet this proposal would destroy it. That wise judgment, affirming hundreds of years of common law and constitutional principles, should certainly not now be abandoned.

S. 2601 as reported by the conferees contains wiretap provisions far broader than those passed by the Senate. The Senate sought to follow the pattern set forth in previous legislation. However, those guidelines are almost completely disregarded in the conference bill. The legislation before us today authorizes governmental intrusion into traditionally privileged conversations between doctor and patient, lawyer and client, priest and penitent. The minimum additional evidence which might be obtained in this manner cannot be worth the coarse and unconstitutional invasion of privacy that would be involved. Wiretapping and other forms of electronic eavesdropping, except under the most strictly controlled circumstances and in the most serious of cases, have no place in a free society.

The provisions of the District of Columbia crime bill which deal with juvenile offenders are blatantly hostile to any reasonable concept of justice. The legislation before us today is completely opposed to the important goals of fair, speedy, and enlightened processing of juvenile offenders and their meaningful rehabilitation. This is not a model bill for juveniles but a repressive and regressive step back into the dark ages. We in the Senate should seek to protect the teenagers of the District. We shall not be doing that if we enact this bill in its present form.

The conference report excludes young people between the ages of 16 and 18 from the jurisdiction of the proposed family division of the superior court if they have been charged with murder, forcible rape, burglary, armed robbery, or assault with intent to commit any such offense. No prior finding of delinquency for serious crime is required. This provision denies the young man or woman an opportunity to be rehabilitated through the specialized juvenile court. The fact is that to imprison a 16- or 17-year-old with adult criminals in adult penal institutions would virtually assure that no rehabilitation will take place.

Hours could be spent delineating the barbaric juvenile provisions in this bill. Preventive detention of juveniles is authorized with only the most meager procedural safeguards. The long standing right of a child to demand a jury trial is completely eliminated. No father, mother, or relative whose child is arrested would have under this bill, if we pass it, the right to demand for that child a jury trial.

Though a juvenile would probably require legal assistance more than an adult, no guarantee is made of the right of a child to be represented by counsel at every stage where such representation may be needed.

The conference bill makes no firm provision of prompt treatment for juvenile offenders. It would allow a continuation of the long incarceration of juveniles with all the accompanying ill effects of such detention. Many young offenders, detained under shocking conditions, may be lost forever to a life of crime because their cases are not considered promptly by an enlightened juvenile court.

Another area in which the conference bill is seriously deficient is that of criminal insanity. Under this bill a defendant who is acquitted by reason of insanity must be automatically committed to a mental hospital, regardless of his present mental condition and without a new judicial inquiry into his sanity at the end of the trial. A sane person may be automatically confined in a mental institution solely because he has raised a reasonable doubt as to his sanity at the time of an offense which may have occurred many years before. In addition, the burden of proof on the issue of insanity is taken from the prosecution—where it has been for hundreds of years—and is placed on the defendant. The prosecution will no longer be required to prove the defendant's capacity to commit the crime beyond a reasonable doubt. If this bill in its present form is passed, the defendant will have to prove that he lacked the ca-

pacity to commit the crime. This provision runs directly counter to the hallowed American tradition which assumes that man is innocent until proven guilty. This constitutional guarantee was reaffirmed earlier this year by the Supreme Court ruling in In re Winship that the prosecution must establish beyond a reasonable doubt every fact necessary to constitute the crime charged.

Mr. President, I could go on and on. Virtually every criminal procedure section of the conference report provides a variety of new possibilities for subverting individual liberties.

These measures can make no real contribution to the fight against crime. They are nothing more than hysterical shots in the dark.

Mr. President, I fervently believe that in the District of Columbia there are ample criminal statutes providing adequate punishment for persons convicted of or pleading guilty to committing crimes. One problem is that too many judges fail to show sufficient backbone and integrity in imposing sentences against defendants who have been proven guilty beyond any reasonable doubt.

Early in 1966 Laurence D. Chappel, who is regional manager of a foodstore chain and who has a bad traffic record of reckless driving, was operating his automobile on the wrong side of Connecticut Avenue shortly after midnight. The headlights were not on. According to eyewitnesses, including members of the Police Department, he was driving his car at an excessive rate of speed, and he disregarded a red traffic light and crashed directly into a taxicab injuring the cabdriver and four passengers. Dr. George Crile, an outstanding surgeon from Cleveland, sustained internal injuries which appeared at the time to be fatal. Three surgeons from Cleveland were flown into Washington to assist him. They reported that his life was saved only because of the fact that he was an athlete and in fine physical condition before the accident. Mrs. Crile, a daughter of Poet Carl Sandburg, was also seriously injured. Two other passengers in the taxicab sustained severe head cuts.

According to eyewitnesses, Chappel drove recklessly an additional six blocks before he was stopped by police officers. The case against Chappel was prosecuted vigorously. The jury, having heard all the evidence, found him guilty of drunken and reckless driving, leaving the scene of an accident, and driving on the wrong side of the avenue. Yet, despite the preponderance of evidence and the jury verdict, the trial judge imposed no jail sentence whatever.

Laurence Chappel did not spend 1 day or even 1 hour in jail. Chappel, or the corporation that employed him, paid out some $1,500 in fines. If Laurence Chappel had been a black man or a laborer rather than a grocery chain executive, it is doubtful his punishment would have been a mere slap on the wrist for very seriously injuring five persons by his wanton criminal and reckless acts in violation of the law.

Mr. President, developing an effective response to the problem of crime in the Nation's Capital will be exceedingly difficult. It will require diligence, hard work, understanding, and a willingness to commit a far greater share of our resources. The problem will not be solved by enacting irresponsible legislation that defies our Constitution and our greatest national traditions. We can pass the conference report on the District of Columbia crime bill and go home and tell our constituents how tough we are in dealing with crime. But we would only be deluding our constituents and ourselves.

Mr. President, let us refrain from the temptation to give another kick in the teeth to the already besieged residents of the District of Columbia. Let us live up to our responsibilities by defeating this Pandora's box of repressive legislation and then get on with the work of enacting meaningful court reorganization legislation.

Mr. President, I yield the floor.

The PRESIDING OFFICER (Mr. SPONG). What is the will of the Senate?

Mr. YOUNG of Ohio. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. EAGLETON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. EAGLETON. Mr. President, my colleagues have been discussing in some detail a number of the questionable provisions in the District of Columbia crime conference report—preventive detention, mandatory minimum sentences, and certain changes in the juvenile code. These are all parts of the bill which make it impossible for me to give it my support. Today I want to discuss yet another section of the bill which I believe to be bad legislation—the section dealing with wiretapping.

In 1958—12 years ago—I came to Capitol Hill to testify at hearings on "Wiretapping, Eavesdropping, and the Bill of Rights" before the Subcommittee on Constitutional Rights, then chaired by the late Senator Thomas Hennings of Missouri.

At that time I was circuit attorney of the city of St. Louis, then the eighth largest city in the country—a city with many of the same law enforcement problems as the District of Columbia. I came to testify as one of the very small minority of prosecutors opposed to wiretapping legislation.

Let me stress that I was well aware of the practical arguments in favor of electronic eavesdropping. I had heard the stories of cases broken with the aid of electronic eavesdropping and I had no doubt that some criminals could be apprehended as a result of it.

But, on balance, it seemed to me then—as it does today—that the good derived on the one hand simply did not outweigh the serious threat to civil liberties on the other.

Today much of what I said then continues to be valid. My statement then—it was May 22, 1958—was, in part, as follows:

> In the history and spirit of the Bill of Rights is the proposition that every person is entitled to a measure of privacy. These basic constitutional amendments insulate the individual from the vast powers of Government. They protect his right to communicate his thoughts freely. The Bill of Rights guarantees every person that he will not be deprived of his liberty without due process, and we know that this liberty includes freedom from arbitrary governmental interference in his normal activities.
>
> Wiretaping is an attack on this privacy. It removes the insulation between individual and government. Wiretapping hinders his freedom of communication and invades his liberty. In this sense, wiretapping constitutes an attack on the spirit of the Bill of Rights. Anything so out of harmony with our basic notions of constitutional rights cannot help but constitute a serious threat to all our constitutional rights. To view the problem otherwise is to take a highly technical and formalized view of constitutional rights.

In the 12 years since I delivered these remarks the country has seen many changes, but the requirements of the Bill of Rights have not been altered. Nonetheless, in the 1960's, technological advance and an absence of public watchfulness combined to allow successive encroachments on this fundamental right to privacy.

We have learned, for example, that our Federal tax returns—long thought to be confidential—are available to inquirers for a broad range of purposes—even purely political ones.

We have learned that Government investigators scrutinize the card files of our libraries looking for the names of borrowers of certain kinds of books.

We have learned that an impressive array of Government computers is used as a storehouse of information of all kinds on so-called persons of interest.

And, in 1968, Congress gave legal authority to Federal law enforcement officers to use electronic eavesdropping in certain cases under court order.

I am aware, of course, that we are not here today to debate the wisdom of title III of the Omnibus Crime Control and Safe Streets Act which grants this wiretapping authority to Federal officials. The fact is, they have that authority.

The question presented by this conference report is whether we want to extend that authority in the District of Columbia to local law enforcement officials as well.

In my view we do not.

Let us look at the practical effects of this bill as well as the constitutional objections.

What we are asked to do in this session of Congress is to deal legislatively with the very serious problems of street crime in the District. But electronic eavesdropping is not an appropriate tool for combating street crime.

Purse snatchers do not plan their activities on the telephone. They take advantage of opportunities as they are presented.

Nor do vandals plan by telephone to destroy property.

Yet the conference report gives the Chief of Police of the District the authority to seek court orders to eavesdrop

in cases of this kind. Street robbery, burglary, and destruction of property—offenses not in the Senate crime bill but accepted by the conference—are peculiarly individual offenses. They do not involve concert or conspiracy, and they are unlikely to be planned over the telephone wires.

If we must have legalized wiretapping, let us make every effort to limit it to situations in which we can expect some positive results. A case can be made for electronic eavesdropping in cases involving organized crime—particularly in the area of narcotics traffic, which is directly related to street crime. But surely these powers should not be extended to local police chiefs in such breadth as to cover the general range of crimes committed on the streets.

We must never become casual about intercepting telephone conversations. In this modern electronic age, the telephone has replaced the backyard fence as the chief medium for conversational exchange. As such, these exchanges are fully deserving of protection from unwarranted intrusion.

It is not enough to argue that because one set of officials can intercept our telephone conversations, we have no cause to prohibit a second set of officials from doing the same. I firmly believe that the extension of the wiretap authority to local officials increases still further the possibility that unwarranted eavesdropping will occur.

The extension of wiretap authority to the Metropolitan Police Department cannot stand on its merits. It will have a negligible effect on the problem of street crime in the District and, on the negative side, will pose a threat to the precious rights of privacy and free speech which every citizen of this country should enjoy.

The District of Columbia crime substitute measure has completely eliminated the wiretap sections of the conference report. In my view, that is yet another reason for Members of the Senate to oppose the conference report and support the substitute measure.

I will close with a quote from Justice Brandeis, as I did in 1958, because it seems to me to apply with equal force to the issues before us now, 12 years later. Justice Brandeis wrote:

> The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well meaning, but without understanding.

Taking the warning of Brandeis to heart, I do not want to be overzealous and infer that our democracy will crumble if wiretapping is extended. Such is not the case. However, one more democratic safeguard will have been eroded.

Mr. MOSS. Mr. President, I shall vote to ratify the conference report on the District of Columbia crime bill.

It has not been an easy decision. I have doubts about the wisdom and constitutionality of several of the bill's more controversial provisions. On previous occasions I have voted against no-knock and the question of preventive detention has never previously been before the Senate. I would prefer that these two provisions not be in the bill.

But we must face legislative reality. If the Congress is this year to overhaul the archaic and hopelessly inadequate court system in the Nation's Capitol, we must do so with this bill now. The press of business makes it virtually impossible to get another District of Columbia crime bill through both houses of Congress this session.

If no-knock and preventive detention are unconstitutional, then the courts will nullify these provisions without throwing out the entire legislation as we would have to do here in Senate. No doubt a court test of these provisions can be arranged quickly. Unfortunately another crime bill without these controversial provisions cannot be arranged very quickly.

The citizens and visitors of the District of Columbia cannot wait. Unchecked crime ravages the streets and homes of Washington every day and every night. People are afraid. Look at the barred windows, the deserted nighttime streets, the empty stores, and the broken lives of the crime's victims.

Our primary concern must be for the potential victims of crime. Most of the victims of crime in Washington, by the way, are black, not white. These black people, who often cannot afford to escape to suburbs, are the ones who will suffer the most if the District of Columbia crime bill is not passed.

As a prosecuting attorney for 8 years, I dealt with criminals and the accused. I am sensitive to their rights. I know the single most important step we can take to protect the rights of the accused and to reduce crime is to speed up the bogged down judicial process. The court reform provisions in this bill will cut pretrial delays by 75 percent. The bill also provides for a 60-day trial guarantee which should mitigate against the dangers of pretrial detention.

In this imperfect legislative world we operate in, we cannot always have what we want. As I have indicated, I wish no-knock and preventive detention had been left out. If the House had not attached these controversial measures, we could have had an excellent District of Columbia crime bill many months ago. But we are faced with a choice of a bill with some bad sections or no bill at all. On that basis, I must vote to protect the victims of crimes. We simply cannot tolerate continued lawlessness.

MESSAGE FROM THE HOUSE—ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills:

S. 417. An act to authorize the Secretary of the Interior to convey certain lands in New Mexico to the Cuba Independent Schools and to the village of Cuba;

S. 778. An act to amend the 1964 amendments to the Alaska Omnibus Act;

S. 885. An act to authorize the preparation of a roll of persons whose ancestors were members of the Confederated Tribes of Weas, Piankashaws, Peorias, and Kaskaskias, merged under the treaty of May 30, 1854 (10 Stat. 1082), and to provide for the disposition of funds appropriated to pay a judgment in Indian Claims Commission Dockets numbered 314, amended, 314–E and 65, and for other purposes; and

S. 3685. An act to increase the availability of mortgage credit for the financing of urgently needed housing, and for other purposes.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970

The Senate continued with the consideration of the report of the committee of the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

Mr. MUSKIE. Mr. President, the Attorney General suggested to a congressional committee that "no-knock" had become a misunderstood catchword. He proposed that "no-knock" be renamed "quick entry."

I suppose that we should expect this sanitizing process to continue. Perhaps "wiretapping" should be renamed "acoustics assistance," and "preventive detention" might be more appetizing if we called it "delayed release."

The Attorney General should not try to fool the Congress, and Congress should not fool itself. No one can whitewash the provisions of wiretapping, no-knock, and preventive detention. They are bad no matter what they are called.

Mr. President, considering measures to control criminal activity is a delicate task for a legislature in a free society.

A local newspaper editorially suggested yesterday that this District of Columbia Crime Bill was an "acceptable legislative compromise." I cannot agree with that statement, and I caution my colleagues that the Bill of Rights is not something we should write off for the sake of a legislative compromise.

We are considering fundamental concepts of fairness, security, privacy, and individual rights. Horse trading here is inappropriate. It is as inappropriate for us today as it was for those who first demanded those rights in America.

At the same time, crime in America—street crime as well as organized crime—has not been effectively reduced in recent years. It has, in fact, increased. This is as true of the Nation's Capital as it is of America's other large cities.

In the District of Columbia the Congress has a clear responsibility to act to halt the rise in crime. At the same time, we can make the District a model for other cities. We can experiment, in a progressive manner, with new policies and programs aimed at restoring a sense of safety and security and freedom to go where one pleases, by day or night.

I think we all recognize that there is no good reason for delay in reporting out meaningful anticrime legislation. That is why I strongly support seven of the nine titles in the Conference Report of the District of Columbia Crime Bill.

The provisions dealing with court reorganization, the District of Columbia Bail Agency, the Public Defender's Office, and the Interstate Compact on Juveniles

are important contributions to law enforcement and should be approved by the Senate.

With some modifications, the provisions dealing with nighttime searches, criminal penalties, juvenile court procedures, moot and interlocutory appeals, and the insanity defense should improve the District's system of criminal justice.

These provisions may well serve as models to other communities faced with similar problems.

And so I have cosponsored amendments introduced by Senator ERVIN, and bills introduced by Senator GOODELL (S. 4080 and S. 4081), that embody these provisions of the conference report.

However, I cannot, in good conscience, accept the entire conference report itself.

For the provisions of the conference report dealing with wiretapping, with no-knock searches, and with preventive detention are—in my judgment—unwise and unnecessary infringements on our fundamental ideals of justice and freedom, our time-honored sense of privacy, and our constitutional Bill of Rights.

Because we must vote for or against all of the provisions of the conference report at once, this bill presents a difficult choice. We must ask ourselves whether this is an appropriate area for "legislative compromise" . . . whether we should look beyond "only a few" infringements on rights and liberties in exchange for much that is good.

The balance between what is right and what is wrong with the conference report is not a balance I can accept. It is not a balance that I would expect my constituents in Maine to accept. And it is not a balance which the citizens of the District of Columbia should be forced to accept.

We have a solemn obligation, in the Senate, to help preserve liberty as well as order, to show that we care about people as well as statistics, and to speak out about what we must not do as well as what we must do.

I think it essential that we keep in mind what the real and justifiable needs are in the field of law enforcement.

We must spend the money required to to provide better training, higher salaries, and more effective equipment for the police.

We must spend the money required to employ enough judges and supporting court personnel, so that the intolerable delays between arrest and trial—and between trial and appeal—become a thing of the past.

And we must spend the money required to reform, in a fundamental way, our penal institutions—so many of which have become breeding grounds of misery, and even more serious criminal behavior among the inmate population.

Our preoccupation with and our excessive commitment of resources to the SST, with the ABM, with military success in Indochina must stop—if we are to reverse the growth of crime in America by spending the money needed to do so.

We fool ourselves dangerously if we think we can improve our society and our way of life by endorsing the practice of electronic eavesdropping—by authorizing law enforcement officers to break into homes without warning—or by imprisoning persons in overcrowded jails while they are presumed to be innocent.

These are neither reasonable nor necessary law enforcement tools. They are instruments of fear. They are tools of repression. And they are measures which any free society must reject in no matter what guise they are presented.

WIRETAPPING

The wiretapping provision of the District of Columbia crime bill is unacceptable.

Until 1968, wiretapping was prohibited by Federal law. In that year, Congress authorized a limited exception to this rule directed at sophisticated criminal organizations, whose illegal activities often leave little physical evidence. This was considered necessary to unmask and prosecute organized crime.

The District of Columbia crime bill preserves and expands the exception but forgets the rule—the rule that we should protect and preserve our privacy. The bill authorizes electronic surveillance for arson, burglary, fencing stolen property, destruction of property in excess of $200 and second degree murder. And the bill authorizes it in advance of judicial approval.

I had serious reservations about extending Federal authority in this area in 1968. In fact, I voted for amendments limiting this expansion. I have even greater reservations about the inclusion of broad wiretap and bugging authorization for local authorities now.

I question whether crimes which are individual acts—rarely ones of concerted action or conspiracy—will be solved by electronic eavesdropping.

In many respects, the conference version of this bill is an improvement over the legislation originally passed by the House. Greater limitations have been placed on the scope of authority and on the use of these communications, and penalties are provided for the distribution of interception devices. The Senate also sought to limit the scope of criminal offenses covered, but ultimately were forced to recede.

However, I remain concerned over the potential widespread use of electronic eavesdropping and wiretapping. It is difficult to underestimate the number of people who will be subjected to government surveillance. How may third parties, not involved but merely mentioned in conversations, suppress information which could damage them and their reputations?

For every criminal heard by our official eavesdroppers, dozens of innocent people will have their privacy violated. For every shred of evidence gleaned, dozens of dialogs will be recorded imparting unfounded gossip, confidential communications, or scandalous—though noncriminal—information.

This is too high a price to pay. This is hardly an acceptable legislative compromise.

Under this proposed section, any law enforcement official may wiretap or bug if he unilaterally determines—without prior court approval—that an emergency situation exists with respect to conspiratorial activities characteristic of organized crime and further unilaterally determines that there are grounds upon which he may get court approval ex post facto. If he makes such a totally unsanctioned interception, he has 3 days before he must apply to the court for approval. Only when his application is denied must he terminate the interception. And, in the meantime, how much illegal and private information would he have received?

I have supported measures to give the Federal Government the resources and the tools to root out organized crime and drug traffic; but the principal duty of the District police is to control crime that is so destructive of the quality of life in this city—the muggings and murders, the robberies, rapes, and assaults. This wiretap provision will only drain manpower from those endeavors. I question whether even drug-related crimes on the retail level can be controlled by electronically assisted investigations of drug traffickers, and I hope that the Federal Bureau of Narcotics and Dangerous Drugs is well able to handle wholesalers of drugs.

The constitutionality of the proposed legislation has also been questioned, but one thing is certain. The fourth amendment guarantees the right of the people to be secure in their persons and houses against unreasonable searches. And central to that guarantee, said the Supreme Court in 1886 in Boyd against United States, is "the sanctity of a man's home and the privacies of life."

The Senate has an obligation in advance of judicial scrutiny and even independently of constitutional principles to consider "the sanctity of a man's home and the privacies of life" for the people of the District. We cannot ignore that responsibility by passing legislation with the thought that it may not matter because it may not be constitutional.

It is our duty to stake out an area where the privacy of the people is inviolate—areas where the individual is not inhibited by fear of the state's intrusion. That line must be drawn here.

THE NO-KNOCK ISSUE

I am perplexed and disturbed by the conference version concerning no-knock powers being presented to the Senate for approval. We are not presented with a narrow, sharply defined proposal. Instead, we are asked to enact into law a provision which one high Justice official has stated to be indispensable if law enforcement officers in the District of Columbia are to do their job properly, and which another high Justice Department official has declared does no more than codify existing law in this area. If our U.S. attorney and our Attorney General do not—appear to—agree on the nature of the proposal, we in the Senate have an added responsibility to know what we are doing.

I read this provision as allowing police to burst into private homes, day or night, so long as a single policeman thinks he has probable cause to believe that evidence is likely to be destroyed.

Those who favor the conference re-

port on the no-knock issue believe that it represents a proper balance between individual rights and the needs of law enforcement. They argue that the conference report does not really grant to the police additional powers to conduct "no-knock" searches. They argue that police officers have had such authority since common law times. They argue that they are merely continuing the existing authority and adding to it reasonable safeguards.

If that were all, I would be tempted to support the provision. But it is not all. Balancing the security of an individual's home against the security of society in general is not easy, but I must disagree with the supporters of this provision for the following reasons:

First. The trend of the law for decades has been to encourage the police to get prior judicial approval for search warrants. The import of this proposal, as it relates to no-knock, is to the contrary. Under certain conditions the bill expressly sanctions no-knock procedures without prior application for a warrant.

Second. The language of the bill is unclear with respect to the degree of probability that must be shown that evidence will be destroyed if a no-knock search is not made. The Senate conferees maintain that they reluctantly agreed to language implying only likelihood that evidence will be destroyed if a no-knock search is not made. They agreed to this language, they say, only on the clear understanding that it must be measured against the language of the Supreme Court in *Ker* v. *California*, 374 U.S. 23 (1963). This language and the expressed doubts of our conferees lead me to the conclusion that the provision is a retreat from our traditional notions of probable cause, leaving an officer in a position to conduct a no-knock search with little factual justification for the breaking and entering without notice.

Third. The use of the word "likelihood" raises in my mind a serious constitutional question. The fourth amendment to the Constitution states:

> The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and *no Warrants shall issue, but upon probable cause*, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

I do not think that the standard for a no-knock entry comports with the right of the people to be free from unreasonable searches. I cannot in good conscience support this provision. It is too casual a grant of power and it increases the danger to police officers who are thus encouraged to make "no-knock" entries into homes. It is too high a price to pay for an "acceptable legislative compromise."

My misgivings about the merits of this proposal are compounded by the recognition that effective law enforcement requires the full cooperation of the community. In cities like Washington and in our suburban communities, our society is becoming increasingly crowded. People are living closer together; our privacy is a value which we must carefully guard. Our responsibility in writing our laws should be to find ways to give people more privacy and security from intrusion, not less. Overcrowding and unsatisfactory conditions alone create tension. Such tension should not be enlarged by a provision in the law which undermines the security of one's home and threatens privacy while increasing the potential for intrusion.

The no-knock proposal has become a symbol of insecurity, endangered privacy and repression in this city. When the language of a proposal which intrudes upon the sanctity of an individual's privacy is unclear and when it has the potential for intensifying hostilities between the police and those whom the police seek to protect, we should subject it to searching examination.

The examination leads to conclude that we should furnish better police protection to our city and develop mutual confidence between our police and our citizens, rather than raise the specter of a police officer breaking into an apartment or a house without notice on the basis of personal conjecture.

PREVENTIVE DETENTION

Crimes committed by persons on court-ordered release or bail are a major impediment to effective law enforcement. The money bail system as it exists in this country does not now make sense and has never made sense. Under the leadership of Senator ERVIN, we have made progress, but our progress has been too slow. We have not devoted sufficient resources to the bail agencies, and we have not given bail reform a chance to work in the District because of the congested court calendar.

Court reorganization to promote speedy trials is indispensable and should reduce crime committed by those on bail. The District court system must be overhauled, and an adequate number of judges and court personnel must be assured. Those accused should be brought to trial within 60 or even 30 days.

With these needs in mind, I have examined the conference report provision for preventive detention, and I have considered the arguments made by those who support that provision. The supporters are satisfied that enactment of the conference report would constitute a major reform of existing bail practices and would result in a lower percentage of persons detained prior to trial. They argue that this will occur because the test will be the narrow question of "dangerousness" rather than the unavailability of adequate release conditions.

They also argue that this provision imposes procedural safeguards which now do not exist; that constitutional rights are preserved by using detention only for defendants who pose an appreciable danger to society; and that the provision assures procedural due process through a hearing of record.

I cannot accept these arguments. I am bothered by the fact that the proposal reflects a concept which runs counter to the presumption of innocence until guilt is proven beyond a reasonable doubt. Some may feel that there is nothing about the preventive detention provision which establishes guilt. But there is certainly a substantial restraint of liberty in the absence of proven guilt. This provision attempts to make society safer by removing from its midst those of alleged dangerous proclivities while they await trial. It assumes intolerable delays between arrest and trial, yet it further clutters the court calendar. In fact, this provision further congests the criminal calendar and will likely result in even longer delays between arrest and trial. These are practical considerations which the supporters have not answered.

In addition, there are problems of constitutional dimensions which concern me. The eighth amendment declares: Excessive bail shall not be required. There is some disagreement among constitutional experts as to the meaning of the eighth amendment. I do suggest, however, that the eighth amendment dictates a constitutional right to pretrial release limited only by conditions that may be reasonably imposed to assure that the trial of the accused will occur. I have always understood that denial of bail in capital cases is permitted in search of that assurance. Where a defendant is threatened with loss of life or life imprisonment, he would be more likely to flee than the one who knows that the most he may suffer is temporary imprisonment.

Preventive detention may also violate the due process clause of the fifth amendment, since the individual is deprived of his liberty on the mere possibility that he will be dangerous if released on bail, and the mere probability that he is guilty of the crime for which he has been charged.

We could all argue statistics about what percentage of persons are arrested while on bail for the same crime or for a crime of another category. The percentage is small. But how do we predict accurately which defendants are apt to be "dangerous" and which are not? We are gambling with a correctional system and detention facilities which are hardly models of training and rehabilitation. This provision would send to jail people who have not been convicted, people who may be guilty of nothing, and people who may have never committed a single crime. People would be sent to jails that do not have room for them, jails that may corrupt them, and jails to which convicted criminals with suspended sentences may not be sent at all. The District of Columbia prisons have been a conspicuous weakness in our law enforcement system. They are overflowing, they are archaic, they are infested with drugs, and most of their inmates go back to the streets trained only in the newer techniques of crime.

This is too high a price to pay for an "acceptable legislative compromise."

I am concerned with constitutionality, with our inability to predict behavior with certitude, and with the potential harm to innocent people of preventive detention.

There are ways, if we will, to shorten the time between arrest and trial and to supervise the accused who may be dangerous—the goals of preventive detention. Many of these alternatives are included in other titles of this legislation which I support and do not involve the potential abuses of individual rights that mark preventive detention. These are the alternatives I prefer. I doubt the effectiveness of preventive detention; I question its constitutionality; and I am apprehensive over its impact.

The tragedy of the District of Columbia crime bill is that it represents, in

part, bad bargains forced on the people of the District by quick answers and easy solutions which threaten our freedoms as well as theirs.

There are no quick answers and easy solutions. Yet the District of Columbia crime bill perpetuates the notion that crime fighting is principally a matter of stiffer penalties, greater government authority, and fewer freedoms. Such measures may have a slight effect on the crime rate but they cannot make up for courts that fall years behind, for prisoners that turn out criminals, for probation and parole services that have neither the money nor the personnel to supervise, and for police forces that are ill paid and overworked.

The Senate acts not only for the people of the District, but also for all Americans. The law we write for the District should be a model for all the 50 States. Instead, the provisions of this conference report make the people of the District subjects for an experiment in repression. It is far from certain that these provisions would reduce crime in the District; but it is certain that all the people of the District will find their privacy endangered, the security of their homes threatened, and just treatment before the law jeopardized.

The security and the privacy of our constituents are also at stake as we write laws for the District.

This is not merely a set of local ordinances we now consider. This is an act of Congress, and it carries that weight. If we pass ill-considered legislation for this jurisdiction, it will reverberate throughout the Nation. On the other hand, if we reject the conference report and pass constructive legislation, the Senate can offer effective leadership against crime for all Americans.

I cannot support enactment of the provisions to which I have referred. This has led to my decision to cosponsor the Ervin amendments and the Goodell bills and to vote to reject this conference report. The District of Columbia does need legislative assistance to reduce crime. There is a good deal of vital help in this bill. However, this conference report does not offer us an acceptable choice. We are forced to accept all or nothing.

I believe that the Senate can do better. We can reject the conference report and pass better legislation to provide effective law enforcement for the District.

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMERICAN BAR ASSOCIATION ENDORSES S. 30, THE "ORGANIZED CRIME CONTROL ACT OF 1969"

Mr. McCLELLAN. Mr. President, on July 15, 1970, the Board of Governors of the American Bar Association met in Chicago in special session at the request of President Nixon to review various items of legislation in the criminal justice field now pending before the Congress. S. 30, the "Organized Crime Control Act of 1969," which passed this body on January 23, by a vote of 73 to 1, was among those items of legislation considered by the board of governors.

The Senate will, of course, recall that several individual titles of S. 30 were closely modeled on American Bar Association recommendations. Title II, dealing with general immunity, was patterned after the bar association's 1952 recommendations for general immunity legislation. Title IV, dealing with false declarations, was modeled on the American Bar Association's 1952 model perjury act. Title VII, dealing with syndicated gambling, was endorsed on February 23, 1970, by the house of delegates in its original form as S. 2022. Title IX, dealing with racketeer influenced and corrupt organizations, was modeled on the bar association's 1968 resolution endorsing "in principle" all legislation having as its purpose "the adopting of the machinery of antitrust laws to the prosecution of organized crime." And, finally, title X, dealing with dangerous special offender sentencing, was closely patterned after the bar association's minimum standards in the sentencing and appellate review field.

Nevertheless, the July 15 meeting in Chicago was the first occasion for the bar association's consideration of the actual text of S. 30 and the way in which the Senate had implemented the past positions of the bar association in a specific item of legislation. This meeting in Chicago was the culmination of a process within the bar association that covered several months. It began with the detailed consideration of S. 30 in both the individual rights and responsibilities and criminal law sections of the American Bar Association. In that connection, the Senate will recall that, on June 12, 1970, I had occasion to draw to its attention certain misleading newspaper stories appearing at that time that conveyed the impression that the bar association was in the process of raising major objections to the enactment of S. 30. I am especially pleased now, therefore, to tell the Senate that the board of governors has approved in principle the provisions of S. 30 and that they urge its enactment by the Congress as soon as possible. It is always gratifying to receive the approbation for one's labors of such a distinguished group as the American Bar Association, and I am grateful to the association for this endorsement of S. 30.

In recommending the passage of S. 30, the bar association also urged that the Congress give prompt consideration to seven specific amendments to the bill as it passed the Senate. In the main, I find these amendments generally acceptable. Indeed, they may be characterized as constructive contributions to the legislative process. For example, amendment No. 6 suggests that title IX of S. 30, dealing with racketeer-influenced and corrupt organizations, be amended to authorize private civil damage suits based upon the concept of section 4 of the Clayton Antitrust Act. This amendment, particularly, should prove, if accepted by the House, to be a major new tool in extirpating the baneful influence of organized crime in our economic life. Only one of the seven amendments do I find unacceptable. Unfortunately, in my judgment, the bar association, while approving the major provisions of title I, dealing with the special grand jury, suggested that those provisions of title I that authorize grand jury reports commenting on the noncriminal misconduct of government officials be stricken from the bill.

Mr. President, I recognize, of course, that these grand jury report provisions have been the subject of controversy. Nevertheless, I believe that, on balance, the provisions of title I in this area should be retained. Such reports are now possible under the law of 27 States, and they have proven, on the State level, to be effective and helpful in the administration of justice. I, am therefore, convinced that the right to file these reports should be clarified and restored on the Federal level under the sort of careful safeguards we have provided in title I.

Mr. President, I might say at this point that is the only major provision that the American Bar Association recommended be wholly stricken from the bill. The bar association therefore concluded that 98 percent of the real force of the bill, as far as law enforcement is concerned, should be retained. This grand jury reporting provision is not imperative; it is simply advisable. I think it should be retained, but even if the House should strike it, I would say without any reservation that 98 percent of the real effectiveness of this bill will have been retained and enacted into law.

Mr. President, what emerges from this meeting of the Board of Governors of the American Bar Association is the clear message to the Congress that the time for delay in the processing of S. 30 should end. No longer should it be possible for anyone to suggest that this bill is riddled through with defects or unconstitutional provisions. There are, of course, policy issues here on which reasonable men can disagree, but disagreement is not a grounds for delay. This bill should be processed so that the House and the Congress can work the will of Congress. I would hope that this course of action will now be followed in the other body.

The other body has had this bill now for 6 months. Procrastination in processing it from now on, if any, can only enure to the advantage of criminals in this country. The most expert counsel of our Nation's lawyers has been given with respect to it and little has been found wanting in the provisions of the bill. With the exception of the one provision, all other provisions are approved as drafted and passed by the Senate, subject to several minor amendments that have been suggested, and most of these amendments actually are constructive and strengthen the bill; they do not detract from its force and the effect or from its quality.

I am hopeful that the House will carefully consider and adopt the most important and wise of these amendments

thereby strengthening the bill, move it out, and let Congress work its will. The House has had the bill for 6 months. If the crime situation in this country were not so critical, and if there were not such an urgent need for this legislation—for all of the additional tools that Congress can provide—to strengthen the arm of our law enforcement officials and agencies, perhaps we could afford further time. But time, delay, and procrastination in this case work only to the advantage of the criminal and contribute nothing whatever to the security and protection of society in the person and property or civil liberties. I urge the swift passage of this bill now without unnecessary delay.

Mr. President, I ask unanimous consent to have printed in the RECORD a text of the resolution of the Board of Governors and a staff memorandum on the grand jury report provisions of title I.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMERICAN BAR ASSOCIATION

Resolved, that the American Bar Association by action of its Board of Governors in meeting July 15, 1970, in Chicago, approves in principle the provisions of S. 30 (91st Congress, 2nd Session), the Organized Crime Control Act of 1969, and urges its enactment by the Congress as soon as possible, with the recommendation, however, that the Congress give prompt consideration to amending the measure in the following particulars:

1. To restrict the right of private persons to submit allegations of criminal offenses directly to a special grand jury as currently provided in Title I, Section 10(a) and, in lieu thereof, to adopt phraseology requiring such information to be channelled through the appropriate prosecutor, who should be required to communicate his action or recommendation thereon to the special grand jury.

2. To eliminate current provisions in Title I, Section 101(a), which empower special grand juries to submit reports criticizing public officials or employees without returning an indictment; and similarly to eliminate provisions authorizing special grand juries to exonerate public officials or employees by report; and to make other technical changes in this Title consistent with these amendments.

3. To amend Title IV, Section 401(a), by incorporating the language of the Model Perjury Act, approved by the American Bar Association in August, 1952, in order to clarify the language of S. 30 relating to false and contradictory declarations.

4. To amend Title VII, Part B, Section 702 (a), in order to provide for a more restricted disclosure of evidence to the defendant as provided therein, by permitting the prosecutor to make a written request for an in camera screening by the court when he believes that such disclosure would constitute situations enumerated in Part A, Section 701, for example, those which would affect the security of the United States, endanger the lives and safety of informants, Government agents or others, or cause unjustified harm to the reputations of third persons; and to grant discretion to the court to withhold any such information deemed justified by its in camera examinations.

5. To amend Title IX, Section 901(a), as recommended by the Judicial Conference of the United States, to give the court discretion to decide which proceedings relating to racketeer influence and corrupt organizations shall be open to the public.

6. To further amend Title IX, Section 901 (a), to include a provision authorizing private damage suits based upon the concept of Section 4 of the Clayton Antitrust Act.

7. To amend Title X, Section 1001(a), in order to incorporate into the provisions for increased sentences for dangerous special offenders the appropriate Standards relating to Sentencing Alternatives and Procedures, which were approved by the American Bar Association, August, 1968.

Resolved further, that the American Bar Association in furthering the objectives of S. 30, also recommends to the Congress prompt enactment of legislation such as S. 1624 and H.R. 322 (91st Congress) entitled Wagering Tax Amendments of 1969, which was approved by the Association in August, 1969.

Be it finally resolved, that the President of the American Bar Association, or other Officer designated by him, is authorized to present the above views to the appropriate committees of the Congress.

MEMORANDUM

To: Senator John L. McClellan.

From: G. Robert Blakey, Chief Counsel, Subcommittee on Criminal Laws and Procedures.

Subject: Grand jury reports under title I of S. 30, the "Organized Crime Control Act of 1969."

Date: July 21, 1970.

You asked for a briefing memorandum on the captioned subject in the context of some of the objections that have been raised to it:

(a) historical background: The grand jury originated in Anglo-American law, in a form in which it largely exists today, at the Assize of Clarendon in 1166. Henry II established it as a body whose function it was to report on and to accuse those who according to public knowledge had committed crimes. Indeed, its report writing and indicting function had been well established for over 500 years before it came to be seen also as a buffer between citizen and State, the function of the grand jury that first comes to mind today.[1]

(b) present law: The modern grand jury is, in the Supreme Court's words in *Blair* v. *United States*, 250 U.S. 273, 282 (1919) a "prototype" of its ancient British counterpart. Its investigative powers are virtually without limitation both on the State and Federal level. *Compare, Ward* v. *State*, 2 Mo. 120 (1829), *with Hale* v. *Henkel*, 201 U.S. No. 43 (1906). Its report writing functions, however, have not survived wholly intact or without substantial limitation. Twenty-one states have legislation similar to the New York statute which in *Jones* v. *People*, 101 App. Div. 55, 92 N.Y. Supp. 275, *appeal dismissed*, 181 N.Y. 389.[2]

74 N.E. 226 (1905) was construed to authorize reports, while six states explicitly authorize such reports by statute.[3] In addition, other states have sanctioned such reports on a common law basis. In 1952, Chief Justice Arthur T. Vanderbilt in *In Re Presentment by Camden County Grand Jury*, 10 N.J. 23, 89 A2d 416, 434 (1955), for example, upheld, over civil liberties objections, grounded on a fear of possible abuse of the rights of individuals, the power of the grand jury to file reports, observing:

A practice imported here from England three centuries ago as a part of the common law and steadily exercised ever since under three successive state constitutions is too firmly entrenched in our jurisprudence to yield to fancied evils.[4]

In similar fashion, the Supreme Court of Florida in upholding the report writing power of grand juries in that State in *In Re Report of Grand Jury*, 11 So 2d 316, 318 (Fla. 1945) observed:

It is the means whereby the people participate directly in the administration of their business and aids to a knowledge of why the grand jury has become such an important agency among free people.

(c) New York law: Practice and law, however, has varied from place to place and from time to time, making generalization about either practice or law difficult to make with assurance of accuracy. The shifting development of the law in New York is illustrative of the general picture. There are records of a New York grand jury as early as 1665. See 1 Hamlin and Baker, *Supreme Court of Judicature of the Province of New York 1691–1704*, 142 (1952). Nevertheless, attempts have been made to abolish the grand jury in New York as a means of instituting criminal prosecutions. A most recent unsuccessful attempt was made in the 1938 constitutional convention. See Heyting, "The Abolition of Grand Juries in England," 19 *A.B.A.J.*, 648–49 (1938). In addition, attempts have been made to abolish its report writing function. In 1946, for example, Governor Thomas E. Dewey vetoed a bill designed to curb this power, saying that such reports were "one of the most valued and treasured restraints upon tyranny and corruption in public office." *Public Paper of Governor Thomas E. Dewey*, 140–41 (1946). More recently, the Court of Appeals of New York in *Wood* v. *Hughes*, 9 N.Y. 2d 144, 212 N.Y.S. 2d 33 (1961) overruled its own *Jones* decision, noted *supra*, and curbed the New York grand jury's power to write reports critical of specific individuals. The response of the people of New York, through their state legislature, however, was promptly to enact comprehensive legislation authorizing such reports, but under limitations designed to overcome the civil liberties objections voiced by the court, see Laws of 1964, Ch. 250, Code of Crim. Proc. § 253–a, and such reports are now filed on a regular basis in New York.[5]

(d) Federal law: On the federal level, the grand jury is, of course, a legal institution whose indicting function is rooted in the Fifth Amendment itself; it is not, however, a requirement of due process under the Fourteenth Amendment. *Hurtado* v. *California*, 110 U.S. 516 (1884). As such, it is beyond the power of legislative abolition.

Nevertheless, the report writing functions of Federal grand juries have been substantially curtailed by district court level decisions, although grand juries continue to issue and district courts continue to accept reports, and the Supreme Court itself has never had occasion squarely to pass on the propriety of the report writing power. But cf. *Hannah* v. *Larche*, 363 U.S. 422, 420 (1960) ("investigates and reports"). The recent report of the January 1970 Grand Jury in the Northern District of Illinois critical of identified members of the Chicago Police Department and the raid they conducted on a Black Panther Party Headquarters is illustrative of the practice. The decision of United States District Judge Edward Weinfield in *Application of United Electrical, Radio and Machine Works*, 111 F. Supp. 858 (S.D. N.Y. 1953) is illustrative of the law. There, Judge Weinfield held beyond the power of the grand jury the issuance of a report that named officials of a union as "Fifth-Amendment Communists" and recommended to the National Labor Relations Board that the certification of the unions be withdrawn.[6]

(a) Recommendation of President's Crime Commission: It was in this context that the President's Commission on Crime and the Administration of Justice in 1967 undertook as a part of its study of crime in the United States to evaluate our Nation's past efforts to arrest and reverse the growth of organized crime. The Commission began by observing in its *The Challenge of Crime in a Free Society 196 (1967)*:

Investigation and prosecution of organized criminal groups in the 20th century has seldom proceeded on a continuous institu-

Footnotes at end of article.

tionalized basis. Public interest and demands for action have reached high levels sporadically, but, until recently, spurts of concentrated law enforcement activity have been followed by decreasing interest and application of resources.

It also commented: And yet the public remains indifferent. Few Americans seem to comprehend how the phenomenon of organiezd crime affects their lives. They do not see how gambling with bookmakers, or borrowing money from loan sharks, forwards the interests of great criminal cartels. Businessmen looking for labor harmony or nonunion status through irregular channels rationalize away any suspicions that organized crime is thereby spreading its influence. When an ambitious political candidate accepts substantial cash contributions from unknown sources, he suspects but dismisses the fact that organized crime will dictate some of his actions when he assumes office. (*Id.* at 188)

Finally, the Commission specifically found that a lack of public and political commitment to end the menace of organized crime was one of six major contributing causes to the failure of our society to deal with organized crime. The Commission observed:

The public demands action only sporadically, as intermittent, sensational disclosures reveal intolerable violence and corruption caused by organized crime. Without sustained public pressure, political office seekers and office holders have little incentive to address themselves to combatting organized crime. A drive against organized crime usually uncovers political corruption; this means that a crusading mayor or district attorney makes many political enemies. The vicious cycle perpetuates itself. Politicians will not act unless the public so demands; but much of the urban public wants the services provided by organized crime and does not wish to disrupt the system that provides those services. And much of the public does not see or understand the effects of organized crime in society. (*Id.* at 200)

Finding that "organized crime succeeds only insofar as the Nation permits it to succeed" (*Id.* at 209), the Commission proposed an "integrated package" of proposals touching on both governmental and private action. Included among these proposals was the recommendation that grand juries should be permitted by law to file public reports. (*Id.* at 200)[7]

(e) Title I of S. 30, the "Organized Crime Control Act of 1969": It was in this context, therefore, that title I of S. 30 was drafted and introduced on January 15, 1969, by Senators McClellan, Hruska and yourself. Recognizing the need for some institutionalized avenue through which information bearing upon the conditions that breed organized crime might be brought to the attention of the public on a systematic and fair basis, the special grand juries, established by title I, are empowered, not only to return indictments, but also to issue grand jury reports as an incident, *but only as an incident*, of the investigation of a Federal criminal offense: (1) concerning governmental misconduct, (2) making legislative or executive recommendations, and (3) regarding organized crime conditions. Where such reports are to be critical of identified public officials (private persons may not be named), however, elaborate safeguards, modeled on New York law (with suitable modification to fit Federal practice) are provided, including notice, opportunity to present evidence, and judicial review prior to publication. These safeguards exceed the limitations now found on the investigations conducted by other Federal bodies and sustained as consistent with constitutional due process. *See, e.g., Hannah* v. *Larche*, 363 U.S. 422 (1960) (Civil Rights Commission)[8]

As so drafted, the provisions of title I have attracted the support, among others, of the Department of Justice (Hearings at 369), the Association of Federal Investigators (*Id.* at 276 "applaud" giving "public" "whole picture"), the National Association of Counties (*Id.* at 330–31 "agree" "no greater deterrent to evil, incompetent and corrupt Government than publicity") and the International Association of Chiefs of Police (115 Cong. Rec., S12562 (daily ed. Oct. 14, 1969).) The support of these groups was most significant, both on the issue of need and fairness, since it would be primarily their work that the special grand juries would review. Nevertheless, restoring to Federal grand juries their historic report writing function was opposed in part by the Committee on Federal Legislation of the New York County Lawyers Association (Hearings at 216: comment on specific individuals) and without discrimination by the American Civil Liberties Union (*Id.* at 456–59).[9] Ths opposition in the hearings was continued on the floor and there led by Senator Goodell from New York.

Senator Goodell offered during the debate on S. 30 an amendment to title I which would have curbed the power of special grand juries to file reports naming public officials. (115 Cong. Rec. S474 (daily ed., Jan. 23, 1969).) His amendment left untouched power of the grand jury to file other reports. In essence, Senator Goodell's attempt to prevent the naming of officials in grand jury reports was based on a two-fold fear: that individuals would be held up to public defamation by false accusations carrying the weight of judicial findings, but made after an unfair, one-sided proceeding, and that they would be unable to reply effectively to such allegations. In addition, he objected to giving to Federal grand juries the authority to comment on state and local officials. He was supported in debate by Senators Cooper and Hart. Senator Cooper questioned the value of a public denunciation not amounting to a charge of criminal conduct in a democratic society. (*Id.* at S477).[10] Senator Hart concurred with the arguments of Senator Goodell and the question raised by Senator Cooper. (*Ibid*) Senator McClellan argued that the report writing power was necessary and that the procedural protections for civil liberties were fair. (*Id.* at S476).[11] The Senate rejected Senator Goodell's amendment; the vote was 59 to 13.[12]

Senator Goodell then offered another amendment which guaranteed the subject of a report the express right to have a "reasonable number of witnesses" called before the grand jury in his behalf. (*Ibid.*) The Committee Report already indicated that the failure to conduct "additional investigations" and call suggested "supplementary witnesses" cast doubt on the propriety of making a report public. S. Rep. No. 91–617, 91st Cong., 1st Sess. 143 (1969). Consequently, Senator McClellan said he saw no inconsistency between the amendment and the provisions of title I. He then indicated that he found it acceptable, and it was adopted by a voice vote. (115 Cong. Rec. S479 (daily ed. Jan. 23, 1970).) As so amended, title I was approved by the Senate as part of the overall bill by a vote of 73 to 1. (*Id.* at 481) Since that time twenty-two Senators not voting on final passage have announced that if present they would have voted for the Act. Only four Senators have not disclosed how they would have voted.

Code Ann. §§ 40–1605 to 40–1608; *Utah*, Utah Code Ann. §§ 77–18–7, 77–19–1; *Washington*, Wash. Rev. Code Ann. §§ 10.28.090 to 10.28.110.

[3] *California*, Cal. Penal Code §§ 929, 930, 933, 939.9; *Georgia*, Ga. Code Ann. § 59–317; *Nevada*, Nev. Rev. Stat. §§ 172, 175; *New York*, N.Y. Code Cr. Proc. § 253–a; *Oklahoma*, Okla. Stat. Ann. 22 § 34L and *Utah*, Utah Code Ann. 1967 Session Laws p. 575.

[4] Court developed rules restrict the power to issue reports, making its exercise consistent with a high regard for civil liberties. *See In Re Camden Co. Grand Jury*, 34 N.J. 378, 196 A2d 465 (1961). For an example of a New Jersey grand jury report dealing with organized crime, see 115 Cong. Rec. S15751 (daily ed. Dec. 5, 1969).

[5] For an example of a New York report, see 116 Cong. Rec. C122 (daily ed., Jan. 19, 1970).

[6] Specifically excluded from the holding were "reports of a general nature touching on condition in a community." 111 F. Supp. 869. These, Judge Weinfield observed, served "a valuable function and may not be amenable to challenge." *Id.*

[7] It has been suggested that this recommendation did not include reports that might comment on specific individuals, Remarks of Senator Charles Goodell, 115 Cong. Rec. S16162 (daily ed. Dec. 9, 1969), and it must be conceded that the text of the Commission Report itself is ambiguous. Nevertheless, when it is read in the context of its "legislative history," it is difficult, I suggest, to read it in so limited a fashion. The Commission's recommendation here was based on the work of its Task Force on Organized Crime, which had before a review of the law that specifically recommended that the "right to file reports should be restored" in Federal law. Since general reports were permissible, see *supra*, "restored" could only be taken to mean to include reports commenting on specific individuals. *See Task Force Report: Organized Crime* 83–85 (1967).

[8] *Measures Relating to Organized Crime*, Hearings before the Subcommittee on Criminal Laws and Procedures, Committee on the Judiciary, United States Senate 91st Cong. 1969 (hereafter cited Hearings).

[9] I note here that the spokesman for the Committee acknowledged that he had no "concrete experience," Hearings at 239, from New York to show that the New York law was not working well and that the spokesman for the Union was asked to provide for the record any indication of abuse in New York or elsewhere and failed to provide any. (*Id.* at 481)

[10] Chief Justice Arthur Vanderbilt in *In Re Camden County Grand Jury* 10 N.J. 23, 89 A 2d 416, 444 (1943) responded to the concern reflected in Senator Cooper's question in these terms:

There are many official acts and omissions that fall short of criminal misconduct and yet are not in the public interest. It is very much to the public advantage that such conduct is revealed in an effective way. No community desires to live a hairbreadth above the criminal level, which might well be the

case if there were no official organ of public protest. Such presentments are a great deterrent to official wrongdoing . . . [and] inspire public confidence in the capacity of the body politic to purge itself of untoward conditions.

[11] Senator Goodell's second point was commented on in the Hearings at 330, by Professor William Greenhalgh, who testified in behalf of the National Association of Counties:

The [Federal grand] jurors are citizens of those [state and local] communities just as much as they are citizens of the United States, and they have precisely the same interest in such matters as they would have if they were sitting on state or local grand juries.

[12] Voting for the amendment were Senators Brooke, Cooper, Dominick, Fong, Goodell, Hart, Hatfield, Kennedy, Metcalf, Mondale, Ribicoff, Stevens, and Young of Ohio.

Mr. HRUSKA. Mr. President, will the Senator yield?

Mr. McCLELLAN. I yield.

Mr. HRUSKA. Mr. President, I commend the Senator from Arkansas for the statement of progress made in the enactment of the organized crime control bill. The report he brings on the action of the American Bar Association is heartening and encouraging.

I join the Senator in calling for early action on this measure by the other body. It is true that further delay will not help, but as the Senator from Arkansas has stated, will hinder effective law enforcement.

Again I commend the Senator for bringing that to the attention of the entire Congress.

Mr. McCLELLAN. I thank the distinguished Senator. I think I might observe that in reference to almost every piece of legislation considered by the Congress in the category of criminal law or criminal procedures, constitutional questions are raised. It is proper that they are raised. Anyone has a right to raise them and to take his position. But I must observe, however, that there is no way to draft legislation in this field, in my judgment, so that everyone will be satisfied with it. That is why we have a Supreme Court to which the legislation may be carried for judicial review to determine if there is anything unconstitutional in it. This body cannot settle such questions. We can argue it and debate it but usually we come up with the same opinion we had before we started. Ultimately, most of the bills go to the courts, where the ultimate constitutional determination is made.

Again, I insist that the crime situation in America today is such, and is progressing so rapidly, that it is imperative that this branch of Government, at least, take every action, enact every law, fashion every tool it can possibly fashion, within the framework of the Constitution, to enable our law enforcement agencies and officials to combat the growing menace of crime.

NASA'S PROCUREMENT OF APPLICATIONS TECHNOLOGY SATELLITES

Mr. McCLELLAN. Mr. President, in April of this year, the Permanent Subcommittee on Investigations was requested to review the procurement competition conducted by the National Aeronautics and Space Administration for the design and construction of two Applications Technology Satellites. The competitors were the General Electric Co. and the Fairchild Hiller Corp. General Electric was selected as the company which would ultimately receive the contract and the decision was protested by Fairchild.

The subcommittee's staff made a preliminary inquiry into the basic facts about the source selection; however, public hearings were deferred pending the completion of a study of the procurement then being conducted by the General Accounting Office.

I reported on this matter to the Senate on July 9, 1970—see CONGRESSIONAL RECORD, page 23476—and also inserted a letter from the General Accounting Office to the Administrator of NASA, Dr. Thomas O. Paine. The General Accounting Office concluded that the established award selection procedures were not followed in this instance, and that the procedures which were followed were defective. GAO then recommended that the proposed award should be reconsidered.

Dr. Thomas O. Paine, NASA Administrator, then announced on July 10 that he had appointed a top level committee of NASA officials to reconsider the selection of General Electric for the Applications Technology Satellite procurement. At the same time, Dr. Paine wrote me in response to my statement of July 9 about this matter.

Mr. President, I ask unanimous consent to have his letters of July 10—with enclosure—and July 16, addressed to me, inserted in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. McCLELLAN. Mr. President, Dr. Paine has expressed agreement with me that it is absolutely essential to avoid not only impropriety itself in all Government procurements but even the appearance of impropriety. Dr. Paine's decision to reconsider this award is evidence of his belief in that principle, and I commend him for his prompt and affirmative action. I am sure that the individuals named by Dr. Paine are competent and will do their utmost to make an objective and impartial review.

Mr. President, last year the Congress passed legislation to establish a Commission on Government Procurement to make a comprehensive review of Government procurement statutes, policies, and regulations and to recommend appropriate changes. The cost and time delay attributable to the phased procurement system as operated by NASA and other agencies is a matter which I believe should be reviewed by the Commission to determine whether the best interests of the Government are being served by this procedure. I will take steps to see that this subject is brought to the attention of the Commission. I have also instructed the Permanent Subcommittee on Investigations to follow the ultimate disposition of the Fairchild protest and will keep the Senate advised of developments.

EXHIBIT 1

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION,
Washington, D.C., July 10, 1970.

Hon. JOHN L. McCLELLAN,
U.S. Senate
Washington, D.C.

DEAR SENATOR McCLELLAN: I am writing with reference to your statement in the Senate on July 9, 1970, concerning NASA's procurement of Applications Technology Satellites (ATS) F & G, based on the preliminary inquiry by the staff of the Subcommittee on Investigations of the Government Operations Committee.

With respect to the current status of the procurement, you will be pleased to know that we have secured the agreement of both General Electric and Fairchild Hiller to a procedure for reconsidering the award in accordance with the Comptroller General's recommendation in his letter to me of July 2, 1970, which summarized the findings of the GAO investigation made at my request. Under the procedure we will use I am designating an ATS Procurement Review Committee comprised of NASA officials not previously associated in any way with this procurement. This top-level Committee will review the selection made on April 7 and then recommend to an entirely new NASA selection panel whether the April 7 selection of General Electric should be confirmed or reversed in favor of Fairchild Hiller in light of all of the information now available on the situation that existed at that time. The committee's reconsideration will include the material set forth in the Comptroller General's letter of July 2, 1970, any material made available by your committee, and any other new material that the NASA Committee may bring to light. The committee will not consider any work done by General Electric or Fairchild Hiller after April 7 as bearing upon its recommendation. For your information, enclosed is a copy of the NASA release describing the procedure to the use.

With respect to the specific points you raised in your statement in the Senate of July 9, 1970, I would like to offer several comments. NASA fully shares your belief that in all government procurements it is absolutely essential to avoid not only impropriety itself but even the appearance of impropriety. However, in assessing the effectiveness of NASA's current procurement procedures and the lessons to be learned from the ATS F & G procurement experience, a number of factors not brought out in your statement are significant and, in my opinion, may lead, after full consideration, to conclusions somewhat different from those suggested in your statement.

With respect to the length of the competitive procurement process for ATS F & G under the NASA phased procurement system, I think it is important to recognize that the "phased project planning guidelines" outlined in our procedure NHB 7121.2 referred to in the Comptroller General's letter are directed at a total development process of which the selection of the ultimate contractor to fabricate the satellite is only a part. Phases A, B, and C (conceptual studies and preliminary and detailed design) consist of the necessary research and development work that must be completed before final system design and is funded by the government. The work carried out in these phases serves the dual purposes of advancing knowledge and understanding of the critical technological problems and their solution, and of placing the government in a sound position to select from several qualified competitive contractors a sound satellite design if a decision to proceed is warranted by the results of the earlier R&D phases.

The expenditure of time and money on Phases A, B, and C which affords the government successive decision points in the conduct of major development projects is

clearly in the best interest of the government, both to secure hardware systems that perform as required and to minimize overruns and other escalations in costs above those anticipated at the time the hardware development contract is let. There may well be room for improvement in NASA's system of phased project planning and its application in individual cases. However, our experience clearly shows that time and money well spent early in the process is the way to avoid the much more serious problems of technical inadequacies, increased costs, and lengthy delays that have so frequently characterized major hardware development projects.

Your second point relates to the propriety of adjustments made by the NASA Source Evaluation Board in cost estimates submitted by one of the competitors and to the fact that this action and the other proceedings of the Source Evaluation Board were not made known to the competitor concerned. This was inaccurately headlined by The Washington Post today as: "McClellan Says NASA Altered Fairchild Bid," which you did not say. I am sure you realize that one of the most difficult problems in evaluating contractor proposals for cost-reimbursable contracts is for the government to prevent a contractor from "buying in" with an antificially low cost estimate, which later produces program overruns. Hence, it is an essential part of the NASA source evaluation procedure for our cost experts to review contractor cost estimates in depth, to make an independent assessment of their validity, to review previous performance by the contractor on similar work, and to present to the selection officials both the contractor's and NASA's best estimates of what the actual cost to the government will be, with a detailed analysis of the reasons for the differences. This was done both with respect to General Electric and Fairchild Hiller at each stage of the evaluation. Since this analysis must include access to the private business records of each firm, it is our practice to keep these data confidential. NASA's normal practice has been to "debrief" unsuccessful proposers, upon their request, after the actual award of the contract. Because this has appeared to involve an undue delay in some cases which may inhibit the recourse of unsuccessful proposers, we are now changing this practice to provide for debriefings shortly after the selection decision has been made and prior to the award of the contract, as we did in this case.

Your third question relates to a conclusion of your staff that questionable reduction by General Electric of their estimated overhead costs, the validity of which was not questioned within NASA, resulted in G.E.'s selection as the contractor. This is incorrect: the validity of this reduction in G.E.'s estimated overhead, which was only one of several factors in the selection, was in fact carefully considered by NASA during the selection process. The conclusion was that the reduction should be accepted as proper since it was in accordance with accepted accounting principles approved by the resident Government auditor and with NASA's previous experience with G.E.'s overhead costs at Valley Forge during fluctuations in their space business.

I have commented on your statement at some length because I believe it is important to place the matters referred to in a more complete perspective. We will, of course, be glad to discuss any and all aspects of this procurement further with you or your staff to clarify them further, and will keep you fully advised of the further steps in our review of this procurement.

Sincerely,

T. O. PAINE,
Administrator.

COMMITTEE FOR ATS F & G

NASA Administrator Dr. Thomas O. Paine today announced the appointment of a top level committee to reconsider the selection of General Electric for the Applications Technology Satellite F & G (ATS F&G) procurement. The General Electric Company and the Fairchild-Hiller Corporation had previously competed for the Award.

Following the announcement of GE's selection on April 7, 1970, the Fairchild Hiller Corporation protested the selection and Dr. Paine requested the Comptroller General to review the events leading to NASA's selection of General Electric.

The review by the General Accounting Office was completed on July 2 and at that time Comptroller General Elmer Staats, in a letter to Dr. Paine, stated that in his view the award to General Electric should be reconsidered in view of an ambiguity in NASA's instruction to the competitors and a one-week extension granted GE to submit its revised proposal. Dr. Paine responded on July 2 that NASA would reopen the competition. Today's action, Dr. Paine said, follows an agreement between NASA, Fairchild Hiller and General Electric that a reconsideration of the selection made on April 7th is preferable to a recompetition.

Bruce Lundin, Director of NASA's Lewis Research Center in Cleveland, will head the ATS Procurement Review Committee. The committee will consider all the facts and circumstances surrounding the April 7, 1970 selection and then make its recommendation to a new selection panel of senior NASA officials. The selection panel will either reaffirm the original selection or reverse it.

Facts and circumstances to be considered by the Review Committee are all those now known to have existed on April 7, 1970, and all those which the Committee might through its additional work, ascertain to have then existed and been relevant. The Committee will not consider work done by GE or Fairchild since April 7 as bearing upon its recommendation. Funding by NASA of Fairchild's work was discontinued on April 16, and announcement was made today that funding of GE's work will be stopped on July 15.

The new Selection Panel is made up of Homer Newell, NASA's Associate Administrator; Willis Shapley, Associate Deputy Administrator; and Bernard Moritz, Acting Associate Administrator for Organization and Management. Dr. Paine has instructed the Review Committee to make its recommendation to the Selection Panel no later than August 3.

NATIONAL AERONAUTICS AND
SPACE ADMINISTRATION,
Washington, D.C., July 16, 1970.

Hon. JOHN L. MCCLELLAN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MCCLELLAN: In my letter to you of July 10, 1970, regarding your statement in the Senate on July 10, 1970, concerning NASA's procurement of Applications Technology Satellites (ATS) F&G, I stated that NASA's practice has been to "debrief" unsuccessful proposers, upon their request, after the actual award of the contract. I further stated that we were changing this practice to provide for debriefings after the selection decision but prior to the award of the contract. In making the latter statement, I referred to the ATS F&G procurement. By this reference I meant that the ATS F&G procurement precipitated our change in policy regarding debriefings. I did not intend to state that we had actually provided either General Electric or Fairchild Hiller a debriefing in connection with the ATS F&G procurement. Of course, a debriefing will be accorded either Fairchild Hiller or General Electric upon the final selection of a contractor for ATS F&G so that either will have adequate time to consider its further legal recourse. Since there may have been some misunderstanding as to my letter, I feel that this clarification is appropriate.

Sincerely yours,

T. O. PAINE,
Administrator.

READING EMPHASIS OF DISTRICT OF COLUMBIA SCHOOL "DESIGN" ENCOURAGING

Mr. MCCLELLAN. Mr. President, on Saturday and Sunday, July 18 and 19, 1970, articles by James Repass and Lawrence Feinberg, respectively, appeared in the Washington Post. Both articles were based upon a "Design" for the District of Columbia school system adopted by the District of Columbia School Board, which would emphasize reading, communications, and math.

The design was prepared by the Metropolitan Applied Research Center, and referred to in the articles as the plan of Dr. Kenneth B. Clark, a New York psychologist. Dr. Clark has appeared before the Select Committee on Equal Educational Opportunity, but did not at that time discuss the design for the District of Columbia schools.

Dr. Clark has been active in the field of education for many years, and his work was cited in the controversial U.S. Supreme Court's Brown decision in 1954. That work has been subjected to intensive and, to my knowledge, unanswered, criticism. However that may be, and regardless of my agreement or disagreement with other areas of Dr. Clark's work or with the theoretical bases for the design submitted and adopted by the District of Columbia School Board, there are substantial areas of this report with which I am in agreement, and which I support.

Mr. Repass reports that a supplement to the design shows that reading ability is declining in the District of Columbia school system.

This decline in reading ability is continuing, and is apparently reflective of a national trend, even though the Federal Government simultaneously has made massive expenditures to support and supplement our educational system. I am encouraged by the fact that the District of Columbia design does not call for the usual and wasteful increased expenditure of Federal moneys as the answer to our Nation's or the District of Columbia's educational deficiencies. It, instead, calls for increased emphasis within the existing school system on the basic cognitive skills required for a person to complete and find fulfillment in our society:

The basic academic skills which must be effectively taught in the elementary grades are reading, oral and written communication and mathematics, since these skills are essential for academic success in the later grades and necessary for a constructive, competitive, and contributory adult role in the economy and the society as a whole. Certainly, they are imperative as the basis of any realistic pride, general competence, and self-respect.

Of these fundamental skills, probably the most basic in the elementary grades is the specific skill in reading, since it is clear that

success in math and in oral and written communication depends upon it. It is not likely that a child will be successful academically if he is permitted to be deficient in the reading skills of word recognition and reading comprehension.

It would follow, therefore, that in seeking to attain academic excellence in the public schools, concentrated emphasis in curriculum development and teaching be placed upon developing reading skills in the primary grades to the highest level of achievement possible.

I am not a professional educator. However, one does not need to be a professional educator to realize that the ability to read, the ability to communicate, and a grasp of mathematics are the basic indispensable tools with which an individual must confront our complex society if he wishes a reasonable probability of success in his chosen vocation. Apparently the ability to read has been determined to be the key skill in this group of interrelated tools. Therefore, improvement of the level of reading ability in the District of Columbia schools is the paramount objective of the design. I applaud this emphasis and wish the District of Columbia schools marked success in their endeavor. I believe that many of the assumptions concerning the achievable improvement in performance in the District of Columbia schools may be overoptimistic. However, that is inconsequential insofar as I do believe that reading ability can be measurably improved in the District of Columbia.

I was somewhat surprised to read the following statement in Mr. Fineberg's article:

In some ways, Clark's plan appeals strongly to conservatives. It emphasizes reading.

There is an implication in this statement that conservatives, as opposed to liberals, back the plan's emphasis on reading. If the ability to read is a "conservative position," then where, may I ask, does the "liberal" stand? What do the "liberals" view as a more important product of our educational system than the ability to read? Mr. Repass's article quotes a Chicago teacher as saying:

We graduate people that are functional illiterates. They couldn't mix up a bowl of Jello following the direction of the package.

If one cannot follow the directions on the Jello package, how realistic are our expectations that one can achieve any other goal where education is essential?

There are several other points about the article which I mention in passing. I state again that there are substantial theoretical points subject to controversy within this design. However, I do not wish at this time to discuss them.

Dr. Clark explodes the theory that big city problems are due to uneducated, culturally deprived blacks migrating to the North:

In fact, in recent years, the evidence suggests that there are now no differences in academic achievement between those children who have spent all their lives in Northern urban schools and those in these schools who have migrated from the South.

Dr. Clark appears to disagree with the conclusion of the Coleman report that economic and therefore racial integration is essential to effective learning. I would suggest that the research in this area is inadequate and that we must await the result of future studies before accepting or rejecting Coleman's thesis. I would agree with Dr. Clark in rejecting the idea that our educational system must accept the Coleman report as the blueprint for all future educational design. Hopefully future testimony before the Select Committee on Equal Educational Opportunity will provide a more meaningful evaluation of the Coleman report.

Dr. Clark reports that our teacher training is inadequate. That may or may be correct, but I have heard the statement so many times from such a variety of commentators that I am beginning to wonder if it does not have substance.

The design would encourage competition in the District of Columbia school system among both the pupils and the teachers. Competitiveness, whether we like it or not, is a primary element of human nature. To go against the grain of human nature and discourage competition is in my view to encourage a mediocre society and to produce a most ineffectual educational system. After leaving the school, as all of us are well aware, one will encounter aggressive, at times vicious, competition. Our educational system should prepare us for life in our society, not in Utopia.

The design relies greatly upon standardized tests. There is a great deal of nonsense current in educational circles suggesting that standardized tests are inappropriate for ghetto children. Mr. President, whether one likes it or not, we are a society in which ability is measured in largely standard terms. I agree with Dr. Clark's conclusion that the products of our educational system must be able to compete in that society or their time has been wasted. The inevitable product of conducting classes in "the prevailing dialect or permitting mispronunciations or grammatical license" is a person increasingly isolated from our society in terms of his ability to communicate outside his particular localized group.

Dr. Clark suggests that the classrooms should be heterogeneous in terms of background and ability levels of students. He apparently does not suggest that automatic promotion of persons below grade level should occur. This seems to suggest a school system in which ability levels may be heterogeneous but achievement levels are roughly homogeneous. If this is the case, then one would be acting on a modified "track" system wherein students are placed in grades or "tracks" according to achievement level. This would implement the theory that children learn best when grouped with other children at the same learning level.

Dr. Clark makes the supposedly radical suggestion that teachers should be rewarded for proven ability and effort. He would measure ability and effort in teaching, as in other areas of our society, by their measurable output. Standardized tests in terms of what children have learned from their teachers would provide a measurable work-output. I do not state that this method of implementation is necessarily the only method of evaluation, nor does Dr. Clark. I have always believed, however, that one should be rewarded according to one's performance, and I would certainly encourage District of Columbia efforts to move in that direction. This suggestion will no doubt meet opposition, alluded to in Mr. Fineberg's article, from the teacher's union—"who perceive quite correctly that any plan that provides extra pay to a successful few, offers less to the majority." That, of course, is elemental, but I reiterate my belief that a device that rewards those who labor and are successful in their labors is preferable to one that rewards equally the mediocre and indolent with the industrious and productive. Dr. Clark alludes to problems he foresees in dealing with education bureaucracies. To the degree these problems exist, I wish success to the District of Columbia School Board in combating them.

In any event, the day of pouring billions of Federal dollars into ill-conceived compensatory educational projects is hopefully at an end. Compensatory education has been attacked by persons of all ideological viewpoints. It largely has been rejected.

Also in Mr. Fineberg's article, Dr. Clark's staff is reported to have stated how useless ideological labels have become in education. With this I concur. Our primary education problem in the United States is that our system produces children who are seriously deficient in reading, communicating, and mathematics. One should not receive an ideological label for advocating acquisition of these basic skills, and I, for one, am hopeful that the press will avoid placing the label "conservative" on one who emphasizes reading. As I understand the meaning of that label I wear it proudly, but on others such as Dr. Clark, the label may not sit so well, nor would he be, I suspect, so happy to receive it. These labels are, in the field of education, and many other places, useless.

Mr. President, I ask unanimous consent that the text of the two articles to which I have referred be placed in the RECORD at this point as a part of my remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PROMOTION RATE UP IN D.C. SCHOOLS WHILE READING ABILITY STILL DECLINES

(By James P. Repass)

Promotions from one grade to the next are becoming easier to obtain in the D.C. elementary schools, while test results show that reading ability—the main criterion for promotion—has been going down.

The trend is most apparent at the sixth-grade level. Last year, according to a table prepared by the statistical office of the D.C. school system, fewer than one out of every 100 sixth-graders failed to graduate to junior high. Six years ago, the number of retentions was eight times higher.

Six years ago, Washington sixth-graders were reading at a median fifth-grade, seventh-month level. In 1969–70, the level had dropped to fourth grade, eighth month.

For all elementary grades the percentage of students retained has dropped from 9.8 in 1963–64 to 4.7 in 1968–69.

"I can't account for it," states Dr. Dorothy Johnson, assistant superintendent of elementary education. "There has been no change in promotional policy in the last three years, to my knowledge." And promo-

tion policy before that, she states, was substantially the same.

Dr. Johnson said in an interview that she would appoint a committee to investigate immediately the cause of the low nonpromotion rate.

The table detailing nopromotions for each of the elementary grades was published in the appendix of a proposal for improving the D.C. school system prepared by Kenneth B. Clark and his associates at the Metropolitan Applied Research Center.

Dr. Johnson had not seen a copy of the table until supplied one by The Washington Post.

The Clark proposal, entitled "A Possible Reality," calls in part for the setting of minimum achievement standards for students. Those not measuring up would be held back until they did. The proposal was adopted in its entirety by the school board Monday night.

Current standards for promotion of sixth-graders to junior high are set out in a directive issued by Dr. Johnson and three other administrators. For promotion, a sixth-grader must be able to read—as a minimum—at a fifth-grade level. To be promoted, those sixth-graders reading below that level must have spent at least one additional year in elementary school and must read at fourth-grade level or better.

Results of a test given last November show that 25 per cent of all Washington sixth graders were reading below fourth-grade level. Dr. Johnson says it is unlikely that those students would have been able to read at the required minimum fifth-grade level by June.

Under school administration policy, teachers make the final decision on whether a student should be promoted. There is a widespread practice among teachers that once a child reaches 13.7 years of age, but is still in the sixth grade, he should be automatically promoted to junior high.

"WOULDN'T HELP THEM"

The automatic promotion practice—which Dr. Johnson says is not official administration policy—is one factor in the low nonpromotion rate. Teachers interviewed, all but one of whom refused to be quoted by name, believe the practice is a good one.

"We don't feel it's wise to retain children past the sixth grade. It wouldn't help them," one sixth-grade teacher explained. "What do you do with a child who's 6 feet tall and weighs 200 pounds?" asks Conway Perkins, a fifth-grade teacher at Patterson Elementary School.

Some teachers say they feel it is better to send a child along to junior high school, where he will be with children his own age, than to keep him in elementary school for another year.

Overcrowded classrooms and disciplinary problems may also contribute to the promotion of underachievers, teachers indicated. If a child is promoted, he takes up space in somebody else's classroom the next year. And, if problem children are promoted, they become someone else's problem.

BLAMES TEACHERS

A principal at one of Washington's elementary schools, who also asked not to be named, blames the teachers: "They're teaching the text. They're not teaching the reading."

The principal also says Judge J. Skelly Wright's 1967 decision, which abolished the track system in D.C. schools, abets nonretention. Because the decision did away with special education classes, she says slow learners were put in the same class with average learners, where they could not do the work.

As a consequence the child is retained once or more until he reaches the sixth grade, and then, when he reaches 13.7 years of age, he is promoted to junior high school, again regardless of achievement.

A report by Daniel U. Levine, associate director of the Center for the Study of Metropolitan Problems in Education, takes sharp issue with the practice of automatic promotion: ". . . it can be a useful device to avoid compounding the sense of failure of students who for one reason or another cannot live up to unrealistic expectations. Its effects are extremely harmful, however, when it is applied to the economically but not educationally disadvantaged student."

A Chicago teacher, quoted in the Levine report, sums up the problem of the automatic promotion practice:

"Many Chicago kids actually drop out when they are in second grade—just sit in the classes from then on, being pushed ahead each year. If such a child manages to stay in school long enough to graduate from high school, his diploma can't be interpreted as much more than a certificate of attendance. It doesn't mean he's learned anything. We graduate people who are functional illiterates. They couldn't mix up a bowl of Jello following the direction of the package."

CRITICS DISPUTE TWO BASIC TENETS OF CLARK PLAN ON READING

(By Lawrence Feinberg)

"The students in Washington are normal human beings," psychologist Kenneth B. Clark has told the D.C. school board. "If they are taught efficiently, they will learn."

These two points—noncontroversial on their face—underlie Clark's plan to upgrade achievement in the city's elementary and junior high schools.

They are also at the heart of the controversy about the plan for a "reading mobilization year," which was adopted by the board on Monday.

Although they hesitate to say so outright, critics of the proposal, led by the Washington Teachers Union, implicitly reject both of Clark's points. They contend that Washington's school children—94 per cent of them Negro and many of them poor—are different from the white middle-class youngsters whose achievements generally determine the national norms.

By ninth grade, according to tests given last November, Washington students average 2.2 years below these norms in reading. To expect them to achieve at "grade level" by next June, as Clark promises, is a "cruel hoax," teachers' union president William Simons believes.

With the problems the children bring into Washington's classrooms, Simons adds it is unfair to hold teachers responsible for what they learn. Yet, placing responsibility on the teachers—and offering more pay to those whose students learn more—is one of the crucial elements of Clark's plan.

"What do you do about the teacher who happens to have a group of students who do not get proper food at home or come from an environment that is not conducive to learning?" Simons asks. "A teacher has to do whatever she can to overcome the problems they bring with them from home."

Some school officials argue privately that the union opposition to Clark's plan stems basically from the nature of the union itself and not from any intellectual doubts.

As a democratic group, they argue, the union reflects the interests of the majority of its members, who perceive quite correctly that any plan that provides extra pay to a successful few, offers less to the majority.

But there is also a considerable amount of academic research to support Simons' arguments.

The most notable example probably is the massive survey of American schools conducted in 1966 for the U.S. Office of Education by James Coleman, a sociologist at Johns Hopkins University. The Coleman report shows a close connection between family background and educational achievement, and relatively little connection between learning and the resources in the schools themselves.

Clark, of course, does not dispute the reality or the painfulness of discrimination. He was raised in Harlem. His research on the damage done to Negro children by segregated education was cited by the Supreme Court in its 1954 desegregation decision.

But he believes the main reason for educational failure is bad education—poor teaching caused by low expectations of what children can learn and poor motivation for both teachers and students.

In his report to the school board he carefully discusses all the usual explanations of "why low-income and minority group children are not learning at national norms"—recent migrancy from the South, "cultural deprivation," over-activity, "alleged biological-genetic inferiority."

He concludes that "none of them is sustained by the evidence."

"Such excuses," he adds, "serve as an evasion of responsibility by any school system that relies upon them. Children, regardless of socio-economic class or race, can learn if they are effectively taught."

In some ways, Clark's plan appeals strongly to conservatives. It emphasizes reading, which Clark, sounding much like former D.C. Superintendent Carl F. Hansen, says must be "the first priority" because "all future learning depends on it."

The plan also emphasizes setting standards—"minimum systemwide floors on achievement" for each grade, and sticking to them instead of granting automatic "social promotions."

And it relies on tests—standardized nationwide test—to measure achievement.

But in the way it uses these tests, and much else, the plan is radical—a drastic change from the usual way of running a school system. And this, Clark's staff insists, shows how useless ideological labels have become in education.

Under the program, the tests will be given to all students three times a year, and their results will be made public—grade-by-grade, class-by-class, and school-by-school. They will be used as the primary means of evaluating teachers and schools to make them "accountable" to their communities.

However, the exact mechanics for evaluation—along with other details of the program—have not yet been worked out.

Clark does not prescribe how reading should be taught. Instead, it is up to "reading mobilization teams," comprised of teachers, reading specialists, and university consultants, to choose specific methods, and materials for each school—and to change them if they are not getting results.

The emphasis almost entirely is on results, which is where it was placed by former U.S. Education Commissioner James Allen when he proclaimed a national "right-to-read" campaign last year.

Rewarding teachers by their "output"—the achievement gains made by their students—is quite different, Clark's staff says, from the traditional forms of "merit pay," which tried to evaluate teacher competency.

Each classroom, in Clark's program, will be "heterogeneous," containing a mix of students at different levels of achievement—the opposite of Hansen's track system.

There will be group competitions between whole classes and schools for honors and prestige. The models for this are found partly in sports teams and partly in Soviet Russia and Cuba, where teams of workers compete to meet production standards.

Last Monday only one school board member, Charles Cassell, voted against Clark's plan. Cassell denounced its emphasis on competitiveness and its commitment to teaching standard English to children who speak a ghetto dialect.

CAN'T BE FOOLED

Clark replied, "The most insidious form of rejection of black youngsters is that based on the assumption that they cannot learn what other human beings can learn. You can't fool these youngsters no matter how you try to sugarcoat it . . .

"We cannot prepare our youngsters for a constructive and competitive role in this society—particularly because it is a racist society—without giving them the tools for single-standard competition . . ."

Many black teachers and administrators in the audience applauded loudly.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970

The Senate continued with the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

Mr. BIBLE. Mr. President, I support the conference report. I was a conferee on the bill. As Senators know, I am also a longtime member and past chairman of the Committee on the District of Columbia. I am well acquainted with—and deeply disturbed by—the crime and law-enforcement problems of our Nation's Capital City.

I daresay that during my long tenure on the District of Columbia Committee no single subject has occupied more time and energy than legislation to curb the crime rate and rid the streets of Washington of the hoodlums who prey on the law-abiding community. At intervals over the years, the District Committee has recommended, the Congress has passed, and the President has approved numerous measures to increase the judge power of Washington's juvenile and criminal courts, to strengthen the criminal laws, to stiffen the penalties imposable on convicted felons, to put more policemen on the streets, and in general to provide the District's law-enforcement authorities all of the tools needed to counter and quell the crime wave.

But what does the record show? The criminal element still runs rampant through the streets of our National Capital. Serious crimes in the District are increasing at the rate of 22 percent a year. The number of reported felonies has risen 122 percent over the past 5 years. Felony convictions in the District of Columbia courts in 1969 represented only 2.5 percent of the 56,419 felonies reported that year. Washington is more than ever a city of fear—deserted after dark downtown. A terror for its citizens and the hundreds of thousands of people from across the Nation who want—and are entitled—to enjoy the beauties of this great Capital in safety.

They cannot do so today. The situation is disgraceful. The mugger, the rapist, the armed robber, the hoodlum community in general are having a field day after dark, and they have got to be stopped.

The bill now before the Senate is a very good bill. It gets to the root of some very critical aspects of Washington's crime problem, and will go far toward curbing the criminal element.

Before turning to the major provisions of the bill, I want to comment concerning the tremendous amount of effort that has gone into its development. In particular, I want to commend our distinguished and very able colleague, the senior Senator from Maryland, and chairman of the District Committee. I know of no one more stanchly dedicated to the cause of individual liberty and freedom under law than Senator TYDINGS. His leadership on this bill has been outstanding. I have been privileged to serve on many conferences involving District legislation, and I have never seen greater dedication than that displayed by the Senator from Maryland in connection with this bill. There were some 24 meetings of the conferees over a 3-month period. Senator TYDINGS brought to his task all of his own considerable knowledge, plus some of the finest staff work I have ever seen. Needless to say, portions of this bill have generated a good deal of controversy and concern in the area of constitutional rights. JOE TYDINGS is an outstanding champion of those rights, and every portion of this legislation was carefully examined to assure their protection. I think he has done a magnificent job for the Senate and the people of the National Capital area. He has hammered out a much-needed bill that will strike a strong and effective blow against crime, and one which is carefully structured so as not to impinge upon constitutional rights and individual freedoms.

Turning to the bill itself, it is a massive piece of carefully drawn legislation. At its heart is a major overhaul of the court system of the District of Columbia.

In recent years, it has become apparent that the court system in the District of Columbia has been increasingly unable to provide the swift administration of criminal justice this city needs to stem the crime wave. Nothing demonstrates this fact better than the incredible backlog that exists in felony prosecutions. Despite the best efforts of the present court—including the use of a visiting judges program, the implementation of a more effective individual calendar system, and an unsurpassed number of days on the bench per judge—delays in felony trials now average from nine months to a year. The felony case backlog now stands at more than 1,600 cases.

This is intolerable. It robs the District's criminal justice system of any deterrent effect. It creates undue pressures to bargain for pleas in order to reduce the case backlog. The pressures are such that it is little wonder that some dangerous defendants charged with several serious felonies have their slates wiped clean by confessing to but one crime and sometimes only to a lesser included offense carrying only misdemeanor penalties.

As the court struggles with its backlog, too many dangerous defendants are free on the streets, either because they are on bail during months of trial delay or because they have been able to bargain and plead to lesser offenses and receive short prison sentences.

This bill will reform the District's present inadequate court system to speed up the processes of justice and to eliminate the evils of delay and the added crime that results when justice is delayed.

Current practice in the District of Columbia requires Federal trial and appellate judges to devote their time and effort to matters that are purely local and non-Federal in nature. The bill will permit the Federal judiciary to concentrate their full attention on Federal matters. It will overcome the split personality of the present system under which some cases must go to Federal court and some to the local courts. Under S. 2601, all District of Columbia offenses, felonies and misdemeanors, will be tried in a new superior court of the District of Columbia. The bill gives the District a court system comparable to those of the States and other large municipalities. It will end the jurisdictional problems that too frequently mark the present working relationship between the Federal and local courts. And it provides for a new emphasis on modern management techniques that should improve the day-to-day operation of the new court.

Perhaps most important of all, the bill provides for a major increase in judge power. Under the conference agreement, there will be 17 new judgeships created, 10 upon enactment and seven additional judges in 18 months.

I have said over and over, and I repeat again, that the one surefire remedy to a rampant crime wave is swift and certain justice. This new court system will have the necessary judges to man the bench and is a major step toward that type of justice. We have before us a court reorganization package structured to bring greater efficiency to the administration of criminal justice. I am confident that in passing this bill we will have launched a major assault against the criminal element.

The bill contains much more that is valuable and long overdue. As a part of the proposed court reorganization, Washington's hopelessly overloaded juvenile court system will be integrated into the superior court system. The present situation is a disgrace. Three judges are struggling to handle a juvenile court backlog of over 6,000 cases with a quarterly intake rate of over 2,000 new cases. By making the juvenile court a part of the family division of the new superior court, the bill will make it possible to direct more judge power and more resources to the juvenile crime problem. It provides a new up-to-date code of juvenile procedure incorporating new requirements imposed by recent court decisions. The new code will bring a vast improvement in the procedures for handling young offenders.

The legislation also provides for a modern and adequate public defender service—a major step forward to guarantee that every person charged with crime in the District will be fully and ably represented by experienced counsel.

Mr. President, while the much-needed court reorganization is the cornerstone of this legislation, the bill also under-

takes to modify some of the more unrealistic provisions of the criminal law that have hampered law enforcement and undermined the administration of justice in the District. I refer, of course, to the so-called no-knock entry and the pretrial detention provisions of the bill.

Because of the public controversy that has surrounded them—and especially because changes in the law in these two areas must be closely scrutinized to insure that there is no infringement of constitutional rights—I have examined both these features of the bill with special care.

I find that the no-knock warrant provision agreed to in conference meets the standards of the unanimously passed Senate bill. The conference bill simply conforms District of Columbia law with Supreme Court decisions on this subject. It merely states in clear statutory language the conditions the Court has already held to permit an officer to dispense with the standard notice of his identity and purpose when he executes a search or arrest warrant.

The bill in no way enlarges the authority of police officers to conduct a search without a warrant. It codifies the controlling Supreme Court decision in Ker against California which already specifies that an officer may enter without knocking when an announcement of his presence and purpose would endanger his life or result in the destruction of evidence for which the court has authorized him to search.

Indeed, the conference bill actually provides not less but more protection for the public by subjecting no-knock actions by police officers to greater judicial scrutiny and supervision. The bill requires prior court approval of any entry without notice when the circumstances which would justify such an entry are known by the officer at the time he applies for a warrant.

A further point to remember in this debate is the need for no-knock authority. All too often the necessary evidence in a narcotics raid or a gambling raid is destroyed during the time the officer spends announcing his presence and authority, and more than one police officer has met his death at the hands of a dangerous felon because he announced himself. Commonsense tells us that there are situations where no-knock authority is essential. The conference bill sets out those situations with precision and in detail.

The pretrial detention provision of the conference bill has also generated a great deal of concern. I think, however, that too little is understood or appreciated of the aims and purposes of this provision. The provision is not aimed at locking up droves of people as has been charged. It is not an affront to the Constitution, and it is not an effort to punish defendants in advance for crimes that they have not committed.

It is none of those things. It is, instead, a carefully drafted proposal that seeks to identify and hold for a limited time prior to trial the truly dangerous defendant; the one whose record demonstrates a past pattern of dangerous criminal conduct; the one where the case being pressed by the Government is strong and indicates a high probability of guilt; the one, for example, who was caught in the act of an armed holdup or serious mugging, and who by the dictates of commonsense ought to be brought to trial promptly and not released to prey again on the community. This provision is aimed only at those defendants who cannot be released on any condition or combination of conditions that will assure the safety of another person or the community.

There is nothing unique or original about the present proposal. It was recommended by a majority of the President's District of Columbia Crime Commission in 1965. It has been endorsed by the Judicial Council Committee of the District of Columbia. Our law has its roots in England, and pretrial detention has been a part of the British system of justice for hundreds of years.

Further, I am convinced that Congress must face the ugly fact that entirely too much serious crime is being committed by defendants released on bail in the District of Columbia. One study by the Metropolitan Police Department shows that of 130 persons indicted for armed robbery and given pretrial release 34.6 percent were indicted for at least one felony while on bail. Data developed by the U.S. attorney's office show that 70 percent of 345 defendants released before trial in 1968 were reportedly arrested for a new crime. The Judicial Council Committee reviewed the U.S. attorney's survey. They took a sample of robbery defendants and found that almost 64 percent of 106 defendants on pretrial release were rearrested while on bail. The report of the National Bureau of Standards released earlier this year showed that of the sample covered by that study 17 percent of 147 felony defendants were rearrested during pretrial. Twenty-five percent of the defendants charged with "dangerous crimes"—as defined in this bill—were rearrested while on bail.

I realize that some controversy surrounds the sampling techniques, statistical methodology, and conclusions reached in these studies. However, add to this individual cases too frequently reported in the press concerning the murdered storekeeper, the injured bus-driver or policeman, the threatened bank teller, the rape victim—who have fallen prey to hardened criminals who have been on pretrial release.

I submit that the case for the limited—carefully circumscribed—preventive detention provision contained in this bill has been well-made.

As has been pointed out earlier in the debate, the Senate conferees were highly alert to the constitutional questions raised against this part of the conference bill. I have examined this issue with some care. I recognize that there are constitutional arguments on both sides of the question—as is so often the case with legislation dealing with the criminal law. The issue will ultimately be taken to and decided by the courts. However, I am satisfied that under existing authorities this narrowly limited and fully protected detention provision is fully constitutional.

I think the ultimate test of constitutionality is due process of law. The detention authority confided to the courts by this bill is surrounded by due process protections. It is a measured and reasonable legislative response.

Mr. President, the need for effective action against the criminal element in the Nation's Capital has never been so urgent, and the time for action is now. The bill is well designed to bring to this crime-ridden city a rebirth of swift, fairly administered criminal justice. It will help to curb the present lawlessness. The specter of certain justice will, I think, have a strong deterrent effect on would-be criminals.

In sum, I think we have before us one of the most carefully constructed, comprehensive and effective legislative attacks on crime in the Nation's Capital ever presented to the Senate.

I urge that the conference report be agreed to.

SENATE JOINT RESOLUTION 222—A BILL TO AMEND THE WATERFRONT COMMISSION COMPACT

Mr. JAVITS. Mr. President, at the desk is Senate Joint Resolution 222, to amend the Waterfront Commission compact and to consent to an Airport Commission compact between New York and New Jersey, which was introduced last Thursday but has not yet been referred.

After conferring with the chairman of the Committee on Commerce, the Senator from Washington (Mr. MAGNUSON), and the Senator from Nebraska (Mr. HRUSKA), the ranking minority member of the Committee on the Judiciary, who has cleared the matter for me through the Judiciary Committee in the absence of its chairman, I ask unanimous consent that the bill may be referred to the Committee on the Judiciary, that the Committee on the Judiciary be requested to refer the bill in turn to the Committee on Commerce, which will have its reference limited to 30 days, and then to return the bill, with its recommendations, to the Committee on the Judiciary.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, reserving the right to object—and I shall not object—I think this is a good solution with respect to a bill that happens to involve the jurisdiction of two committees. We handle air cargo and all transportation, but the bill also involves some judicial matters.

Mr. JAVITS. The compact.

Mr. MAGNUSON. It involves the jurisdiction of States. I think this is a good solution, and I shall not object. I appreciate the courtesy of the Senator from New York.

Mr. JAVITS. I greatly appreciate the cooperation of Senator MAGNUSON and Senator HRUSKA, without which this could not have been done.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting

nominations were communicated to the Senate, by Mr. Geisler, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the presiding Officer (Mr. FANNIN) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received today, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House had passed the following bills of the Senate, each with amendments, in which it requested the concurrence of the Senate:

S. 3102. An act to amend section 4 of the Fish and Wildlife Act of 1956, as amended, to extend the term during which the Secretary of the Interior can make fisheries loans under the act; and

S. 3889. An act to amend section 14(b) of the Federal Reserve Act, as amended, to extend for 2 years the authority of Federal Reserve banks to purchase U.S. obligations directly from the Treasury.

The message also announced that the House had passed the bill (S. 3279) to extend the boundaries of the Toiyabe National Forest in Nevada, and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 9164. An act to permit the use for any public purpose of certain real property in the State of Georgia;

H.R. 10837. An act to provide for the conveyance to Pima and Maricopa Counties, Ariz., and to the city of Albuquerque, N. Mex., of certain lands for recreational purposes under the provisions of the Recreation and Public Purposes Act of 1926;

H.R. 11953. An act to amend section 205 of the Act of September 21, 1944 (58 Stat. 736), as amended;

H.R. 12475. An act to revise and clarify the Federal Aid in Wildlife Restoration Act and the Federal Aid in Fish Restoration Act, and for other purposes;

H.R. 14114. An act to improve the administration of the national park system by the Secretary of the Interior, and to clarify the authorities applicable to the system, and for other purposes;

H.R. 15351. An act to authorize additional funds for the operation of the Franklin Delano Roosevelt Memorial Commission;

H.R. 16539. An act to amend the National Aeronautics and Space Act of 1958 to provide that the Secretary of Transportation shall be a member of the National Aeronautics and Space Council; and

H.R. 18253. An act to increase the availability of guaranteed home loan financing for veterans and to increase the income of the national service life insurance fund.

The message also announced that the House had agreed to a concurrent resolution (H. Con. Res. 689) providing for an adjournment of the House from August 14, 1970, until September 9, 1970, or sooner if reassembled by the Speaker, in which it requested the concurrence of the Senate.

HOUSE BILLS REFERRED OR PLACED ON THE CALENDAR

The following bills were severally read twice by their titles and referred, or placed on the calendar, as indicated:

H.R. 9164. An act to permit the use for any public purpose of certain real property in the State of Georgia; and H.R. 10837. An act to provide for the conveyance to Pima and Maricopa Counties, Ariz., and to the city of Albuquerque, N. Mex., of certain lands for recreational purposes under the provisions of the Recreation and Public Purposes Act of 1926; to the Committee on Interior and Insular Affairs.

H.R. 11953. An act to amend section 205 of the act of September 21, 1944 (58 Stat. 736), as amended; to the Committee on Agriculture and Forestry.

H.R. 12475. An act to revise and clarify the Federal Aid in Wildlife Restoration Act and the Federal Aid in Fish Restoration Act, and for other purposes; to the Committee on Commerce.

H.R. 14114. An act to improve the administration of the national park system by the Secretary of the Interior, and to clarify the authorities applicable to the system, and for other purposes; placed on the calendar.

H.R. 15351. An act to authorize additional funds for the operation of the Franklin Delano Roosevelt Memorial Commission; to the Committee on Rules and Administration.

H.R. 16539. An act to amend the National Aeronautics and Space Act of 1958 to provide that the Secretary of Transportation shall be a member of the National Aeronautics and Space Council; to the Committee on Aeronautical and Space Sciences.

H.R. 18253. An act to increase the availability of guaranteed home loan financing for veterans and to increase the income of the national service life insurance fund; to the Committee on Finance.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970

The Senate continued with the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

Mr. McGOVERN. Mr. President, I oppose adoption of the conference report on S. 2601, the District of Columbia omnibus anticrime bill. I join nearly two dozen other Senators in sponsoring an alternative District of Columbia crime package. The first part of the package retains the provisions of the conference bill on court reorganization, the District of Columbia Bail Agency, and adoption of the Interstate Compact on Juveniles by the District. This substitute includes all the noncontroversial parts of the conference measure. The second part of the package deals with criminal and juvenile law and procedure. It eliminates the conference provisions on preventive detention, no-knock searches, wiretapping, and mandatory minimum sentences.

I join other Senators in retaining provisions for crime control which criminologists, judges, prosecutors, and the bar have long recommended. The proposals we would eliminate are those which are the unique creation of the administration.

The crime problem is so serious, that we must all be inclined, as I know we are, to give any proposal for better crime control the most sympathetic consideration. But the evidence and argument that has been amassed leads simply and surely to the conclusion that what the administration would have us write into law will do much to curb freedom in America, and may heighten the crisis of crime and violence now ravaging the Nation.

The proposal for preventive detention is perhaps the most compelling demonstration of this. When preventive detention is proposed, it is always coupled with the recitation of horrible crimes committed by defendants while on bail release and statements, such as that of the Attorney General who said in proposing preventive detention:

> I believe that the pretrial release of potentially dangerous defendants constitutes one of the most serious factors in the present crime rate.

Well, the facts are now in and they make dramatically clear that the Attorney General's belief is unfounded. During the initial hearings on the District of Columbia bill, all sorts of pretrial recidivist rates from 6 to 45 percent were suggested, but there was no consensus on reliable data. Only after the serious questions were raised by the opponents of preventive detention, did the Justice Department decide to find out what really are the facts about pretrial crime. It was a curious procedure of first proposing policy, and only afterward, looking at the facts upon which the policy decision must be based. Anyway, the Justice Department, through the National Bureau of Standards, had a report prepared on pretrial crime in the District of Columbia. There was unexplained delay in its release. Commentators began to suspect that the Justice Department was surprised by the results. When the report finally was released, its remarkable conclusion was that the percentage of persons in the District of Columbia arrested for violent crimes and then released who are later rearrested for serious crimes while on bail is only 5 percent. As Senator ERVIN has pointed out, this 5-percent figure is an inescapable conclusion of the Justice Department's own report. And this figure refers to the entire 10-to-12 month period it presently takes to reach trial in the District of Columbia. The proposal for preventive detention provides for a 2-month detention period. So actually, even assuming that judges could determine which defendants are fit subjects for preventive detention, roughly one-fifth of the minimal pretrial crime is the maximum that could be prevented.

However, the other key fact about preventive detention, the fact which the Justice Department report and the commentators verify, is that there is no way that judges can come even reasonably close to selecting out of all the criminal repeaters, the ones who will actually commit pretrial crime. Thus, for every 100 criminal defendants, about 99 will be subjected to the jeopardy of imprisonment without bail to stop the one. That is 99 out of every 100 who could lose their rights as American citizens for crime they would never commit. That is 99 innocent people out of every 100, who may

be subject to the loss of their jobs, the dissolution of their families, and all the other usual results of incarceration which flow from the physical and psychological degradation of jail life.

There may be further arguments about the exact figures, but this much is clear. Preventive detention means putting some people in jail for crimes they would never commit. And for all the improvements, the District of Columbia jails, like most jails in the United States, are places where crime is taught among the inmates. By keeping innocent people in these crime factories, preventive detention, an alleged solution to the crime problem, will serve to encourage even more crime.

The real solutions to pretrial crime are less flamboyant but more just: for instance, conditional release whereby release on bail could be revoked if certain conditions are violated, such as regular employment and reporting to supervisory personnel. Another partial solution would be the deterrent effect of special additional penalties for crime committed while on bail. Most important of all would be speedier trials. The witnesses on the bill have agreed that trials within 60 days could virtually eliminate pretrial crime, and would of course ensure better justice. The tragic irony of the proposal for preventive detention is that it means a horrendous additional burden for the already clogged court system and the crowded jails. By further slowing the time to trial and degrading the administration of justice, preventive detention will only increase the opportunity for pretrial crime.

In sum, the facts, as established by the Justice Department's own Report, and simplest logic, end the debate even before we can reach all the constitutional reasons for rejecting preventive detention. It is clear that preventive detention, even in the terms of its sponsors, just will not do the job promised. The Justice Department and news reports may continue to find and display the outrageous crime committed by a defendant while on bail; but the hard fact is there is no way to identify that person without endangering the well-being of a large part of the very community most oppressed by street crime. My colleague, Senator TYDINGS, has remarked:

> To those who say this bill is antiblack, I say crime in this 70 percent black city is antiblack.

But that is no answer for the innocent man who sits in jail tormented with wondering whether his children will eat or be clothed without his support.

It is a key principle of our constitutional heritage that whenever constitutional rights are involved in the provision for crime control, legislators and judges must look not only to how a particular measure may work out in the ideal, but also to the potential for abuse. I repeat that on the basis of the former alone, there is conclusive reason to reject preventive detention. But consider also how preventive detention can actually be used with respect to the black community. Judges will tend to find the "dangerousness" that legitimizes detention most easily where an individual's background reflects the worst social conditions.

I call to your attention a very revealing item that passed unnoticed in the Senate committee hearings on preventive detention. District of Columbia Police Chief Wilson had just testified, asserting the fairness of the proposal. He then submitted, as examples for the record, a dozen or so case histories selected to show appropriate individual subjects for preventive detention. Each case history begins, "Negro, male." I do not doubt for a moment that preventive detention, with all the injustice that it means, will impinge primarily on the black ghetto. My colleague, the Senator from Maryland (Mr. TYDINGS), has voiced the hope and expectation that present apprehension in the black community is ill founded and will be dispelled when there is better education as to the operation of preventive detention. I say the ghetto understands very well what preventive detention means—much better than most of us. Living in the ghetto is the best possible instruction as to the impact of extreme and irrational response to the crime problem.

That preventive detention would deny justice should not really come as a surprise. For in theory alone the proposal never made much sense. If the public safety justifies detention to prevent future crime, it is just as reasonable to extend jail terms. No doubt if we never let any offender out of jail, the crime rate would be significantly reduced. This is, of course, the absurd logic of preventive detention. It would seem to have no place in a society where laws are supposed to represent the rational side of man. But, of course, the administration's crime proposals are supposed to represent a change in philosophy.

The change in philosophy is perhaps nowhere more evident than in the proposals for dealing with juvenile offenders. From the very beginnings of criminology, indeed, since the earliest studies of social development, it has always been recognized that rehabilitative efforts are most hopeful and successful where the youthful offender is concerned. Yet, under the conference measure, as it grew out of the administration proposals, the term "child" is to be defined so that persons 16 years old charged with certain crimes must be excluded from the jurisdiction of Family Court. They must be tried by an adult court and will be subject to imprisonment in an adult jail. The conference measure also makes it possible to transfer any 15-year-old to adult court for the commission of any felony. This provision was opposed by all the hearing witnesses except the Department of Justice. Opposing witnesses included the people in the District most intimately acquainted with the juvenile treatment process and the District's juveniles, such as the District of Columbia Department of Public Welfare and the District of Columbia Bar Association's Juvenile Court Committee. Altogether, the direction of the juvenile offender provisions is to make permanent social evil of youthful tendency that could be reversed by more rational treatment. The long-range dividend is absolutely negative.

What will be accomplished in the short run? The testimony also established that judges and prosecutors are not generally willing to send young offenders to adult jails. Judges and prosecutors are understandably reluctant to send a young offender to crime school. They are reluctant to destroy his life. They are reluctant to give society a permanent enemy. Thus, instead of more protection for the community, these proposals will severely increase the immediate danger. The charges against the young criminal will be more often dropped. Society and the offender will lose the benefit of the supervision and correctional controls of the juvenile authorities.

By myopic rejection of rehabilitation for repression, the administration thus promises order and gives us social disaster. They forget Justice Burger's wise admonition—

> We must proceed, even in the face of bitter contrary experience, in the belief that every human being has a spark somewhere hidden in him that will make it possible for redemption and rehabilitation. If we accept the idea that each human being, however "bad," is a child of God, we must look for that spark.

If the juvenile offender provisions and other provisions such as mandatory minimum sentences are enacted, we lose not only this spiritual commitment, but also the real possibility for a better society through rehabilitation.

The District of Columbia crime bill as proposed is probably most disturbing in the range and degree of its attack on civil liberties. This seemingly is the aspect of the bill that is most disturbing to the Senator from North Carolina (Mr. ERVIN). The Senator from North Carolina has been caused to remark:

> This bill might be better entitled "A bill to repeal the fourth, fifth, sixth, and eighth amendments to the Constitution."

For instance, the administration intends to bring better crime control by extending the use of the wiretap to the widest range of street crime. While the wiretap sometimes yields results in the surveillance and investigation of narcotics distribution and organized crime, police experience as well as commonsense both indicate that the wiretap has almost no utility with respect to the ordinary street crime which leads to cries for law and order. The administration's proposals are aimed at blanket authority to use the wiretap. The practical result would be to make the wiretap a ubiquitous presence and conventional assumption in this society.

The extended wiretap is the proposal of politicians who decried "big Government" on their way to the White House. Big Government? This bill has the makings of the "big brother" of 1984.

The effect of the no-knock proposal is to give the police the authority to break into your home, any time, day or night. Oh, yes. There is provision for a warrant. But besides the fact that a police officer will be generally allowed to break in without a warrant, the warrant provided for is a giant step into 1984. It is a new kind of warrant. Instead of requiring a

sworn statement as to present fact, it requires only a declaration of prophecy that if the police officer knocks and informs the occupants of a house of his presence, a life will be threatened or evidence will be destroyed. As Senator ERVIN has pointed out, this is pure prophecy by an officer miles away from the point of entry. It requires him to swear to what he cannot possibly know.

Most important, once this warrant is issued, no-knock procedures is legitimized no matter what the actual facts when the officer is later present at the point of entry. Under the present common law rule, there can be post facto review by a court, review at which the actual circumstances of the entry can be presented and judged. The risk of this review serves as a deterrent to unjustifiable no-knock entry. But under the no-knock proposal in this bill, once the oracle has spoken and the policeman is armed with this unique warrant, or modern version of the Sibylline leaves, nothing will be disallowed.

The no-knock proposal is couched in terms of prevention of violence. But think for a moment what will occur when policemen charge into citizens' homes, any time, day or night. Consider the deadly weapons and attack trained dogs available to many District of Columbia residents, and the likely response of an average citizen when someone, he probably would not know who, breaks into his home in the middle of the night. No-knock means extreme physical danger to all of us, including the police. It is incredible that this is the proposal of an administration publicly dedicated to law and order.

We have before us what Senator ERVIN rightly entitled on its initial presentation, "a garbage pail of some of the most repressive, nearsighted, intolerant, unfair, and vindictive legislation that the Senate has ever been presented."

What is particularly remarkable is that the administration's bill, as originally presented, contained proposals which were in blatant violation of well established constitutional law. The bill, as it appeared in the House, permitted appeals by the Government to resolve substantial questions, even after a defendant is acquitted. Any first-year law student knows that the quality of our legal process depends on adversary presentation of the issues, that the Constitution requires an "actual case or controversy," and that American courts do not sit to render advisory opinions. It is beyond belief that trained lawyers in the Justice Department could have sincerely expected this proposal to stand as law in this country. That this proposal could withstand a line of precedent stretching at least as far as Marbury against Madison in 1803 is surpassed in absurdity only by the provision added in the House, and later modified, which stated that in any civil action for unlawful arrest against a police officer, the plaintiff is required to pay the attorney's fees of the defendant officer, even if the plaintiff wins the case.

This is some war on crime. In truth, it is only a war dance; with all the pounding and the shouting, but no real commitment to battle.

The reason is not a lack of toughness. The administration is getting tougher, but for a different war—a political war. All these apparently hard-nosed proposals, which would actually result in making reduction of crime harder to accomplish, are part of a great illusion that has been fostered ever since Richard Nixon began to campaign for the Presidency in 1968. It is the illusion that crime is ravaging the Nation because the police, the prosecutors and the judges are too soft on the criminals. The reasoning of the administration was never more clear than when a few weeks ago, the President threatened the Congress that if we did not pass his crime legislation, the people would hold those rejecting his proposals responsible for the continuing crime crisis. He thereby laid the groundwork for reaping the political benefit of his crime program.

Why, then, were some proposals made which were so obviously doomed to failure? The only reason that appears is reflected in President Nixon's threat. The administration hopes to blame Congress and the courts for striking down an alleged attempt to stop crime. This will be the administration's response to the inevitable demonstration that the Nixon promise to end the crime crisis is to be unfulfilled.

The promise will be unfulfilled because the harder constructive task has been largely avoided. There has been no major effort to make the basic change and improvement in correctional facilities that is the precondition for eliminating the high proportion of repeater crime. There is no major new effort on the part of the administration to secure better gun control, to develop police community relations programs, to professionalize and educate police. But we have seen a slowdown in the effort to eradicate a major source of the crime problem, the decaying urban environment that deprives and demoralizes the individual.

The plan in the District of Columbia crime bill for an improved court system represents a long requested positive effort. But even here the conference bill provides about one-tenth the funds that Senator ERVIN and others who have studied the problem in depth regard as critically necessary. The court reorganization proposals should be saved and improved, and the garbage must be dumped. This is what the substitute measure which I have cosponsored will accomplish.

It is our duty to dispel the Nixon mythology which substitutes political expediency for any real attack on crime. For the bill before us shows that indulging in illusions means failure in fighting crime and the loss of precious freedom.

We must face up to the challenge of crime by providing the thoughtful constructive solutions and the necessary resources. We must not cower before the political threat. We cannot build wise policy on fear. I for one believe in the good sense of the American people. Those who sow deception and fear will not profit. "For they have sown the wind, and they shall reap the whirlwind." Mr. President, I shall vote against the conference report.

EXTENSION OF BOUNDARIES OF THE TOIYABE NATIONAL FOREST IN NEVADA

Mr. ALLOTT. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 3279.

The PRESIDING OFFICER (Mr. SAXBE) laid before the Senate the amendment of the House of Representatives to the bill (S. 3279) to extend the boundaries of the Toiyabe National Forest in Nevada, and for other purposes which was on page 3, line 14, strike out "Funds" and insert "Not to exceed $12,500,000 of the funds".

Mr. ALLOTT. Mr. President, I move that the Senate concur in the amendment of the House.

The motion was agreed to.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970

The Senate resumed the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

The PRESIDING OFFICER (Mr. SAXBE). The Senator from Maryland.

Mr. TYDINGS. Mr. President, I rise once more in support of the report of the conference on S. 2601, the District of Columbia Court Reform and Criminal Procedure Act of 1970.

It might be expected that any defense of this strong anticrime measure would be prefaced by an extended discussion of the problem the report is designed to meet. I will refrain from repeating the appalling statistics relating to crime in the National Capital, however, for several important reasons:

First, too much rhetoric, too much emotionalism has already beclouded the debate on the conference report on S. 2601.

Second, I do not choose to waste words when I know that every Senator knows the impact of crime on the citizens of this city. In fact, hardly an office in the entire U.S. Senate has not actually felt the impact of the crime crisis of this city.

This bill is the keystone of President Nixon's program against crime in the Nation Capital. The court reorganization it provides is indispensable to any permanent reduction in the criminal case backlog in the Capital. Its codification of portions of criminal law in the city is the first in half a century. Its expansion of the Public Defender Service and the Bail Agency are long overdue steps to provide an adequate representation and supervision of criminal defendants. The pretrial detention provisions are essential to protect law-abiding citizens from dangerous criminal defendants. The second offense minimum mandatory and "wiretap" provisions simply make applicable to local crimes in the District of Columbia the same penalties and procedures prescribed by Congress

for the Nation in the omnibus crime bill and the Gun Crime Control Act of 1968.

This bill should be enacted because it is a good bill; because it is an essential tool for law enforcement; and because the alternative suggested by the bill's critics are illusions which promise only continued delay and inaction on the District of Columbia crime crisis.

Now, Mr. President, turning to the substance of the bill, most of the debate on this legislation has centered on the issues of so-called no-knock warrants and pretrial detention. I wish to remind the Senate, however, that all of the controversial features in the conference report on S. 2601 in the aggregate do not amount to so much as 10 percent of the substance or bulk of the bill. I vigorously urge the Senate not to lose sight of the fact that the conference version of S. 2601 is 100 percent a monumental compendium of important and much-needed reforms. Moreover, 90 percent of the bill is wholly noncontroversial.

Among other reforms, the conference report provides—

An efficient, merged local court system with divisions of flexible size capable of adjusting to exact court needs.

A nearly two-thirds increase in the number of local trial judges, along with numerous other means for expanding the city's judicial resources.

Increased tenure, salaries, retirement benefits, and the like, to attract high quality personnel to the local bench.

A refined mechanism for ridding the bench of unfit judges.

Modern court management, with centralization of non-judicial, administrative duties in a top-level court executive.

A modern juvenile code codifying recent developments in the law of juvenile court proceedings.

A telescoping of numerous juvenile proceedings, and other means for assuring juvenile court expedition.

Three distinct modes of adjudication and treatment for three distinct categories of juveniles.

A full-fledged Public Defender Service for the District of Columbia, greatly expanded beyond the size and scope of the operation of the existing Legal Aid Agency.

An expanded bail agency, with new supervisory capacity and functions regarding persons released prior to trial.

Authorization for increased police mutual assistance between the District and the suburbs.

A Federal payment of $5,000,000 to assist the District of Columbia government in meeting the costs of S. 2601 and certain other crime-related programs, notably the city's Narcotics Treatment Agency.

Among the many other reforms less frequently mentioned, the conference report also provides—

A percentage method for computing local judges' salaries, with such salaries to be fixed at 90 percent of Federal judges' salaries—thereby extending to District of Columbia judges the benefit of quadrennial review by the Kappell Commission.

Individual law clerks for all local judges, as well as a pool of three additional law clerks to serve the local court of appeals.

Authorization for the assignment of Federal district judges to serve temporarily, as the need arises, on the local trial bench.

A corps of active "senior" judges, by establishing a mandatory retirement age of 70 and repealing the 60-day limit on the fully compensated annual active service of retired local judges.

A requirement that all judges file annually with the removal commission a detailed financial statement much like the confidential report required in the U.S. Senate.

Authorization for the Public Defender Service to accept public grants and private contributions to facilitate research and continuing educational assistance on the part of the Service for members of the private bar inexperienced in criminal defense work and the like.

Elimination of the requirement that an indigent plaintiff in an uncontested divorce proceeding pay the attorney's fees of the defendant.

In the place of the ancient coroner system, a modern office of medical examiner with purely scientific, and no longer quasi-judicial, functions.

Elimination of the criminal and quasi-criminal incidents of paternal and non-support proceedings.

In cases involving offenses among members of the same family, special proceedings for a civil protection order as a preferred alternative to criminal process.

Procedure for sealing—expunging—juvenile records, in appropriate cases, apart from the familiar rules of codification.

Right of juvenile to appeal directly, and on an expedited basis, from the entering of a detention or shelter care or transfer order.

The "beyond a reasonable doubt" standard for factfinding in delinquency cases.

Precise statutory criteria to be applied in juvenile transfer proceedings.

Authorization for disclosure of the presentencing report in criminal proceedings.

Right of a defendant in a criminal proceeding to address the court and adduce information in mitigation of his sentence.

Right of discovery for a defendant in a criminal proceeding, as to information to be adduced by the prosecution in connection with sentencing.

Codification of the case law requirement of pretrial notice of the prosecution's intent to rely on any repeated offender statute.

Mr. President, each of the items in this summary list of reforms constitutes an historic development, promising great and important benefit for the administration of justice in the National Capital.

I hope that my fellow Senators by now have studied the conference report on S. 2601 and the Senate statement of managers; I hope that they appreciate fully the extraordinary breadth and depth of the reforms incorporated in the pending report.

In the course of this debate it has been asserted that the Senate went down in defeat on most of the major issues before the conference on S. 2601. That assertion, Mr. President, is both untrue and unfair. It reflects a lack of familiarity, a lack of a grasp of the facts, with the scores of important issues before the conference—that same lack of familiarity, in fact, that has led the opponents of this report into exaggerations and misstatements both of the facts and of the law.

Some critics have alluded to the House debate on the pending conference report, during which one of the House conferees claimed that the conference report was very much akin to the House-passed version of the District of Columbia crime bill. I ask my distinguished colleagues to look at the real motivation behind that claim: the House conferees were quite obviously wary of their own House statement of managers—of its potential for embarrassment, its detailed description of the repeated failure of the House conferees to exact Senate recession. The House statement of managers was not even introduced into the record in the House until one of the opponents of the conference report, minutes before House passage, made a great issue of the statement's absence.

Mr. President, the plain fact for anyone who cares to read is that the House conferees carried away from the conference less than one third—less than one-third—of the agenda items in the form in which they were passed by the House. Anyone who has checked against the list of 68 major differences—between the original House and Senate versions of the crime bill—the list published in volume 9 of the Senate District Committee's "Crime in the National Capital" series, the list which my distinguished colleague, the senior Senator from North Carolina, himself, addressed when he testified before us on the subject of the House-passed crime bill—anyone who has checked against that list knows that the Senate prevailed on 50 percent of the most important items; the House prevailed on only 32 percent; and the remaining 18 percent in the conference report represents genuine compromises departing substantially from both the Senate and House positions.

Mr. President, the Senate conferees on the District of Columbia crime bill have labored long: for 3 months we reasoned, cajoled, persuaded, and pleaded with House conferees whose convictions to all appearances were as deep and fixed as those of any Member of this body. We have produced a score of 50 wins, 32 losses, and 18 ties. I call that a major victory which the U.S. Senate should certainly endorse.

So that our colleagues in the Senate can get a better idea of the extent and significance of the differences which were resolved in favor of the Senate, I want to enumerate a sample, a dozen of the items from the House bill deleted in conference. Unlike the House version of S. 2601, the conference report on the District of Columbia crime bill does not provide:

Presidential appointment and removal of the court executive officer, which would have rendered the day-to-day operations of the judiciary subject to the influence of the executive branch of Government.

Automatic transfer of 16- and 17-year-olds to criminal court when charged with manslaughter, mayhem, arson, kidnaping, second-degree burglary, breaking into vending machines, assault with a dangerous weapon, "unarmed" robbery—including common purse snatching and yoking—and assault with intent to commit any of the above.

Juvenile "waiver" proceedings with the burden on the child to establish that he should not be sent to the criminal court for trial and punishment.

Termination of juvenile court jurisdiction over a child after "waiver," even if the pending charges were to be dropped or the child found innocent.

Conditioning of the defendant's right to take depositions in criminal cases on the express permission of the prosecution.

Mandatory life sentences—with no possibility of parole for 20 years—for third and subsequent "violent" crimes—including all of the principal common law felonies.

Notice of prior convictions, and of the prosecutor's intent to proceed under a repeated offender statute, to be given after trial and only prior to time of sentencing.

Authorization for the prosecution to take appeals from judgments of acquittal in criminal cases—with no reversal of judgment in such cases—that is to say, "moot" appeals.

General authority for an officer executing a search warrant to perform "chemical, scientific, medical, or other tests or experiments" on persons.

Authority for an officer executing a search warrant to seize any property believed to be subject to seizure "discovered in the course of" the execution "even if the property is not enumerated in the warrant or the application therefor."

In civil actions against a police officer for wrongful arrest, payment by the injured plaintiff of the defendant police officer's attorney's fees, and even if the judgment in the wrongful arrest action is entered in favor of the plaintiff.

Dismemberment of the District of Columbia government's Department of Corrections, with the transfer of the city's Lorton Reformatory complex to the Federal Bureau of Prisons.

Mr. President, the Senate conferees fought long and hard to root out these many shortsighted features from the House-passed version of the District of Columbia crime bill. We cannot now risk unraveling the 50 percent of the conference issues which have been finally tailored to the Senate's expressed wishes, nor can we risk unraveling the additional 18 percent of the issues which have been compromised on neutral ground.

Most important, Mr. President, it is essential that the Senate distinguish carefully between fiction and fact in assessing the few controversial provisions in the conference bill. I have implored the Senate and the public: Study the conference report; it is a complex and highly technical document. Likewise, I have urged upon my colleagues, the public, and the communications media: Study the comprehensive Senate statement of managers. Nevertheless, as late as this weekend just past, indeed even today, nearly every statement in opposition to the conference report on S. 2601 has been riddled with misstatements and misunderstanding.

Let me enumerate a few examples:

MANDATORY MINIMUMS

On the floor of the Senate last Thursday, a Senator attacked the conference report on S. 2601 claiming that it imposes a mandatory minimum penalty for first offenses relating to incendiary devices—see CONGRESSIONAL RECORD of July 16, 1970, page 24709. I suggested to that distinguished Senator that he was in error. Nevertheless, he continued to press this mistaken criticism—see CONGRESSIONAL RECORD of July 16, 1970, page 24709. In addition other commentators have asserted that the conference report on S. 2601 provides a multiplicity of repressive mandatory minimum penalties.

Such is the fiction. The fact is as it is stated in the Senate statement of managers on page 22:

> The conference bill contains no mandatory minimum sentences for first offenders in any case . . . Mandatory sentences were limited to a provision for second-offender armed violent felons only, comparable to a provision already contained in Federal law (18 U.S.C. sec. 924(c)).

The error which the critics have made is in not studying the conference report in its entirety or with adequate care. On page 96 of the report it provides, in paragraph (6), that "Superior Court of the District of Columbia" is to be substituted in the place of "District of Columbia Court of General Sessions" in District of Columbia Code section 16–710. Therefore, the latter section will now provide as follows:

> In criminal cases in the Superior Court of the District of Columbia, the court may, upon conviction, suspend the imposition of sentence or impose sentence and suspend execution thereof, for such time and upon such terms as it deems best, if it appears to the satisfaction of the court that the ends of justice and the best interests of the public and of the defendant would be served thereby. In each case of the imposition of sentence and the suspension of the execution thereof, the court may place the defendant on probation under the control and supervision of a probation officer.

In other words, the general power to suspend any sentence or the imposition thereof, and to order probation, is effective in all cases except where the statute defining the offense in question specifies otherwise. The only instance of such "specification otherwise" in the conference report on S. 2601 occurs on page 144 and relates exclusively to, as I have stated previously, second-offender armed violent felons.

Again, the only mandatory sentencing provision which survived the conference negotiations is the requirement of a 5-year mandatory penalty for a second offense of committing a crime of violence while armed with a dangerous weapon. Critics of the conference report have recoiled from this provision as if such a proposal had never been made on the Senate floor. Yet, a similar 5-year mandatory penalty was approved by this body for second offender firearms crimes in the Federal Firearms Act of 1968. Just 8 months ago the Senate passed by voice vote S. 849 which contained a mandatory minimum sentence for second offenders.

CONSECUTIVE SENTENCES

Contrary to the unfounded assertion of the critics, nothing in the conference report creates a presumption that sentences for two or more offenses shall run consecutively rather than concurrently. Both the Senate statement of managers and the original House committee report express an intent to overturn the result reached in *Borum* v. *United States*, 409 F.2d 433 (D. C. Cir. 1967), *cert. denied*, 395 U.S. 916 (1969), where two sentences were required to run concurrently, although based upon entirely unrelated offenses, because the trial judge by oversight failed to specify that the sentences should be consecutive.

This provision does not create a preference or presumption for consecutive sentences. It merely avoids the irreparability of such judicial oversight. The critics are simply wrong in assuming that a contrary oversight to the detriment of the defendant cannot be corrected: Failure to specify that sentences should run concurrently, as is the usual practice, may be easily and quickly rectified on a motion to correct the sentence under rule 35 or rule 36 of the Federal Rules of Criminal Procedure.

SPECIAL SENTENCING PROCEDURES

On the floor of the Senate last Friday, Senator ERVIN made allusion to another so-called inequity meriting the attention of the Senate, and proceeded to attack the conference report provisions relating to discretionary increased sentences for repeated offenders—see CONGRESSIONAL RECORD of July 17, 1970, starting at page 24838. Mr. President, I respectfully submit that much of what my distinguished colleague has suggested is mistaken—both on the law and on the facts.

For example, there is no violation here of the due process requirement of the highest order of proof by the prosecution as to all facts underlying a criminal judgment. Proposed District of Columbia Code section 23–111(c)(1), on page 154 of the conference report, states quite specifically that, except as provided in paragraph (2), "the prosecuting authority shall have the burden of proof beyond a reasonable doubt on any issue of fact" relating to special sentencing. Paragraph (2), meanwhile, merely provides that, where the defendant alleges constitutional invalidity, the defendant must support his allegations, his motion, by a preponderance of the evidence. Consistent with its plain meaning, its limited application, paragraph (2) in no way diminishes the requirement that the prosecution make its showing, including proof of prior convictions, "beyond a reasonable doubt."

The clear implication of Senator ERVIN's remarks was that the provisions on pages 142, 143, 154, and 155 of the conference report constitute a clear departure from precedent and right thinking. Such, of course, is fiction. The fact is that

the provisions on the sentencing of repeated offenders are much more tightly drawn and are much more carefully safeguarded than title X, "Dangerous Special Offender Sentencing," of the President's organized crime bill, S. 30, which passed the Senate in this very session with only one dissenting vote—not Senator ERVIN's.

TRANSFER OF JUVENILES

It was with profound dismay that I read this past week end in one of the Nation's leading newspapers an article attacking the District of Columbia crime bill on the basis of a supposed general lowering of the age limit for juvenile court jurisdiction from 18 to 16.

This attack, Mr. President, was based on misunderstanding pure and simple. The fact is that the overwhelming majority of 16- and 17-year-olds presently handled in the juvenile court system will be unaffected by the conference report on S. 2601. The District of Columbia crime bill merely provides that in the unusual case where a 16- or 17-year-old is the subject of a bona fide charge of murder, forcible rape, first-degree burglary, or armed robbery—or felonious assault with intent to commit one of the aforesaid serious offenses—the 16- or 17-year-old must be sent to adult court for trial and sentencing—like an 18-year-old.

I have stated it before; let me state it again; unlike the House version of S. 2601, the list of offenses for which the age limit may be lowered does not now include manslaughter, mayhem, arson, kidnaping, second-degree burglary, breaking into vending machines, assault with a dangerous weapon, "unarmed" robbery—including purse snatching and yoking—and assault with intent to commit one of these offenses.

Critics have complained that basing the automatic transfer on charges brought by the prosecution places undue discretion in the hands of the United States attorney. This is nonsense. In fact, as is made eminently clear in the Senate Statement of Managers, the basic thrust of this new definition of "child" is to see to it that persons convicted of the few most serious offenses listed in the report, are given the benefit of the more intensive rehabilitation programs available to more mature persons; ordinarily the preferred method for shifting a child to the adult court is by the traditional means of formal transfer proceeding. The Senate conferees fully expect that the Criminal Division will turn back or dismiss the indictment in any case where the prosecutor categorizes, as one of the few most serious offenses, acts which under other circumstances would not be similarly categorized—whenever, in other words, the prosecutor seeks unfairly to circumvent the preferred transfer proceeding. In fact, the discretion left to the prosecutor with the new definition of "child" can only operate in the child's benefit: the courts will protect against abuses in the nature of unnecessarily high charges, while the prosecutor himself can exercise his customary discretion and in appropriate cases refrain from bringing serious charges even when in law they might be well-founded.

INSANITY DEFENSE

Mr. President, opponents of the conference report on S. 2601 have characterized as a Constitutional curiosity that provision in the District of Columbia crime bill which renders the issue of the defendant's insanity at the time of the offense an affirmative defense in a criminal case. The claim is made that the due process clause of the Constitution requires that the prosecution prove the defendant's sanity beyond a reasonable doubt—whenever sanity is in issue.

This claim of unconstitutionality, Mr. President, runs counter to the ruling of the United States Supreme Court in *Leland* v. *Oregon*, 343 U.S. 790 (1952). The provision under S. 2601, whereby the defendant must establish the defense of insanity by a preponderance of the evidence, adheres to the rule of law in force, moreover, in approximately 20 States. Indeed, I believe that the Senate would find illuminating an opinion of the supreme court of the State of North Carolina, written by my esteemed colleague, the senior Senator from North Carolina, during the time that he served as a justice of that court—one *State* v. *Swink*, 229 N.C. 123, 77 S.E. 2d. 852 (1948), in which Mr. Justice ERVIN held that, following a celebrated common law ruling, the defense of insanity is to be established by the defendant by a preponderance of the evidence—and not beyond a reasonable doubt.

I ask unanimous consent that the opinions in those cases be printed in the RECORD at this point.

There being no objection, the opinions were ordered to be printed in the RECORD, as follows:

[Appeal from the Supreme Court of Oregon]

LELAND v. OREGON

No. 176—Argued January 29, 1952—Decided June 9, 1952

In a criminal prosecution in an Oregon state court on an indictment for murder in the first degree, appellant pleaded not guilty and gave notice of his intention to prove insanity. Oregon statutes required him to prove his insanity beyond a reasonable doubt and made a "morbid propensity" no defense. Appellant was found guilty by a jury and was sentenced to death. *Held:* These statutes did not deprive appellant of life and liberty without due process of law in violation of the Fourteenth Amendment of the Federal Constitution. Pp. 791–802.

1. The trial judge's instructions to the jury, and the charge as a whole, made it clear that the burden was upon the State to prove all the necessary elements of guilt, of the lesser degrees of homicide as well as of the offense charged in the indictment. Pp. 793–706.

2. The rule announced in *Davis* v. *United States*, 160 U.S. 469, that an accused is "entitled to an acquittal of the specific crime charged if upon all the evidence there is reasonable doubt whether he was capable in law of committing the crime," established no constitutional doctrine but only the rule to be followed in federal courts. P. 797.

3. Between the Oregon rule requiring the accused, on a plea of insanity, to establish that defense beyond a reasonable doubt, and the rule in effect in some twenty states, which places the burden on the accused to establish his insanity by a preponderance of the evidence or some similar measure of persuasion, there is no difference of such magnitude as to be significant in determining the constitutional question here presented. P. 798.

4. That a practice is followed by a large number of states is not conclusive as to whether it accords with due process, but may be considered in determining whether it "offends some principle of justice so rooted in the traditions and conscience of our people as to be ranked as fundamental." P. 798.

5. The instant case is not one in which it is sought to enforce against the State a right which has been held to be secured to defendants in federal courts by the Bill of Rights. Pp. 798–799.

6. Oregon's policy with respect to the burden of proof on the issue of sanity cannot be said to violate generally accepted concepts of basic standards of justice. P. 799.

7. *Tot* v. *United States*, 319 U.S. 463, does not require a different conclusion from that here reached. P. 799.

8. The contention that the instructions to the jury in this case may have confused the jury as to the distinction between the State's burden of proving premeditation and the other elements of the crime charged and appellant's burden of proving insanity, cannot be sustained. P. 800.

9. Due process is not violated by the Oregon statute which provides that a "morbid propensity to commit prohibited acts, existing in the mind of a person, who is not shown to have been incapable of knowing the wrongfulness of such acts, forms no defense to a prosecution therefor." Pp. 800–801.

10. The "irresistible impulse" test of legal sanity is not "implicit in the concept of ordered liberty"; and due process does not require the State to adopt that test rather than the "right and wrong" test. Pp. 800–801.

11. The trial court's refusal to require the district attorney to make one of appellant's confessions available to his counsel before trial did not deny due process in the circumstances of this case. Pp. 801–802.

190 Ore. 598, 227 P. 2d 785, affirmed.

Appellant's conviction of murder, challenged as denying him due process in violation of the Fourteenth Amendment, was affirmed by the State Supreme Court. 190 Ore. 598, 227 P. 2d 785. On appeal to this Court, *affirmed*, p. 802.

Thomas H. Ryan argued the cause for appellant. With him on the brief was *Harold L. Davidson*.

J. Raymond Carskadon and *Charles Eugene Raymond* argued the cause for appellee. With them on the brief was *George Neuner*, Attorney General of Oregon.

Mr. JUSTICE CLARK delivered the opinion of the Court.

Appellant was charged with murder in the first degree. He pleaded not guilty and gave notice of his intention to prove insanity. Upon trial in the Circuit Court of Multnomah County, Oregon, he was found guilty by a jury. In accordance with the jury's decision not to recommend life imprisonment, appellant received a sentence of death. The Supreme Court of Oregon affirmed. 190 Ore. 598, 227 P. 2d 785. The case is here on appeal. 28 U.S.C. § 1257(2).

Oregon statutes required appellant to prove his insanity beyond a reasonable doubt and made a "morbid propensity" no defense.[1] The principal questions in this appeal are raised by appellant's contentions that these statutes deprive him of his life and liberty without due process of law as guaranteed by the Fourteenth Amendment.

The facts of the crime were revealed by appellant's confessions, as corroborated by other evidence. He killed a fifteen-year-old girl by striking her over the head several times with a steel bar and stabbing her twice with a hunting knife. Upon being arrested

Footnotes at end of article.

five days later for the theft of an automobile, he asked to talk with a homicide officer, voluntarily confessed the murder, and directed the police to the scene of the crime, where he pointed out the location of the body. On the same day, he signed a full confession and, at his own request, made another in his own handwriting. After his indictment, counsel were appointed to represent him. They have done so with diligence in carrying his case through three courts.

One of the Oregon statutes in question provides:

"When the commission of the act charged as a crime is proven, and the defense sought to be established is the insanity of the defendant, the same must be proven beyond a reasonable doubt. . . ." [2] Appellant urges that this statute in effect requires a defendant pleading insanity to establish his innocence by disproving beyond a reasonable doubt elements of the crime necessary to a verdict of guilty, and that the statute is therefore violative of that due process of law secured by the Fourteenth Amendment. To determine the merit of this challenge, the statute must be viewed in its relation to other relevant Oregon law and in its place in the trial of this case.

In conformity with the applicable state law,[3] the trial judge instructed the jury that, although appellant was charged with murder in the first degree, they might determine that he had committed a lesser crime included in that charged. They were further instructed that his plea of not guilty put in issue every material and necessary element of the lesser degrees of homicide, as well as of the offense charged in the indictment. The jury could have returned any of five verdicts: [4] (1) guilty of murder in the first degree, if they found beyond a reasonable doubt that appellant did the killing purposely and with deliberate and premeditated malice; (2) guilty of murder in the second degree, if they found beyond a reasonable doubt that appellant did the killing purposely and maliciously, but without deliberation and premeditation; (3) guilty of manslaughter, if they found beyond a reasonable doubt that appellant did the killing without malice or deliberation, but upon a sudden heat of passion caused by a provocation apparently sufficient to make the passion irresistible; (4) not guilty, if, after a careful consideration of all the evidence, there remained in their minds a reasonable doubt as to the existence of any of the necessary elements of each degree of homicide; and (5) not guilty by reason of insanity, if they found beyond a reasonable doubt that appellant was insane at the time of the offense charged. A finding of insanity would have freed appellant from responsibility for any of the possible offenses. The verdict which the jury determined—guilty of first degree murder—required the agreement of all twelve jurors; a verdict of not guilty by reason of insanity would have required the concurrence of only ten members of the panel.[5]

It is apparent that the jury might have found appellant to have been mentally incapable of the premeditation and deliberation required to support a first degree murder verdict or of the intent necessary to find him guilty of either first or second degree murder, and yet not have found him to have been legally insane. Although a plea of insanity was made, the prosecution was required to prove beyond a reasonable doubt every element of the crime charged, including, in the case of first degree murder, premeditation, deliberation, malice and intent.[6] The trial court repeatedly emphasized this requirement in its charge to the jury.[7] Moreover, the judge directed the jury as follows:

"I instruct you that the evidence adduced during this trial to prove defendant's insanity shall be considered and weighed by you, with all other evidence, whether or not you find defendant insane, in regard to the ability of the defendant to premeditate, form a purpose, to deliberate, act wilfully, and act maliciously; and if you find the defendant lacking in such ability, the defendant cannot have committed the crime of murder in the first degree."[8]

These and other instructions, and the charge as a whole, make it clear that the burden of proof of guilt, and of all the necessary elements of guilt, was placed squarely upon the State. As the jury was told, this burden did not shift, but rested upon the State throughout the trial, just as, according to the instructions, appellant was presumed to be innocent until the jury was convinced beyond a reasonable doubt that he was guilty.[9] The jurors were to consider separately the issue of legal sanity *per se*—an issue set apart from the crime charged, to be introduced by a special plea and decided by a special verdict.[10] On this issue appellant had the burden of proof under the statute in question here.

By this statute, originally enacted in 1864,[11] Oregon adopted the prevailing doctrine of the time—that, since most men are sane, a defendant must prove his insanity to avoid responsibility for his acts. That was the rule announced in 1843 in the leading English decision in *M'Naghten's Case:*

"[T]he jurors ought to be told in all cases that every man is to be presumed to be sane, and to possess a sufficient degree of reason to be responsible for his crimes, until the contrary be proved to their satisfaction; and . . . to establish a defense on the ground of insanity, it must be clearly proved that, at the time of the committing of the act, the party accused was laboring under such a defect of reason, from disease of the mind, as not to know the nature and quality of the act he was doing. . . ." [12]

This remains the English view today.[13] In most of the nineteenth-century American cases, also, the defendant was required to "clearly" prove insanity,[14] and that was probably the rule followed in most states in 1895,[15] when *Davis* v. *United States* was decided. In that case this Court, speaking through Mr. Justice Harlan, announced the rule for federal prosecutions to be that an accused is entitled to an acquittal of the specific crime charged if upon all the evidence there is reasonable doubt whether he was capable in law of committing crime." [16] In reaching that conclusion, the Court observed:

"The views we have expressed are supported by many adjudications that are entitled to high respect. If such were not the fact, we might have felt obliged to accept the general doctrine announced in some of the above cases; for it is desirable that there be uniformity of rule in the administration of the criminal law in governments whose constitutions equally recognize the fundamental principles that are deemed essential for the protection of life and liberty." [17]

The decision obviously establishes no constitutional doctrine, but only the rule to be followed in federal courts. As such, the rule is not in question here.

Today, Oregon is the only state that requires the accused, on a plea of insanity, to establish that defense beyond a reasonable doubt. Some twenty states, however, place the burden on the accused to establish his insanity by a preponderance of the evidence or some similar measure of persuasion.[18] While there is an evident distinction between these two rules as to the quantum of proof required, we see no practical difference of such magnitude as to be significant in determining the constitutional question we face here. Oregon merely requires a heavier burden of proof. In each instance, in order to establish insanity as a complete defense to the charges preferred, the accused must prove that insanity. The fact that a practice is followed by a large number of states is not conclusive in a decision as to whether that practice accords with due process, but it is plainly worth considering in determining whether the practice "offends some principle of justice so rooted in the traditions and conscience of our people as to be ranked as fundamental." *Snyder* v. *Massachusetts*, 291 U.S. 97, 105 (1934).

Nor is this a case in which it is sought to enforce against the states a right which we have held to be secured to defendants in federal courts by the Bill of Rights. In *Davis* v. *United States, supra,* we adopted a rule of procedure for the federal courts which is contrary to that of Oregon. But "[i]ts procedure does not run foul of the Fourteenth Amendment because another method may seem to our thinking to be fairer or wiser or to give a surer promise of protection to the prisoner at the bar." *Snyder* v. *Massachusetts, supra,* at 105. "The judicial judgment in applying the Due Process Clause must move within the limits of accepted notions of justice and is not to be based upon the idiosyncrasies of a merely personal judgment. . . . An important safeguard against such merely individual judgment is an alert deference to the judgment of the state court under review." Mr. JUSTICE FRANKFURTER, concurring in *Malinski* v. *New York*, 324 U.S. 401, 417 (1945). We are therefore reluctant to interfere with Oregon's determination of its policy with respect to the burden of proof on the issue of sanity since we cannot say that policy violates generally accepted concepts of basic standards of justice.

Nothing said in *Tot* v. *United States*, 319 U.S. 463 (1943), suggests a different conclusion. That decision struck down a specific presumption created by congressional enactment. This Court found that the fact thus required to be presumed had no rational connection with the fact which, when proven, set the presumption in operation, and that the statute resulted in a presumption of guilt based only upon proof of a fact neither criminal in itself nor an element of the crime charged. We have seen that, here, Oregon required the prosecutor to prove beyond a reasonable doubt every element of the offense charged. Only on the issue of insanity as an absolute bar to the charge was the burden placed upon appellant. In all English-speaking courts, the accused is obliged to introduce proof if he would overcome the presumption of sanity.[19]

It is contended that the instructions may have confused the jury as to the distinction between the State's burden of proving premeditation and the other elements of the charge and appellant's burden of proving insanity. We think the charge to the jury was as clear as instructions to juries ordinary are or reasonably can be, and, with respect to the State's burden of proof upon all the elements of the crime, the charge was particularly emphatic. Juries have for centuries made the basic decisions between guilt and innocence and between criminal responsibility and legal insanity upon the basis of the facts, as revealed by all the evidence, and the law, as explained by instructions detailing the legal distinctions, the placement and weight of the burden of proof, the effect of presumptions, the meaning of intent, etc. We think that to condemn the operation of this system here would be to condemn the system generally. We are not prepared to do so.

Much we have said applies also to appellant's contention that due process is violated by the Oregon statute providing that a "morbid propensity to commit prohibited acts, existing in the mind of a person, who is not

Footnotes at end of article.

shown to have been incapable of knowing the wrongfulness of such acts, forms no defense to a prosecution therefor." [20] That statute amounts to no more than a legislative adoption of the "right and wrong" test of legal insanity in preference to the "irresistible impulse" test.[21] Knowledge of right and wrong is the exclusive test of criminal responsibility in a majority of American jurisdictions.[22] The science of psychiatry has made tremendous strides since that test was laid down in *M'Naghten's Case*,[23] but the progress of science has not reached a point where its learning would compel us to require the states to eliminate the right and wrong test from their criminal law.[24] Moreover, choice of a test of legal sanity involves not only scientific knowledge but questions of basic policy as to the extent to which that knowledge should determine criminal responsibility.[25] This whole problem has evoked wide disagreement among those who have studied it. In these circumstances it is clear that adoption of the irresistible impulse test is not "implicit in the concept of ordered liberty." [26]

Appellant also contends that the trial court's refusal to require the district attorney to make one of appellant's confessions available to his counsel before trial was contrary to due process. We think there is no substance in this argument. This conclusion is buttressed by the absence of any assignment of error on this ground in appellant's motion for a new trial. Compare *Avery* v. *Alabama*, 308 U.S. 444, 452 (1940). While it may be the better practice for the prosecution thus to exhibit a confession, failure to do so in this case in no way denied appellant a fair trial. The record shows that the confession was produced in court five days before appellant rested his case. There was ample time both for counsel and expert witnesses to study the confession. In addition the trial judge offered further time for that purpose but it was refused. There is no indication in the record that appellant was prejudiced by the inability of his counsel to acquire earlier access to the confession.

Affirmed.

MR. JUSTICE FRANKFURTER, joined by MR. JUSTICE BLACK, dissenting.

However much conditions may have improved since 1905, when William H. (later Mr. Chief Justice) Taft expressed his disturbing conviction "that the administration of the criminal law in all the states in the Union (there may be one or two exceptions) is a disgrace to our civilization" (Taft, The Administration of Criminal Law, 15 Yale L. J. 1, 11), no informed person can be other than unhappy about the serious defects of present-day American criminal justice. It is not unthinkable that failure to bring the guilty to book for a heinous crime which deeply stirs popular sentiment may lead the legislature of a State, in one of those emotional storms which on occasion sweep over our people, to enact that thereafter an indictment for murder, following attempted rape, should be presumptive proof of guilt and cast upon the defendant the burden of proving beyond a reasonable doubt that he did not do the killing. Can there be any doubt that such a statute would go beyond the freedom of the States, under the Due Process Clause of the Fourteenth Amendment, to fashion their own penal codes and their own procedures for enforcing them? Why is that so? Because from the time that the law which we have inherited has emerged from dark and barbaric times, the conception of justice which has dominated our criminal law has refused to put an accused at the hazard of punishment if he fails to remove every reasonable doubt of his innocence in the minds of jurors. It is the duty of the Government to establish his guilt beyond a reasonable doubt. This notion—basic in our law and rightly one of the boasts of a free society—is a requirement and a safeguard of due process of law in the historic, procedural content of "due process." Accordingly there can be no doubt, I repeat, that a State cannot cast upon an accused the duty of establishing beyond a reasonable doubt that his was not the act which caused the death of another.

But a muscular contraction resulting in a homicide does not constitute murder. Even though a person be the immediate occasion of another's death, he is not a deodand to be forfeited like a thing in the medieval law. Behind a muscular contraction resulting in another's death there must be culpability to turn homicide into murder.

The tests by which such culpability may be determined are varying and conflicting. One does not have to echo the scepticism uttered by Brian, C. J., in the fifteenth century, that "the devil himself knoweth not the mind of men" to appreciate how vast a darkness still envelopes man's understanding of man's mind. Sanity and insanity are concepts of incertitude. They are given varying and conflicting content at the same time and from time to time by specialists in the field. Naturally there has always been conflict between the psychological views absorbed by law and the contradictory views of students of mental health at a particular time. At this stage of scientific knowledge it would be indefensible to impose upon the States, through the due process of law which they must accord before depriving a person of life or liberty, one test rather than another for determining criminal culpability, and thereby to displace a State's own choice of such a test, no matter how backward it may be in the light of the best scientific canons. Inevitably, the legal tests for determining the mental state on which criminal culpability is to be based are in strong conflict in our forty-eight States. But when a State has chosen its theory for testing culpability, it is a deprivation of life without due process to send a man to his doom if he cannot prove beyond a reasonable doubt that the physical events of homicide did not constitute murder because under the State's theory he was incapable of acting culpably.

This does not preclude States from utilizing common sense regarding mental irresponsibility for acts resulting in homicide—from taking for granted that most men are sane and responsible for their acts. That a man's act is not his, because he is devoid of that mental state which begets culpability, is so exceptional a situation that the law has a right to devise an exceptional procedure regarding it. Accordingly, States may provide various ways for dealing with this exceptional situation by requiring, for instance, that the defense of "insanity" be specially pleaded, or that he on whose behalf the claim of insanity is made should have the burden of showing enough to overcome the assumption and presumption that normally a man knows what he is about and is therefore responsible for what he does, or that the issue be separately tried, or that a standing disinterested expert agency advise court and jury, or that these and other devices be used in combination. The laws of the forty-eight States present the greatest diversity in relieving the prosecution from proving affirmatively that a man is sane in the way it must prove affirmatively that the defendant is the man who pulled the trigger or struck the blow. Such legislation makes no inroad upon the basic principle that the State must prove guilt, not the defendant innocence, and prove it to the satisfaction of a jury beyond a reasonable doubt.

For some unrecorded reason, Oregon is the only one of the forty-eight States that has made inroads upon that principle by requiring the accused to prove beyond a reasonable doubt the absence of one of the essential elements for the commission of murder, namely, culpability for his muscular contraction. Like every other State, Oregon presupposes that an insane person cannot be made to pay with his life for a homicide, though for the public good he may of course be put beyond doing further harm. Unlike every other State, however, Oregon says that the accused person must satisfy a jury beyond a reasonable doubt that, being incapable of committing murder, he has not committed murder.

Such has been the law of Oregon since 1864. That year the Code of Criminal Procedure defined murder in the conventional way, but it also provided: "When the commission of the act charged as a crime is proven, and the defense sought to be established is the insanity of the defendant, the same must be proven beyond a reasonable doubt. . . ." General Laws of Oregon, 1845–1864, p. 441 *et seq.*, §§ 502, 204. The latter section, through various revisions, is the law of Oregon today and was applied in the conviction under review.

Whatever tentative and intermediate steps experience makes permissible for aiding the State in establishing the ultimate issues in a prosecution for crime, the State cannot be relieved, on a final show-down, from proving its accusation. To prove the accusation it must prove each of the items which in combination constitute the offense. And it must make such proof beyond a reasonable doubt. This duty of the State of establishing every fact of the equation which adds up to a crime, and of establishing it to the satisfaction of a jury beyond a reasonable doubt is the decisive difference between criminal culpability and civil liability. The only exception is that very limited class of cases variously characterized as *mala prohibita* or public torts or enforcement of regulatory measures. See *United States* v. *Dotterweich*, 320 U.S. 277; *Morissette* v. *United States*, 342 U.S. 246. Murder is not a *malum prohibition* or a public tort or the object of regulatory legislation. To suggest that the legal oddity by which Oregon imposes upon the accused the burden of proving beyond reasonable doubt that he had not the mind capable of committing murder is a mere difference in the measure of proof, is to obliterate the distinction between civil and criminal law.

It is suggested that the jury were charged not merely in conformity with this requirement of Oregon law but also in various general terms, as to the duty of the State to prove every element of the crime charged beyond a reasonable doubt, including in the case of first degree murder, "premeditation, deliberation, malice and intent." Be it so. The short of the matter is that the Oregon Supreme Court sustained the conviction on the ground that the Oregon statute "casts upon the defendant the burden of proving the defense of insanity beyond a reasonable doubt." *State* v. *Leland*, 190 Ore. 598, 638, 227 P. 2d 785, 802. To suggest, as is suggested by this Court but not by the State court, that, although the jury was compelled to act upon this requirement, the statute does not offend the Due Process Clause because the trial judge also indulged in a farrago of generalities to the jury about "premediation, deliberation, malice and intent," is to exact gifts of subtlety that not even judges, let alone juries, possess. See *International Harvester Co.* v. *Kentucky*, 234 U.S. 216, 223–224. If the Due Process Clause has any meaning at all, it does not permit life to be put to such hazards.

To deny this mode of dealing with the abuses of insanity pleas and with unedifying spectacles of expert testimony, is not to deprive Oregon of the widest possible choice of remedies for circumventing such abuses. The multiform legislation prevailing in the different States evinces the great variety of the experimental methods open to them for dealing with the problems raised by insanity defenses in prosecutions for murder.

To repeat the extreme reluctance with

Footnotes at end of article.

which I find a constitutional barrier to any legislation is not to mouth a threadbare phrase. Especially is deference due to the policy of a State when it deals with local crime, its repression and punishment. There is a gulf, however narrow, between deference to local legislation and complete disregard of the duty of judicial review which has fallen to this Court by virtue of the limits placed by the Fourteenth Amendment upon State action. This duty is not to be escaped, whatever I may think of investing judges with the power which the enforcement of that Amendment involves.

[229 N.C. 123]

STATE v. SWINK

No. 649—Supreme Court of North Carolina—May 19, 1948

1. CRIMINAL LAW—48

An accused is legally "insane" and exempt from criminal responsibility if he commits an act which would otherwise be punishable as a crime, and at time is laboring under such a defect of reason, from disease of the mind, as to be incapable of knowing nature and quality of act he is doing, or, if he does know this, incapable of distinguishing between right and wrong in relation to such act.

See Words and Phrases, Permanent Edition, for all other definitions of "Insane".

2. CRIMINAL LAW—311

Everyone is presumed to be sane until the contrary appears.

3. CRIMINAL LAW—311

The presumption of sanity applies to persons charged with crime, but is rebuttable.

4. CRIMINAL LAW—331, 570(2)

The burden of proof upon a plea of insanity in a criminal case rests upon the accused, but he is merely required to prove his insanity to the satisfaction of the jury and not beyond a reasonable doubt.

5. CRIMINAL LAW—570(2), 782(14), 1172(2)

In prosecution for rape of a 9 year old girl, defendant was only required to establish his defense of insanity to the satisfaction of the jury, and instruction imposing upon defendant burden to establish insanity beyond a reasonable doubt entitled defendant to a new trial. G.S. § 14–21.

Appeal from Superior Court, Guilford County; John H. Clements, Judge.

John Thomas Swink was convicted of rape upon a girl of the age of 9 years, and he appeals.

New trial.

The prisoner, a boy of the age of eighteen years, was tried upon a bill of indictment alleging that he perpetrated the capital felony of rape upon a girl of the age of nine years. G.S. § 14–21. Answering the charge preferred against him by the State, the accused entered two pleas, namely: first, a general plea of not guilty upon the ground that he did not commit the capital felony of rape or any of the lesser offenses included in the charge set forth in the indictment; and, second, a special plea of not guilty upon the ground that he was insane at the time specified in the indictment.

The evidence of the State and that of the prisoner were in sharp conflict with respect to the issue raised by the general plea of not guilty. The State adduced testimony tending to show that the accused raped the prosecuting witness in manner and form as charged in the bill of indictment, and the prisoner replied thereto with evidence indicating that this could not have been so because he was not at the place where the alleged crime was committed at the time of its alleged commission.

The evidence of the State and that of the accused were likewise in substantial conflict in respect to the issue arising upon the prisoner's special plea of not guilty upon the ground of insanity. We refrain from setting forth the conflicting testimony relating to the prisoner's mental condition with particularity because a detailed statement of such evidence is not necessary to an understanding of the only question involved on this appeal. For present purposes, it is sufficient to say that the prisoner presented testimony tending to show that he was mentally irresponsible at the time named in the indictment, and that the State countered with evidence indicating that the accused was mentally accountable at such time.

The jury returned a verdict finding the prisoner "guilty of rape as charged in the bill of indictment", but recommended "that the State of North Carolina not take his life." The trial judge thereupon pronounced sentence of death against the accused, and he appealed.

Lyon & Johnson, and T. W. Albertson, all of High Point, for prisoner, appellant.

Harry M. McMullan, Atty. Gen., and T. W. Bruton, Hughes J. Rhodes and Ralph M. Moody, Asst. Gen., for the State.

ERVIN, Justice.

[1] It is a well settled rule in the administration of criminal justice in this State than an accused is legally insane and exempt from criminal responsibility by reason thereof if he commits an act which would otherwise be punishable as a crime, and at the time of so doing is laboring under such a defect of reason, from disease of the mind, as to be incapable of knowing the nature and quality of the act he is doing, or, if he does know this, incapable of distinguishing between right and wrong in relation to such act. State v. Matthews, 226 N.C. 639, 39 S.E.2d 819; State v. Harris, 223 N.C. 697, 28 S.E.2d 232; State v. Hairston, 222 N.C. 455, 23 S.E.2d 885; State v. Terry 173 N.C. 761, 92 S.E. 154; State v. Cooper, 170 N.C. 719, 81 S.E. 50; State v. English, 164 N.C. 497, 80 S.E. 72; State v. Cloninger, 149 N.C. 567, 63 S.E. 154; State v. Spivey, 132 N.C. 989, 43 S.E. 475; State v. Potts, 100 N.C. 457, 6 S.E. 657; State v. Haywood, 61 N.C. 376; State v. Brandon, 53 N.C. 463.

By his special plea of not guilty upon the ground of insanity, the prisoner invoked this principle for his protection, and put directly in issue for the determination of the jury the question of fact as to whether he was sane or insane in a legal sense at the time mentioned in the indictment. It

has already been pointed out that the testimony of the State and that of the accused concerning this matter were in sharp conflict. The trial judge charged the jury, in substance, that to establish the prisoner's plea of insanity it must be "clearly established" that he did "not know the nature and quality of the act he was doing, or if he did know it, that he did not know he was doing what was wrong." The accused duly preserved an exception to this instruction on the theory that it imposed too high a degree of proof upon him in respect to the defense of insanity.

[2–4] Since soundness of mind is the natural and normal condition of men, every one is presumed to be sane until the contrary is made to appear. This presumption of sanity applies to persons charged with crime, but it is rebuttable. State v. Harris, supra; State v. Cureton, 218 N.C. 491, 11 S.E.2d 469; State v. Bracy, 215 N.C. 248, 1 S.E.2d 891; State v. English, supra; State v. Cloninger, supra; State v. Potts, supra; State v. Starling, 51 N.C. 366. These considerations give rise to the firmly established rule that the burden of proof upon a plea of insanity in a criminal case rests upon the accused who sets it up. But he is not obliged to establish such plea beyond a reasonable doubt. He is merely required to prove his insanity to the satisfaction of the jury. State v. Harris, supra; State v. Stafford, 203 N.C. 601, 166 S.E. 734; State v. Jones, 203 N.C. 374, 166 S.E. 163; State v. Wilson, 197 N.C. 547, 149 S.E. 845; State v. Walker, 193 N.C. 489, 137 S.E. 429; State v. Jones, 191 N.C. 753, 133 S.E. 81; State v. Terry, supra; State v. Potts, supra; State v. Starling, supra.

[5] When the trial judge instructed the jury, in effect, that the prisoner's plea of insanity must be "clearly established," he imposed upon the accused the burden of proving his insanity by a higher degree of proof than that required by law. 14 C.J.S. Clearly, p. 1200, 11 C.J. § 37; Beeler v. People, 58 Colo. 451, 146 P. 762; McEvony v. Rowland, 43 Neb. 97, 61 N.W. 124; People v. Wreden, 59 Cal. 392.

Undoubtedly, the learned judge in the court below fell into this error because of a too literal reliance upon the language used by Lord Chief Justice Tindal in the celebrated English decision known as Macnaughten's Case. See 16 C.J. 100, 22 C.J.S., Criminal Law § 59. The present action is distinguishable from State v. Manning, 221 N.C. 70, 18 S.E.2d 821, where a similar erroneous instruction was given. In Manning's case, however, the trial judge recalled the jury after it had been out a short while and corrected his error. Nothing of this sort happened here.

For the reason given, the prisoner is entitled to a new trial. It is so ordered.

New trial.

POLICE STATE BLUEPRINT?

Mr. TYDINGS. Mr. President, it has become fashionable in some quarters for critics of the District of Columbia crime bill to refer to the provisions on so-called no-knock warrants as a "blueprint for a police state." This claim, Mr. President, merely constitutes more fiction, more emotionalism, evidencing a lack of familiarity with existing law and with the precise proposal of the conferees on S. 2601.

As I have stated many times before, the so-called no-knock provisions in the pending legislation are calculated to be a codification of existing law as sanctioned by the Supreme Court of the United States in the case of *Ker* v. *California*, 374 U.S. 23 (1963), together with an additional protection not afforded under the law at present—namely, a requirement that no-knocking be conducted whenever possible on the basis of court approval only. The conferees have sought to take the no-knocking decision out of the streets and place it in the courts. This is hardly a "blueprint for a police state"; rather, this is a blueprint for a state regulated by a more objective rule of law rather than a rule of men.

Mr. President, I am particularly puzzled by the fact that the junior Senator from New York (Mr. GOODELL) has alined himself with the critics of the conference report provisions on no-knock. I cannot imagine what the grounds for the Senator's criticism may be: the no-knock provisions in the pending conference report, both in terms of the literal language of the statute and in the context of the wealth of restrictive legislative history, these provisions are so much narrower in scope, so much more carefully safeguarded than the New York State no-knock: statute and case law. Section 799 of the New York Code of Criminal Procedure states:

> The officer may break open an outer or inner door or window of a building, or any part of the building, or any thing therein, to execute the warrant, (a) if, after notice of his authority and purpose, he be refused admittance, or (b) without notice of his authority and purpose, if the judge, justice or magistrate issuing the warrant has inserted a direction therein that the officer executing it shall not be required to give such notice. The judge, justice or magistrate may so direct only upon proof under oath, to his satisfaction, that the property sought *may be* easily and quickly destroyed or disposed of, or that danger to the life or limb of the officer or another *may result*. (Emphasis added.)

The leading New York case affirms authority substantially broader than that which is provided expressly and intended in the pending conference report. Mr. President, I refer to the case of People of the State of New York against Anthony De Lago, decided by the highest court of the State of New York, the New York State court of appeals—reported at 16 N.Y. 2d 289 (1965) and printed in the CONGRESSIONAL RECORD of July 20, 1970, at pages 25042 and 25043.

The characterization "blueprint for a police state" is totally unfounded. I have not noticed the emergence of such a police state in any of the United States to date, even though a vast majority of the States expressly authorize no-knocking in case law or by statute. Indeed, I would challenge any man who chose to so characterize—as a police state—the great State of New York.

NO-KNOCK PRECEDENT

It has been charged that the Senate, on the issue of the no-knock provisions, is taking an unprecedented step. This fiction cannot stand up to facts, to the record, plain for all to see: not only do a vast majority of the States clearly permit no-knocking in the limited circumstances set forth in the conference report, not only has this practice been approved by the Supreme Court of the United States—but, also, this very body, the U.S. Senate, approved what was basically the same no-knock provision without a single dissenting vote in S. 2869 in December of 1969 and in the Senate-amended S. 2601 in March of 1970. Indeed the Senate overwhelmingly approved a no-knock provision in S. 3246, the administration's Controlled Dangerous Substances Act, in January of this year.

Mr. President, I would urge my colleagues to desist from this endless rehashing of the same basic issues. The Senate has three times in a single Congress approved no-knock warrants; let us not continue as the expression goes, "beating a dead horse." I trust, moreover, that the crtics of the pending no-knock provision will not occasion the anomaly of rejecting a conference report on the basis of the Senate version—twice approved—of a particular issue.

EXIGENCY

In his impressive, and extensive, remarks of last Friday on the no-knock provisions in the pending conference report, the senior Senator from North Carolina made the intellectual argument that the exigent circumstance which justify no-knocking cannot be known in advance.

Mr. President, as a matter of commonsense, and based on my own experience as a prosecutor, I must take exception once again to the views of my distinguished colleague. The fact is that in perhaps as many as 99 percent of the cases where no-knocking is and should be allowed, the basic facts, the so-called exigent circumstances, are known to the police well in advance of the execution of the warrant.

For example, in a gambling case, if it is known that the prospective defendants regularly use water-soluble paper, that they conduct their operation near a disposal facility, that they have defeated searches previously by immediately and effectively disposing of all evidence upon receiving preentry notice from the police, and that the prospective defendants are aware of the police surveillance and are primed to effect the disposal of the necessary evidence—if these so-called exigent circumstances are known at the time of the execution of the search warrant, they are almost invariably also known at least 1 hour in advance of the execution, in time for the police to apply for court permission to depart from the knock-and-wait rule.

Let me give another example: in a case involving armed robbery, if it is known that the prospective defendant is armed and will shoot it out rather than surrender to the police, if for example he has just shot and killed a police officer in the process of escaping, if his recent conduct in escaping has made it evident that he knows the police are close on his trail—if these so-called exigent circumstances are known at the time of the execution of the arrest warrant, they are almost invariably also known the 1 hour or so in advance, in time for the court to rule on whether complete surprise is warranted and on whether the knock-and-wait rule must be complied with strictly.

Again, Mr. President, I recognize the theoretical appeal of Senator ERVIN's argument. I submit, however, that consideration of concrete, practical examples makes it quite clear that exigency need not be conceived of simply in terms of time.

UNRELIABLE PROPHECY?

Now and then in the course of his prodigious discourse of last Friday, the senior Senator from North Carolina had occasion to decry the apparent slender showing which might serve, or have to serve, as grounds for the issuance of a no-knock warrant. As I have described already, however, just as a substantial quantum of sound information must be and is available in advance for the issuance of an arrest or search warrant; similarly, a substantial quantum of sound information is also usually available in advance—if at all—to enable judicial scrutiny of the appropriateness of no-knocking.

Moreover, if it has not been made clear heretofore, let me stress once again that the Senate conferees intend no mere slender showing as grounds for court-ordered no-knocking. I ask that the critics again consult the relevant passage in the Senate statement of managers, at pages 28 to 29, which states as follows:

Fifthly, the Senate conferees did not recede from their original position that only particular facts, bearing upon any given particular case, may serve as grounds for "no-knocking." The House conferees urged to the contrary that particular facts are unnecessary; they urged, for example, that "no-knocking" would be appropriate in nearly all narcotics and gambling cases, based on the destructibility of the evidence usually involved. The issue was resolved in favor of neutral language, adaptable to either the House or the Senate interpretation; but with the limitation of specific reference to the *Ker* case. Just as the Senate conferees are of the view that the particularity requirement is affirmed in *Ker* and rooted in the Constitution, in like manner the Senate conferees contemplate implicit incorporation of the requirement in the S. 2601 provision.

My remarks in colloquy with the junior Senator from Indiana (Mr. BAYH) at pages 24743 to 24744 of the RECORD of July 16, 1970, should provide further clarification on this point.

VIOLENCE

In the past 6 months or so, since the no-knock issue has become the focus of political controversy, I have been most troubled, Mr. President, by the repeated suggestion that the pending legislation will somehow heighten the level of violence in this community. Critics have suggested that when police officers depart from the knock-and-wait rule, occupants of the premises to be searched will, and perhaps should, respond with a blast from a rifle.

If I believed that the net effect of the conference report would be an increase in shoot-outs with the police—if I did not believe that this legislation will have a net effect of reducing the incidence of such violence in this community—I would immediately align myself in opposition to S. 2601. My support of the conference report, however, reflects my judgment, based in large measure on observation and experience in the world of law enforcement, that the effect of this legislation will not be what the critics have suggested.

It is an observable fact, as well as a matter of commonsense, that the danger of shoot-outs arises more out of strict adherence to the knock-and-wait rule, rather than out of the limited no-knock authority in existing law codified in S. 2601. Shoot-outs, violence, death, occur more frequently when the police signal their presence and purpose, and give a dangerous suspect time to get his weapon—not when the police take the dangerous suspect by surprise before he can arm himself to shoot. We need only reflect on the recent, publicized case of the local bank robber, Billy Austin Bryant. Bryant killed two FBI agents at the door of his wife's apartment after the agents identified themselves as police—and clearly not because he mistook them for burglars. Again, I am convinced that on balance the consequence of limited no-knocking is less violence, not more. And I am equally confident that the police, especially with increased court supervision, will continue to utilize their law enforcement tools so as not to endanger human lives, including their own.

I submit, Mr. President, that the critics of the pending so-called no-knock provisions tend to view the legislation entirely out of context. Realistically, the context in which no-knock warrants are designed to be and will be executed is one narrowly defined by: First, the probable cause showing made to a judge in support of the underlying warrant application, second, the further probable cause showing made to establish the presence of exigent circumstances, and third, not the least of all, the sound judgment of a full-fledged judicial officer. In actual fact the context will be one where last-minute surprise is requisite; and where the greatest danger is that notice will occasion the occupant's locating a weapon and meeting the executing officer with a bullet. In sum, again, the limited no-knock provisions in S. 2601 are calculated to stem local violence, not to foster it.

PRETRIAL RELEASE AND DETENTION

Mr. President, a great deal has been said on the subject of pretrial detention, much of it based upon misinformation. I do not wish to belabor the issue needlessly, but certain facts must be made clear.

Few of the critics of formal pretrial detention have cast their arguments in constitutional terms. Both the junior Senator from Missouri and the junior Senator from New York, who refused to sign the conference report, have conceded that pretrial detention legislation can be drafted to conform to the Constitution. These and other critics have argued, however, that pretrial detention is not needed to protect the community or that the provisions on pretrial detention in the conference report do not include sufficient safeguards to protect the due process rights of the individual.

Mr. President, every Member of the Senate should be made aware that no less than 18 important safeguards are included in the conference version for the protection of the individual. Let me simply list them:

First. Detention eligibility is restricted to persons charged with one of a limited number of specific offenses.

Second. Detention eligibility is further conditioned upon a showing of prior criminal activities, at the very least consisting of a provable pattern of dangerous behavior.

Third. Detention cannot be ordered unless the court holds an adversary hearing.

Fourth. The defendant has the right to counsel at the hearing.

Fifth. The court must find that no condition or combination of conditions of release will reasonably assure the safety of the community.

Sixth. In making such finding, the court must exhaust a searching list of possible release conditions, including third-party custody, restrictions on travel, association, or place of abode, daily narcotics use testing, employment requirement, daytime work release, and so forth.

Seventh. The expansion of the Bail Agency will make third-party custody a realistic and preferred alternative.

Eighth. Use of money bond in dangerousness cases is prohibited.

Ninth. The prosecution must establish that there is a substantial probability of conviction.

Tenth. An immediate and expedited appeal from a detention order is permitted.

Eleventh. Detention orders are limited to a nonrenewable 60-day maximum period, unlike the 6, 10, or 12 months now actually experienced.

Twelfth. The maximum detention period is not tolled by timely defense motions.

Thirteenth. An expedited trial calendar must be provided for all cases involving pretrial detention.

Fourteenth. Both House and Senate statement of managers urge appropriations adequate to provide at least 25 additional assistant U.S. attorneys for the District of Columbia, to assure trial in 60 days.

Fifteenth. A new and expanded Public Defender Service will assure readily available defense counsel to promote speedy trial. Greatly expanded judicial manpower will contribute to the same speedy trial goal.

Sixteenth. Pretrial detainees must be confined apart from convicted persons.

Seventeenth. Liberal access to counsel while in detention is assured.

Eighteenth. Even in detention cases, the defendant may be released for short periods of time under custody to assist counsel in preparation of the defense.

Mr. President, I have outlined some 18 different safeguards which the conference report builds into the pretrial detention procedure which fulfills the promise of due process of law. Yet, critics of the concept of formalized pretrial detention have argued that these safeguards are insufficient, illusory, or meaningless. These arguments are unfounded.

PRETRIAL DETENTION CATEGORIES

Each of the four pretrial detention categories is premised upon factors in addition to the current charge which must be found to exist before a defendant can be ordered detained.

The crimes of violence category requires that the person must be charged with a violent crime and be previously

convicted or awaiting trial with respect to an earlier violent crime.

The narcotics addict must be charged with a violent crime and be shown to have a narcotics addiction which is so costly that the defendant will ordinarily be forced to continue to engage in crime to support it.

The obstructor of justice must be charged with an offense and then engage in provable threats, intimidations, or injuries against witnesses or jurors in order to influence the outcome of his trial.

The dangerous crime category couples the current charge with a required finding by the court that the defendant exhibits a provable pattern of dangerous behavior.

Moreover, the dangerous crime category is narrowly drawn to include only the most serious life-threatening offenses: First, only robbery by force against resistance is meant to be included as a dangerous crime—taking property by stealth or sudden snatching, defined as robbery in the District of Columbia Code, is not within the dangerous crime category; second, burglary and arson are specifically limited to those offenses in the first degree—entering or burning of nonoccupied buildings is excluded; third, forcible rape eliminates consensual and lesser sex crimes; and fourth, narcotics offenses are limited to reach felonious selling or distribution—the professional pusher.

PATTERN OF DANGEROUS BEHAVIOR

A pattern of dangerous behavior not only must be premised upon a prior criminal record of criminal acts of a serious and dangerous nature but upon an identifiable pattern of such acts which suggests that the dangerous activity will be continued into the future. Thus, a series of arrests or of minor offenses will not indicate dangerous behavior and an isolated felony (other than a "dangerous crime" or "crime of violence") will certainly depict no pattern.

EXHAUSTION OF RELEASE CONDITIONS

In every case, detention shall not be ordered unless the court, with the assistance of the Bail Agency and counsel for the prosecution and defense, thoroughly exhausts the available release alternatives and finds that no condition or combination of conditions will reasonably protect the community. A repeated failure of the courts under the Bail Reform Act of 1966 has been the lack of resourcefulness and imagination in devising adequate and minimally restrictive release conditions. See *Banks* v. *United States*, 414 F. 2d 1150 (D.C. Cir. 1969).

The expansion of the Bail Agency's functions to include devising and recommending release plans and serving as a third-party supervisor will contribute to correcting this failure. But the courts and counsel must be held to an even higher standard of resourcefulness in setting release conditions before detention is ordered, and appellate courts should insist that every avenue of adequately supervised release has been explored, including but not limited to the hierarchy of conditions suggested in section 23–1321, before a detention order will be sustained. Compared *Long* v. *United States*, 422 F. 2d 712 (D.C. Cir. 1970).

MEANING OF "DANGEROUSNESS"

Critics have argued that protection of the safety of the community is an unlimited concept, that a court could order detention in order to protect the community from minor offenses, property offenses, nuisances, or, worse, from political dissent. No proponent of pretrial detention has suggested this unwarranted construction. The emphasis must be placed upon the term "safety," and momentary reflection upon the types of crime contained in the dangerous and violent crime categories will disclose that the only concern of the proponents of the conference report on S. 2601 is the protection of the public from the risk of death or serious bodily injury, not from property-related offenses or political disruption.

MEANING OF "SUBSTANTIAL PROBABILITY"

Even after the defendant is found to fall within a detainable category and after the court unavailingly exhausts all release alternatives in order to assure the safety of the community, detention cannot be ordered unless the court finds by a substantial probability that the defendant committed the offense. Critics have argued that the standard of certainty adopted by the conference report departs from due process requirements and has no accepted content.

The law requires different quanta of proof to justify detention depending upon the onerousness of the restraint. Thus, no person may be convicted of crime and subjected to extended incarceration except upon proof beyond a reasonable doubt. But a person may be arrested and detained until he can be brought before a magistrate on proof that rises to only probable cause to believe. And certain stop-and-frisk laws permit brief restraint to search for weapons on merely a reasonable belief.

The substantial probability formulation is not new to the law. In a civil action when a request for a stay pending appeal is made, the movant must show by a "substantial likelihood that he will ultimately prevail on the merits." See *Virginia Petroleum Jobbers Association* v. *F.P.C.*, 259 F. 2d 921 (1958). A similar standard is incorporated in the conference report. It depicts a quantum of proof which is somewhat less than the classic reasonable doubt standard, but is greater than the mere probable cause standard. The judge must be convinced to a substantial certainty that the person before him will be ultimately convicted.

RULES OF EVIDENCE

The critics have further suggested that evidence in the bail process will permit the court to base its findings—particularly with reference to the issue of guilt—upon matters which would never be admissible at trial. This fear is based on fiction.

As is current law and practice, information offered at a bail hearing need not conform to the technical rules of evidence. This does not mean, however, that the Government can build its case for detention solely on evidence which would clearly be inadmissible at trial.

Thus, if the Government by proffer or by witnesses shows nothing more than evidence which was illegally seized, a coerced confession, or an eyewitness identification at an impermissibly suggestive lineup, no court could predict by a substantial probability that the person will be ultimately convicted. All the Government's evidence need not conform to technical rules, but it must be sufficient in the aggregate for a court to make its finding on the issue of guilt.

The required finding that there is a substantial probability that the defendant committed the offense must be translated into a prediction of the likelihood of ultimate conviction in order to pass constitutional muster. Equal protection of the laws would forbid a court to order the detention of a person when the prosecution fails to produce, by proffer or otherwise, probative evidence which will be admissible and sufficient to justify conviction at the trial on the merits. The term "committed the offense" is thus to be understood not in the lay context of having done the act, but in the legal context of being criminally accountable before the law.

THE PREDICTION OF DANGEROUSNESS

In spite of these safeguards, critics of the conference report have urged that it is still impossible to predict future dangerousness.

The objection to permitting judges to make such determinations suggests that there is something novel or unusual and unreliable about predictions within our judicial system and that the pretrial detention plan will unwisely turn the judge into a prognosticator of future behavior. Yet, our system calls on the trial judge to make numerous predictions of future behavior. No one objects to the prediction made in every release under the Bail Reform Act on the question of the likelihood of flight, which is the crime of bail jumping, but he is said to be incapable of predicting other future criminal acts. Yet if a capital offense is charged, the same judge is directed by the Bail Reform Act to take danger to the community into consideration and thus predict the chance of crime on bail. To say that a judge can predict in one of these situations and not in another defies logic.

Further, every time a judge imposes or suspends a sentence or grants or denies probation, he makes a prediction as to future behavior and the possibility of rehabilitation. If a judge can predict reliably and constitutionally in these areas, he can also predict the dangerousness of a defendant before him with equal reliability.

Indeed, based on a person's past conduct and prior criminal record, it is more likely that a judge can predict with greater accuracy the likelihood of a defendant to pose a danger than that he can predict the likelihood of a defendant to flee.

Moreover, by reason of the hearing provided, which is specifically directed to a defendant's dangerousness, we can expect a degree of accuracy as high, if not higher, than in many other areas

where daily predictions are made under our judicial system.

THE LIMITS ON PRETRIAL DETENTION

The revision of the Bail Reform Act of 1966, as contained in the conference report, is proposed not only to permit the courts to detain certain highly dangerous defendants, but to correct the injustices of present bail practice which, in spite of the Bail Reform Act, continue to detain between 30 percent and 40 percent of all arrested persons without a meaningful inquiry into the realistic risks of danger or flight.

There is no denying the fact that over 1,400 persons are today being held in pretrial detention facilities in the District of Columbia, some for over a year awaiting trial.

This practice can no longer be tolerated. It permits an approach to pretrial detention that is both overinclusive and underinclusive in effect.

It is overinclusive because the process is committed solely to the unreviewable discretion of the trial judge's mental processes. As a result, through the lack of procedural safeguards, many persons who should be released are often detained.

It is underinclusive because the hypocrisy of present bail practices does not permit the courts to focus directly, forthrightly, and in adversary proceedings, upon the question of dangerousness. As a result, many persons are being released to commit new crimes while on bail.

In both instances, in addition to being arbitrary, the present practice is totally discriminatory, since it permits the detention of the poor but allows the rich defendant to be released regardless of what may be his greater danger to society.

Yet, critics of the conference report argue that our proposal does not end the hypocrisy of present bail practices. First, it is suggested that there is nothing in the report to preclude a person from being detained beyond the 60-day maximum simply by repeating the detention process with successive detention orders. This reading is completely false. Second, it is urged that the statutory pretrial detention procedure merely supplements and does not replace the sub rosa form of detention through unreachably high money bond. This too is incorrect.

As to the first criticism, Mr. President, the conference report clearly expresses the intent that a detained person's trial must begin within 60 days of arrest or he must be released. Sec. 23–1322(d)(2) requires that upon the expiration of 60 days, if the trial is not in progress, the defendant must be treated under the general release section 23–1321, the entire thrust of which is directed to release and conditions of release.

The court is directed by the statute at the end of 60 days to treat the defendant pursuant to the section entitled "Release in noncapital cases prior to trial," not directed to treat the person under either the release section or the section entitled "Detention prior to trial," as the court may choose. If the 60-day time limit section envisioned continued detention as a possibility, the section would direct the court to treat the person in accordance with section 23–1322 or 23–1323, as well as section 23–1321. The detention sections are not specified for good reason.

It is the clear intention of the report and the intention of the conferees in both Houses, that the detention process cannot be repeated. A similar view was expressed by Deputy Attorney General Kleindienst at the Constitutional Rights Subcommittee hearings.

It has been suggested that the court can extend a detention period by the presently existing high money bond subterfuge. It is a hard fact that many honest and sincere judges have been forced to disobey the literal reading of the Bail Reform Act of 1966 by setting unreachable money bond because they cannot in good conscience close their eyes to the danger which some defendants would pose if released. The pretrial detention provision will afford a visible and protected technique by which these judges may consider dangerousness.

Of course, there may always be a few judges who will bypass statutory procedures and use devious and unreviewable means to achieve the same results. It is impossible to draft legislation which will force all judges to obey the letter and spirit of the law. Hypocrisy cannot be eliminated even by eliminating money bail entirely; as a condition of release unscrupulous judges can as readily impose unreachable nonfinancial conditions as financial ones.

It is the firm intention of your conferees in recommending this bail reform measure that the practice of imposing unreachable money bond or other intentionally unreachable conditions under any circumstances, must stop.

If a judge sets a money bond to assure the appearance of the defendant and the bond proves to be beyond the financial means of the particular defendant, the judge should make an exhaustive search of release conditions which the defendant can meet. With the expansion of the Bail Agency to include supervisory functions, the judge will have an immediately available competent third-party custodian which can supervise a person released on bail as well as, if not better than, any public bail bondsman. In the more difficult cases, more rigorous supervision will be available from community resources such as Offender Rehabilitation project, Bonabond Narcotics Treatment Agency, and Black Man's Development Center.

Prior to the expansion of the Bail Agency, courts often would find the condition of third-party custody to be available only in theory. In reality, there have not been enough custodians to go around. This bill changes that reality. In the future we should expect and demand that our judges will construct plans of release with resourcefulness and imagination. The many release conditions which have been ignored in the past must be utilized in the future.

In the rare case when a judge determines that an unreachable money bond should stand, he should give his reasons why the financial condition imposed, if it could be met, would assure appearance, whereas no other reachable condition would provide the adequate assurance. I am confident that the appellate courts will insist that such a showing be made; in this way, the bail system will not continue to discriminate against persons solely on the basis of their poverty.

Under these circumstances, if an occasional case runs beyond the 60-day limit—which I have been assured will almost never happen—it is inconceivable that a judge will resort to the use of financial conditions, on the dishonest theory of risk of flight, in order to extend a detention which has been premised all along on a theory of dangerousness. It is the clear intent of the conferees that this result not be tolerated.

Mr. President, last Friday the supporters of the President's District of Columbia crime bill completed most of their arguments for the bill. In the statement of Senate managers regarding the bill and in our presentations last week, we spelled out the provisions of the bill and their meaning. I have offered these remarks to clarify the record as to the debate to date.

I see no further need for arguments on our part for the bill. It is a sound bill. It is a constitutional bill. It stands on its own two feet.

Let me warn once again of the delusion and futility inherent in the "end-run strategy" embraced by the opponents of this bill. Some Senators seek to defeat this conference report in hopes of sending another watered-down bill back to the House for its consideration. Do they imagine that the House will not amend any bill we send it to once more include all of the undesirable features the Senate conferees succeeded in deleting from the original House bill in achieving the conference report?

How can they ignore that the House passed this conference report by a vote of 5 to 1 just 1 week ago and passed, by an even wider margin, just a few months ago, the original House bill which the Senate conferees successfully revised and perfected?

Do these critics not recognize that the seniority and influence of the members of the House District Committee will enable them to block action on any bill referred to any other committee in the House on this matter?

Do the proponents of the "end-run strategy" realistically take into account the months and months of further delay their strategy involves?

Mr. President, we need no reminder that Congress has two Houses. We have returned from conference with the other House with a sound, constitutional, and effective bill. The other House made enormous concessions to us in achieving this conference report. Do we really think now that they will make even further concessions because some of our Members do not like some of those which they insisted upon?

The blunt fact is, Mr. President, no matter how much anyone may wish to delude himself about it, that if this conference report fails, there will be no District of Columbia crime legislation in this Congress. Any District of Columbia crime legislation in the future will in all probability have in it every feature this bill contains and perhaps even some of the odious features the Senate con-

ferees eliminated from the House-passed bill in conference.

Let us be frank and realistic. Let us recognize the strategy of the opponents of this bill for what it is: a stall, a dream, a bitter risk for the citizens of the National Capital who are suffering the scourge of the crime lash which is destroying the very basis of this city.

Let us face our responsibilities. Let us promptly ratify this conference report on its merits and get it on to the President for his signature.

Mr. President, I wish to invite the attention of Senators to an editorial published in the Washington Sunday Star of July 19, 1970, printed at page B–1; this editorial in large part affirms the view that I have expressed here today. I ask unanimous consent to have the editorial printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SENATE CASE FOR THE D.C. CRIME BILL

The Senate's climactic debate on the D.C. Crime Bill, which resumes with a full head of steam tomorrow, needs to be viewed in two distinct frames of reference.

The more obvious consideration concerns the merits of the bill. Some 22 senators—and the number probably will grow—believe that certain features of a House-Senate conference agreement on the omnibus anti-crime measure are so odious that they want to scrap the conference report, with the idea of starting anew to salvage parts of it.

The more subtle and more important consideration is, however, that if this move should succeed the result almost certainly would be not a new start, but the end of any significant anti-crime legislation in this session of Congress. In that event, more than a year of hard work, which has produced a wealth of vitally needed new weapons to combat crime and to improve this city's fabric of justice would go down the drain. The price is one which neither the Congress nor the District of Columbia can afford.

That price would not be too high, perhaps if this were actually a bad bill—if the bombastic criticism leveled against it really stood the test of scrutiny. But the rhetoric does not hold up. The bill, in our view, is an acceptable legislative compromise in every major respect. Moreover, its most controversial features—the police no-knock provision and the preventive detention authorization—are both enveloped in a great deal of misunderstanding and confusion. More of that later.

The procedural dilemma which has evolved in the Senate, and which jeopardizes the entire legislation, springs mainly from the immense size and complexity of the bill. To comprehend the problem fully, it is necessary to retrace how that came about.

From the start there has been no dispute over the need to expand and reorganize Washington's archaic court system, to develop a true public defender program, to modernize certain provisions of criminal law and, among other things, to restructure the skeleton-like D.C. Bail Agency. Accordingly, following specific proposals last year by President Nixon, the Senate promptly passed five separate bills, embodying these reforms.

Across Capitol Hill, however, the House District Committee pursued a quite different course—wrapping this maze of legislation, for strategic reasons, into a single omnibus bill. The strategy was clear: The House committee, while dealing with most of the same subjects covered in the Senate bills, favored a harder, more repressive line on many of them. Besides which it desired to add some features of its own—most notably preventive detention—which the Senate had ignored. And the veterans of the House committee reasoned that they would have a much better chance to carry their pet projects in the give-and-take bargaining of a House-Senate conference on the total package than by fragmentation—in which the most controversial items could very likely be lost. However one viewed the merits of their proposals—and we disliked many of them—their strategy, politically speaking, was unimpeachable.

For the ultimate conference agreement, with preventive detention included, is not subject to partial acceptance by the Senate. If the Senate votes it down, the entire package dies. And if the Senate should elect to return the bill to conference to seek changes, Senator Tydings has warned flatly that no further gains could be expected—and that gains already achieved might well be lost. No one, to our knowledge, challenges the validity of that prediction.

Nor does the counter-strategy which is actually developing on the Senate floor, under the usually canny leadership of North Carolina's Senator Sam J. Ervin, seem to us to hold any better prospect of success. In essence, the Ervin appeal is to vote down the conference report, and to send the House two entirely new Senate bills—stripped of the most controversial features. Or, as a final alternative, Ervin says, the two bills might be attached to some House-passed measure already pending in the Senate in an effort to end-run the hard-line leaders of the House.

In the initial debate on this strategy move the other day, Senator Tydings commented, accurately in our judgment, that Ervin was "only kidding himself and kidding the Senate" if he thought his approach could prevail—or that any crime bill could pass Congress this year devoid of preventive detention. In rebuttal, Ervin shouted his unwillingness "to knuckle under to the House"—to "buy a lot of rotten apples in order to get some good ones."

And that, of course, moves to the real crux of the Senate struggle. How rotten, truly, are Ervin's apples? Consider the prime target of dissent—preventive detention.

The issue, on purely constitutional grounds, is a subject of valid argument. The First Congress of this nation, in the first federal bail law, specifically provided that a judge could refuse bail and could jail any suspects accused of a number of specified crimes. In Great Britain, that rule still prevails. Yet we concede, in the context of today, that we have no more idea than does Senator Tydings or Senator Ervin precisely how the Supreme Court might rule on this provision of the D.C. Crime Bill.

But we are entirely convinced that the court should have an opportunity to rule. Present law provides that the only basis for denying bail is whether a criminal defendant is likely to appear for trial—a criterion which in practice is abused day after day under the subterfuge of money bonds set too high for defendants to pay. Yet, under the letter of the law, many defendants accused of the most heinous crimes are supposed to be turned loose, their prior records of criminal activity notwithstanding, even if it is clear to any reasonable person that they are likely to commit further violent crimes. That law ought to be changed. The pending proposal's provisions for due-process hearings, for rights of appeal, for the assurance of trials within 60 days, all envision preventive detention as a last resort, in the gravest of situations. In our view, they also provide ample protection of individual rights.

As to the second dominant controversy, this newspaper holds no brief for the police no-knock provision. We regret its inclusion in the bill. Yet, it is fair to say that a great deal of hypocrisy also surrounds this imbroglio. From the laments last week, one would assume that many senators had never before heard of this proposal. But the truth is that the Senate, only a matter of months ago, approved the proposal without a single vote of dissent. What has happened in the meantime, however, is that this issue has taken on a symbolic status of protest against generalized fears of repressive police actions which has completely overshadowed the substantive points of debate.

In other vital points of controversy, however, as in these two, we believe the Senate conferees have achieved compromises which fully justify the Senate's approval. As one final example, the conference report permits mandatory jail sentences only in the case of second offenders convicted of armed violent crimes. That is surely a minimum protective device for society, which any member of Congress should be able to support. And it is such details, not as yet well publicized, which should occupy the Senate's primary attention this week.

In any bill 400 pages long, extending over the full spectrum of criminal justice in the District of Columbia, a total absence of flaws would be nothing short of miraculous. It is not merely possible, but likely, that instances will arise in which Congress may want to enact refinements later. But the immediate question before the Senate is whether any of these isolated subjects of doubt or disappointment justify a scuttling of the enormous gains of the bill as a whole.

The answer, in our opinion, is a resounding no.

S. 3889—AMENDMENT OF SECTION 14(b) OF THE FEDERAL RESERVE ACT

Mr. SPARKMAN. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 3889.

The PRESIDING OFFICER (Mr. SAXBE) laid before the Senate the amendments of the House of Representatives to the bill (S. 3889) to amend section 14(b) of the Federal Reserve Act, as amended, to extend for 2 years the authority of Federal Reserve banks to purchase U.S. obligations directly from the Treasury, which were in line 5, strike out "1972" and insert "1971". In line 7, strike out "1972" and insert "1971". And amend the title so as to read: "An act to amend section 14(b) of the Federal Reserve Act, as amended, to extend for one year the authority of Federal Reserve banks to purchase United States obligations directly from the Treasury."

Mr. SPARKMAN. Mr. President, I move that the Senate concur in the House amendments.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Alabama.

The motion was agreed to.

THE CON SON ISLAND PRISON

Mr. NELSON. Mr. President, tens of thousands of American lives and billions of American dollars have been invested in a futile war in Vietnam that has divided the Nation with angry dissent and name calling.

It has been argued that monolithic communism is again threatening all of Southeast Asia and the United States, and that it is "patriotic" to support the Thieu-Ky government in Saigon to bring democracy to the South Vietnamese peo-

ple. There is, however, no democracy in Vietnam, and the Thieu- Ky government has no intention of being a democracy.

The Thieu-Ky government is proving to be a repressive government, refusing to tolerate dissent and brutally punishing those who disagree.

Just this month, the newest horror story of repression was published in the Nation's press when former congressional staff member Thomas Harkin disclosed examples of brutality against South Vietnamese "political prisoners" in the Conson Island prison.

While the stories of inhuman beatings and torturing of men and women whose only crime was to disagree with the policies of the South Vietnamese government were new to the national press, they were not new in Appleton, Wis.

On July 27, 1969, nearly 1 year ago, Mark E. Oliva wrote an enterprising expose in the Post-Crescent in Appleton, Wis., telling about acts of brutality and inhumanity in Conson. Unfortunately, his well-documented report, now well substantiated by American officials there who are attempting to disassociate themselves from the oppressive prison system, was not widely circulated.

Oliva and the editors of the Post-Crescent are to be commended for their enterprising leadership in exposing a situation that should and must embarrass this country, because the United States is in the position of financing the Thieu-Ky government and, in the logic of world opinion, is supporting the oppression and brutality at Conson.

I ask unanimous consent that the Post-Crescent article by Mark Oliva be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DETENTION BASED ON SUSPICION: VIETNAM CONCENTRATION CAMP OPERATES WITH U.S. APPROVAL

(By Mark Oliva)

CON SON ISLAND, VIETNAM.—History again is witnessing the horrors of the concentration camp, this time with a helping hand from the United States.

Con Son, the French "Devil's Island of Indochina," now is South Vietnam's barbed-wire home for more than 7,000 Vietnamese who "had to be removed" but couldn't be convicted in a trial.

Long beds, malarial mosquitoes and a host of diseases with no effective medical program, no shelter from the tropical monsoon rains and a diet not much better than silage greet the unfortunates interned in the concentration camps here.

The United States provides both financial and advisory assistance to the Con Son island prison.

On March 1, Con Son housed in excess of 9,000 prisoners. Of these, more than 7,000 were detainees. A detainee is an individual suspected of being a Viet Cong sympathizer or supporter who never has been convicted or tried.

KING OF CON SON

Vietnamese Lt. Col. Nguyen Van Ve, a brash man who illustrates his every point with a swing or sway of his swagger stick, is the commander here. He calls himself the "King of Con Son," and the title fits his power. He has total rule over the island and its prison population.

Lt. Col. Ve explains the "detainee" system simply.

He says his government needs a means to remove the potential or possible enemy from causing or contributing to trouble. When a man is suspected of giving food, shelter or information to the Viet Cong, he cannot be convicted without evidence, according to Lt. Col. Ve.

Instead, he says, these Viet Cong suspects are brought before district security committees. The committee, according to Lt. Col. Ve, does not require evidence, only grounds to believe the individual may be aiding the Viet Cong. The committee then has the power to order the suspect sent to Con Son or one of several other detention centers for a period of six months.

Lt. Col. Ve says this dispenses with the need for a trial, conviction and evidence. He also admits that almost all of the detainees would be acquited for lack of evidence if they were to be tried.

When questioned, Lt. Col. Ve said that he has the authority to detain these prisoners beyond the six-month period based upon his observations, and that very few actually are released after their initial six months' detention.

Our study group's tour of the prison included Camps Six and Seven, the camps that house all but 200 of the detainees.

BARBED WIRE

Each of these camps is surrounded by double fences strung heavily with barbed wire. Within, the camps are divided into many small sections, each also ringed with double fences of heavily-barbed wire. The main sections consist of two 60-foot rows of rough logs, each log five feet long, with the entire row elevated two feet off the ground. Canvas, perforated with holes is stretched about six feet overhead.

These rows of logs serve as bed, home and recreation area for the detainees. They are not allowed to leave the compound at any time. There is no shelter from malarial mosquitoes or monsoons.

At the end of each camp is a small dispensary stocked only with aspirins, salt tablets and anti-malaria pills that are ineffective against the fatal strains of malaria found on the island, according to the U.S. Army doctor accompanying our study group. These dispensaries are staffed with untrained personnel.

On the side of each dispensary is a disciplinary area used for detainees found guilty of even the smallest infraction of prison rules. It, too, is encircled with a double barbed wire fence. Barbed wire also is strung the length and width of the disciplinary area about 16 inches above the ground, with the strand about six inches apart.

Detainees being disciplined are forced to crawl under this layer of barbed wire and lie on their backs for the duration of their sentences, often several days. They are allowed only bread and water.

We were permitted to interview individual prisoners, but Lt. Col. Ve insisted the detainees be interviewed only in the presence of a guard. Detainees interviewed refused to answer questions, apparently in fear that a "wrong" answer, after being reported by the guard, would lead to days and nights under the barbed wire.

It. Col. Ve stated that the detainees come from all walks of life but mainly are farmers from the provinces. He listed the three main ways in which these prisoners come before the security committees:

They are reported by a neighbor as aiding or being sympathetic to the Viet Cong.

All persons in an area are held when an Army commander in the area states someone has been aiding the Viet Cong.

When a village is being force-evacuated and relocated prior to being destroyed to eliminate Viet Cong havens, all persons in the village who resist in any way are brought before the committees.

As with most of the other prisoners on Con Son, according to Lt. Col. Ve, the majority of the detainees continue to be held there.

Basic living conditions in the Con Son concentration camps are extremely bad, but the island's prisoners also are faced with even worse medical problems.

Malaria is the major disease. The island's mosquitoes carry two strains, one which usually is fatal and the other which the victim usually survives, but with his strength sapped. The prison dispensaries are stocked, though inadequately, with chloroquine-primaquine anti-malarial pills. These combat only the non-fatal strain. No preventative for the usually-fatal strain is available to the prisoners.

Con Son's prison population also has severe problems with beriberi and tuberculosis, as well as year-round epidemic levels of diarrhea and dysentery. Almost non-existent latrine and sewage facilities contribute to this.

All the prison dispensaries are staffed by prisoners, mostly captured Viet Cong medics. None has been trained beyond the level attained by a student nurse in the U.S.

ONE DOCTOR

The island has one doctor, a first lieutenant in the Vietnamese Regional and Popular Forces (roughly equivalent to our National Guard). However he treats only the civil servants, national police and military.

A Vietnamese public health nurse also is assigned to Con Son, mainly to treat the non-prisoner population. The nurse makes a monthly visit to each of the seven prison dispensaries.

The government provides air evacuation for members of the non-prisoner population requiring mainland treatment, but prisoners requiring such treatment must wait for the monthly supply boat.

The public health nurse admits that several prisoners have died due to lack of proper medical attention.

In addition to the detainees, Con Son also houses about 2,000 other prisoners including Viet Cong, political, religious and criminal prisoners and military prisoners from the South Vietnamese forces. All these categories have been tried and convicted.

Convicted Viet Cong are considered civil prisoners and are held at Con Son. North Vietnamese prisoners of war are held at another island prison, Phu Quoc. The U.S. is not involved in the operation of Phu Quoc because the South Vietnamese government does not abide by the Geneva prisoner-of-war conventions.

With the exception of 200 detainees, the regular prisoners only are confined in Camps One through Five. Strangely, the convicted prisoners fare much better than the detainees. Camps One through Five consist of the old French prison buildings, and provide adequate though unpleasant shelter.

These prisoners leave the camps each day to go out in work parties. Although some of the prisoners still split rocks, the majority work on fishing teams or on the farms which produce most of the food other than rice which is consumed on the island. The prisoners raise mainly papaya, coconuts, pigs and chickens.

A large number of the sentenced prisoners have attained trustee status and are allowed to live outside the camps. All the prisoners except the detainees are allowed monthly three-day visits with their families, who are taken to the island on the supply boat. A beach home has been set up to house these families.

PRISONER DIET

All the prisoners, detainees included, are on the same diet. The catch of the fishing teams is laid out and salted on tin sheets placed on the streets daily. After a day in the sun, the fish, well-dried, are fed to the prisoners. Prisoners cook the fruits, vegetables and meats raised on the island as well as rice brought in from the mainland. The cooking is done in extremely unsanitary and antiquated outdoor kitchens surviving from French days.

Many of Con Son's political prisoners were sentenced several Vietnamese regimes ago but never were released by succeeding governments, including the current Thieu government.

One prisoner interviewed on death row had been there for 13 years, sentenced for political opposition to the late President Ngo Dinh Diem in the early days of his rule.

Another death row prisoner interviewed stated he has been confined seven years for the same reason, since the latter days of Diem.

A Buddhist monk stated he has served 11 years of a 15-year political sentence, also a Diem victim still on Con Son.

A student monk said he came here three years ago on a one-year sentence, for giving sanctuary to a Viet Cong in a pagoda. He too has been forgotten.

Prisoner interviews also produced some surprising opinions. Many of the regular prisoners from rural Vietnam stated they were not too dissatisfied with their confinement because the prison living conditions were better than those they had experienced in the country side. Other prisoners said they felt relieved to be at Con Son and away from the war.

But no prisoner was willing to say he is happy.

DDT RULED ENVIRONMENTAL POLLUTANT IN WISCONSIN

Mr. NELSON. Mr. President, 18 months ago, one of the landmark cases in environmental protection began in Madison, Wis.

Citizen groups and the environmental defense fund joined forces in a petition asking the State department of natural resources to ban the use of DDT in the State under any circumstances where the pesticide can enter world circulation patterns and further contaminate the biosphere. With EDF, the petitions groups were the Citizens Natural Resources Association of Wisconsin and the Wisconsin Division of the Izaak Walton League.

In the State hearing which began December 1968, the alliance of concerned scientists and lawyers presented extensive testimony outlining the growing pollution of the environment by persistent pesticides in the chlorinated hydrocarbon family.

Dr. Robert W. Risebrough, an environmental scientist at the University of California at Berkeley, stated that the effect of pesticides on man may be very serious. He said that man accumulates 12 parts per million of DDT in his fatty tissues before the body discharges. He said that this is enough to stimulate enzyme production, which acts as a catalyst for bodily processes, such as digestion. Risebrough added that the death of some birds has been traced to enzyme induction by DDT, impairing their ability to reproduce.

Dr. Charles F. Wurster, Jr., an organic chemist at the State University of New York, Stonybrook, testified on the range of the pesticide residues through the world.

Other witnesses have testified that DDT goes into the atmosphere along with evaporating water, builds up to extremely high levels in predator birds and animals, and has caused new insect problems by killing predators that once held those inserts in check.

Dr. Joseph Hickey, a University of Wisconsin wildlife ecologist, said that DDT has been linked to reproduction failures of certain birds, including the eagle, the osprey, and the peregrine falcon. Dr. Hickey and other researchers have traced the presence of pesticide residues to a decrease in weight and thickness of the shells of eggs produced by these birds.

In related testimony, Lucille Stickel, the pesticide research coordinator of the Interior Departments Patuxent Wildlife Research Center, stated that the presence of small quantities of DDT and its derivative DDE in the diets of mallard ducks decreased eggshell thickness, increased egg breakage, and decreased overall reproductive success.

Although the second half of the hearings, held last spring, was billed as the time for the defense against the arguments of the environmentalists, the pesticide industry, which historically has promoted more pesticide use and fought new controls, made a weak defense.

Industry witnesses who were knowledgeable about the environmental impact of pesticides were few and far between. Instead, defense witnesses relied on shopworn repetitions of the past triumphs of DDT and trotted out research from a decade ago which purported to show that the health of pesticide workers was not impaired by constant exposure to the compounds.

In fact, witnesses for the defense often provided the environmentalists with valuable evidence to support their contentions. For example, a Shell Development Co. scientist confirmed the fact that DDT does not remain in the soil, but has a great deal of mobility and persistence which enables it to infiltrate the atmosphere, the waters, and the total environment.

Another witness for the DDT defense, a U.S. Department of Agriculture pesticide official, admitted that his agency relies almost totally on industry claims regarding health and environmental effects.

The initial decision has been made and the Department found DDT to be guilty as an environmental pollutant, which is "contaminating and rendering unclean and impure the air, land and waters of the State and making the same injurious to public health and deleterious to fish, bird and animal life.

I ask unanimous consent that the hearing examiners summary of evidence and proposed ruling be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[Before the State of Wisconsin Department of Natural Resources]

EXAMINER'S SUMMARY OF EVIDENCE AND PROPOSED RULING

(Petition of Citizens Natural Resources Association, Inc., and Wisconsin Division, Izaak Walton League of America, Inc., for a Declaratory Ruling on Use of Dichloro-Diphenyl-Trichloro-Ethane, Commonly Known as DDT, in the State of Wisconsin)

[3-DR-1]

On October 28, 1968, the Citizens Natural Resources Association, Inc., by Frederick L. Ott, Wauwatosa, Wisconsin, and on November 1, 1968, the Izaak Walton League of America, Inc., Wisconsin Division, by J. Michael Borden, Elm Grove, Wisconsin, filed petitions with the Department of Natural Resources requesting a declaratory ruling in respect to the use of Dichloro-Diphenyl-Trichloro-Ethane, commonly known as DDT, in the State of Wisconsin.

The Department issued its Notice of Hearing on November 5, 1968, and held hearing on the matter December 2, 1968, and on days thereafter at Madison, Wisconsin, before Examiner Maurice H. Van Susteren.

APPEARENCES

Petitioners: Citizens Natural Resources Association, Wisconsin Division Izaak Walton League of America, Michigan Audubon Society, Inc., by Paul J. Burbach, Attorney, 710 North Plankinton Avenue, Milwaukee, Wisconsin 53203, and Victor J. Yannacone, Jr., Attorney, of Counsel, P.O. Box 109 — 39 Baker Street, Patchogue, New York 11772.

In support of the petition: Institute of Marine Resources, University of California, Berkeley, California, by Robert W. Risebrough, PhD, Specialist.

Lewis T. Mittness, State Assemblyman, 1st District, Rock County, 730 North Ringold Street, Janesville, Wisconsin 53545.

National Audubon Society, Inc., 1130 Fifth Avenue, New York, New York 10028, by Edward M. Brigham, III, Regional Representative (Michigan, Wisconsin, Iowa, Minnesota, Northern Illinois), Box 125, Atlas, Michigan 48411 (Also President, Michigan Audubon Society, Inc.).

Charles F. Wurster, Jr., PhD, Assistant Professor, Biology Department, State University of New York, Stony Brook, New York 11790.

Lawrence G. Monthey, Asst. Professor, University of Wisconsin, Extension Specialist, Travel-Recreation Industry, Home Address Route 1, Verona, Wisconsin 53593 (As Intervenor in Support).

Wisconsin Resource Conservation Council, by Hugh H. Iltis, PhD, Professor of Botany, Department of Botany, University of Wisconsin, Madison, Wisconsin.

In opposition: Buckley Tree Service and Wisconsin Arborist Association, by Patrick Buckley, 608 East Broadway, Waukesha, Wisconsin 53186.

Egelhoff Tree Service, Inc., by Theodore C. Egelhoff, Secretary, P.O. Box 31, Thiensville, Wisconsin 53092.

Industry Task Force for DDT of the National Agricultural Chemicals Association, 1155 Fifteenth Street, NW., Washington, D.C., by Louis A. McLean, Attorney and Representative, 525 Happ Road, Northfield, Illinois 60093, and by Willard S. Stafford, 204 S. Hamilton Street, Madison, Wisconsin, and by Fredrik S. Waiss, Rm. 2525, 650 California Street, San Francisco, California.

Rudolph F. Lange, 115 Vine Street, Delavan, Wisconsin 53115.

City of West Allis, by John A. Cahill, Superintendent of Forestry, 2406 South 76th Street, West Allis, Wisconsin 53219, (and for self).

Wisconsin Farm Bureau, by William Kas-

akaitas, Legislative Counsel, 801 West Badger Road, Madison, Wisconsin 53711.

Rollins, Inc., by Donald R. McCallum, Attorney, 111 South Fairchild Street, Madison, Wisconsin 53703.

As interests may appear, John Brian Dennis, Student, 2667 Milwaukee Street, Madison, Wisconsin 53704.

Department of Natural Resources, Division of Environmental Protection, by Edward D. Main, Attorney, and Mark W. Johnson, Attorney, 55B Hill Farms State Office Building, P.O. Box 450, Madison, Wisconsin 53701.

James S. Devitt, Senator-Elect, 5151 Root River Parkway, Greenfield, Wisconsin 53228.

E. H. Fischer, PhD, Professor, and Coordinator of Pesticide Use Education, University of Wisconsin, 237 Russell Lab., Madison, Wisconsin 53706.

Illinois Water Pollution and Water Resources Commission, by Carl L. Klein, State Representative, Chairman, 6428 South Francisco Avenue, Chicago, Illinois 60629.

League of Wisconsin Municipalities, by Ed Johnson, Executive Director, 433 West Washington Avenue, Madison, Wisconsin 53703.

Robert B. McConnell, Assistant Attorney General Department of Justice, State Capitol, Madison, Wisconsin 53702 (Either as Public Intervenor, or as a Representative of the Department of Justice, whichever Circuit Court of Dane County may later determine to be proper).

Gaylord Nelson, United States Senator, Senate Office Building, Washington, D.C. 20510.

Steven M. Schur, Assistant Attorney General, 5 North, Capitol Building, Madison, Wisconsin 53702.

George F. Sieker, Assistant Attorney General, 48 North, Capitol Building, Madison, Wisconsin 53702.

Wachtel Tree Science and Service, Inc., by Brookdale Drive, Brookfield, Wisconsin 53228. Brookfield, Wisconsin 53228.

Wisconsin Department of Agriculture, by Arthur R. Kurtz, Administrator, Plant Industry Division, 202B Hill Farms State Office Building, Madison, Wisconsin 53702.

Wisconsin Red Cherry Growers, Inc., by Frank K. Ullsperger, Executive Secretary, P.O. Box 160, Sturgeon Bay, Wisconsin 54235.

Gayle L. Worf, Ph. D., Associate Professor of Pathology, Department of Plant Pathology, 276 Russell Lab., University of Wisconsin, Madison, Wisconsin 53706, and Charles Kovall, Ph. D., Assistant Professor, Department of Entomology, 237 Russell Lab., University of Wisconsin 53706.

U.S. Department of Agriculture, by George A. Robertson, Attorney, U.S. Department of Agriculture, Washington, D.C.

Working Group on Environmental Toxicology, Ecological Research Committee of the Swedish Natural Science Research Council, by S. Goran Lofroth, DSc, Royal University of Stockholm, Radiobiology, Department of the Biochemistry Institute, Box 6409, S–11382, Stockholm, Sweden.

EXAMINER'S SUMMARY OF EVIDENCE

I. Statutes, Rules, Issues

A. The petitioners seek a declaratory ruling under Section 227.06, Wisconsin Statutes, which provides that any interested person may petition for a declaratory ruling with respect to the applicability to any person, property or state of facts of any rule or statute enforced by it. A ruling is sought declaring DDT to be a highly toxic persistent chemical, that its use be restricted in such way that it cannot enter the biosphere and that its existence in the biosphere constitutes pollution.

Section 144.01 (11), Wis. Stats., defines pollution:

"Pollution includes contaminating or rendering unclean or impure the waters of the state, or making the same injurious to public health, harmful for commercial or recreational use, or deleterious to fish, bird, animal or plant life."

Section 144.30 (9), Wis. Stats., defines environmental pollution:

"Environmental pollution means the contaminating or rendering unclean or impure the air, land or waters of the state, or making the same injurious to public health, harmful for commercial or recreational use, or deleterious to fish, bird, animal or plant life."

B. Rules

Under the provisions of Section 144.025 (2)(b), the Department is authorized to adopt rules setting standards of water quality, to protect the public interest which includes the protection of the public health and welfare and the use of the waters for public and private water supplies, the propagation of fish and aquatic life and wildlife and other uses.

In compliance with the above, the Department adopted minimum standards of water quality in Wisconsin Administrative Code section RD 2.02(1)(d):

"Substances in concentrations or combinations which are toxic or harmful to humans shall not be present in amounts found to be of public health significance, nor shall substances be present in amounts, which by bioassay and other appropriate tests, indicate acute or chronic levels harmful to animal, plant or aquatic life."

C. Issues

1. DDT in what concentrations or combinations is toxic or harmful to humans and its presence in water in what amounts can be found to be of public health significance?

2. What amounts of DDT in water, which by bio-assay and other appropriate tests, indicates acute or chronic levels harmful to animals, plant or aquatic life?

3. Is DDT a pollutant within the statutory definitions of "pollution" as found in Sections 144.01(11) and 144.30(9), Wis. Stats.?

II. DDT—Chemical structure

A. Chemical Structure

DDT, a chlorinated hydrocarbon, is chemically described as 1, 1, 1-trichloro-2, 2-bis (para-chlorophenyl) ethane (T–223). It is common practice to refer to DDT and to include in the term its various isomers—DDE and DDD (T–264), and lesser isomers DDA and DDMU. Each of the isomers is further broken down into the ortho, para derivative and the para, para derivative (T–651). Isomers have the same number and kind of atoms but in either different configuration or different locations within the molecule (T–224). What is known as technical DDT is composed of 75% of para, para DDT, 20% ortho, para prime DDT, and 5% is the other isomers (T–2499). DDT is manufactured in the reaction of chloral and monochlorobenzene in the presence of sulfuric acid, the spent sulfuric acid carrying away any monochlorobenzene that remains (T–2498).

DDT has been known since 1870, developed in Switzerland as an insecticide and first used in United States armed forces in 1943. DDT in its pure state is not insecticidal (T–2491).

B. Properties, Uses, and Tests

1. Physical properties

DDT is unique in that it has broad biological activity as an insecticide, it has great chemical stability, high mobility, is relatively insoluble in water and soluble in fat or lipid tissue (T–226, 227). It has a strong tendency to form suspensions more than solutions (T–236). Ability to absorb particulate matter can cause a concentration in water particulates which is thousands of times greater than the concentration in water itself (T–2215). Although it has a finite vapor pressure, and is relatively non-volatile, it will evaporate and recrystallize in air and travel in airborne dust. It also has the power of codistillation (T–237, 238). Half-life is estimated at 10 years (T–234, 279–284), there being no standards of determination (T–282).

However stable DDT is, it does degrade in sunshine and oxygen, first to DDE and then to bis (chlorophenyl) ketone and parachlorobenzoic acid. Since the DDT molecule is a very efficient light absorber, it absorbs the shorter wave lengths of the solar spectrum. Being a diphenyl methane type compound, it readily dissociates to a free radical leading to the formation of DDE. The degrading mechanism of DDE is not clear, but it does degrade faster than DDT. Under sunlight irradiation in sealed Petrie dishes, DDT will degrade approximately 50% in 12 days and it can be expected to be faster in a vapor state in the atmosphere (T–2206–2208).

When applied to crops, it has a period of rapid decline believed to be evaporation, and then degrades at a rate that is logarithmic in time. Exact mechanism of "disappearance" is not known. Half lives of DDT and isomers are reported in crop materials from as little as two days to 40 days—the longer time being the more appropriate. DDT on crops or plants degrades to DDD and DDE and when harvested, the residues go with the plant. DDT very tightly sorbs to soil particles which may be moved deeper into soil or washed away. "Disappearance" of DDT from soil is logarithmic in time and on the average 20% of the amount present at any time "disappears" each year. DDT "degradation" in soil is due to microorganisms amounting to as much as two-thirds of the DDT in a period of two weeks to DDE, DDD, DDA, DBM, DBP and chlorobenzoic acid. Degradation is more rapid under anaerobic conditions (Exh. 157). DDT is extremely insoluble in water, sorbs to particulate matter which collects on bottoms of streams, etc. and tends to degrade under the anaerobic conditions existing. It will degrade in the gut of fish, insects, mammals and birds because of microorganisms found there (T–2209–2217; Exh. 204).

2. Uses

DDT is and has been primarily used as an agricultural pesticide, for the control of Dutch elm disease and for the control of mosquitoes. Slightly over 100,000 lbs. were shipped into Wisconsin in 1968 with approximately 58,000 lbs. used for Dutch elm disease (Exh. 2). Recommendation for mosquito control was withdrawn (in Wisconsin) (T–161–165), as was registration for use on dairy cattle and around dairy barns since a zero tolerance was established for milk in 1954 in the Miller amendment (T–137–138). It is also used as a rodenticide in the control of mice (T–2512–2514) and bats (T–2517).

3. Toxicity

DDT has a wide range toxic effect on agricultural pests (Exh. 2), on the entire phylum Arthropoda (T–265), and is toxic to a degree to fish, birds, mammals, amphibians and reptiles and crustaceans (T–227). It is a Class II pesticide under the Federal Eocnomic Poisons Law (T–157–159). Technical DDT is somewhat more toxic than metabolites DDE and DDD and toxicity varies between species (T–266–267). Pure undiluted DDT is not an insecticide (T–292). It was stipulated that DDT has an effect on the nervous system (T–2581). Effects occuring at very low concentrations are variable but in the case of cockroaches consist of repetitive firing in nerves, resulting in disorientation, running about, tremor overwork and death due to exhaustion (T–2581–2583).

The effect on crustacean nerve is the failure of the nerve axon to transmit impulses (T–2583–2584). The effect on robins is similar to that of the cockroach—quivering, tremor and death due to nerve effect (T–2528–2548). DDT, at acute toxic levels, affects the central nervous system of fish causing instability, difficulty in respiration and sluggishness (Exh. 70). In humans, the first

clinical signs of toxicity are a sensation of burning or itching of the tongue, lips and face (Exh. 70, T–1398), tingling of fingers and toes (T–1442, 1688). With larger doses tremor appears, a sensation of alarm, of fear, marked uneasiness and to convulsions with accidental doses (T–1688).

In rats clinical signs of poisoning are directly correlated with the concentration of DDT in the nervous system, as measured by the concentration in the brain. All parts of the nervous system are affected (Exch. 105). In both animals and man poisoned by DDT it is the nervous system that is affected primarily.

4. Translocation

DDT, because of its chemical/physical properties and once applied to crops, or placed in the atmosphere, moves throughout the environment in water, air, soil and food (Exh. 73, 74, 189, 198–204; T–209–214, 665–670, 723, 728, 831–837, 869, 2204–2205, 2209, 2212, 2215). A minor transport mechanism is in organisms such as birds and fish (T–239). It has been found in filtered air, untreated forest soil, and the fish in the untreated watershed had in some instances 2.4 ppm DDE (T–243–245). DDT and metabolites have been found in oceanic food chains from zoo-plankton to gulls, osprey, cormorant, petrels, pelicans and p. falcons with a corresponding biological concentration at each level of the chain (Exh. 65; T–251–256, 661–662, 715). It was not present in plankton gathered in the 1920's and studied, nor in the body of a penguin of 1911 (T–912). It was not present in 10 samples of human fat collected before the advent of DDT (Exh. 102). DDT is found in bodies of fresh water (Lakes Michigan/Superior) from the muds up through all aquatic organisms (Exh. 71; T–619–620, 1207–1208).

5. Storage/accumulation in organisms

While relatively insoluble in water, DDT is soluble in lipid or fatty tissue (Exh. 102, 109; T–226, 246, 788), and accumulates in such tissue (T–247, 654; Exh. 109).

Unlike birds, DDE levels in mammals appear to reach a plateau with same amount of intake (Exh. 102) and remain at approximately 10–12 ppm in body fat of general population (T–855–856, 1099). A study of 35 men with 11 to 19 years of exposure in a DDT manufacturing plant shows the overall range of storage of isomers and metabolites in body fat ranged from 38 to 647 ppm, with an average of eight ppm for the general population (Exh. 72). There is no evidence of progression of storage of DDT in the general population since 1950–1951 (Exh. 84, 102, 109).

Abstainers from meat stored on the average about half as much DDT and half as much DDE as persons in the general population who stored an average of 4.9 ppm and 6.1 ppm of the two compounds respectively. Agricultural occupational exposure caused marked increase in storage at an average concentration of 17.1 ppm. In a 1958 study applicators stored less than formulators but stored about three times as much DDT/DDE as neighbors with only environmental exposure (Exh. 102). A 1961–1962 study showed no difference in levels of DDT/DDE between general population and persons living in or near areas of extensive agricultural use. Differences in the two studies may be due to decreased use by more than 50% in the test area (Exh. 106). One of the general population samples came from a six-month-old bottle-fed boy whose extractible lipid levels for DDT (6.2 ppm) and DDE (16.5 ppm) were well within range of the general population. In six months he had stored at least the average concentration for the general population (Exh. 106).

Human storage of DDT in England, West Germany, France, and Canada is lower than in the United States. Only in Hungary did the level of DDT storage equal or exceed that of the U.S. (Exh. 106). Sixty-five (65) percent of material is DDE (Exh. 106). Loss of DDT from storage, although always slow—less than 0.3% per day in man—is always more rapid when the storage is high than when it is low. Rate of excretion of DDT changes with concentration (Exh. 109). In general, doubling the dosage will double the storage (Exh. 109). A total of 282 autopsy samples of human abdominal fat tissle obtained at random from patients who had died of a variety of causes, regularly showed concentrations of 0.1 ppm or higher. The sum of DDE plus DDT averaged 10.3 ppm with standard deviation of 7.2 ppm. Nearly 96% of the values ranged from 0.1 to 22.3 ppm. About 72% of the DDT was present as DDE, the rest as DDT itself (Exh. 112). Other studies of volunteers receiving 35 mg per man per day of technical DDT resulted in average storage in fat of 234 ppm and 281 ppm respectively (T–1397). Other studies of 1961 to date give ranges of storage at between 2.3 and 4.0 ppm body fat (T–1397), but the witness was uncertain (T–2653). Concentration of storage depends on dosage and nature of the tissue in which stored and rate of metabolism depends on the concentration. A point or plateau is reached where concentration/storage and rate of metabolism matches ingestion or dosage (T–1406–1407).

All organisms store DDT in varying amounts in fat, muscle, and internal organs (Exh. 82, 70, 103, 105, 106, 119; T–364, 409. 619–650, 975, 1208, 1319).

6. Detection and measurement

The laboratory equipment now most commonly used for the detection and measurement of chlorinated hydrocarbons is what is known as the gas chromatograph. Long U-shaped tubes filled with a powder-like material coated with resin are in a heat cabinet with temperatures around 200° C. A specific amount of a mixture of various chlorinated hydrocarbons in a solvent such as hexane is injected through the system at one end of the column. Some of the compounds come out earlier than others because of their physical-chemical properties and pass through a mechanism known as a detector, the most commonly used being known as an electron capture detector. The detector operates a recorder pen which marks a moving sheet of paper showing the times and amounts of gas which spin off the basic hydrocarbon ring. Peaks are made on the moving paper corresponding to the compound coming off. Because of chemical properties it occasionally happens that two of the compounds may come out at or about the same time, creating one peak or confusing the type of peak. This may happen with a non-polar column known as a DC–200 or an SE30 where compounds known as polychlorinated-biphenyls may come off at the same time as p, p' DDT. The interference is avoided by also using a QF–1 polar column where the retention times of the compounds will be differentiated. Laboratory procedures such as saponification can also be utilized (T–916). There chlorinated hydrocarbons are extracted from the sample provided no matter what it may be through certain laboratory procedures (T–275, 302, 652, 654–656, 675, 705, 723, 728, 819–820, 2220–2223, 2235).

Almost all analytical techniques are based on pesticide manuals of Food and Drug Administration listing techniques and now to verify conclusions (T–711, 922, 2077). There are several techniques and procedures used for confirmation or verification (T–275, 302–303, 2048–2049, 306–307, 313–316, 656–657, 711, 869, 916, 922, 2048–2050, 2069, 2221, 728).

Chlorinated hydrocarbon residues in organisms or samples of other material can be detected and measured in parts per million (ppm) up to .10 ppm in the Schecter-Haller colorimetric method (T–1454, 2047) and with the more sensitive gas chromatograph up to parts per billion (ppb) (T–239, 243, 244, 621–624).

7. Chlorinated hydrocarbons are tested for effects, storage residues by feeding tests (T–918, 971–980, 1044, 1217, 1802), bio-assay (T–889, 918, 2045), in "vitro" (Exh. 138; T–1670) and in "vivo" (Exh. 85, 86; T–322, 327, 1045, 1046, 1670).

III. Enzyme induction

A. Enzymes—Function and Body System Effects

Enzymes are catalysts (T–684, 847), protein in nature, manifested morphologically by an increase in the smooth endoplasmic reticulum of the liver. The production of non-specific hydroxylating enzymes by the microsomal fragment liver cells is a normal function of the liver (T–229, 347, 1044, 1126–1127, 1672–1676). The existence of non-specific enzymes and their production in the liver became evident in 1958 (T–1093). Two major functions of the liver are digestion and detoxification (T–346, 1461, 1673–1676). Enzymes are produced in the liver to hydrolyze or oxidize non-polar substances such as fat and resins to a polar condition and capable of excretion by the kidney (T–681, 1063, 1461, 1673–1676). They have not been isolated in purified form (T–850). They will also hydroxylate both endogenous and exogenous steroids which is a natural physiological process and will themselves disappear when no longer needed (T–683–684, 1044–1046, 1059, 1072, 1074). The enzyme substrate affinity for steroids is much greater than it is for drugs (T–1059) and it has been shown that o, p' DDD stimulates the metabolism of hydrocortisone to 6-Beta hydroxy-cortisone in humans (T–1063, 1104, 1673–1676; Exh. 86). Enhanced steroid metabolism causes compensatory synthesis of more steroid by organisms and raises problems of drug interaction (T–1129, 1674–1678; Exh. 87).

Many drugs, compounds and poisons induce detoxifying enzymes. For an example, while phenobarbitol induces enzymes and is metabolized, a high level of enzymes induced by chlorinated hydrocarbons will decrease its physiological effect (T–687, 1060, 1101, 1128, 1673–1676; Exh. 86). Levels of enzymes induced are directly proportional to the dose and rate (T–2633).

An overall body concentration of one (1) ppm and ten (10) ppm of DDT in the fat—levels slightly below levels found in the human body—causes a significant increase in liver enzymes (T–740, 1044, 1058, 1094, 1099). Five (5) ppm of DDT given to rats for three months caused an increase in enzyme activity in the rat liver and as little as 40 micrograms of DDT given to rats for four (4) weeks caused an increase in the metabolism of several clinically useful drugs, an effect which extended for twelve (12) weeks after the DDT feeding was stopped (T–1058, 1060–1062, 2651; Exh. 87). Liver detoxification mechanisms are less highly developed in human infants than in adults and this is also true of rat infrants (T–2649).

2. Clinical effects

There are no overt pathological changes in body organs at tissue levels of ten (10) ppm (Exh. 72). There are no overt pathological histological changes in rats fed DDT in very low amounts (T–1117). This does not mean, however, that there are no bio-chemical or pharmacologic effects (T–1120–1124). Histologically, no effect is evident except a proliferation of the smooth endoplasmic recticulum of the liver cell following the administration of enzyme-inducing agents. Up to this time this effect has not been considered a pathological one and therefore has no pathological significance. The biochemical significance is a higher enzyme level and the metabolism at a faster rate of steroids and drugs (Exh. 87; T–1127–1128).

Repeated oral doses of DDT to volunteers of approximately 200 times what the general population gets in their diet caused no clinical signs of illness. Dosages of 3.5 and

35 mg., depending on the exact weight of each man, averaged .05 and .5 mg/kg per day and did not produce any clinical illness. It did result, however, in increased storage (T–1394–1395; Exh. 101). Storage in fat of 35 mg per man per day dosages of technical DDT was an average of 234 ppm in one study and 281 in another study (T–1397). Average person diet intake of DDT is .028 mg per man per day on values established for 1964 through 1967 (T-1396). Ten (10) mg/kg produces illness in many people and sixteen (16) mg/kg has frequently produced convulsions (T–1404). Routine clinical examinations and simple laboratory tests of workers with great exposure to DDT failed to show any illness (T–1439, 1446, 1475–1476; Exh. 72) and disorders were looked for which had been produced by moderately larger dosages of DDT in man and in animals (T–1452, 1474–1475). There were no clinical or sub-clinical effects found. Clinical effects were primarily sought. No procedures were utilized to determine subclinical effects of enzyme induction (T-1657–1658). Not only the dosage that ordinary people get but the higher dosages workers get produce no detectable clinical effects (T-2656, 2645). People who have not ingested enormous amounts of DDT have evidenced no manifest clinical symptoms (T-1692).

3. Sub-clinical effects

The principal sub-clinical metabolic effect of DDT is the accelerated degradation of drugs, hormones and endocrines as listed in preceding paragraphs. Hormones such as testosterone, estrogen and progesterone in the human body function in a ratio of parts per billion (ppb) (T-233) and are broken down by liver enzymes (T-347). Other chlorinated hydrocarbons such as polychlorinated biphenyls (PCB) also induce hepatic enzymes with the capacity to hydroxylate steroids. The PCB-induced enzyme produces a different polar metabolite (T-847, 851–852; Exh. 153, 173). PCB is found in almost all organisms throughout the world (Exh. 153, 173, 174).

The degradation of hormones without observable effect on the organism itself by DDT-induced hepatic enzymes is evidenced by what is known as "the thin eggshell phenomenon" in birds. High levels of hepatic enzymes cause a rapid metabolism of the avian estrogen necessary for the laydown of calcium in the medullary bone of birds (T–335, 409, 435, 678–679, 685–686; Exh. 67). An upset in the calcium metabolism of the bird itself results in abnormal brooding behavior and the eating of its own eggs (T–335). Lack of available calcium carbonate results in thin eggshells (T–685–686, 849, 1180, 1193–1205; Exh. 93).

In a controlled feeding study at the Patuxent Wildlife Research Center, Department of the Interior, mallards were fed DDT or metabolites DDD or DDE each separately at 10 ppm or 40 ppm on a dry weight basis. Mallards fed DDE cracked or broke 24% of their eggs, controls 4%, and good eggs produced had shells 13½% thinner than controls. Incubated eggs laid by ducks fed DDE produced less than one-half (½) as many healthy ducklings as did the controls. Both amounts of DDE produced effects of similar magnitude. A "no effect level" was not found and must be lower than the dosages given. Ducks fed p, p' DDT minus the o, p fraction at 25 ppm showed results similar to those produced by DDE at 10 or 40 ppm. DDD fed to ducks at 10 or 40 ppm produced normal eggs and healthy ducklings.

In another experiment, kestrels (sparrowhawks) were fed 2 ppm of DDT plus ⅓ ppm of dieldrin and also 5 ppm DDT plus 1 ppm of dieldrin. Shells of dosed birds were 15% thinner than the controls as were second generations fed diet of the parents (T–1214–1222).

Another experiment with the Japanese quail, was designed to determine what effect toxic levels of DDT fed in the growing period might have on reproduction efficiency later on, and whether resistance to DDT could be developed. The quail were fed 200 ppm until a 50% mortality was reached which was approximately 30 days. Survivors were bred for four (4) generations. There was no effect on reproduction or shell thickness. No residue levels were determined. The Japanese quail is related physiologically to chickens, pheasants and turkeys (T–1802–1806, 1832–1833).

What role, if any, DDT plays in fish physiological processes is unknown. It is unknown whether the principle of hepatic enzyme induction is involved in fish reproduction (T–690–693).

B. Environmental Effects

1. Birds

a. Sea or Waterfowl

The effects shown in the Patuxent studies are similar to those experienced in the environment, resulting in declining raptor and water bird populations. The pelagic Bermuda petrel (T–256), the brown pelican (T–662, 714–715), the peregrine falcon (T–696–700, 1149–1152, 1188–1197; Exh. 93, 98), the forked-tail petrel (T–714), the bald eagle (T–1153, 1197, 1269; Exh. 93), the osprey (T–1158–1159, 1197, 1277; Exh. 90, 93), the coopers hawk (T–1187), the double-crested cormorant (T–1206–1207) and mallards (T–2281) are affected.

b. Upland Birds

The population trend on a nationwide basis so far as small game and upland game birds are concerned, taking into account anticipated population fluctuations, shows a generally healthy upward trend. This is true of cottontails, snowshoe hare and squirrels and birds such as pheasant, quail, grouse and woodcock (T–2271–2273).

c. Omnivores

Golden eagles, red-tailed hawks and the great horned owl are omnivores, feeding on both birds and mammals, and are representative of reasonably stationary populations showing no statistically significant fluctuations in eggshell weight (T–1197; Exh. 93). The golden eagle in the British Isles is also declining and it is shown that in feeding on sheep carrion and fleece is ingesting DDT in combination with dieldrin, both being used as sheep-dips (Exh. 91).

2. Fish

The University of New Hampshire studies on effects of DDT on reproduction of brook trout and their resistance to stress shows that mortality where one gamete came from fish exposed to DDT was in every case higher than instances where neither of the gametes came from a fish exposed to DDT, and in five out of six cases the differences were statistically significant. The stress imposed was starvation and lowered water temperatures and the approach of spawning activity (T–971–976; Exh. 80, 81).

The findings in the New Hampshire study are consistent with the study and field investigation of the New York State Conservation Department, which showed a relatively close relationship between the amount of DDT in lake trout eggs and observed mortality (Exh. 82). Canadian studies establish that when DDT and its metabolites occur in concentrations slightly above 400 ppb in eggs, mortality in the resulting fry ranged from 30% to 90% in the 60-day period following the swim-up stage (Exh. 83). The Wisconsin studies, however, are inconclusive. Data indicated no relationship between pesticide residue levels in eggs and median life span of fry nor pesticide levels in fry and median life span of the fry. Difficulties in the experiment occurred and the experiment design differed also from the New York and New Hampshire studies (Exh. 70, 175).

IV. Effect on nerves

A. Anatomy and Physiology

Exhibit 184 is a simplified diagram of a motornerve cell showing receptor dendrites, the nerve soma or body, the axon and endplate. The axon or transmission part of the nerve cell is composed of a central core surrounded by a plasma membrane called the neurolemma. Next to the neurolemma is a Schwann cell which comprises the myelin sheath. The myelin sheath has openings or channels called the node of Ranvier.

The nurolemma is believed to be a laminated membrane with a lipid molecule interior sandwiched between layers of protein molecules with channels through the membrane. The term "channel" does not refer to an anatomical structure, but only refers to a conceptual pathway (Exh. 182). Between the neurolemma and the cytoplasm is a concentration of potassium ions and on the outside of the membrane is a concentration of sodium ions. The membrane offers resistance to the passage of electrical currents and shows selective permeability to the exchange of the sodium and potassium ions. In the resting cell the inside of the membrane is negative to the outside.

In excitation of the cell, the nerve impulse received by the dendrites and at a certain potential is passed on through the axon. With the decay of the potential due to resistance, sodium ions pass through the membrane to the inside and simultaneously the potassium ions flow outward. Both flows last but a thousandth of a second and at the moment the two effects balance one another the inside of the memberane is slightly positive and the membrane restores ionic balance typical of the resting state. The excitation or nerve impulse passes down the lattice-type membrane by leaking currents through one node of Ranvier to the next node where sodium and potassium ions are exchanged through the neurolemma. The conductance is then not a smooth flow but a whole series of changes in potentials. (Examiner's Note: This is a gross oversimplification of an enormously complex, complicated neurophysiological reaction) (T–2552, 2616; Exh. 179–184).

DDT will increase membrane conductance to potassium or the inactivation of the nerve membrane conductance to sodium or both are inhibited, thereby increasing the negative after potential and its prolongation (Exh. 182). DDT does not simply reduce maximum sodium current, but instead gums open the channels or some of the channels for sodium, resulting in the prolonged action potential and the prolonged action current with an effect similar to veratrine, the alkaloid active ingredient of belladonna (T-2593).

". . . A prolongation of the active state of the nerve means—and coupled with no change in the inactivation process for sodium—means that after one nerve impulse, when the channels become ready to conduct or to open again to conduct a second impulse, and examine or test the potential across the membrane, they will find that according to the potential they should already go again, that is, no further impulse would be necessary to make it fire another signal. This could produce repetitive firing. On the other hand, in other nerves where sodium inactivation takes a longer time, one could simply find that the nerve on reactivating its sodium mechanism finds that the potential, already too high to fire an action potential, and instead would simply remain quiescent. This would product a complete failure of the transmission line or at least intermittent failure. Either of these mechanisms quite clearly and very conclusively could cause tremors and could cause grave disturbances

in terms of the ability of the animal to move or to make motions." (T-2594-2595).

The effects of DDT on nerves involved in the experiments conducted did not wear off during the time course of the experiment. The effects are irreversible (T-2593-2594). There did not seem to be any concentration lower limit of DDT to create the effects shown (T-2591, 2589). In cockroaches, insects and crustaceans, effects occur at very low concentrations and are variable. Effect on the cockroach consisted of repetitive firing on nerves where one impulse applied to the nerve no longer evoked a single message but rather a large volley of messages. The behavior showed disorientation, running about, tremoring, kicking of legs in the air, and death (T-2583). There is a similar effect on robins (T-2595). How DDT reaches the nerves in the body is unknown (T-2607).

It was stipulated that DDT has an effect on the nervous system (T-2581). It is the nervous system that is primarily affected (T-1438), and it does in fact stimulate all parts of the nervous system (T-1679-1680). The earliest subjective clinical sign of DDT poisoning is tingling of fingers and toes, and peculiar tingling about the mouth (T-1442).

B. Environmental Effects

1. Fish

At acutely toxic levels, the chlorinated hydrocarbons damage the central nervous system, causing instability, difficulty in respiration and sluggishness in fish (Exh. 70).

2. Birds

In Hanover, New Hampshire, a study was made of effects of DDT on local birds after the town was sprayed for Dutch elm disease. Ninety-six (96) dead birds had a concentration of about 30 ppm DDT. All birds with tremor had above 30 ppm in the whole bird (T-363-365).

The study conducted at the East Lansing Campus at Michigan State University shows that birds, primarily robins, suffered from extensive tremor and death after the campus had been sprayed with DDT. More than 200 robins and 216 specimens of non-robins, representing about 50 different species were analyzed. It was determined that the amount of DDT in the liver had no correlation with mortality. The brain was considered the best criterion. DDT was found in 99.5% of birds from DDT-sprayed area. No robins with tremor were found that did not have 50 ppm or more DDT. All birds in tremor and dying birds had large concentrations of DDT in the brain (T-2524-2549).

3. Mammals

The giant squid axon fiber is like nerves of higher vertebrates, but unlike them has a very large diameter and is useful in nerve conductance experiments (T-2562). Work done on the squid axon is applicable to nerves of both vertebrates and invertebrates (T-2572, 2583, 2596; Exh. 183). The effect of DDT on nerve conductance would not always be manifest in gross neuromuscular clinical signs and if manifested would not necessarily be the sole cause of the observed clinical signs (T-2615).

The action of DDT in animals is manifested almost entirely through the nervous system with prominent signs of poisoning being muscle tremor, incoordination and convulsions. Concentration of DDT in the brain of rats fed p, p DDT at 200 ppm for 90 days increased during a subsequent 10-day period of partial starvation. Increased concentration of DDT in the brain during starvation was correlated with clinical signs of poisoning. While all parts of the nervous system are affected by DDT the brain is of major importance (Exh. 105).

V. Other effects

A. Hormone Mimicry in Quail and Rats

An experiment designed to determine estrogenic effects resulted in a tripling of the wet weight of the conturnix quail oviduct when injected with 190 mg/kg of o, p DDT. No attempt was made to determine the amount that would cause the effect (T-323, 326). The coturnix is a gallinaceous bird, related physiologically to chickens, pheasants and turkeys (T-1833). Experiments at the University of Wisconsin designed to determine the effect toxic levels of DDT fed in the growing period would have on reproductive efficiency later on, and also whether DDT-resistant birds could be developed, showed no effect at all on coturnix eggshell thickness (T-1802-1806). The nationwide trend so far as small game and upland game birds are concerned shows "a generally healthy upward trend." (T-2272, 2273; Exh. 158, 159).

DDT also increases the uterine wet weight in immature female rats and in ovariectomized adult rats. The physiological significance of this effect is unknown.

B. DDT and Human Pathology

DDT concentrations were determined at autospy in the fat and liver of 271 patients previously exhibiting pathological states of the liver, brain and other tissues and compared with other random autopsy cases. There was a striking lack of correlation between concentrations in the liver and fat in all cases, but a significant correlation between levels in the brain and fat. There was no elevation of concentrations in the presence of brain tumors but a significant increase of the mean p, p' DDE in encephalomalacia and cerebral hemmorrhage. Significant concentrations of p, p' DDE were found in portal "cirrhosis" and highly significant concentrations in carcinoma. Fat concentrations of the various DDT analogs were consistently and significantly elevated in hypertension.

Individuals using pesticides extensively in the home had levels of p, p' DDT and p, p' DDE three to four times higher than those who had used minimal quantities. No conclusions can be drawn on the role of pesticide exposure in the production of the diseases without confirmatory studies to determine whether the diseases caused high DDT levels or vice versa (T-1725-1735; Exh. 119).

OPINION

Clinically observable toxic effects of DDT in humans are obtained only with extremely large dosages by sudden extreme exposure, or of accidental origin. Clinically observable effects are evident injury, illness, loss of body function which directly inconveniences a person at work or play. Toxicity, as the word is ordinarily expressed, is related to dosage which in turn is related to storage.

DDT is ubiquitous. It is found in the atmosphere, soil, water and in food in what might be considered minute amounts. The chemical property of being soluble in lipid or fat tissue results in storage primarily in the body fat and nervous systems of all organisms in all levels of food chains. It is therefore impossible to establish levels, tolerances or concentrations at which DDT is toxic or harmful to human, animal, or aquatic life.

The principle that DDT, being a chlorinated hydrocarbon, induces the production of nonspecific detoxifying hydroxylating hepatic enzymes is well established. The induction of the enzymes is a normal adaptive hepatic process for the detoxification of substances and no definitive pathological effects are observed at present dosages. A high level of induced hepatic hydroxylating enzymes, however, causes a pharmacological biochemical effect in accelerating the metabolism of body steroids and drugs such as barbiturates and nonbarbiturate depressants.

While the exact physiological mechanisms are not known in enzyme induction, it is established by feeding studies that DDT and one or more of its metabolities will by themselves cause a thinning of egg-shells in raptor, pelagic or water-fowl birds. The effect explains the existence of the phenomena in the environment but does not exclude other causative factors, namely diet, illness and other chlorinated hydrocarbons among them being polychlorinated biphenyls. The appearance of the phenomena, however, on two continents simultaneously, would seem to eliminate illness, diet or predator interference as causative factors. Waterfowl and raptors on the top of water and other food chains are suffering decline and insect/worm-eaters are affected whereas gallinaceous birds are not. The differences in dosage reactions can also be explained by well-known order differences in birds.

The effect of DDT in minute amounts on the extremely complex, complicated mammalian nerve system is unknown. Huge dosages of DDT bordering on the accidental will cause gross clinically observable neurological symptoms in humans. It is uncontroverted that DDT has an almost immediate nerve effect on the primitive nerve systems of insects and on the less well-developed nervous systems of other forms of life. It is also uncontroverted that nerve tissue of vertebrates and invertebrates is the same, that DDT has a harmful effect on nerve conductance as shown by experiments on the axons of crustaceans and amphibians, that the effects are irreversible during the duration of the experiments. Clinically observable signs of nerve effects in humans such as tremor disappear upon reduction of dosage. That there are sub-clinical residual effects can only be postulated on mathematical equations and principles worked out in conjunction with nerve conductance experiments on nerve axons of crustaceans and amphibians and shown to be valid in all cases. Taking into consideration the above experiments together with the fact that DDT is used as a rodenticide for mice and bats, the only valid permissible inference is that DDT in small dosages has a harmful residual effect on the mammalian nervous system.

While physiological mechanism causing a reduced reproductive success in fish and a reduced resistance to stress when dosed with fairly high levels of DDT is unknown, the known effects themselves can only be considered harmful ones.

The record is replete with evidence of the economic benefits derived from use of DDT in the control of pests in agriculture and in the control of mosquitoes for both comfort and prevention of disease. Without doubt DDT has provided enormous economic benefits, but economic benefits are not an issue or part of any issue in this case.

RULING

DDT, including one or more of its metabolites in any concentration or in combination with other chemicals at any level, within any tolerances, or in any amounts, is harmful to humans and found to be of public health significance. No concentrations, levels, tolerances or amounts can be established. Chemical properties and characteristics of DDT enable it to be stored or accumulated in the human body and in each trophic level of various food chains, particularly the aquatic, which provides food for human consumption. Its ingestion and dosage therefore cannot be controlled and consequently its storage is uncontrolled. Minute amounts of the chemical, while not producing observable clinical effects, do have biochemical, pharmacological, and neurophysiological effects of public health significance.

No acute or chronic levels of DDT which are harmful to animal or aquatic life can be established. For the reasons above set forth a chronic level may become an acute level. Feeding tests, laboratory experiments and environmental studies establish that DDT or one or more of its analogs is harmful to raptors and waterfowl by interfering with their

reproductive process and in other birds by having a direct neurophysiological effect.

Feeding tests or experiments and environmental studies establish that DDT at chronic low levels is harmful to fish by reducing their resistance to stress.

DDT and its analogs are therefore environmental pollutants within the definitions of Sections 144.01 (11) and 144.30 (9), Wisconsin Statutes, by contaminating and rendering unclean and impure the air, land and waters of the state and making the same injurious to public health and deleterious to fish, bird and animal life.

Dated at Madison, Wisconsin, this 21st day of May, 1970.

CONGRESS CUTS LAST BUDGET OF PRESIDENT JOHNSON

Mr. ALLOTT. Mr. President, yesterday the distinguished majority leader inserted a chart into the CONGRESSIONAL RECORD of July 20, 1970, on page 25036. This chart detailed the reductions effected by Congress on the spending requests contained, in the words of the distinguished majority leader, "in the budget submitted by the administration."

The distinguished majority leader pointed out that, and again, I use his words:

Acting on administration budget requests for the fiscal year just concluded, Congress cut a total of $6.37 billion.

The table inserted by my distinguished colleague described, in his words, "items that were felt to have been unnecessarily bloated by the administration."

Unfortunately, my esteemed colleague neglected to mention that the budget to which he had reference, which he had just inserted in the RECORD, was the budget for fiscal year 1970. This budget was submitted to the Congress at 12 noon on Wednesday, January 15, 1969, and signed by Lyndon B. Johnson, President of the United States. Certainly we should all feel quite proud of our actions with regard to this last budget of the previous Democratic administration.

Of course, in his budget message of January 15, 1969, former President Johnson stated that he had developed a budget which would yield a surplus of $3.414 billion in fiscal 1970. This was based on anticipated revenues of $198.7 billion and anticipated expenditures of $195.3 billion.

President Nixon inherited that budget when he took office, 5 days later, studied it for approximately 2 months, and came up with a revised budget which was announced on April 15, 1969. In essence, his budget cut aggregate expenditures to $192.9 billion with the same figure for aggregate revenues, $198.7 billion. Initially, therefore, the Nixon budget yielded an anticipated surplus of revenues over expenditures of $5.8 billion.

A good deal of discussion has already taken place with regard to the way in which the first session of the 91st Congress addressed itself to discharging its appropriation responsibility in light of the revised Nixon budget.

Taking the narrow issue of appropriations alone, it has been argued that the Congress itself cut the Nixon budget by $7.6 billion in certain areas of governmental appropriations, added roughly $2 billion to other areas of appropriation, for a total aggregated reduction of $5.6 billion.

Not so, says Representative GEORGE H. MAHON'S Joint Committee on Reduction of Federal Expenditures, in its report on the impact of congressional actions and inactions of the 1970 fiscal year Federal budget. As shown in the following table, this Congress cut a $5.9 billion surplus by $46 million.

Mr. President, at this point in my remarks I ask unanimous consent that this table be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

BUDGET SUMMARY—A SUMMARY OF FISCAL YEAR 1970 AND FISCAL YEAR 1969 FEDERAL BUDGETS—REFLECTING CONGRESSIONAL ACTIONS AND INACTIONS AFFECTING THOSE BUDGETS DURING THE 1ST SESSION OF THE 91ST CONGRESS

[In millions of dollars]

Summary totals	Budget authority (obligational and lending authority) (1)	Budget outlays (expenditures and net lending) (2)	Budget receipts (3)	Budget surplus or deficit (4)
Fiscal year 1970:				
Net total budget estimates as submitted Jan. 15, 1969	210,116	195,272	198,686	+3,414
Net total budget estimates as corrected by the new administration	211,412	196,921	198,686	+1,765
Net total budget estimates as corrected and revised to Apr. 15, 1969	205,901	192,899	198,686	+5,787
Net total budget estimates as revised and amended to date	[1] 204,201	[2] 192,885	[2] 198,800	+5,915
Adjustments for interfund and intragovernmental transactions and applicable receipts	+13,714	+13,714	+13,714	
Total gross budget estimates	217,915	206,599	212,514	+5,915
Budget estimates not requiring further action by Congress (previously enacted or permanent)	80,712	114,896	202,712	
Prior year's budget authority		(85,165)		
Current (1970) budget authority	(80,712)	(29,731)		
Budget estimates requiring action by Congress	137,203	91,703	9,802	
Effect of congressional action on budget estimates (net changes) to Dec. 23, 1969:				
House	−3,687	+362	+158	−204
Senate	+2,512	+767	−2,173	−2,940
Enacted	[3] −837	[3] −1,569	−118	+1,451
Effect of congressional inaction on budget estimates (see supporting table No. 3 and part I of supporting table No. 4)	+1,313	+1,232	−265	−1,497
Total net effect of congressional action and inaction, 1st session, 91st Congress	+476	−337	−383	−46
Fiscal year 1969:				
Net total budget estimates as submitted in January	194,620	183,701	186,092	+2,391
Net total budget estimates, as revised	196,030	185,588	186,492	+904
Net total budget estimates, as changed by congressional action	195,568	185,263	186,492	+1,229
Actual net total as enacted by Congress and reported by the Treasury	195,568	184,769	187,843	+3,074

[1] Budget authority estimates have not been revised since the May 20 withdrawal of $1,700,000,000 for the previously proposed social security program.

[2] The summer review of the 1970 budget reflected revised budget outlay estimates at $192,860,000,000 and revised budget receipt estimates at $198,800,000,000. The revised outlay estimates reflect many increases and many offsetting decreases on which full details are not available. Since revised detailed estimates were not transmitted to the Congress, it must be assumed for scorekeeping purposes that the Congress was working with the Apr. 15 budget appropriation and outlay estimates.

[3] Includes the effect of the Labor and Health, Education, and Welfare, and the Foreign Assistance Appropriation bills, on which Congress has not taken final action, in the amounts approved by the committees of conference.

Mr. ALLOTT. Specifically, Congress acted to reduce budget authority by $837 million, reduce budget outlays by $1.569 billion, and reduce budget receipts by $118 million, thus apparently producing a budget surplus of $1.451 billion.

But through congressional inaction on other budget estimates, as the committee pointed out, Congress at the same time added $1.313 billion to authority, $1.232 billion to outlays, and reduced receipts by $265 million, therefore, the total net effect of congressional action and inaction of the first session of the 91st Congress, according to Chairman MAHON'S committee, was to reduce a $5.9 billion surplus by $46 million.

It may be history that the first session of this Congress set new records on the lateness of making appropriations—a history that may find its way into the trivia of the Guinness Book of World Records—but the fact of the matter is that retardation of appropriations has caused budgetary experts to estimate a loss of about $3 billion. The cause was inefficient governmental expenditures because none of the 15 appropriation bills had yet been enacted when the fiscal year began.

Perhaps a comparison with the pace of appropriations bills during the first year of President Eisenhower's first term is in

order. It should be recalled there was a slim Republican majority in both House and Senate in that year, 1953, and Congress adjourned August 4, having passed all appropriations bills.

This year, hopefully, we can match that record. In 1969, however, after the first 6 months, the Democratic-controlled Congress had failed to enact any of the fiscal year 1970 appropriations bills; by September 30, Congress had enacted one bill; by October 31, the total was two; by November 30, it had risen to four. By adjournment time, December 22, 1969, most of the bills had been rushed through by a weary Congress—half a year late.

Just a few weeks ago, the distinguished Representative from Texas, Chairman GEORGE H. MAHON, released his 1971 budget scorekeeping report—Staff Report No. 6. I would like to quote from page 1 of this report which deals with congressional changes up to June 25, 1970, with regard to the budget for fiscal year 1971, the first budget truly reflective of the intents of the new Republican administration.

According to Chairman MAHON:

A. Budget authority for fiscal 1971:

1. House actions to June 25, 1970 on all spending bills—appropriations and legislative—have *increased* the President's requests for fiscal 1971 budget authority by $1,197,277,000.

2. Senate actions to June 25, 1970 on all spending bills—appropriations and legislative—have *increased* the President's budget authority requests for fiscal 1971 by $1,992,529,000.

3. Enactments of spending bills—appropriations and legislative—to June 25, 1970 have *added* $457,584,000 to the President's budget authority requests for fiscal 1971.

B. Budget outlays for fiscal 1971:

1. House actions to June 25, 1970 on all spending bills—appropriations and legislative—have *added* a net of $1,833,363,000 to the President's total estimated outlays for fiscal 1971.

2. Senate actions to June 25, 1970 on all spending bills—appropriations and legislative—have *added* a net of $1,028,852,000 to the President's total estimated outlays for fiscal 1971.

3. Enactments of spending bills—appropriations and legislative—to June 25, 1970 have *added* $465,084,000 to the President's total estimated outlays for fiscal 1971.

Perhaps the action of Defense Secretary Melvin Laird in cutting the Johnson defense budget even before Congress began serious consideration of it, threw my colleagues on the other side of the aisle into such confusion that they have never really understood the fiscal 1970 budget.

Fortunately, we have the reports of the distinguished chairman of the House Appropriations Committee, Mr. MAHON, to place the matter in its proper perspective.

As Mr. MAHON has so straightforwardly pointed out, since January 1970 the Congress has been considering the budget for fiscal year 1971. Fiscal year 1971 begins on July 1, 1970. The Congress has added $465 million to the President's budget so far this year.

Finally, Mr. President, I should like to call attention to an editorial that appeared in this morning's Baltimore Sun entitled "Let's Not Blow It," and request unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S NOT BLOW IT

George P. Schultz, head of the President's new Office of Management and Budget, said that Mr. Nixon's statement on excessive spending by Congress could be boiled down to this: "We've worked so hard to get here, now let's not blow it by doing the ill-considered thing."

The President's statement put the matter this way:

When the federal government's spending actions over an extended period push outlays sharply higher, increased tax rates or inflation inevitably follow. We had such a period in the nineteen-sixties. We have been paying the high price—and higher prices—for that recently.

We must not let that happen again. It need not happen. Responsible government cannot let it happen. This is a time when the taxpayers of the United States will not tolerate irresponsible spending.

Americans surely have learned the futility, indeed, the lunacy, of inflation. The record of the past several years is there for all to see, and the recession of the past few months is painful evidence of the fact that the high price of inflation must be met at some stage. It would be nothing less than folly for Congress now to ignore all of these developments and set off another inflationary spree.

As has been noted in these columns many times, Congress cannot keep raising the government's spending totals above its income level without causing more inflation. It is slow to raise taxes and quick to raise spending. If the decision of Congress is to increase appropriations in such fields as public health and education above the President's recommendations—and this is its prerogative—other approriations must be reduced accordingly.

Some progress has been made in checking inflation and some signs have appeared that the national economy may be moving out of the recessionary period of recent months. As Mr. Schultz said, let's not blow it.

Mr. ALLOTT. Mr. President, I quote the last two paragraphs of the editorial:

As has been noted in these columns many times, Congress cannot keep raising the government's spending totals above its income level without causing more inflation. It is slow to raise taxes and quick to raise spending. If the decision of Congress is to increase appropriations in such fields as public health and education above the President's recommendations—and this is its prerogative—other appropriations must be reduced accordingly.

Some progress has been made in checking inflation and some signs have appeared that the national economy may be moving out of the recessionary period of recent months. As Mr. Schultz said, let's not blow it.

Mr. President, I think this is an obligation of Congress today if we are going to hold the line against inflation. Let us not "blow" it in Congress.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House had passed, without amendment, the bill (S. 3978) to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970

The Senate continued with the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

Mr. ERVIN. Mr. President, the American Bar Association has come out through its committees as being emphatically opposed to provisions embodied in the District of Columbia crime conference report.

I read the report and recommendations of the section of individual rights and responsibilities of the American Bar Association:

REPORT AND RECOMMENDATION OF THE SECTION OF INDIVIDUAL RIGHTS AND RESPONSIBILITIES

RECOMMENDATION

The Section of Individual Rights and Responsibilities recommends adoption of the following Resolution.

Whereas, the House version of S. 2601 contains many provisions of a controversial nature, particularly on the subjects of permissive authority for no-knock searches, preventive detention of those accused of crime and rights of juveniles; and

Whereas, the Chairman of the Senate Judiciary Subcommittee on Constitutional Rights has expressed grave concern that some of the provisions of the House version of S. 2601 would violate provisions of the Constitution of the United States and constitute serious deprivations of individual rights, and the Section of Individual Rights and Responsibilities of the American Bar Association strongly shares such concern; and

Whereas, some of the provisions in the House version of S. 2601 are inconsistent with the Minimum Standards for the Administration of Justice adopted by the House of Delegates of the American Bar Association; and

Whereas, the Senate version of S. 2601, although an improvement over the House version, also has many provisions which raise serious constitutional questions, constitute deprivation of individual rights and involve departures from the Minimum Standards; and

Whereas, the Congressional hearings on the House version of S. 2601 have been wholly inadequate and failed to explore the pertinent constitutional and legal objections and no testimony was presented by representatives of the American Bar Association or other elements of the organized bar on many of the controversial provisions in such legislation;

Resolved, that the American Bar Association—

(a) disapproves the enactment of S. 2601 in its present forms;

(b) recommends that the provisions of S. 2601 regarding court reorganization (Title I, Part A), The Public Defender (Title III) and Transfer to Bureau of Prisons of Certain Facilities (Title V) be treated separately from the criminal law portions of the remaining Titles and that the criminal law portions on such legislation be returned for further hearing and consideration.

REPORT

There is presently pending before a Conference Committee of the United States Senate and the House of Representatives a bill known as S. 2601. There is a House version of this bill and a Senate version of this bill.

The procedural history of the bill is com-

plicated. As originally introduced in July 1969 by the Department of Justice, S. 2601 was announced "D.C. Court Reorganization Bill." It proposed to redistribute the mixed jurisdiction of the Washington courts to conform to the federal state model. It was characterized as containing no substantive changes in criminal law or procedure. It was soon discovered, however, to contain wire tapping, juvenile and other proposals of a highly controversial nature. These provisions were sorted out and introduced in a new bill, S. 2869. Over the period from July through October, these two bills and three others, S. 545 (D.C. Bail Agency); S. 2981 (Juvenile Court Procedure); and S. 2602 (D.C. Public Offender), were passed by the Senate. As is unfortunately sometimes the practice with D.C. legislation, these bills attracted little attention in the Senate. Even as modified from the original Department proposals, the Senate bills were not entirely satisfactory.

The House Committee took no action until January. Then in a short time and with bare lip service to the formalities of hearings, the House passed what suddenly became known as the D.C. Omnibus Crime Bill.

I digress to say it would have been a good name for the bill if they had called it the ominous crime bill instead of the omnibus crime bill.

I continue to read:

For debate, the House version was designated as H.R. 16196. A copy of the bill, excluding the portions dealing with court reorganization, is attached as *Appendix A*. As a formal matter, however, both the House bill and the original Senate bill are designated as S. 2601.

The bill went to a joint conference in the end of March. Indications are that the conference may complete action as early as June 1, which points up the urgency of the Resolution submitted herewith.

The contents of the House bill are as difficult to summarize as is legislative history. It is 439 pages, and has a confusing table of contents. For example, the provisions dealing with "Preventive Detention" are contained under the heading "Codification of Title 23," not a very revealing title. The table of contents does not even refer to the page numbers, which makes it especially difficult to analyze. Among the major objectionable features are:

1. Repressive juvenile court procedures (page 115, et seq.).
2. Extraordinary mandatory sentence provisions (page 301, et seq.).
3. No-knock search authority (page 337, et seq.).
4. Wire tapping (page 344, et seq.).
5. Preventive detention (page 398, et seq.).

Senator Ervin, Chairman of the Senate Subcommittee on Constitutional Rights, has termed the bill "a garbage pail of some of the most repressive, nearsighted, intolerable, unfair and vindicative legislation that the Senate has ever been presented."

Attached as *Appendix B* is a statement by Senator Ervin made in Congress on Tuesday, March 24, 1970, which sets forth some of the defects in the bill and raises concerns which the Section of Individual Rights and Responsibilities shares.

In addition to the major defects pointed up by Senator Ervin, the House bill contains many other controversial and poorly conceived provisions. For example:

In suits for wrongful arrest, the complainant must pay the policeman's attorney's fees, no matter who wins (page 435, et seq.).

Medical tests "or experiments" on anyone found on premises may be conducted by police incident to the search warrant (page 337, et seq.).

In a criminal trial, the defendant may not be acquitted on the ground of insanity unless the insanity is proven by a preponderance of the evidence (page 311, et seq.).

Government interlocutory appeals may be taken during trial upon certification of need by the prosecutor (page 319, et seq.).

"Moot appeals" on issues of law may be taken by the government after trial even if the defendant is acquitted (page 320, et seq.).

Upon a verdict of not guilty by reason of insanity, the defendant is automatically committed to a medical hospital without the need for a showing of present insanity (page 311, et seq.).

Moreover, the proposed legislation conflicts with various of the Standards for the Administration of Criminal Justice adopted by the American Bar Association. For example:

H.R. 16196, provides mandatory minimum sentences, in certain cases as much as twenty years (pages 301–314). Such provisions are inconsistent with the approach and structure set forth in the Standards Relating to Sentencing, Alternatives and Procedures Adopted by the American Bar Association in August, 1968.

The provisions of H.R. 16196 dealing with electronic surveillance (pages 344–358, et seq.) are inconsistent in various respects with the Tentative Draft Relating to the Standards of Electronic Surveillance and even more inconsistent with the Recommendations by the Section of Criminal Law for Amendments of the Tentative Draft Relating to the Standards of Electronic Surveillance.

The provisions dealing with preventive detention (pages 398–418, et seq.) are inconsistent with the Minimum Standards Relating to Pretrial Release. Our Section, pursuant to authority granted by the Board of Governors in October, 1969, has already testified before another Committee of the House setting forth the reasons why preventive detention proposals similar to those contained in H.R. 16196 are inconsistent with the Minimum Standards and are undesirable, and such testimony is available if desired.

The provisions dealing with juvenile procedures (page 115, et seq.) are inconsistent in many respects with the Uniform Juvenile Court Act drafted by the National Conference of Commissioners on Uniform State Laws and approved by the American Bar Association in August, 1968. For example, H.R. 16196 provides that the determination of delinquency shall be made on the basis of the preponderance of the evidence, whereas the Uniform Act provides for such a determination on the basis of proof beyond a reasonable doubt. H.R. 16196 removes juvenile court jurisdiction for any juvenile over sixteen years old charged with certain serious crimes, whereas the Uniform Act retains jurisdiction for juveniles under eighteen.

Mr. President, I digress from reading the report of the American Bar Association Section on Individual Rights and Responsibilities to make this remark. Three days after the House version of this bill was passed by the House of Representatives the Supreme Court held in the case of In re Winship, coming from a State court, that the provision of the bill which authorized the conviction of juveniles on the basis of greater weight of the evidence rather than by evidence satisfying the jury or the court beyond a reasonable doubt was unconstitutional under the due process clause of the Constitution. Notwithstanding that adjudication of the Supreme Court, holding that in criminal cases it is necessary for the prosecution to prove the guilt of a defendant beyond a reasonable doubt from the testimony, the present bill contains a provision declaring a lesser burden of proof in order to imprison people for as much as life under the habitual criminal provision of the act; and it also provides that the burden of proving the guilt of the defendant does not rest upon the prosecution but that the burden of proving the innocence of the defendant rests upon the defendant so that the defendant must be adjudged guilty of being a habitual offender unless he proves by the greater weight of the evidence that he is not a habitual offender.

I have made this statement on the floor of the Senate and nobody who supports the conference report has dared to reply to it nor dared to deny what I say about its contents.

Now, I resume reading the report:

This Report does not by any means try to exhaust the numerous deficiencies in H.R. 16196. There are many more. While the Senate version (S. 2601) is an improvement, many of the deficiencies referred to also exist in the Senate version as well. Unfortunately, the defective provisions of this proposed legislation have been lumped with provisions which are not objected to such as court reorganization. It is regrettable that there was such lumping of the desirable with the defective. At this stage, we are advised that the legislation must be returned in order to eliminate the defective provisions.

I digress to observe that the Section of the American Bar Association on Individual Rights and Responsibilities came to the same conclusion I did about this bill. I phrased it a little differently. I said the Department of Justice was like the apple grower who wanted to sell his rotten applies along with his good apples, so he put his rotten apples in the bottom of the barrel and covered them up with the good apples. That is exactly what this conference report does and that is the reason I have joined 21 other Senators in separating the good apples from the rotten apples.

We propose to ask the Senate—if it does what it should do and rejects this conference report—to pass a bill containing sound provisions and to reject these travesties on justice which we oppose.

Mr. President, instead of reading the remainder of the report I ask unanimous consent that the remainder of the report may be printed in the RECORD.

There being no objection, the remainder of the report was ordered to be printed in the RECORD, as follows:

The matter is of sufficient importance to warrant the attention of the organized bar. Informed observers believe that this legislation if adopted will serve as a prototype for legislation on a national scale. This latter point has been succinctly made by Senator Ervin in a letter to the Chairman of our Section's Committee on Civil Rights and Responsibilities. A copy of that letter is incorporated in this Report as *Appendix C*.

We do not believe that the organized bar can remain silent and not express its views on provisions as significant and sweeping as those under consideration.

Like all thoughtful citizens, we are deeply concerned with problems created by the nation's high crime rate. Society cannot prosper and flourish when its urban centers are beset by crime and are unable to provide essential security and freedom from the devastations of lawlessness. We recognize that every effort must be made to combat crime with all of the resources at our disposal, and we must do more than has been

done until now. At the same time, the individual and constitutional rights of our citizens have been painfully developed in the course of American jurisprudence over the course of years. Lawyers have been foremost in the fight for individual liberties. The remedies we fashion today must not be false to our tradition. They must be consistent with the spirit of liberty and due process which is part of our heritage and which is the basis for our claim to moral leadership in the free world. The proposed legislation in its present form is not consistent with that spirit.

We therefore respectfully urge the adoption of the foregoing Resolution.

Respectfully submitted.

JEROME J. SHESTACK,
Chairman, Section of Individual Rights and Responsibilities.

SUPPLEMENTAL NOTE

The foregoing recommendation was adopted by the Council of the Section on May 4, 1970, with one abstention and no negative votes. The recommendation was presented to the Board of Governors during its May meeting. The Board deferred action, apparently because the Council of the Section of Criminal Law had not yet expressed its views on the subject.

Subsequently, on June 6–7, 1970, the Council of the Section of Criminal Law met and took action which in substance agrees with this Section regarding the objectionable portions of the legislation discussed herein.

Since our Council acted in the matter, proponents of the legislation have argued that the American Bar Association endorse this legislation because of the need to combat the increasing crime problem. Regrettably, that need is not served by lumping desirable legislative provisions with defective and objectionable ones. Frequently in our history, repressive and undesirable riders have been inserted in otherwise beneficial legislation with the objective that the whole package, including the bad, would be enacted for fear of losing or delaying the good. Such an in terrorem approach to enactments is destructive of the legislative process and has been often condemned by thoughtful students of our democratic system.

Mindful of the pressures that have been brought to bear on this issue, it is reassuring to find that the expert and experienced Council of the Section of Criminal Law has disapproved the same provisions which this Section found objectionable. Indeed, that Section has pinpointed even more objectionable provisions than did our Section. We find it significant that after a two day meeting, in which the Council of the Section of Criminal Law heard presentations by proponents of the legislation, the Council of that Section took the following action, inter alia, with respect to H.R. 16196:

Disapproved Section 201–208 (pp. 301–314) dealing with sentencing provisions for certain felonies because of inconsistency with the ABA Standards Relating to Sentencing Alternatives.

Disapproved Section 23–103 (p. 318) relating to availability of the pre-sentence report to the defendant prior to sentence because it is inconsistent with Standards 4.3, 4.4 and 4.5 of the ABA Standards Relating to Sentencing Alternatives.

Disapproved Section 207(5)(d) H.R. 16196 (p. 311) relating to automatic commitment of a defendant acquitted on ground of insanity because it is inconsistent with the decision of the Court of Appeals of the District of Columbia Circuit in *Bolton* v. *U.S.* which requires a due process hearing on the present mental condition of the defendant.

Disapproved Section 207(6)j) H.R. 16196 (p. 311) relating to placing a burden of proof on the defendant to prove insanity because it does not conform to existing law which requires the prosecution to prove the defendant sane beyond a reasonable doubt when the defendant places his sanity in question and produces some evidence to support his defense.

Disapproved Section 23–104(f) relating to detention of a defendant pending an appeal by the prosecution because it is inconsistent with the tentative draft of the Standards Relating to Criminal Appeals.

Disapproved Section 23–112 relating to consecutive sentences because it is inconsistent with Standard 3.4 of the ABA Standards Relating to Sentencing Alternatives.

Disapproved Section 23–521(f)(6) (p. 339) relating to content of search warrants and Section 23–591(c) (p. 366) relating to execution of search warrants without prior notification because of inconsistency with present law. (These are the provisions popularly referred to as "No-knock" provisions.)

Disapproved Section 23–1322 relating to Preventive Detention (p. 398, et seq.) as being inconsistent with the ABA Standards Relating to Pre-Trial Release approved by the House of Delegates of the ABA.

Disapproved Title IV—H.R. 16196 (p. 435) relating to attorney fees in wrongful arrest actions against police because it is against public policy.

The organized bar has a responsibility to make its views known on this subject affecting as it does constitutional law, individual rights, public policy and the desirable Standards for the Administration of Justice. It is to be regretted that so long a time has passed without those views being made known. Yet, on a significant public and legal issue such as this one, it is better that the bar be heard late than not at all.

APPENDIX D. DISSENTING STATEMENT OF BEN R. MILLER*

The Matter of Jurisdictional Conflicts:

This Section, though now almost four years old, has a membership of less than 1700—far less than many of the sections, and particularly less than the Section of Criminal Law. Yet this relatively small section from its very beginning, and increasingy so, has transgressed (in my opinion) on the exclusive or at least primary jurisdiction of many other sections and committees of the Association—as is exemplified by the three currently proposed resolutions. As examples of matters which have been placed on the agenda of this Council from time to time or which have been the subject of committee work and reports, which would at least appear to be more properly, if not exclusively, within the primary jurisdiction of other sections and committees, are these:

1. Infringement on the primary jurisdiction of the Section of Criminal Law:

(1) S. 30 which has passed the Senate. The Omnibus Crime Bill.

(2) Various bills pending in the present House and Senate dealing with pretrial detention—which involves also the interpretation of "The Standards on Pretrial Release" which as you know was drafted by (and presumably matters of interpretation should be first requested of) the Lumbard Committee, or, alternatively, of the Criminal Law Section which has primary jurisdiction to implement the Standards.

(3) The "Chicago Seven" Trial.

(4) Criticism and opposition to the tentative standards on "Electronic Surveillance."

(5) The Bail Reform Bill.

(6) Jury Selection.

(7) Alcoholism and Drug Abuse.

(8) Abortion (as to which the Family Law Section would appear to have collateral jurisdiction).

(9) Rights of Prisoners.

(10) Opposition to Title 2 of S. 917 (now law)—the Safe Streets Bill.

2. Infringement on the primary jurisdiction of the Section of International Law:

(1) The Genocide Treaty.

(2) The Racial Discrimination Treaty.

3. The Judicial Administration Section:

(1) The conduct of Judge Hoffman in the "Chicago Seven" Trial.

(2) The general conduct of the "Chicago Seven" Trial.

(3) Allegations of improper or unethical conduct of judges.

(4) Many of the other matters dealing with Criminal Law would be more properly within the jurisdiction of the Section of Judicial Administration rather than "Individual Rights and Responsibilities."

4. Local Government Law Section:

(1) Housing and Urban Development.

(2) Reapportionment—particularly as pertains to local government.

5. Administrative Law:

(1) Selective Service Law.

(2) Indian Affairs.

6. Labor Law:

(1) Labor unions—discrimination in.

7. Family Law:

(1) Abortion.

(2) S. 2108 and Food Stamp and Family Assistance—the subjects of two of the resolutions proposed for submission at the August annual meeting of the House.

8. Legal Education and Admission to the Bar Section:

(1) The supply of lawyers from minority groups.

(2) Investigation of the Mississippi Law School.

9. Section of Bar Activities:

(1) Bar Association membership requirements.

10. Federal Judiciary Committee: As to which the Judicial Administration Section would appear to have jurisdiction.

I do not mean to imply that the Section of Individual Rights has sought to assert primary jurisdiction in all of these matters which are listed above. It has, however, at one time or another had all of these matters on the agenda, or had committees working on such topics.

I am convinced, there is a serious and immediate need for a full re-evaluation of this Section's jurisdiction; and for the promulgation of specific and detailed ground rules as to the Section's permitted activities and the procedure it should follow both before and after Section activity.

My Dissent on the Substantive Issues Presented By the Three Proposed Resolutions:

A. With Respect to S. 2108, on Extending Family Planning Service in Population Research Activities: And With Respect to the Resolution Endorsing Food Stamp and Family Assistance Legislation.

A distinguished member of this Association and of this Section advised the Chairman of this Section by letter dated May 7, 1970, in part as follows:

"The section now appears to me as an unfortunate example of what I consider almost a fad among American lawyers, particularly in the eastern part of the nation, to convert bar associations into agencies of social reform or public charity on the mistaken theory that such is a peculiar responsibility of the legal profession.

"Frankly, I see little more reason for bar associations to barge into this sort of activity than medical or engineering associations, scientific associations, school teacher unions, etc. The matter of relieving hunger and so on is, in my opinion, one for charitable associations, governments, churches, etc., but

*Chairman's Note: On June 2, 1970, Mr. Miller sent the Chairman a letter opposing the foregoing three resolutions. Actually, in the case of two of the resolutions, Mr. Miller is recorded as voting in favor of them at the Council meeting and as abstaining as to the other. However, since we favor airing dissenting views, we include Mr. Miller's statement, although he did not follow the standard ABA procedures for presenting minority reports.

not for bar associations; and the connection between the law profession and all this is too thin to justify burdening an already busy group with additional responsibilities."

I, too, received a copy of this letter of May 7th which was subsequent to the discussion of these two proposed resolutions by members of the Council of this Section at the meeting it held on May 4, 1970. At the moment I do not recall whether at that Council meeting I abstained on these two particular resolutions or dissented at the time, but in any event, my serious doubts as to this Section taking any action with respect to the subject matter of these first two resolutions were increased by such expressions, and particularly by the statement in that letter of May 7th, that "I do not intend to renew my membership in the Section." Accordingly, I oppose these two particular resolutions by this Section, and dissent to their approval by either the Council or the Section.

B. With Respect to S. 2601 or S. 2869 and the House Version [H.R. 16196] (The District of Columbia Crime Bill):

Both S. 2601 and S. 2869 relate to criminal law and procedure in the District of Columbia. But S. 2869 is the Senate version of the criminal law provisions which appear in H.R. 16196, the House version of the D.C. Crime Bill. Both the House and Senate District Committees diligently studied the crime problem in the nation's capital, holding 44 days of hearings on these proposals.

Every one or certainly virtually every one, of the alleged controversial criminal law provisions, such as pretrial detention, no-knock and local wiretapping were individually and thoroughly debated on the Floor of the House and overwhelmingly approved by the House, March 19, 1970.

The Bar Association of the District of Columbia, further, spent considerable time and energy reviewing and reporting on the criminal law sections of this District of Columbia Crime Bill. A referendum was held by the District of Columbia Bar Association in February 1970 on the more important criminal law provisions in the Bill. This referendum not only stated succinctly the specific significant provisions but stated fully and clearly the arguments for and the arguments against each particular provision on which the referendum was taken. Over 1400 members of the District of Columbia Bar Association voted. The referendum fully supported most of the criminal law provisions in the Bill including the no-knock provision and the local wiretapping section.

After the House and Senate passed different versions of this particular District of Columbia Crime Bill, a Criminal Law and Procedures Committee of the Bar Association of the District of Columbia spent considerable time comparing the differences in the Bills and making recommendations. As a result of that study and with the approval of the Executive Council of that Association, a letter was sent to all House and Senate conferees stating that Association's position on the differences in the Bill.

Great weight should be attached to the fact that that Bar Association [of the District of Columbia], the organization of lawyers most familiar with the particular problems of the District of Columbia, after carefully studying the Bills, supported almost all of the criminal law provisions therein.

These are among the specific positions taken by or on behalf of the Bar Association of the District of Columbia:

1. Approved the no-knock provisions which, despite misconstruction of it by certain segments of the press and by certain critics of the bill, merely codifies the case law on the subject so as to enable the police to know what the law on that point is without having to guess. (The only new "law" embodied in the no-knock provision is in fact the imposition of a limitation on the police which does not exist under the case law today; for it would restrict their present discretion to enter without knocking by requiring that when the exigent circumstances are known in advance, they secure prior judicial approval for such an entry).

2. Approved the wiretapping and electronic surveillance provisions except that Association recommended abortion be deleted from the list of crimes for which a wiretap could be obtained.

3. Approved provisions permitting impeachment of a defendant or witness by a prior but not remote conviction if it reflected on his honesty or veracity. (Here, again, this is but clarification of the existing case law in the District, by virtue of the Gordon and Luck line of cases).

4. Approved discretionary triple penalties for persons convicted for the third time for the same offense.

5. Approved discretionary life sentences of those convicted of a third felony, if the history of the person and nature of his criminal conduct indicates that a life sentence will best serve the public's interest.

6. Approved the provision that it is neither justifiable nor excusable to use force to resist any arrest, even one *subsequently* ruled unlawful.

7. Approved giving appeal by the government of certain in-trial orders, comparable to the right of the defendants to appeal such in-trial orders; and that rather than a mistrial being required during such an in-trial appeal by the government, the trial would be suspended.

8. Approved granting the government the same right as the defense to take depositions of potentially unavailable witnesses.

9. Approved the provision that all sentences would run consecutively *unless* the sentencing judge provides to the contrary.

10. Approved granting the police officer executing a search warrant the authority to seize evidence not listed in the warrant but which he discovered in the course of the search.

11. Approved permitting a police officer to arrest a person without a warrant whom he has probable cause to believe has committed or is committing an offense in his presence.

12. Approved authorizing a private citizen to arrest, or assist in arresting, a person committing a crime in his presence.

With respect to the furor which has been created concerning the "pre-trial" or "preventive detention" provisions in this District of Columbia Crime Bill, and those in S. 30 (the Organized Crime Bill), these provisions would create even less rather than greater, infringement on the "rights" of the recidivist accused of crime than exists in the states and other great cities of our nation today. For in most if not all of the courts of the states the dangerous criminal and the recidivist who commits further crime if released pending trial (to secure funds for his defense, and to secure the drugs he craves if he is an addict, for examples) are "preventively detained" through the medium of prohibitive bail and without all the safeguards and protection contained in the District of Columbia Crime Bill or in S. 30—the Organized Crime Bill. For not only must there be an adversary hearing, but the one so detained must be actually brought to trial within 60 days (unless further delay is occasioned by his own counsel) or else freed.

Although critics have challenged the constitutionality of pretrial detention, the Attorney General of the United States among many others, has in my opinion, answered all such arguments.[1] In any event it is highly presumptious of this Section, with its lack of expertise in criminal law, to substitute its judgment of constitutionality for that of the Attorney General, the majority of the Senate Judiciary Committee, as well as the Senate and the House which each passed overwhelmingly a District of Columbia Crime Bill.

England, the source of our common law, has always had and still has "pre-trial detention".

Moreover, most if not all of our states' coroners always have had the power and authority for "preventively detaining" those they consider dangerous to society pending a hearing to determine that fact and upon such determination there may be commitment to an institution often far more forbidding than our penitentiaries; yet no one has seriously questioned the constitutionality or propriety of coroners "preventively detaining" on suspicion of dangerous insanity pending the trial for commitment to an institution. And in our rural sections even today coroners may be laymen rather than medical experts, yet every day those who in their opinion are "dangerous" to the community because of mental aberrations are "preventively detained." The District of Columbia Crime Bill would allow a legal expert—a judge (before whom the particular defendants may even have appeared on repeated charges of crimes of violence) to make a finding of "dangerous to the community" but *only* after an adversary hearing, only for a relatively short period of time pending a prompt trial, and with his finding of dangerous itself subject to review; and with the defendant fully enabled to assist his attorney in preparing for trial.

Finally, critics of the District of Columbia Crime Bill say it should not be enacted because it will become a model for similar legislation on a nationwide scale. If this experiment in new techniques to combat what is either the first or the second most serious crisis in our country (the crime explosion) demonstrates its effectiveness; and its provisions (as initially enacted or as modified as a result of experience under it) are shown to have corrected at least to some extent the imbalance presently favoring the rights of those accused of crime over the rights of the public to be protected from crime, I would hope it *would* be followed on a nationwide scale.

Everyone talks of crime; and contradictory measures to solve the problem and contradictory statistics concerning the problem are offered. The District of Columbia Crime Bill, applicable to one of our great cities, supported by *its* bar association and *its* governing authority, offers a unique opportunity to obtain valuable empirical facts.

For all the reasons I have stated in this dissent, I strongly do dissent to the approval of any of the three resolutions to be submitted to the House of Delegates by the Section of Individual Rights and Responsibilities; and if in the interim before the meeting of the House this Section should also propose a resolution urging opposition to S. 30 (the Organized Crime Bill), I likewise dissent and for the reasons herein stated.

Response to Mr. Miller

At the Council meeting where the foregoing Resolutions were discussed, Mr. Miller did not raise jurisdictional question or substantive objection. He is recorded as voting in favor of two of the Resolutions and abstaining on the third.

It is regrettable that Mr. Miller should use this occasion for an attack on the Section. Fortunately, his views do not reflect those of any member of the Council and do not, we believe, reflect the views of our membership which is well satisfied with the direction of our activities.

The so-called jurisdictional points now raised by Mr. Miller are not well taken. The Criminal Law Section has not objected to our dealing with S. 2601 or S. 30; they have welcomed our interest and we theirs, and, in fact, we share the same views, as our Reports make clear.

As the House knows, many subjects often

[1] "Bail Reform and the Constitutionality of Pre-Trial Detention," John N. Mitchell, 55 Va. L.R., No. 7, Nov., 1969, pps. 1223–42.

fall within the jurisdiction of more than one Section. For example, at the 1968 mid-year meeting of the House, the Section on Administrative Law introduced a Resolution dealing with immigration matters which could just as well have been initiated by the Section of Judicial Administration. At the same session, the Section on Real Property, Probate and Trust Law proposed a Resolution on new administrative procedures which might just as well have been introduced by the Section of Administrative Law. Numerous other examples can be cited. This Section, like other Sections, addresses itself to matters it considers within the scope of its interest, establishes liaison with other Sections where warranted and acts in good faith to carry out its objectives.

With respect to the merits of the Resolutions, Mr. Miller does not take up the merits of two of the Resolutions and discusses only H.R. 16196 (S. 2601). He raises two points. Mr. Miller's first point here is that most of the provisions of the bill were supported in a referendum conducted by the District of Columbia Bar Association. Mr. Miller neglects to note that: (1) the vote was taken not in any meeting but in a mail ballot; (2) it has been pointed out that most of those who replied were not residents of the District of Columbia and were not experienced in the criminal justice field; (3) even so, the vote was very close and some provisions were disapproved; and (4) the members voting were not given a copy of the proposed bill to examine. We believe that the judgment of our Council and the Council of the Section on Criminal Law, which gave this matter considerable study before reaching their conclusions, is sound.

Mr. Miller's second point deals with preventive detention. The Board of Governors, at its meeting of October, 1969, authorized this Section to testify against pending preventive detention proposals to the extent they were inconsisent with the ABA Minimum Standards. That position has already been presented to Congressional Committees by the Section on behalf of the Section. To better understand the failings in current preventive detention proposals, we are attaching as *Appendix E* a copy of such testimony presented by this Section on behalf of the Association. It fully answers the few points raised by Mr. Miller.

JEROME J. SHESTACK,
Chairman.

Mr. ERVIN. Mr. President, I also call to the attention of the Senate, so they may know before they vote on this matter, that another section of the American Bar Association, the section on criminal law of the American Bar Association, condemns the provisions which are incorporated in this bill. I ask unanimous consent that the recommendations and report of the section of criminal law of the American Bar Association be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

AMERICAN BAR ASSOCIATION: SECTION OF CRIMINAL LAW

Recommendations on H.R. 16196 (91st Congress, 2d session), entitled: "A Bill to reorganize the courts of the District of Columbia, to revise the procedures for handling juveniles in the District of Columbia, to codify title 23 of the District of Columbia Code, and for other purposes."

Whereas, there is pending in Conference Committee in the Congress H.R. 16196, and

Whereas, a majority of the Council of the Section of Criminal Law of the ABA believe that this proposed legislation contains certain provisions relating to criminal law and procedure which involve policy of a national dimension and are not simply related to the problems of criminal justice in the District of Columbia, and

Whereas, a number of these provisions are unacceptable to a majority of the Council in their present form for reasons of policy and law or because they are inconsistent with certain Standards of Criminal Justice previously adopted by the Council and the ABA, and

Whereas, the Council desires to assist the Congress to improve the administration of criminal justice in the District of Columbia as a model for the nation consistent with Constitutional requirements and the policies embodied in the Standards of Criminal Justice previously adopted by the ABA,

Now therefore be it resolved: that the Board of Governors and/or the House of Delegates of the ABA recommend to the Congress the following:

1. That No. 14–305 (b) of Title I (p. 184, H.R. 16196) be stricken and that there be substituted in its place the language of Sec. 203 (4), Title II, of S. 2601 P.S. 4524 as amended to incorporate the holding of the Court of Appeals of the District of Columbia Circuit in *Luck v. U.S.* 348 Fed. 2d 763 (1965).

2. That Sec. 201 of Title II (beg. p. 301, H.R. 16196) be stricken and that there be substituted in its place a provision incorporating Standards 2.5(b) and 3.1 (c) of the ABA Standards Relating to Sentencing Alternatives which have been approved by the ABA.

3. That sections 204 and 205 of Title II (beg. p. 304, H.R. 16196) be stricken and that there be substituted in their place provisions incorporating the ABA Standards Relating to Sentencing Alternatives which have been approved by the ABA.

4. That Sec. 207 (5) (d) of Title II (H.R. 16196) be stricken and that there be substituted in its place a provision consistent with the relevant holding of the Court of Appeals for the District of Columbia Circuit in *Bolton v. Harris*, 395 Fed. 2d 642.

5. That Sec. 207 (6) (j) of Title II (p. 309, H.R. 16196) be stricken.

6. That Sec. 23–103 of Title II (p. 318, H.R. 16196) be amended by striking the words beginning "may disclose . . ." on line 11, p. 318 and ending "in the case," on line 14, p. 318, inclusive, and substituting in their place language incorporating Standards 4.3, 4.4 and 4.5 of the ABA Standards Relating to Sentencing Alternatives which have been approved by the ABA.

7. That No. 23–112 of Title II (p. 330, H.R. 16196) be stricken and that there be substituted in its place a provision incorporating Standard 3–4 of the ABA Standards Relating to Sentencing Alternatives which have been approved by the ABA.

8. That Sec. 23–521(f)(6) of Title II (p. 339, H.R. 16196) be stricken and that there be substituted in its place the language of Sec. 23–522(c)(2) of S. 2601, as amended.

9. That Sec. 23–591(c) of Title II (p. 366, H.R. 16196) be stricken and that there be substituted in its place the language of Sec. 23–524(a) of S. 2601, as amended.

10. That the provisions of Sec. 23–522(c)(2) and Sec. 23–524(a) of S. 2601, as amended, be included in H.R. 16196 with regard to arrests as well as searches.

11. That sections 23–541 to 23–544 of Title II (beg. p. 344, H.R. 16196) be stricken and that there be substituted in their place provisions incorporating the amendments to the tentative draft of the ABA Standards Relating to Electronic Surveillance recommended by the Council of the Section of Criminal Law and submitted to the House of Delegates of the ABA. (Submitted as report with recommendation June 17, 1970)

12. That Sec. 23–1322 of Title II (p. 402, H.R. 16196) be stricken and that there be substituted in its place a provision incorporating the ABA Standards on Pretrial Release which have been approved by the ABA.

13. That Title IV of H.R. 16196 be stricken.

And be it further resolved: that the Section of Criminal Law be authorized by the Board of Governors and/or the House of Delegates of the ABA to communicate these recommendations to the appropriate Committees of Congress on behalf of the ABA.

REPORT

Provisions on which the Council took no action on the ground that they dealt with Court reorganization in the District of Columbia or with institutions or legal provisions peculiarly relating to the District of Columbia.

1. Title I of H.R. 16196 (pages 1–300) dealing with Court reorganization and other substantive and procedural provisions particularly relating to the District of Columbia.

2. Title III (pages 428–436, H.R. 16196) relating to the Public Defender of the District of Columbia.

3. Title V (pages 436–438, H.R. 16196) relating to transfer of certain prison facilities of the District of Columbia.

4. Title VI (p. 438, H.R. 16196) relating to abolition of Commission to revise the Penal Code of the District of Columbia:

(b) Provisions on which the Council took action.

1. Title I—No. 14–305(b) H.R. 16196 (p. 184) relating to use of prior conviction to impeach witness. The Council disapproved this provision and instead approved S. 2601, as amended, Title II, Sec. 203(4) with the recommendation that S. 2601 be amended to include the right of the Court to have discretion to pass upon the use of a prior record of conviction as contained in the decision of the Court of Appeals for the District of Columbia Circuit in *Luck v. U.S.*

2. Title II—Criminal Law and Procedure (H.R. 16196):

(a) Sections 201, 204 and 256, relating to sentencing of multiple offenders and sentencing provisions for certain felonies.

(1) The Council disapproved these provisions on the ground they were inconsistent with the ABA Standards relating to sentencing alternatives and recommended amendments incorporating the ABA Standards. They lack clarity and specific criteria helpful to a sentencing judge and also provide for mandatory imprisonment which is inconsistent with correctional policies recommended by most experts in the field of corrections.

(b) No. 23–103 (p. 318) relating to availability of pre-sentence report to defendant prior to sentence. The Council disapproved this section on the ground it was inconsistent with Standards 4.3, 4.4 and 4.5 of the ABA Standards Relating to Sentencing Alternatives and Procedures which have been approved by the House of Delegates of the ABA and recommended amendments incorporating the ABA Standards.

(c) #207 (5(d) H.R. 16196 (p. 311) relating to automatic commitment of a defendant acquitted on ground of insanity. The Council disapproved this provision and recommended it be amended to be consistent with the decision of the Court of Appeals of the District of Columbia Circuit in *Bolton* v. *U.S.* 395 Fed. 2d 642 which requires a due process hearing on the present mental condition of the defendant.

(d) #207(6)(j) H.R. 16196 (p. 311) relating to placing a burden of proof on the defendant to prove insanity. The Council disapproved this provision and recommended that it be amended to conform to existing law which requires the prosecution to prove the defendant sane beyond a reasonable doubt when the defendant places his sanity in question and produces some evidence to support his defense.

(e) #23–112 relating to consecutive sentences. The Council disapproved this section on the ground it is inconsistent with Standard 3.4 of the ABA Standards Relating to Sentencing Alternatives which have been approved by the House of Delegates of the ABA

and recommended an amendment incorporating the ABA Standards.

(f) #23–521(f)(6) (p. 339) relating to content of search warrants and #23–591(c) (p. 366) relating to execution of search warrants without prior notification. These are the provisions popularly referred to as "No-knock" provisions. The Council disapproved these provisions in H.R. 16196 and approved instead Sec. 23–522(c)(2) and Sec. 23–524(a) of S. 2601, as amended, on the ground that these provisions of the Senate Bill are more consistent with present law. The action of the Council would apply to arrests in the same manner.

(g) #23–541 to #23–544 incl. relating to wire interceptions and interceptions of oral communications. The Council disapproved these sections on the ground that they were inconsistent with the Supreme Court decisions in the *Berger, Katz, and Alderman* cases (*Berger* v. *New York*, 388 U.S. 41 (1967); *Katz* v. *U.S.* 389 U.S. 347 (1967) and *Alderman* v. *U.S.* 394 U.S. 165 (1969)) and recommended that they be amended to incorporate the draft provisions which the Council has previously unanimously approved and which will be submitted to the House of Delegates as an alternative to the ABA tentative draft relating to Electronic Surveillance.

(h) #23–1322 relating to Preventive Detention. The Council disapproved this section as being inconsistent with the ABA Standards Relating to Pre-Trial Release approved by the House of Delegates of the ABA and recommended amendments incorporating the ABA Standards.

3. Title IV—H.R. 16196 (p. 435) relating to attorney fees in wrongful arrest actions against police.

(a) The Council disapproved this Title on the ground it was against public policy.

Respectfully submitted,

H. EUGENE BREITENBACH, *Chairman.*

JUNE 16, 1970.

Mr. ERVIN. Mr. President, for many years we have had some of the finest lawyers in the United States serving in various sections of the American Bar Association on such subjects as criminal law and the rights of individuals. As a result of their studies they have developed minimum standards which should be followed in the administration of criminal justice and in recognizing the basic rights of the individual American citizens.

These reports point out that this conference report offends virtually every one of these minimum standards which have been adopted by some of the ablest lawyers in the United States who study law for the purpose of having sound law and not for any personal purposes whatsoever.

Not only have these two sections of the American Bar Association condemned the bill, but I have scores and scores of telegrams from great teachers of law throughout this Nation and scores and scores of telegrams from great lawyers throughout this Nation condemning the conference report.

At this point I should like to read a telegram which I received from Maynard J. Toll, president of the National Legal Aid and Defender Association. The telegram is addressed to me and reads:

DISTRICT OF COLUMBIA CRIME BILL

The National Legal Aid and Defender Association strongly opposes the provision of S. 2601 (companion to H.R. 16196) granting permissive authority for no-knock searches and preventive detention of those accused of crime. NLADA resolution adopted October 29, 1969, reads: Whereas, Senate bill 2600 amends the Bail Reform Act of 1966 by granting authority to Federal courts to detain certain defendants found to be dangerous and whereas, the concept of preventive detention.

As embodied in such legislation was also specifically rejected by the American Bar Association project on minimum standards in its minimum standards relating to pretrial release approved by the American Bar Association House of Delegates in 1968 based on the many constitutional and practical objections to such concepts; that the Association opposes the preventive detention amendment of the act that would permit the practice of 'preventive detention,' and at this time NLADA urges the Congress not to enact such provision into law.

This legislation would establish a most dangerous precedent—which might prompt similar legislation in the various States. The bill is entirely inconsistent with the spirit of liberty and due process as exemplified by our Constitution.

We respectfully urge you to vote against it.

MAYNARD J. TOLL,
President, National Legal Aid and Defender Association.

I have received the following telegram from Dean Howard R. Sacks of the University of Connecticut Law School:

Urge you support recommittal to conference of District of Columbia anti crime bill concur fully with sentiments expressed in July sixteenth letter to you from several Yale law faculty members. Believe there is still time to draft sensible bill which will help curb crime without curbing individual rights.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD a telegram I received from Jerome J. Shestack, chairman of the Section of Individual Rights and Responsibilities of the American Bar Association, condemning the provisions incorporated in the bill.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

In reply to your inquiry, there is no change in the position of the American Bar Association with respect to preventive detention. As testified to before your committee the ABA is on record as opposing preventive detention proposals of the kind now before the Senate as inconsistent with the standards on pre-trial release adopted by the ABA. Both the section of criminal law and the section of individual rights and responsibilities of the ABA have carefully studied the various preventive detention proposals and have found that they conflict in approach and philosophy with standards which the House of delegates of the ABA has adopted.

Mr. ERVIN. Mr. President, some of the most objectionable provisions were embodied originally in the House bill, and all of them are now embodied in the conference report.

I read into the RECORD a telegram which I received from Stephen B. Goldberg, professor of Constitutional Law of the University of Illinois, reading as follows:

I urge you to continue your opposition to the pending District of Columbia crime bill. Pretrial detention and no-knock provisions probably unconstitutional and clearly no solution to legitimate concerns relating to crime in the District of Columbia.

Mr. President, I hold in my hand a telegram from one of the most distinguished lawyers in the United States, Albert E. Jenner, Jr., of Chicago, a former president of the American Bar Association. It is addressed to me and reads as follows:

As a member of National Committee Against Preventive Detention, member of American Bar Association House of Delegates, member of American Bar Association Council of Section of Individual Rights and Responsibilities, and member of National Lawyers Committee for Civil Rights Under Law, I commend your opposition to the preventive detention provisions of the D.C. crime bill. In my judgment enactment of the preventive detention provisions of the D.C. crime bill would be an unfortunate and insidious material erosion of individual liberties under our Constitution. It will be but the camel's nose under the tent.

I received a telegram from Charles D. Venturo, of Denver, Colo., addressed to me and reading as follows:

Congratulations on commonsense that was used on stopping the National Capital Crime Control Bill. Continue the excellent work you are doing in this field. If this bill is passed we are indeed lost. Stop this bill if America is to be safe and free.

I have a telegram from Hazel M. Murdock, of the city of Washington, addressed to me and reading as follows:

I wholeheartedly admire and support your stand on no knock and detention provisions of D.C. crime bill. Please continue your resistance to erosion of Constitutional rights and liberties. I am white middle-aged D.C. resident born Houston, Texas, who cannot vote.

I have a telegram from David H. Vernon, of Iowa City, Iowa, addressed to me and reading as follows:

Urge defeat of preventive detention provision D.C. crime bill. Speedy trial not preventive detention only reasonable answer.

Mr. President, I have a telegram from Anna Weston, chairman of the Hawkeye area chapter of Iowa Civil Liberties Union, of Iowa City, Iowa, which reads:

Hawkeye Area Chapter of Iowa Civil Liberties Union strongly urges defeat of preventive detention provision D.C. crime bill.

I also have a telegram from Mr. Michael A. Quintana, of Denver, Colo., which like the others I have read, opposes enactment of this proposal. I ask unanimous consent that the telegram be printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

Congratulations on commonsense that was used on stopping the national capital crime control bill. Continue the excellent work you are doing in this field. If this bill is passed we are indeed lost. Stop this bill if America is to be safe and free.

Mr. ERVIN. Mr. President, I also have a letter from the dean of the Yale University Law School, signed by the following members of the faculty of Yale Law School: Ralph S. Brown, Jr., Dennis E. Curtis, John Hart Ely, Thomas I. Emerson, Daniel J. Freed, Abraham S. Goldstein, Burke Marshall, Louis H. Pollak, Fred Rodell, Clyde W. Summers, Harry H. Wellington, and Eugene V. Rostow.

This letter is accompanied by a letter from the dean of the Yale University Law School, Dean Lewis Pollak, and the original letter is addressed to the two distinguished Senators from Connecticut, and reads as follows:

We write to express our conviction that it would be gravely prejudicial to the orderly administration of justice for Congress to adopt the District of Columbia Anti-Crime Bill in the form in which it was reported out by the House-Senate Conference Committee on July 13.

The bill of course contains many desirable features—those relating, for example, to the reorganization and expansion of the District of Columbia's judicial system. But the bill also contains many provisions, chiefly drawn from the House of Representatives version of the bill, which led Senator Ervin, last March, to characterize the House version as being "as full of unconstitutional provisions, unjust provisions, and unwise provisions as a mangy dog is with fleas." Among the provisions that cause us greatest concern are those which would (1) authorize pre-trial "preventive detention," (2) weaken the procedural protections of juveniles, (3) establish new categories of harsh mandatory minimum sentences, and (4) give ambiguous legislative sanction to "no knock" searches. Less important practically, but of enormous importance symbolically, is the provision which would require the plaintiff in a suit against a policeman for false arrest to pay the defendant's attorney's fees even when the plaintiff prevails on the merits: legislation of this sort mocks the very concept of even-handed enforcement of the laws.

I digress from the reading of the letter at this point to remark that one of the few good things that the conference committee did in its consideration of this bill was to strike out this provision which would have required a plaintiff, who recovered a verdict and a judgment against a police officer for false arrest, to pay the counsel fees of the police officer. When it was called to public attention that the bill contained such a provision as that, that was too much even for the conferees to swallow; and I must say, Mr. President, without meaning anything of a derogatory nature, that they have the most inordinate swallowing capacity of any group of distinguished citizens I have ever been privileged to know.

To resume the reading of this letter from the faculty of Yale University:

Three facts underscore the significance of the proposed legislation: The first is that the District of Columbia is the nation's capital. The second is that you who govern the District are not accountable to those who reside there. The third is that the overwhelming majority of the residents of the District you govern are black. If Congress enacts sound legislation, its handiwork may rightfully serve as a model for state legislatures across the land. If Congress—acting in haste and vindictiveness and unconcern for constitutional and prudential limitations—adopts the bill as it now stands, its handiwork will simply evidence man's inhumanity to man.

We urge that the bill be recommitted to conference.

Mr. President, that is a rather strong statement, signed by 12 distinguished law teachers. They say that if the Senate of the United States approves this conference report as it now stands, its handiwork will simply evidence man's inhumanity to man.

Mr. President, on Friday of last week, I called the attention of the Senate to the provisions of this bill dealing with habitual criminals.

On page 142 of the conference bill, we find section 201. This section has three provisions which decree that persons who repeat criminal offenses shall suffer increased punishment; and it provides among other things, that a person who is convicted of as many as three felonies in the District of Columbia can be given life imprisonment.

Mr. President, under the law of this land, these persons cannot be given increased punishment for life or for a long term of years unless it is found, first, that they committed a felony, and second, that they had committed two other felonies before they committed the third felony.

The provision of this bill which undertakes to implement the provisions about habitual criminals is found on page 154, and is embodied in section 23–111.

I hold in my hand a copy of the Constitution of the United States. I call the attention of the Senate to the fact that every Member of this body has sworn to uphold the provisions of this Constitution. I call to the attention of the Senate that none of us has taken any oath to uphold the provisions of the conference report.

Mr. President, I would just like to say, "You cannot do both." A Senator cannot abide by his obligation to support the Constitution of the United States and support the crime bill, too.

I say that because the Constitution of the United States says that no person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury. That is what the Constitution of the United States says.

But this District of Columbia crime bill, in section 23–111, says that a man could be prosecuted upon a charge of infamous crimes, which will result in his imprisonment up to 3 years, without his ever being indicted by a grand jury. I am astounded to find such a provision as that in this crime bill.

Then the Constitution of the United States says, in another provision of the fifth amendment, that no person shall be compelled in any criminal case to be a witness against himself.

But section 23–111 of this bill says that a man can be compelled to be a witness against himself. It says that the district attorney or prosecuting attorney, when he seeks to have a person subjected to these increased punishments as a habitual offender, serves upon the defendant a copy of an information alleging the previous offenses against the defendant, and it says here that the defendant must file a response to that information, and he must say whether he committed those offenses or whether he did not.

It says, therefore, that he has to incriminate himself, and that is contrary to the fifth amendment. It not only violates the fifth amendment, but it violates these other provisions.

The original Constitution of the United States, in section 2 of article III, says:

The trial of all crimes, except in cases of impeachment, shall be by jury.

When the Bill of Rights was added to the Constitution, those who drafted and ratified it put a second guaranty of the right of trial by jury in this provision of the sixth amendment.

In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the state and district wherein the crime shall have been committed.

That is what the Constitution says in two places—that the trial of all crimes shall be by a jury. But section 23–111 says that when a person is charged with being a habitual criminal, under the provisions of this act, he shall have no right of trial by jury, that the case shall be tried by a judge without a jury.

It does not say only that, but more. The due process clause has been uniformly interpreted by the Supreme Court of the United States to place upon the prosecution the burden of establishing the guilt of a defendant before he can be punished. That is what the Constitution says. Not only does it say that, but also, it says that the prosecution must establish his guilt beyond a reasonable doubt from the testimony. But that is not what this bill says in respect to habitual offenders. It says that the burden is on the habitual offender to show that he is not due to receive this increased punisment, and it says that he must show that by the greater weight of the evidence.

Never in my long experience in the Senate or in my experience in the House of Representatives or in my experience as a member of the legislature of North Carolina have I seen one section of one bill which violated as many provisions of the Constitution as does section 23–111. It violates the provision of the Constitution that says no man can be placed on trial for an infamous crime—that is, a felony, under Federal law, or sentenced to imprisonment for more than a year—except upon an indictment by a grand jury. It shows the contempt for that provision of the Constitution, and it shows contempt also for that provision of the Constitution which says that every man is entitled to a trial by jury before he can be punished. Yet, it says here in the conference bill that there is going to be a trial by the judge and not by a jury.

All the case law is to the effect, and the Constitution is to the effect, that the burden is on the prosecution to prove the guilt of the defendant beyond a reasonable doubt from the testimony. This section says that is not so. This section says that the burden is on the defendant to show that he is not to be punished as a habitual criminal and that he must show it by the greater weight of the evidence.

Last Friday I called the attention of to Senate to decisions of the supreme courts of some 25 or more States which have habitual criminal laws, and those decisions are to the effect that a person cannot be tried as a habitual criminal except by a jury; that he cannot be convicted of being a habitual criminal except by evidence which satisfies a jury beyond a reasonable doubt of his guilt—that is, that he committed the previous offenses. Yet, this bill shows a contempt for at least five separate provisions of the Constitution. If the Members of the Senate vote for this bill, they will have to vote for a bill which in one section only, having nothing to do with preventive detention and having nothing to do with no-knock provisions, violates the Constitution of the United States, which every

Member of Congress has taken an oath or made an affirmation that he will support.

I yield the floor.

AUTHORIZATION FOR THE SECRETARY OF THE SENATE TO RECEIVE AND THE PRESIDENT PRO TEMPORE OR THE ACTING PRESIDENT PRO TEMPORE TO SIGN DULY ENROLLED BILLS DURING ADJOURNMENT OF THE SENATE

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to receive duly enrolled bills from the House of Representatives and that the President pro tempore and the Acting President pro tempore be authorized to sign duly enrolled bills during the adjournment of the Senate until midnight tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 a.m. tomorrow.

The motion was agreed to; and (at 5 p.m.) the Senate adjourned until tomorrow, Wednesday, July 22, 1970, at 11 a.m.

NOMINATIONS

Executive nominations received by the Senate July 21, 1970:

U.S. MARSHAL

Johnny M. Towns, of Alabama, to be U.S. marshal for the northern district of Alabama for the term of 4 years, vice Roy Lee Call, retiring.

COMMUNICATIONS SATELLITE CORPORATION

Rudolph A. Peterson, of California, to be a member of the Board of Directors of the Communications Satellite Corporation until the date of the annual meeting of the Corporation in 1973, vice William W. Hagerty.

IN THE COAST GUARD

The following-named temporary officers to be permanent commissioned officers of the Coast Guard in the grade of lieutenant (junior grade):

Frederick K. Farner
James G. Lester
Ellis W. Grimes
Lywald W. Hendricks
Michael J. Schiehl
Larry E. Sartin
Robert D. Bowen
John F. Ebersole
Henry D. Jacoby
Michael W. Olivo
James L. Phaup
Marvin L. Grier, Sr.

The following-named officer to be a member of the permanent commissioned teaching staff of the Coast Guard Academy as an associate professor in the grade of commander:

Ronald C. Kollmeyer

The following-named officers to be members of the permanent commissioned teaching staff of the Coast Guard Academy as assistant professors in the grade of lieutenant commander:

George P. Vance
Bruce A. Patterson

The following-named Reserve officers to be permanent commissioned officers of the Coast Guard in the grade of lieutenant commander:

Richmond D. Greenough, Jr.
David V. V. Wood

The following-named Reserve officer to be a permanent commissioned officer in the Coast Guard in the grade of lieutenant:

Gary F. Van Nevel

IN THE MARINE CORPS

The following-named officers of the Marine Corps for temporary appointment to the grade of major general, subject to qualification therefor as provided by law:

Homer S. Hill
Leo J. Dulacki
Carl W. Hoffman
William G. Johnson
H. Poggemeyer, Jr.
William C. Chip

The following-named officers of the Marine Corps for temporary appointment to the grade of brigadier general:

Edward J. Miller
Wilbur F. Simlik
James H. Berge, Jr.
James R. Jones
William G. Joslyn
Donald H. Brooks
Charles D. Mize
Norman W. Gourley
Paul G. Graham
William R. Quinn
Harvey E. Spielman
Andrew W. O'Donnell

HOUSE OF REPRESENTATIVES—*Tuesday, July 21, 1970*

The House met at 12 o'clock noon.

Rev. George G. Oliver, minister emeritus, Dunn Loring United Methodist Church, Dunn Loring, Va., offered the following prayer:

Almighty and everlasting God, who in wisdom has established our Nation through the faith and devotion of our fathers, we give Thee praise for Thy gracious guidance and bountiful providence with which Thou hast prospered each generation. Through peril and storm Thou hast led us with the light of truth in the path of liberty. Mercifully Thou hast recalled us from error, division, and strife to holy ways of freedom. Today we humbly pray that we may always prove ourselves a people mindful of Thy favor, and glad to do Thy will. Grant that our statesmen and others in places of authority may have the guidance of Thy spirit as they endeavor to keep our land forever "bright with freedom's holy light." We ask in Thy name. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 2104. An act for the relief of Milton Kyhos.

THE LATE HONORABLE THOMAS B. STANLEY

(Mr. DANIEL of Virginia asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous material.)

Mr. DANIEL of Virginia. Mr. Speaker, Virginia has lost a beloved citizen and noble statesman in the passing of Thomas Bahnson Stanley. A life of service and achievement distinguished the career of the illustrious former member of this body and Governor of Virginia, and placed him in the league with giants among men.

Governor Stanley was born on a farm in Henry County, Va., on July 16, 1890, the youngest child of Susan Walker and Crockett Stanley. Although born into an environment where material wealth was absent, Tom Stanley was reared in a home in which priceless character-building ideals were instilled and which later were to serve him well. Early in life, Tom Stanley set sight on his goals and embarked on a course which was to bring him distinction and lasting respect.

Realizing the value of education and using a life insurance policy as collateral, the youthful Stanley borrowed money from a bank in order to obtain tuition to enroll in Eastman Business College at Poughkeepsie, N.Y. After graduation, he returned to his native county in Virginia and began a long and highly successful business career. Banking was his first calling, and the young man lent his energies as bookkeeper, teller, and cashier to banks in Ridgeway, Martinsville, and Rural Retreat, Va. His experience in this field later earned him the accolade of president and director of the First National Bank of Bassett, Va.

In 1918, Stanley was married to Anne Pocahontas Bassett, daughter of one of the Nation's leading furniture manufacturers who previously had refused a job to the then freshly graduated Stanley. Later, after obtaining an interest in and serving in several managerial capacities of his new father-in-law's furniture factory, Tom established his own plant. Thus, in 1924, the Stanley Furniture Co. was started, and the surrounding community—which owed its birth to the enterprise of young Stanley—was appropriately named "Stanleytown."

At this time, another phase of this energetic young man's career was taking shape. Henry County citizens witnessed the untiring efforts and ability of the young leader in their midst and elected him as their representative to the Virginia House of Delegates in 1930. During his 16-year term in the Virginia General Assembly, Stanley served as speaker from 1942–46 and as chairman of the Rules Committee. In 1946, the Fifth District of Virginia elected him as their Representative in Congress to replace the late Congressman Thomas G. Burch, who had been appointed to fill the unexpired term of the late U.S. Senator Carter Glass.

Stanley served in Congress until submitting his resignation on February 3, 1953, to enter the campaign for Governor of his beloved Virginia. Holding the Governorship from 1954–58, Governor Stanley led the Commonwealth through one of the most difficult periods of her colorful and distinguished history. The Governor from Henry County brought to government operations his expertise in business principles and, although he had inherited a State treasury which was somewhat weak, he left for the succeeding Governor State coffers which contained a substantial surplus. During his term, he was vitally interested in improving the highway system and emphasized highway safety. Also, his Governorship was characterized by industrial development and the reorganization of the State department of mental hygiene and hospitals. Further, he and his charming wife enriched Virginia's historic heritage by the restoration of the Governor's mansion in Richmond.

After completion of his term as Governor, Tom Stanley returned to Stanleytown, where he continued his farming and business interests. Although in semi-retirement, the Governor was more active in later life than many individuals are during their prime. The Governor and Mrs. Stanley both gave unselfishly of their resources and energies to the betterment of the community and the State. They were philanthropists in the true sense of the word, committing themselves totally to such worthwhile projects as their church, scholarship funds, and the development of Ferrum Junior College—of which the Governor was a trustee. Indeed, the very existence of the Stanley Library at Ferrum Junior College will be an eternal memorial to the generosity and devotion of the late Governor from Henry County, Va.

Governor Stanley is survived by his lovely and devoted wife; a daughter, Mrs. Hugh H. Chatham, of San Francisco, Calif.; Thomas B. Stanley, Jr. and John David Stanley, both of Stanleytown; 10 grandchildren and two great-grandchildren. All the members of his family have my deepest sympathy.

Mr. Speaker, Tom Stanley was a great and good man. He was more than a Representative and a Governor to me. He was a close personal friend, whose sound advice and counsel was always freely given. He was a man of few words, lacking the golden-tongued oratory of many of Virginia's forefathers. But, he was a man of wisdom; and when he spoke, men listened. Tom Stanley was heralded as a great family man, surely an attribute worthy of the highest recognition. He instilled in his three children the qualities which made him great—frugality, fairness, and tolerance. Tom Stanley was a man of compassion, fairmindedness, and respect for others. He possessed the proper degree of unflagging determination, dedication, and perseverance.

Tom Stanley was a man who loved America deeply. Although without the benefit of formal education, without cultural advantages and devoid of material wealth in early years, the late Governor Stanley recognized that through the free enterprise system, he was permitted to choose a course in life and develop his potential. Tom Stanley was a statesman of the highest quality; superior in character and integrity, yet humble and understanding in his associations; and his life of dedicated service to his fellow man will be an inspiration to future generations.

Mr. Speaker, I mourn the loss of a great friend—but thousands of others share with me that sense of personal grief. However, we share, too, a sense of pride in the uncommon life and eminent career of our late fellow Virginian—Thomas B. Stanley.

Mr. Speaker, I would like to place in the RECORD editorials on the late Governor Stanley from the Danville Register, as well as the Stuart Enterprise and Martinsville Bulletin. To preface those, I insert an excerpt about him from an article on Virginia's Chief Executives which appeared in the Commonwealth magazine in February 1969.

The material follows:

THOMAS B. STANLEY

Thomas B. Stanley—or Bahnse, as his fellow Governors called him—aimed never to say one syllable more than he could back up at that very moment. If you asked him at any hour during a campaign whether it was night or day, he would glance first at that orb in the sky to check whether it was the sun or the moon.

When Mr. Stanley announced for Governor, someone asked, casually, why he wanted to be Virginia's Chief Executive. The newsmen waited for resounding phrases—pressures of the people . . . the call to service . . . the challenge of the times . . .

Well, said Mr. Stanley, he always had tried to rise to the top in whatever he undertook.

An aide suggested hurriedly that the candidate might wish to frame a more formal statement.

Mr. Stanley retired to a desk at which he wrote for a while on a pad, and then stood up and said, no, he believed he'd just leave it at that. He wanted to go to the top.

[From the Danville (Va.) Register, July 12, 1970]

THOMAS BAHNSON STANLEY

Death has claimed Thomas B. Stanley just five days before his 80th birthday. The end came in a Martinsville hospital early Saturday morning. His demise brought expressions from all across Virginia, and deservedly so. Tom Stanley was an extraordinary man whose years were filled with achievement and service—a combination that sets one apart.

He grew up a poor farm boy who entered banking and made a success in that field. Then he became aware of the opportunities for industrial development and for personal profit in the fabrication of furniture from Virginia's hardwoods. Instead of entering the furniture businesses of his wife's family, he established a small factory of his own in Henry County and the community that grew around it as the industry grew took his name. It was in name and in fact Stanleytown.

An interest in public affairs led him to offer for the House of Delegates from Henry County in 1930 and he was elected. He became an influential member of the House and, in 1942, was elected its Speaker. He ended his legislative service in 1946 to run for Congress as successor to Rep. Thomas G. Burch of Martinsville, who had moved over to the U.S. Senate by appointment of Governor Tuck. In Congress, Mr. Stanley served until 1953 when he resigned to campaign for governor.

Governor Stanley was inaugurated in January, 1954, and immediately was confronted with a problem. He had campaigned on a no-increase in taxes platform, yet during the two months between his election and his inauguration he had become convinced that continued improvement of Virginia's highways required seeking more funds. He let his conscience be his guide—as he generally did—and asked a General Assembly that was not at all receptive to the idea to impose an increase of 1 cent in the gasoline tax. It did not comply but Tom Stanley had shown the General Assembly and the people of Virginia that he would change his mind when circumstances justified a change in attitude and in program.

There were two other challenges that came to Governor Stanley and measured the man. One was the May 17, 1954, decision of the U.S. Supreme Court holding racial segregation of public schools to be illegal. The other was the outdated system of operating the state's Mental Hospitals System.

Shortly after the court decision outlawing segregation, Governor Stanley summoned a group of 32 outstanding people to consider all aspects of the problems of compliance and to recommend a course of action for the Commonwealth. This body, known as the Gray Commission after its chairman, Senator Garland Gray, recommended a freedom of choice policy. The General Assembly, reflecting sentiment among the people, took a hard-line stance that became known as Massive Resistance. Governor Stanley exerted himself to see that the policies formulated as a time-gaining procedure for easing the transitions that necessarily would follow, were supported by his administration.

Governor Stanley took some gaff from the press and from the racial militants but he did help smooth the way and frictions were held to a minimum.

The Mental Hospital System had been given lots of lip service but not much modernization over the years. Stanley, who was a short-horn Hereford grower, looked over the hospital "farms" and found the most expensive and also a quite extensive system of dairy cattle operations. As a businessman the cost of milk reaching the patient at the hospitals outraged his sense of propriety. Quietly but effectively, Governor Stanley put all the hospitals out of the farming and dairying business. In earlier years the farms had grown up around the hospitals as part of the occupational therapy available to patients. Even earlier, the insane had been put to such farm work as they could do in the belief that it helped them to pay a part of the cost of their support.

Governor Stanley separated the medical and the administrative operations of the hospitals and placed each in charge of a competent official directly responsible to the Governor. The changes and the results were beneficial. Among them was employment of 550 more people to help care for the mentally ill instead of dairy cattle.

During his term of office there was an inclination in certain intellectual circles to downgrade the businessman governor. This attitude vanished as time proved that Mr. Stanley brought to the office of chief magistrate of the Commonwealth many assets that far outweighed a lack of glibness.

Thomas B. Stanley was a credit to his home community of Spencer, where he was born. He was a credit to Henry County which he served in the General Assembly. He was a credit to the Fifth Congressional District which he served in Congress. He was a credit to Virginia which he governed during trying times. And he was a businessman who was highly successful by all the yardsticks of commerce. He also was a gentleman who won and retained friends because he gave of himself and of his energies and substance where they could be of the greatest assistance.

[From the Stuart Enterprise and Martinsville Bulletin, July 15, 1970]

GOVERNOR STANLEY DIES AFTER LONG SERVICE TO PEOPLE OF VIRGINIA

Henry County's most illustrious citizen is dead.

Thomas Bahnson Stanley, Henry County's senior statesman, died quietly Friday night in Martinsville Memorial Hospital five days shy of his 80th birthday after apparently being on the way to recovery from a mild heart attack suffered at his home five days earlier.

Thus ended a life marked by exemplary proof of the goals one can accomplish through strength of character, determination and dedication.

Thomas Bahnson Stanley was born a poor man but he was reared in a home whose environment engendered respect for others, hard work and independence of thought and action when the rights of others were not infringed upon.

When he was 17 years old, he felt the urge to move from his environment to other fields and slipped away one night, walked to Bassett and caught a train for Roanoke. He was looking for a job but found none there. He went on to Maybeury, W. Va. He helped clean coal cars and to bring coal out of the mines for two months.

Family ties called, along with a feeling of responsibility, and he returned home to help save that year's crop on his parental farm near Preston.

One thing he had learned on that trip was that a better education was needed if he were to find employment in the business world. He decided he would attend Eastman National Business College in Poughkeepsie, N.Y., about which he had heard from a friend. Using a life insurance policy as collateral, he borrowed tuition money from a bank here and took off in search of a higher education.

He was graduated there and came back home in 1912 at the age of 22. He went to Bassett for a job and was turned down by the late John D. Bassett, Sr., who was later to become his father-in-law.

He then went to Winston-Salem, where he became a bookkeeper for R. J. Reynolds Tobacco Co. with a salary of $40 a month.

After working there for a while, he returned to Henry County and looked after the affairs of the E. L. Knight Distillery at Ridgeway. Ambitious, hard-working and efficient, Mr. Stanley looked for even more to do. In 1913, when he was 23, he accepted a supplementary job in the Bank of Ridgeway. He worked in the bank in the mornings and at the distillery in the afternoons and evenings.

He moved from there to the First National Bank of Martinsville, becoming general bookkeeper and teller on July 1, 1914. In less than two years, he was offered a position as cashier of the First National Bank of Rural Retreat and he went there, assuming the additional responsibilities of caring for his mother, who had been recently widowed, and a foster sister.

In October, 1918, after he had been at Rural Retreat for about two years, he was married to Miss Anne Pocahontas Bassett. The Bassett furniture empire was growing steadily and was branching out. Later in 1919 his father-in-law, J. D. Bassett Sr., and the late Bunyan C. Vaughan purchased a furniture factory in Galax and Tom Stanley bought an interest in the firm—Vaughan-Bassett. He served as a vice-president of this new firm for less than a year.

At that time he was asked by the elder Mr. Bassett to come to Bassett to accept managerial responsibilities for the Bassett plants, which he did and in 1923, he decided to establish his own plant and ground for Stanley Furniture Co. was broken in early 1924 on its present site at Stanleytown, which, of course, was named for him.

The business was an instant success and thus two facets of Tom Stanley's life had been established—business and farming—in which he continued an active interest until he died.

The third career was about to begin. In 1929, Henry County Republicans nominated him as their candidate for the Virginia House of Delegates. He declined, saying he had always been a member of the Democratic Party. But Henry County wanted him in the House of Delegates and two weeks later the Democrats picked him as their nominee. He won, took his seat in 1930 and served for 16 consecutive years, with three terms being as Speaker of that body.

It was during those 16 years that Tom Stanley won a reputation throughout Virginia as being fair-minded, competent and impartial in his dedication to his home community and the Commonwealth. He was being mentioned widely as a possible candi-

date for Governor. But, the party, meanwhile, suffered the loss through death of one of its senators, Carter Glass, and the late Congressman Thomas G. Burch was appointed to fill his unexpired term.

Party leaders throughout the Fifth District immediately rallied behind Tom Stanley and he subsequently was elected to Congress, serving from 1946 until 1953, when he resigned to seek the Governorship. He won that office and served from 1954 until 1958—the only native of Henry County ever to earn that distinction.

Mr. Stanley carried his business talents and abilities to Richmond and won the admiration and respect of his fellow Virginians for the competent, calm, discreet and gentlemanly manner in which he went about his duties.

After his term as Governor, he returned to Stanleytown and to his business and farming interests. Nonetheless, he remained a willing counsellor for his party and assisted succeeding administrations in various capacities.

He also continued to devote considerable time to the various philantropies to which he and Mrs. Stanley were committed, such as their church, scholarship funds, Ferrum Junior College and the like.

Here was a man indeed, who gave himself and his energies and his substance to the service of his community, his county, his state and his nation to an uncommon degree. His influence will long be felt and his memory long respected here in Henry County and throughout the Commonwealth.

Mr. McCORMACK. Mr. Speaker, I was very sorry to read of the death of our former colleague, the late Governor of Virginia, Tom Stanley, which the gentleman from Virginia (Mr. DANIEL) just announced.

Mr. Speaker, Tom Stanley was one of the finest gentlemen that anyone could ever meet, broad, fine, noble, with an understanding mind, and one of the most public spirited officials I have ever served with during my many years of service in the legislative branch of the Government, the Federal Government, and the State government. His contributions while he was a Member of this body were deep and profound and constructive. His contributions as Governor of the great Commonwealth of Virginia will always be uppermost in the pages of the history of that great State.

I join with the Virginia delegation in extending to the loved ones of our late friend Tom Stanley my deep sympathy in their great loss and sorrow.

Mr. ABBITT. Mr. Speaker, will the gentleman yield?

Mr. DANIEL of Virginia. I yield to the gentleman from Virginia.

Mr. ABBITT. Mr. Speaker, I desire to associate myself with the remarks of the gentleman from Virginia (Mr. DANIEL), regarding the Honorable Thomas B. Stanley. Mr. Stanley was a close personal friend of mine. I was associated with him when he was in the house of delegates where he served with honor and distinction. He was speaker of the house of delegates for three terms. He then came to Washington as a Member of the House of Representatives. I came here 2 years after Mr. Stanley. He and I were closely associated all the time he was in the House.

Mr. Stanley was a man of honor, integrity, and dedication. He was steadfast and faithful. As we say in Virginia, one would not be afraid to go bear hunting with him. He was warmhearted.

I extend to his family my deepest sympathy. Tom was loved by all who knew him.

Tom Stanley was a great Virginian and all Virginia mourns his passing. He was one of the outstanding Governors of Virginia.

He was a great family man, a devoted husband, a kind and loving father and a true friend.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. DANIEL of Virginia. I yield to the distinguished majority leader, the gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, I desire to associate myself with my distinguished colleague and other colleagues from Virginia and others in mourning the passing of a friend of mine, Gov. Tom Stanley. Tom Stanley and I came to Congress together. He immediately placed his stamp of greatness on the House. He was a strong and a great man, yet he was a lovable and kind man. He was a great Virginian and a great American. Above everything else, he was a great human being.

Mr. Speaker, I extend my deepest sympathy to his loved ones.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. DANIEL of Virginia. I yield to the distinguished minority leader, the gentleman from Michigan (Mr. GERALD R. FORD).

Mr. GERALD R. FORD. Mr. Speaker, today the House joins in mourning the passing of former Representative Thomas B. Stanley, of Virginia, who served in this House from 1946 until 1953 when he resigned to run successfully for the governorship of his State.

Tom Stanley was a Member of the House when I took my seat here in January 1949 and I served with him for 5 years. I have many fine memories of our friendship. My recollection of him is that he was a fine gentleman and that he served his district, his State, and the Nation with distinction.

At this time I extend my sincere condolences to Governor Stanley's wife, Anne, and to the Stanley family. Governor Stanley's death is a loss to his community, his State, and to the country.

Mr. BOGGS. Mr. Speaker, will the gentleman yield?

Mr. DANIEL of Virginia. I yield to the gentleman from Louisiana.

Mr. BOGGS. Mr. Speaker, I associate myself with the remarks made by the distinguished gentleman from Virginia and the distinguished dean of the Virginia delegation, as well as the distinguished majority and minority leaders, in paying tribute to a man who made a name for himself here in a very short period of time.

Tom Stanley was a man of great integrity and tremendous ability, warmth, and courage. He served his country well, he served his State well, and he will long be remembered as a great American.

Mr. Speaker, I join in extending sympathy to his beloved family.

Mr. PERKINS. Mr. Speaker, will the distinguished gentleman from Virginia yield?

Mr. DANIEL of Virginia. I am glad to yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Speaker, thousands of my fellow Kentuckians and I were saddened a few days ago to learn of the passing of Thomas B. Stanley of Virginia.

Over the years, we knew him as something more than an outstanding public servant. He was a good neighbor. As Governor of the Commonwealth of Virginia, he went out of his way to be helpful to my State; and this cooperative spirit is embodied in the establishment of the Breaks Interstate Park.

Kentucky and Virginia are joined in an interstate compact to operate this fine park facility on their borders. It is located in one of the most scenic areas of America, where the Big Sandy River breaks through a major mountain barrier, ultimately to make its way on down to the Ohio and the Mississippi Rivers.

It was a wild, inaccessible region, and was probably due to remain unknown except to the strip mine operators; but Kentuckians and Virginians of vision and determination—men like Thomas B. Stanley—intervened and saw that it was preserved as part of the heritage of all Americans.

I first knew Tom Stanley as a Member of this Chamber when I first took my seat here nearly 22 years ago. He had been elected in 1946, and I always admired his grasp of legislative affairs, and his reasonableness in dealing with Members with whom he disagreed.

We are all rather proud when, in 1953, his fellow Virginians called him to the Governorship of his Commonwealth. He knew Virginia intimately through his lifelong study of her ways and her history, and through 16 years as a member of the State legislature, including 4 years as speaker of the house of delegates.

Many able men have occupied the Governorship of Virginia. None was more able than Thomas B. Stanley. And none was more admired and respected than he when he died recently, just a few days before his 80th birthday.

Mr. McMILLAN. Mr. Speaker, will the gentleman yield?

Mr. DANIEL of Virginia. I am glad to yield to the gentleman from South Carolina.

Mr. McMILLAN. Mr Speaker, I want to join the Virginia House delegation and the other Members of the House of Representatives in paying honor to the late Honorable Thomas Stanley who served as a Member of this body with great distinction. We were all saddened to learn of Judge Stanley's passing and I want to express my deepest sympathy to the members of his family. The late Congressman Stanley left a wonderful record as a legislator and I am happy that I had the privilege and pleasure of serving with him during the time he was representing the State of Virginia in the Halls of Congress. I watched his activities during the time he was serving as Governor of the

great State of Virginia and I do not know of any Governor who did more for the State of Virginia than the late Governor Stanley. I feel that our country and the State of Virginia gained an awful lot through the public services of the late Congressman Stanley. Again, I want to express my deepest sympathy.

Mr. ANDREWS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. DANIEL of Virginia. I am glad to yield to the gentleman from Alabama.

Mr. ANDREWS of Alabama. Mr. Speaker, I was sorry to learn of the death of my former colleague from Virginia, the Honorable Thomas B. Stanley. It was my good fortune and pleasure to serve and, on occasion, travel with Tom during his service in this great body from 1946 to 1953.

Tom Stanley was a fine gentleman and a very capable legislator and, of course, he was a friend. He came to Congress with strong credentials as speaker of the Virginia House of Delegates, a body in which he served for 16 years.

He continued to serve his State and the Nation in an able and highly effective manner The voters of Virginia's Fifth District reelected him three times, before he gave up his seat in Congress to run for Governor of Virginia.

The people of Virginia realized the great qualities of Tom Stanley, and in 1954, he was elected to a 4-year term as Governor of Virginia.

Mr. Speaker, Virginia and the Nation have lost one of their finest citizens and most dedicated public servants. Mrs. Andrews and I extend our deepest sympathy to the Stanley family at this time of their great loss.

Mr. DOWNING. Mr. Speaker, last week, the hearts of Virginians throughout the Commonwealth were saddened as Thomas B. Stanley's body was returned to the red clay of Henry County in the Piedmont section of the State from which he had sprung almost 80 years before. Tom Stanley was a quiet Virginian who had served his State and Nation steadfastly in public office for almost 30 years.

Mr. Stanley's service was climaxed and concluded by a term as Governor in the trying days of the mid-1950's. Before that time, he had served 7 years here in the House of Representatives and 17 years in the General Assembly of Virginia, during 6 of which he filled the speaker's chair in the house of delegates.

A successful farmer, businessman, industrialist and banker, Tom Stanley was an unassuming self-made millionaire. His personal and business life were dedicated to sound financial principles and he carried these principles with him throughout his career in government. It is rare indeed for an individual to serve in a high executive post in government and leave his constituents at the end of his service in better financial condition than it was when his service began, but that is exactly what Tom Stanley did as Governor of Virginia.

There is no better measure of a man's life than the quality of his service to his fellow man. Tom Stanley was devoted to Virginia and the Nation both of which he served admirably.

Mr. POFF. Mr. Speaker, when I came to the Congress nearly 18 years ago, one of the first to befriend me was the Representative of Virginia's Fifth Congressional District, which joins our Sixth District on the east.

Tom Stanley was known to me, not personally but by reputation, before I came to the Congress. Even at that time, he had already left his footprints indelibly imprinted in the sands of time. I was, therefore, most flattered when he tendered a frightened freshman Congressman a genuinely warm welcome to this body. More than flattered, I was profoundly grateful.

The word "genuine" somehow seems suited to the character of Tom Stanley. Indeed, in all that he thought, said and did, he was genuine, earnest, sincere, so much so that those about him could not fail to recognize it. During the spring and summer of 1953, the relationship ripened into a friendship which I valued most highly. That fall, he campaigned successfully for Governor of Virginia against my law partner. It is a measure of the strength of our friendship that it was not fractured or marred either by the campaign or the election. The following January, my partner and I jointly attended the Governor's inauguration. As always, he was kind, gracious and gentlemanly.

Mrs. Poff and I join the innumerable caravan of his friends in expressing to his loved ones our most heartfelt sympathy in their time of sorrow.

Mr. PATMAN. Mr. Speaker, I was deeply saddened to learn of the passing of a great statesman, the Honorable Thomas B. Stanley of Virginia. In the 7 years that I had the privilege to serve in the House of Representatives with Tom Stanley, I came to have a very deep appreciation for the outstanding ability and dedication of this son of the Old Dominion. This splendid gentleman came to the Congress already a skilled legislator. His 16 years in the Virginia House of Delegates, including 4 years as speaker, gave him a rare insight into legislative procedure, and all of us who knew him benefited from his remarkable parliamentary knowledge and skill. Seldom has a man come to the House so well prepared to take up an active and constructive role in the proceedings of this body, and few men have so vigorously applied their abilities to make the Congress function smoothly and effectively.

It was fitting that this experienced statesman was selected to the Committee on House Administration where he served with distinction, rising to become chairman. Similarly, in his service in the House Interstate and Foreign Commerce Committee he made a meaningful contribution to legislation affecting transportation, communications, and public health. We were fortunate, indeed, to have Tom Stanley in the House of Representatives during those difficult years following World War II.

When Tom Stanley left the House it was to campaign for the Governorship of Virginia. He won the support of the people, as he had so many times in the past, and served as Governor for 4 productive years. His life is a great American success story—the story of a man who worked his way up from a farmhouse in Henry County, Va., to the Governor's mansion in Richmond.

Mr. Speaker, the Commonwealth of Virginia has produced many great statesmen who have helped to build our Nation. Tom Stanley served in the wonderful tradition of the early Virginia patriots, and I will always appreciate the opportunity I had to know him and to work with him. Although I can speak of his character, his ability, and his accomplishments, words are really inadequate to tell of my feelings for this great man. Tom Stanley was a good and a true friend, and I miss him. My thoughts and prayers are with his family.

Mr. MARSH. Mr. Speaker, I join with others today in paying tribute to the memory of Thomas B. Stanley, former Governor of the Commonwealth of Virginia and former Member of the House of Representatives. Governor Stanley's life stands as a monument to public service. The contributions he made to his State and to his country are evidenced by his years of distinguished service here and as the chief executive of the State he so dearly loved.

In looking at his career, he stands forth as a leader. This leadership was not limited just to legislative service here in this body or to executive service in the statehouse. He was a leader in industry and in the economic well-being of his community and of his State. The sound practices of his business and corporate management were reflected in the sound approach to the operation of government and decisionmaking in the legislative process. His judgment, commonsense approach and warm human insights inspired confidence in others and influenced them to follow him.

Devoted to his family, his passing marks not only a deep loss to them, but Virginia has lost one of her most distinguished sons. I join with my colleagues and his other countless friends in extending to his family my deepest sympathy.

Mr. SIKES. Mr Speaker, I share the regret which has been expressed by the distinguished gentleman from Virginia (Mr. DANIEL) and others, about the death of our former colleague, the Honorable Tom Stanley. It was my privilege to serve with Congressman Stanley, to know his family, and to appreciate the warm friendship which they accorded me. Congressman Stanley, who later became one of Virginia's illustrious Governors, served with great credit and distinction in the House. He was highly regarded on both sides of the aisle for his patriotic motivation and for the able contributions which he made in debate on behalf of the enactment of sound legislation. I continued to enjoy his friendship through the years since he left the Congress and I feel a deep sense of bereavement at his death. My sincere sympathy is extended to all of his family.

GENERAL LEAVE TO EXTEND

Mr. DANIEL of Virginia. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the life, character and service of the late Honorable Thomas B. Stanley.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

COMMENDATION TO BANKING AND CURRENCY COMMITTEE FOR REPORTING BILL TO GIVE PRESIDENT AUTHORITY TO IMPOSE PRICE, WAGE, RENT, AND SALARY CONTROLS

(Mr. BOGGS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BOGGS. Mr. Speaker, I take this time to extend my congratulations to the distinguished chairman of the Banking and Currency Committee, the Honorable WRIGHT PATMAN, and to the members of that committee for having the foresight to report out today a bill giving the President authority to impose price, wage, rent, and salary controls.

Previously we have given the President the same power in respect to credit controls.

I consider it rather anomalous to read in the press each day about inflation and then to see this administration continue a policy which has proved to be totally inadequate in dealing with inflation; namely, to attempt to control inflation by monetary policy alone.

We have had a $300 billion loss in the securities market in the last 18 months, and we have had increasing unemployment. In some sections of the country we have something that approaches not a recession but a depression, and at the same time the price structure continues to go up.

So I congratulate the gentleman from Texas and the members of his committee for having the foresight to give the President the authority, if he wants to use it.

THE STRONG ECONOMY OF THE UNITED STATES

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GERALD R. FORD. Mr. Speaker, I am delighted that the economy of the United States is strong enough to withstand the words of doom and gloom of the gentleman from Louisiana. The economy of the United States is healthy now and will get healthier in the months ahead because of the sound economic policies of the Nixon administration.

This morning at 11:30 the announcement was made by the Department of Labor that the consumer price index was again at a 0.4-percent increase, which is the second month in a row where it has maintained that level.

The facts are that we are winning the battle against inflation. In the first 3 months of calendar 1970 the cost of living went up slightly over 6 percent.

Mr. BOGGS. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. In the last 3 months——

Mr. BOGGS. Will the gentleman yield?

Mr. GERALD R. FORD. Will the gentleman let me conclude?

Mr. BOGGS. Certainly.

Mr. GERALD R. FORD. In the last 3 months the cost of living has increased at approximately a 4-percent rate.

Let me say with emphasis there is no recession and the words of the gentleman from Louisiana trying to talk us into one will go for naught. The economy is healthy. It will get better. If we continue doing the things that are right, we can win the battle against inflation, which is one that was inherited by this administration from its predecessor.

Mr. BOGGS. Will the gentleman yield now?

Mr. GERALD R. FORD. I yield to the gentleman.

Mr. BOGGS. Since this administration came to power, the annual rate of increase in the cost of living has been over 6 percent, highest in almost two decades.

The minority leader finds solace in the June increase in cost of living, running at 0.4 of 1 percent for the month. Admittedly, that is slightly improved over the excessive increases since the Republicans assumed office, but it is still increasing faster than the worst rate under Democrats. The average annual rate in 1968 was 4.2 percent, and was at less than 4 percent when Mr. Nixon became President. The 1969 rate, under the Republicans, was 5.4 percent and the 1970 rate has averaged over 5.5 percent in the first 6 months.

Now the gentleman allegedly left the White House some weeks ago and said that the chances of a recession were nil. I wonder what the reaction was on Wall Street where the loss in the security market had been $300 billion or I wonder what the reaction was of the stockholders of Penn Central who have lost $2 billion or I wonder what the reaction might be in many places in this country where unemployment is 6 and 7 percent.

Mr. ALBERT. Will the gentleman yield to me?

Mr. GERALD R. FORD. Mr. Speaker, if I might, let me make this statement. The nationwide unemployment under the Kennedy administration averaged approximately 5.5 percent. In 1961 it was 6.7 percent. In 1962 it was 5.5 percent. In 1963 it was 5.7 percent. Unemployment under your last two administrations was always higher than it is at the present time except when the manpower commitment in Vietnam increased beginning in late 1964.

Mr. ALBERT. Will the gentleman yield?

The SPEAKER. The time of the gentleman from Michigan has expired.

BATTLE AGAINST INFLATION

(Mr. ALBERT asked and was given permission to address the House for 1 minute.)

Mr. ALBERT. Mr. Speaker, I take this time only to ask a question which I hoped to be able to ask while the gentleman from Michigan had the floor.

If we are winning the battle against inflation, why is the President, every 2 or 3 days, blaming the Congress for causing inflation?

Mr. GERALD R. FORD. Will the gentleman yield to me?

Mr. ALBERT. I will be glad to yield to the gentleman.

Mr. GERALD R. FORD. The President's concern is not the problem of winning the battle against inflation. Right now we are achieving that result. But unless we act responsibly at the present time in fiscal affairs in the Congress of the United States, all of the good that has been accomplished as of now will go down the drain. That is why Congress must act responsibly on spending authorizations and appropriations. If we do not, we will lose the inflation battle we are winning right now.

Mr. ALBERT. Mr. Speaker, I do not know whether the gentleman has given me an answer or not.

The SPEAKER. The time of the gentleman has expired.

PERMISSION FOR HOUSE MANAGERS TO FILE CONFERENCE REPORT ON H.R. 17619, INTERIOR DEPARTMENT APPROPRIATIONS, 1971

Mrs. HANSEN of Washington. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the bill (H.R. 17619) making appropriations for the Department of the Interior and related agencies for fiscal year 1971.

The SPEAKER. Is there objection to the request of the gentlewoman from Washington?

There was no objection.

CONFERENCE REPORT (H. REPT. No. 91–1321)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17619) "making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 18, 19, 20, 21, 44, and 65.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 8, 12, 13, 15, 16, 17, 22, 23, 24, 27, 28, 29, 30, 31, 35, 36, 41, 48, 49, 50, 51, 59, 61, and 64, and agree to the same.

Amendment numbered 4: That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$64,622,000"; and the Senate agree to the same.

Amendment numbered 9: That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$400"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amend-

ment of the Senate numbered 10, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$3,895,000"; and the Senate agree to the same.

Amendment numbered 11: That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$4,159,000"; and the Senate agree to the same.

Amendment numbered 32: That the House recede from its disagreement to the amendment of the Senate numbered 32, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$400"; and the Senate agree to the same.

Amendment numbered 37: That the House recede from its disagreement to the amendment of the Senate numbered 37, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$400"; and the Senate agree to the same.

Amendment numbered 43: That the House recede from its disagreement to the amendment of the Senate numbered 43, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$17,650,000"; and the Senate agree to the same.

Amendment numbered 45: That the House recede from its disagreement to the amendment of the Senate numbered 45, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$400"; and the Senate agree to the same.

Amendment numbered 46: That the House recede from its disagreement to the amendment of the Senate numbered 46, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$7,074,000"; and the Senate agree to the same.

Amendment numbered 47: That the House recede from its disagreement to the amendment of the Senate numbered 47, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$11,563,000"; and the Senate agree to the same.

Amendment numbered 52: That the House recede from its disagreement to the amendment of the Senate numbered 52, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$45,591,000"; and the Senate agree to the same.

Amendment numbered 54: That the House recede from its disagreement to the amendment of the Senate numbered 54, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$117,986,000"; and the Senate agree to the same.

Amendment numbered 55: That the House recede from its disagreement to the amendment of the Senate numbered 55, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$18,715,000"; and the Senate agree to the same.

Amendment numbered 58: That the House recede from its disagreement to the amendment of the Senate numbered 58, and agree to the same with an amendment, as follows: In lieu of the matter proposed by said amendment insert:

"NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

"SALARIES AND EXPENSES

"For expenses necessary to carry out the National Foundation on the Arts and the Humanities Act of 1965, as amended, $31,310,000, of which $8,465,000 shall be available until expended to the National Endowment for the Arts for the support of projects and productions in the arts through assistance to groups and individuals pursuant to section 5(c) of the Act and for support of the functions of the National Council on the Arts set forth in section 6; $4,125,000 shall be available until expended to the National Endowment for the Arts for assistance pursuant to section 5(g) of the Act; $11,060,000 shall be available until expended to the National Endowment for the Humanities for support of activities in the humanities pursuant to section 7(c) of the Act; and $2,660,000 shall be available for administering the provisions of the Act: *Provided*, That in addition, there is appropriated in accordance with the authorization contained in section 11(b) of the Act, to remain available until expended, amounts equal to the total amounts of gifts, bequests, and devises of money, and other property received by each endowment during the current and preceding fiscal years, under the provisions of section 10(a)(2) of the Act, for which equal amounts have not previously been appropriated, but not to exceed a total of $5,000,000: *Provided further*, That not to exceed 3 per centum of the funds appropriated to the National Endowment for the Arts for the purposes of sections 5(c), 5(g), and 6 and not to exceed 3 per centum of the funds appropriated to the National Endowment for the Humanities for the purposes of section 7(c) shall be available for program development and evaluation."

And the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 3, 5, 6, 7, 14, 25, 26, 33, 34, 38, 39, 40, 42, 53, 56, 57, 60, 62, and 63.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17619) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

TITLE I—DEPARTMENT OF THE INTERIOR

Bureau of Land Management

Amendment No. 1: Appropriates $58,605,000 for management of lands and resources as proposed by the Senate instead of $58,940,000 as proposed by the House.

Amendment No. 2: Appropriates $3,310,000 for construction and maintenance as proposed by the Senate instead of $3,215,000 as proposed by the House.

Bureau of Indian Affairs

Amendment No. 3: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $217,615,000 for education and welfare services instead of $218,645,000 as proposed by the House and $218,678,500 as proposed by the Senate. The decrease below the amount provided by the Senate includes $500,000 for teaching and guidance personnel in the public schools, $250,000 for development courses in Indian language, history, and culture and teacher training programs in local Indian culture and values, $200,000 for higher education scholarships, $50,500 for counseling and guidance in public schools, and $63,000 for teacher aides in public schools.

The conferees are in agreement that $50,000 included in the bill for the Navajos shall be available for expenses of the faculty at the Navajo Community College.

It is further agreed by the conferees that not less than $1,300,000 of funds available under this appropriation item shall be made available for operation of the vocational center at the Lewis and Clark Job Corps Center, Fort Lincoln, Bismarck, North Dakota.

Amendment No. 4: Appropriates $64,622,000 for resources management instead of $65,690,000 as proposed by the House and $64,122,000 as proposed by the Senate. The increase over the amount provided by the Senate includes $150,000 for forestry development, $200,000 for soil and moisture conservation, and $150,000 for development of housing programs.

Amendment No. 5: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $19,885,000 for construction instead of $18,935,000 as proposed by the House and $18,800,000 as proposed by the Senate. The increase over the amount provided by the Senate includes $585,000 for the boys' dormitory, Eufaula Indian Boarding School, Oklahoma, and $500,000 for the San Carlos Indian Irrigation Project, Arizona.

Amendment No. 6: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with language as proposed by the Senate to provide $150,000 for assistance to the Wagner, South Dakota, East Charles Mix Independent School District No. 102, for planning an addition to the District school facilities.

Amendment No. 7: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with Senate language which provides that not to exceed $365,000 may be used for enlargement, remodeling, and improving the Sioux Museum and Crafts Center, Rapid City, South Dakota.

Amendment No. 8: Appropriates $20,200,000 for road construction (liquidation of contract authority) as proposed by the Senate instead of $20,000,000 as proposed by the House.

Amendment No. 9: Provides an increase of $400 over the general purchase price limitation for the current fiscal year for police-type vehicles instead of $300 as proposed by the House and $500 as proposed by the Senate.

Bureau of Outdoor Recreation

Amendment No. 10: Appropriates $3,895,000 for salaries and expenses instead of $3,825,000 as proposed by the House and $3,995,000 as proposed by the Senate. The increase over the amount provided by the House includes $50,000 for nationwide planning and $20,000 for preparation of a study of the Mormon Battalion Trail.

Land and Water Conservation

Amendment No. 11: Appropriates $4,159,000 for administrative expenses of the Bureau of Outdoor Recreation instead of $3,459,000 as proposed by the House and $4,759,000 as proposed by the Senate.

Amendment No. 12: Appropriates $357,400,000 for the Land and Water Conservation Fund as proposed by the Senate instead of $168,500,000 as proposed by the House.

Amendment No. 13: Appropriates $185,400,000 for payments to States as proposed by the Senate instead of $63,500,000 as proposed by the House.

Amendment No. 14: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $96,600,000 for the National Park Service instead of $95,000,000 as proposed by the Senate and $56,000,000 as proposed by the House.

The increase over the amount provided by the Senate includes $800,000 for Cape Cod National Seashore, and $800,000 for the Delaware Water Gap National Recreation Area.

Amendment No. 15: Appropriates $32,741,000 for the Forest Service as proposed by the Senate instead of $13,750,000 as proposed by the House.

Amendment No. 16: Appropriates $8,000,000 for the Bureau of Sport Fisheries and Wildlife as proposed by the Senate instead of $1,541,000 as proposed by the House.

Amendment No. 17: Appropriates $500,000 for the Bureau of Land Management as proposed by the Senate instead of $250,000 as proposed by the House.

Amendment No. 18: Deletes language proposed by the Senate to provide $1,000,000 to the Bureau of Outdoor Recreation for supplemental allocations to the Federal agencies.

Amendment No. 19: Deletes technical correction proposed by the Senate.

Office of Territories

Amendment No. 20: Appropriates $509,000 for the Office of Territories as proposed by the House instead of $539,000 as proposed by the Senate.

Amendment No. 21: Appropriates $17,350,000 for administration of territories as proposed by the House instead of $17,380,000 as proposed by the Senate.

Amendment No. 22: Appropriates $367,000 for expenses of the Office of the Government Comptroller for the Virgin Islands as proposed by the Senate instead of $330,000 as proposed by the House.

Trust Territory of the Pacific Islands

Amendment No. 23: Appropriates $49,750,000 for the Trust Territory of the Pacific Islands as proposed by the Senate instead of $50,000,000 as proposed by the House.

Geological Survey

Amendment No. 24: Appropriates $106,392,000 for surveys, investigations, and research as proposed by the Senate instead of $108,057,000 as proposed by the House.

Bureau of Mines

Amendment No. 25: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $46,422,000 for conservation and development of mineral resources instead of $45,122,000 as proposed by the House and $45,272,000 as proposed by the Senate. The increase over the Senate allowance includes $1,000,000 for studies of mining environmental problems and for removal of coal waste banks, and $150,000 for sampling and characterization of incinerator residues and raw refuse.

Office of Coal Research

Amendment No. 26: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $17,160,000 for salaries and expenses instead of $16,200,000 as proposed by the House and $16,500,000 as proposed by the Senate. The increase over the Senate allowance includes $620,000 for the solid electrolyte high temperature fuel cell, $90,000 for the multi-cell coal-fired fluidized bed boiler project, and a reduction of $50,000 for the electrofluidic coal processing project.

Bureau of Commercial Fisheries

Amendment No. 27: Appropriates $27,893,000 for management and investigations of resources as proposed by the Senate instead of $28,168,000 as proposed by the House.

Amendments Nos. 28 and 29: Provide language as proposed by the Senate which cite the most recent authorizing legislation and include provision of that Act that funds for anadromous and great lakes fisheries conservation will remain available until expended.

Amendment No. 30: Provides language as proposed by the Senate for administration of Pribilof Islands, which states that of the amount appropriated, so much as may become available during the current fiscal year shall be derived from the Pribilof Islands fund.

Administrative provisions

Amendment No. 31: Technical correction as proposed by the Senate.

Amendment No. 32: Provides an increase of $400 over the general purchase price limitation for the current fiscal year for police-type vehicles instead of $300 as proposed by the House and $500 as proposed by the Senate.

Bureau of Sport Fisheries and Wildlife

Amendment No. 33: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $56,840,000 for management and investigations of resources instead of $56,356,000 as proposed by the House and $56,705,000 as proposed by the Senate. The increase over the House allowance includes $74,000 for restoration of Steamboat Bertrand, $150,000 for acquisition of additional waterfowl production areas in North Dakota, $100,000 for research on the red tide in the New York Bight area, and $160,000 for an evaluation study on oil spills, atomic waste, steelhead, and additional Columbia River Dams.

Amendment No. 34: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $4,983,000 for construction instead of $4,175,000 as proposed by the House and $3,497,000 as proposed by the Senate. The increase over the House allowance includes $220,000 for a water reconditioning system, Lahontan National Fish Hatchery, Nevada; $292,000 for a water reconditioning system at Leetown National Fish Hatchery, West Virginia; $196,000 for fish production facilities at Valley City National Fish Hatchery, North Dakota; and $100,000 for additional facilities at Ouray National Wildlife Refuge, Utah.

Amendments Nos. 35 and 36: Provide language as proposed by the Senate which cite the most recent authorizing legislation and include provision of that act that funds for anadromous and Great Lakes fisheries conservation will remain available until expended.

Administrative provisions

Amendment No. 37: Provides an increase of $400 over the general purchase price limitation for the current fiscal year for police-type vehicles instead of $300 as proposed by the House and $500 as proposed by the Senate.

National Park Service

Amendment No. 38: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $57,990,000 for management and protection instead of $57,670,000 as proposed by the House and $58,035,000 as proposed by the Senate. The decrease below the Senate allowance includes $25,000 for promotion of domestic travel and $20,000 for master planning.

The conferees are in agreement that of the total amount provided in this appropriation account, $75,000 shall be available for the student conservation program.

Amendment No. 39: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with contingency language proposed by the Senate.

Amendment No. 40: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with contingency language proposed by the Senate.

Amendment No. 41: Appropriates $48,543,000 for maintenance and rehabilitation of physical facilities as proposed by the Senate instead of $48,500,000 as proposed by the House.

Amendment No. 42: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $16,259,000 for construction instead of $16,385,000 as proposed by the House and $17,583,000 as proposed by the Senate. The decrease below the Senate amount includes reductions of $776,000 for anticipated slippage, $712,000 for construction of an airport at Jackson Hole, Wyoming, $11,000 for planning of developments in North Cascades National Park, and increases of $100,000 for restoration of facilities at Fort Scott National Historic Site, Kansas and $75,000 for administrative headquarters, Redwood National Park, California.

The conferees are in agreement that the reduction of $776,000 for anticipated slippage shall include $90,000 for the Anchorage Airport, $322,000 for visitor center improvements at the Everglades National Park, $300,000 for development of the National Sculpture Garden, and $64,000 for Big Horn Canyon National Recreation Area, Montana.

Amendment No. 43: Appropriates $17,650,000 for parkway and road construction (liquidation of contract authority) instead of $16,000,000 as proposed by the House and $17,660,000 as proposed by the Senate. The reduction below the Senate allowance includes $10,000 for planning roads and trails in the North Cascades National Park.

Amendment No. 44: Appropriates $6,801,000 for preservation of historic properties as proposed by the House instead of $6,672,000 as proposed by the Senate.

Administrative provisions

Amendment No. 45: Provides an increase of $400 over the general purchase price limitation for the current fiscal year for police-type vehicles instead of $300 as proposed by the House and $500 as proposed by the Senate.

Office of the Solicitor

Amendment No. 46: Appropriates $7,074,000 for salaries and expenses instead of $6,924,000 as proposed by the House and $7,229,000 as proposed by the Senate. The increase over the amount proposed by the House includes $150,000 for legal operations.

Office of the Secretary

Amendment No. 47: Appropriates $11,563,000 for salaries and expenses instead of $11,353,000 as proposed by the House and $11,771,000 as proposed by the Senate.

General provisions, Department of the Interior

Amendment No. 48: Provides language as proposed by the Senate for air-conditioning equipment for passenger motor vehicles.

TITLE II—RELATED AGENCIES

Department of Agriculture

Forest Service

Amendment No. 49: Appropriates $199,617,000 for forest land management as proposed by the Senate instead of $213,412,700 as

proposed by the House. Construction funds previously under this account have been transferred to the new construction account.

Amendment No. 50: Deletes language, as proposed by the Senate, relating to the appropriation of funds for acquisition of lands under the Weeks Act.

Amendment No. 51: Technical correction as proposed by the Senate.

Amendment No. 52: Appropriates $45,591,000 for forest research instead of $46,671,000 as proposed by the House and $45,294,000 as proposed by the Senate. The increase over the Senate allowance includes $325,000 for urban forestry, $172,000 for forest economics research, and a reduction of $200,000 for research on black cherry and white ash at the forest research facility, Warren, Pennsylvania. $1,280,000 of construction projects included under this appropriation item by the House were transferred to the new construction appropriation account.

Amendment No. 53: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $15,467,700 for construction instead of $14,188,000 as proposed by the Senate. The increase over the House allowance includes $297,000 for construction of a visitor information center at Seneca Rocks, West Virginia, $55,000 for planning of an addition to the Forest Research Laboratory at Princeton, West Virginia, and a reduction of $10,000 for the Kerr Arboretum and Nature Center, Oklahoma.

Department of Health, Education, and Welfare

Health Services and Mental Health Administration

Amendment No. 54: Appropriates $117,986,000 for Indian Health Services instead of $114,692,000 as proposed by the House and $118,436,000 as proposed by the Senate. The reduction below the amount proposed by the Senate includes $300,000 for the California Rural Indian Health Board, and $150,000 for the Urban Indian Health Pilot Program. Of the additional $1,269,000 provided for additional hospital positions, not to exceed $160,000 shall be used for operation of the Albuquerque Tuberculosis Sanatorium.

The conferees are in agreement that the Bureau of Indian Affairs, the National Council on Indian Opportunity and the Indian Health Service should work jointly with the individual states to develop a joint policy to provide adequate health services to all Indians residing in urban areas and isolated rural areas.

Amendment No. 55: Appropriates $18,715,000 for Indian Health Facilities instead of $17,950,000 as proposed by the House and $19,510,000 as proposed by the Senate. The reduction below the amount proposed by the Senate includes $500,000 for additional sanitation facilities, $138,000 planning funds for a hospital at Zuni, New Mexico, and $157,000 for converting the Albuquerque Tuberculosis Sanatorium to an outpatient clinic.

National Capital Planning Commission

Amendment No. 56: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with an amendment providing $891,000 for salaries and expenses instead of $1,070,000 as proposed by the House and $941,000 as proposed by the Senate. The reduction below the amount proposed by the Senate includes $50,000 for the Regional Airport Facilities Study. Notwithstanding this reduction, the conferees are in agreement that within available funds $100,000 shall be utilized for the Regional Airport Facilities Study.

Amendment No. 57: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with language proposed by the Senate for the transfer of $229,000 of the balance of the appropriation granted under "Land acquisition, National Capital park, parkway, and playground system" for salaries and expenses.

National Foundation on the Arts and the Humanities

Amendment No. 58: Appropriates $31,310,000 for salaries and expenses instead of $33,310,000 as proposed by the Senate. The decrease below the Senate allowance includes a reduction of $2,000,000 for the National Endowment for the Humanities.

Smithsonian Institution

Amendment No. 59: Deletes language, as proposed by the Senate, for the appropriation of funds for the Woodrow Wilson International Center for Scholars. This item has been included in the bill as a separate appropriation account.

Amendment No. 60: Reported in technical disagreement. The managers on the part of the House will offer a moton to recede and concur with an amendment providing $34,702,000 for salaries and expenses instead of $35,737,000 as proposed by the House, and $35,066,000 as proposed by the Senate. $750,000 included in the House amount has been transferred to a separate appropriation account for the Woodrow Wilson International Center for Scholars.

The reduction below the amount proposed by the Senate includes decreases of $100,000 for increased pay costs, $100,000 for the Joseph H. Hirshhorn Museum and Sculpture Garden, $18,000 for the Smithsonian Tropical Research Institute, $40,000 for the Radiation Biology Laboratory, $6,000 for the Office of Ecology, $150,000 for the Environmental Sciences Program, $25,000 for the Smithsonian Institution Press, and increases of $10,000 for the Center for Study of Man, $25,000 for the Division of Performing Arts, Festival of American Folklife, and $40,000 general funding for the Museum of History and Technology.

Amendment No. 61: Appropriates $950,000 for restoration and renovation of buildings as proposed by the Senate instead of $1,080,000 as proposed by the House.

Salaries and Expenses, Woodrow Wilson International Center for Scholars

Amendment No. 62: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with the provision of $750,000 as proposed by the Senate under a separate appropriation account.

American Revolution Bicentennial Commission

Amendment No. 63: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur with the provision of $373,000 for salaries and expenses as proposed by the Senate.

Federal Metal and Nonmetallic Mine Safety Board of Review

Amendment No. 64: Appropriates $167,000 for salaries and expenses as proposed by the Senate.

TITLE III—GENERAL PROVISIONS

Amendment No. 65: Deletes Sec. 303 proposed by the Senate.

Managers on the Part of the House.

CREDIBILITY GAP—RHETORIC VERSUS PERFORMANCE

(Mr. HANNA asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. HANNA. Mr. Speaker, I listened quite clearly when the charge of a credibility gap was leveled against our past President, but no place have I seen a more dramatic demonstration of the difference between rhetoric and performance than on page 3 of the Wall Street Journal this morning. In that very credible newspaper there is the statement made by President Nixon that the business downturn "has bottomed out," and the last half of 1970 "will definitely see the economy turning up."

Right alongside the statement there is a little box in which it says that factories operated at an average 77.9 percent of capacity in the second quarter of this year, the lowest level in more than 9 years, and it is the fourth consecutive quarterly drop in a row. If that is the way you arrive at an upturn, it seems to me that we are still taking too many downturns to be really turning upward.

BANKING AND CURRENCY COMMITTEE VOTES IMPORTANT NEW WEAPONS FOR PRESIDENT TO USE AGAINST INFLATION AND RECESSION

(Mr. PATMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include a statement by Speaker MCCORMACK on standby price and wage controls.)

Mr. PATMAN. Mr. Speaker, the House Banking and Currency Committee this morning reported out the renewal of the Defense Production Act of 1950 which includes an important new section giving the President authority to stabilize wages, prices, salaries and rents.

The wage-price section—title II of the bill—will give the President an effective and essential tool in combatting inflation and recession. This is standby authority to be invoked by the President when and if he determines economic conditions warrant its use.

The authority expires February 28, 1971. In the intervening months, this standby power will give the President a full opportunity to bring the economy under control and to put an end to the twin economic evils of inflation and recession which have plagued the country in recent months.

Mr. Speaker, I want to commend the Democratic members of the Banking and Currency Committee who stood together and steadfastly refused to go along with attempts to water down this important fight against inflation and recession. The 21 Democrats on the committee are recorded—in their votes on this title—for a stable economy. Their votes are a firm and strong indication that the Congress intends to give the President all the power that he might need to bring about a much-needed improvement in our economy. The vote is another indication

that this Congress is willing to do whatever is necessary to end inflation and to prevent ruinous recession.

Mr. Speaker, I hope that the House will be given an early opportunity to act on this legislation and that it will be passed by an overwhelming majority. The American people are demanding action on the economy and the bill passed by the House Banking and Currency Committee this morning is in accordance with these demands.

I include at this point a statement on this subject by Speaker McCORMACK:

STATEMENT BY SPEAKER McCORMACK ON STANDBY PRICE AND WAGE CONTROLS

This morning the House Banking and Currency Committee favorably reported H.R. 17880 granting the President standby authority to freeze prices, rents, wages and salaries. I strongly endorse the Committee's action. Last year the Congress granted the President standby authority to control credit. The proposed authority to control prices and wages is complementary to that legislation. With standby authority to control prices and wages, the President will then possess all of the tools necessary to stop the galloping inflation which we are now experiencing.

The House Democratic leadership will make every effort to expedite and pass this vitally needed legislation.

OUR DETERIORATING NATIONAL BUDGET SITUATION

(Mr. MAHON asked and was given permission to address the House for 1 minute.)

Mr. MAHON. Mr. Speaker, the House will consider this afternoon the $18 billion Labor-HEW appropriation bill for the fiscal year 1971. Amendments will be offered to increase the total of the bill, which is already $92 million above the budget appropriation requests.

The precarious fiscal situation confronting the country has, in recent days, again come to the fore. Over the last weekend, in fact on Sunday, the Washington Star carried a banner headline on the front page, "Nixon Berates Hill on Spending."

I think it is healthy that we discuss the spending situation and look where we are going. In the debate this afternoon I shall undertake to discuss the precarious situation confronting the country and I would be glad to exchange views with Members on the problems which confront us today.

PRESIDENT THREATENS VETO OF TRADE BILL

(Mr. VANIK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VANIK. Mr. Speaker, yesterday the President said that he would veto the trade bill, if the language of the bill went beyond textile quotas. He was strangely silent on the pernicious language of the trade bill which freezes into law the oil quota import privileges which costs the taxpayers and the U.S. consumers between $4½ to $7 billion a year, according to the Government's own figures.

The trade bill which so blatantly and arrogantly protects the privilege of oil should never be permitted to reach the President's desk. The quota system on oil imports is a horrible disregard of the public interest.

SHIFT IN U.S. ECONOMY

(Mr. KYL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KYL. Mr. Speaker, the July 1970 "Business Roundup" in Fortune magazine states this about the economy:

The U.S. economy has turned the corner on its 1970 readjustment. . . .

It seems clear that—without either stumbling into a deep recession or renewing the inflationary boom—the Nation is successfully negotiating a massive redeployment of priorities and resources, from an economy based on defense and business investment to one directed more toward consumption, housing, and social welfare.

We are now at a time when, for the first time in 20 years, we will devote more money to domestic and social causes than we do to defense, and as we move in that direction, there will be more unemployment in defense-oriented industries during the period of adjustment. We have heard this noon of wage, price, and rent controls, and I might suggest that one of the merits of that program is that it does take care of unemployment. The last time we had such controls it took a quarter of a million Americans to administer the program.

PRESIDENT'S ANNOUNCEMENT HE WOULD VETO A TRADE BILL

(Mr. FINDLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FINDLEY. Mr. Speaker, President Nixon's announcement yesterday that he would veto a trade bill imposing broad quotas is a welcome relief to those of us who have seen the specter of a devastating trade war looming on the horizon. The President acted with both courage and wisdom in making this announcement. He said:

Quota legislation, mandatory quota legislation, is not in the interest of the United States. We are an exporting nation rather than an importing nation.

Although the President did say that he does favor a limited quota on textile imports—a position which I personally question—he went on to state in unequivocal language:

If the bill goes beyond that, if it, for example, includes other items, I would not be able to sign the bill because that would set off a trade war which would have all the repercussions that I have tried to describe earlier.

The repercussions he spoke of were two. He said:

First, it would cost us more jobs in the exports that would be denied us, the export markets that would be denied us; and, second, even more important, it is highly inflationary, as anybody who has studied tariffs and quotas through the years is well aware.

I would express the hope that the President's statement will cause the entire quota proposal, including the textile provision, which the President, I regret to say, does support, and including the freezing of the oil quotas, to which the gentleman from Ohio (Mr. VANIK) just referred, to die a quiet, unobtrusive death in familiar surroundings where it now lies in the Ways and Means Committee.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. FINDLEY. I am glad to yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. I would just like to make this observation to my friend. A friend of mine coming to the Capitol this morning read the headline to which the gentleman referred, and his observation was, "My God, the President is in the hands of the Philistines."

Mr. FINDLEY. I will say to the gentleman that in the long run protectionism is going to cost a lot of American jobs, whereas trade expansion will create a lot of jobs, as it has in the past. In the short and long run, protectionism hurts the consumer.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman yield further?

Mr. FINDLEY. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. I would like to point out that in the State of New Hampshire in the next few weeks a textile firm will close. It is the main industry in the town in which it is located, and employs 600 people. Those people will lose their jobs. What would the President recommend that those 600 unemployed people do?

Mr. FINDLEY. The President has proposed an expanded program of relief for affected industries, including retraining allowances.

The SPEAKER. The time of the gentleman from Illinois has expired.

FREE TRADE SHOULD BE FAIR TRADE

(Mr. CLEVELAND asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CLEVELAND. Mr. Speaker, unfortunately the gentleman from Massachusetts has just left the floor. The two companies the gentleman referred to in his remarks are not only going to close, but they have closed. The announcement was made last week. These were J. P. Stevens textile mills, one in Franklin, N.H., and one in Tilton, N.H.

I think it is fair to point out in reply to the remarks of the gentleman from Massachusetts (Mr. BURKE) that it is my understanding the President has said he will not veto a bill with textile quotas. The two plants the gentleman from Massachusetts referred to are textile mills. I am glad to see he is back on the floor, and I will yield to him later—if I have time. In my opinion if the principles for quotas for textiles are reasonable and fair, and they are, then some provision

must be made for other important products such as shoes or electronics.

The point I wanted to make, before I yield to the gentleman from Massachusetts (Mr. BURKE) is this, and I address it to the gentleman from Illinois (Mr. FINDLEY): I am for free trade, but I want free trade to be fair trade.

We cannot export any more jobs to countries which do not assure to us free trade, or which do not allow fair competition at home, or legislate good working conditions for their workers. Nor can we allow the national security to be seriously imperiled by unwise and unfair trade policies as we are doing with the miniature and instrument precision ball bearing industry.

MILITARY BALANCE MUST BE RESTORED AND MAINTAINED IN THE MIDDLE EAST

(Mr. PELLY asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. PELLY. Mr. Speaker, there is a clear and present danger to world peace caused by the Soviet rearming of the Egyptians. This arms race danger is even compounded by the fact that Russians are manning both the missile sites in Egypt and flying jet fighters and bombers against the Israelis.

President Nixon was emphatic recently on television when he told the American people, and the world, that the threat to world security is greater in the Middle East than it is in Indochina.

The time to act is now. Delay could be catastrophic. I am deeply opposed to an arms race, except one we face in the Middle East; namely, the race to restore and maintain a balance of strength.

Today, Mr. Speaker, I have introduced a bill to furnish Israel with the means of providing for its own security by authorizing the President to transfer to Israel, by sale, credit, or guarantee, such aircraft as may be necessary to counteract any increased military assistance provided to other countries of the Middle East.

The threat to democracy in the Middle East is clear. Its defense is mandatory now.

STANDBY WAGE AND PRICE CONTROLS

(Mr. BLACKBURN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BLACKBURN. Mr. Speaker, I am taking this time to reply to the comments made earlier by the chairman of my committee, the Committee on Banking and Currency, in which he pointed out the committee today voted out an extension of the Defense Production Act and included in that a provision for standby wage and price controls.

Of course, the gentleman made it seem to appear that this provision for standby wage and price controls would be the panacea for all the economic ills we inherited from the previous administration. What the gentleman did not bother to point out is that this whole business of wage and price controls is a great fraud on the American public. When members of the committee were given the opportunity to vote either for or against price controls, they preferred not to take a position.

I say that is a political fraud, because if the economic conditions continue at the rate of inflation we have seen in the last few months, then the Democrats on the committee can say that if the President had exercised the standby controls we gave him, we would not have the problems, but on the other hand, if the President's economic policies are working—and I think they are working as well as we expect—then the inflation would not be a campaign point this fall, and the same Democrats who would not take a position on it today would not take a position on it next fall.

We all know the wage and price controls would involve the employing of hundreds of thousands of new Federal employees, and it would take months to set up such devices. To pretend that wage and price controls for a 6-month period would work is a great fraud.

VICE PRESIDENT AGNEW SUBSTITUTES FOR RADIO NEWS COMMENTATOR PAUL HARVEY

(Mr. ROSENTHAL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROSENTHAL. Mr. Speaker, last Saturday, there were newspaper reports that Vice President SPIRO T. AGNEW would deliver a broadcast for radio news commentator Paul Harvey.

In all fairness to Mr. AGNEW, I should report that when Hubert Humphrey was Vice President, he wrote numerous articles for national magazines in which he expressed opinions on major issues.

During his third term, President Franklin D. Roosevelt did a series of articles for Colliers magazine on the organization of the Supreme Court.

No canon of ethics seems to exist which would bar a President or Vice President from working as a news commentator while holding public office.

I think this is a dangerous situation which should be corrected as quickly as possible. What could prevent a President from offering his services as a news commentator to some network 3 nights a week? With the communications business so fiercely competitive, a network might conceivably jump at the opportunity to swamp its rivals in the ratings by featuring the President in a nightly 15-minute presentation of his views.

What a devastating propaganda weapon could accrue to a President or Vice President who by virtue of his office already enjoys an enormous advantage over his opposition when it comes to airing views. What is more, television reaches into more homes and carries more impact than any one national magazine does.

Because freedom of dissent and guaranteed expression of minority views is so vital to democracy, I think we must consider some prohibition to forbid the President or Vice President from engaging in news interpretation and opinion in a private capacity.

The easier it is for a national leader to drown out his opposition, the greater temptation there is for tyranny.

I am today asking the Federal Communications Commission to investigate the issue and promulgate a policy.

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar Day. The Clerk will call the first individual bill on the Private Calendar.

JOSE LUIS CALLEJA-PEREZ

The Clerk called the bill (H.R. 1747) for the relief of Jose Luis Calleja-Perez.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

DR. ANTHONY S. MASTRIAN

The Clerk called the bill (H.R. 15760) for the relief of Dr. Anthony S. Mastrian.

Mr. HALL. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

ATKINSON, HASERICK & CO., INC.

The Clerk called the bill (H.R. 10534) for the relief of Atkinson, Haserick & Co., Inc.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CLAUDE G. HANSEN

The Clerk called the bill (H.R. 13807) for the relief of Claude G. Hansen.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

JOHN R. GOSNELL

The Clerk called the bill (H.R. 13469) for the relief of John R. Gosnell.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CAL C. DAVIS AND LYNDON A. DEAN

The Clerk called the bill (S. 2427) for the relief of Cal C. Davis and Lyndon A. Dean.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CERTAIN INDIVIDUALS EMPLOYED BY THE DEPARTMENT OF THE AIR FORCE AT KELLY AIR FORCE BASE, TEX.

The Clerk called the bill (H.R. 10150) for the relief of certain individuals employed by the Department of the Air Force at Kelly Air Force Base, Tex.

There being no objection, the Clerk read the bill as follows:

H.R. 10150

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That each individual named in section 3 of this Act is relieved of liability to pay to the United States the amount set forth opposite his or her name, which amount represents an overpayment of compensation, due to administrative error, received by him or her before July 1, 1960 (and to which the waiver provisions of section 5584 of title 5, United States Code, do not apply), as a civilian employee at Kelly Air Force Base. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for amounts for which liability is relieved by this section.

SEC. 2. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to each individual named in section 3 of this Act an amount equal to the aggregate of the amounts paid by him or her, or withheld from sums otherwise due him or her, with respect to the liability to the United States which is relieved by the first section of this Act.

SEC. 3. The individuals referred to in the first section of this Act, and the amount of the liability of each of them, are as follows:

INDIVIDUALS WHOSE CLAIMS FOR OVERPAYMENT WERE PARTIALLY WAIVED UNDER SECTION 5584 OF TITLE 5, UNITED STATES CODE

Name:	*Amount of overpayment not waived*
Bryant, John M	$124.80
Courvier, Joe	97.32
Gillum, Richard A	542.45
Green, William R	43.44
Hernandez, Santos A	89.60
Herrera, Jimmie	93.40
Huntly, Dick M	89.60
Green, William R	43.44
Moore, Harvey L	84.81
Rosel, Consuelo O	21.60
Springs, Zea A	121.89
Vaughn, Betty L	106.90

INDIVIDUALS WITH CLAIMS (EITHER IN WHOLE OR PART) FOR OVERPAYMENT TO WHICH SECTION 5584 OF TITLE 5, UNITED STATES CODE, DOES NOT APPLY

Name:	*Amount of overpayment*
Seay, Henry A	$20.78
Snyder, Donald A	109.84

SEC. 4. No part of the amount appropriated in section 2 of this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this subsection shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

Page 2, in the list of individuals overpaid, after "Huntly, Dick M——$89.60" strike "Green, William R——$43.44".

Page 3, line 2, strike "in excess of 10 per centum thereof".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SAMUEL R. STEPHENSON

The Clerk called the bill (H.R. 10704) for the relief of Samuel R. Stephenson.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

DAVID L. KENNISON

The Clerk called the bill (H.R. 15272) for the relief of David L. Kennison.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

GEORGE F. MILLS

The Clerk called the bill (H.R. 15415) for the relief of George F. Mills.

Mr. HALL. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MRS. FERNANDE M. ALLEN

The Clerk called the bill (H.R. 15478) for the relief of Mrs. Fernande M. Allen.

There being no objection, the Clerk read the bill as follows:

H.R. 15478

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Mrs. Fernande M. Allen, of Alpena, Michigan, the sum certified to him by the Administrator of Veterans' Affairs pursuant to section 2.

SEC. 2. The Administrator of Veterans' Affairs shall certify to the Secretary of the Treasury the total additional amount of widow's pension benefits to which the said Mrs. Fernande M. Allen would have been entitled under title 38, United States Code, had she filed her application for such benefits on October 1, 1960, instead of on June 8, 1962.

SEC. 3. No part of the amount appropriated in the first section of this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this section shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

REFERENCE OF H.R. 1390 TO CHIEF COMMISSIONER, COURT OF CLAIMS

The Clerk called House Resolution 108, referring H.R. 1390 to the Chief Commissioner of the Court of Claims.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this resolution be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

THOMAS J. BECK

The Clerk called the bill (H.R. 4982) for the relief of Thomas J. Beck.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

KEUM JO KIM

The Clerk called the bill (H.R. 2043) for the relief of Keum Jo Kim.

There being no objection, the Clerk read the bill as follows:

H.R. 2043

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Keum Jo Kim may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by James and Shirley Franks, citizens of the United States, pursuant to section 204 of the Act.

Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

With the following committee amendment:

On page 1, beginning on line 8, after the words "of the" strike out the remainder of the bill and insert in lieu thereof the following: "Act: *Provided,* that the brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed

and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Keum Ja Franks."

A motion to reconsider was laid on the table.

OK YON (MRS. CHARLES G.) KIRSCH

The Clerk called the bill (H.R. 4670) for the relief of Ok Yon (Mrs. Charles G.) Kirsch.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

LOW YIN (ALSO KNOWN AS LOW YING)

The Clerk called the bill (H.R. 5655) for the relief of Low Yin (also known as Low Ying).

There being no objection, the Clerk read the bill as follows:

H.R. 5655

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Low Yin (also known as Low Ying) shall be deemed to be an immediate relative within the meaning of section 201(b) of that Act and may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That, for the purposes of section 203(a)(1) and 204 of the Immigration and Nationality Act, Low Yin (also known as Low Ying) shall be held and considered to be the natural-born alien son of Tom Nom Low and Cleo H. Low, citizens of the United States: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TAE PUNG HILLS

The Clerk called the bill (H.R. 12400) for the relief of Tae Pung Hills.

There being no objection, the Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Tae Pung Hills may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a pettition filed in his behalf by Frederick A. Hills and Lee Hills, citizens of the United States, pursuant to section 204 of the Act.

With the following committee amendment:

On page 1, line 8 after the words "of the" strike out the word "Act." and insert in lieu thereof the following: "Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAUREEN O'LEARY PIMPARE

The Clerk called the bill (H.R. 12962) for the relief of Maureen O'Leary Pimpare.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MARIA DE CONCEICAO BOTELHO PEREIRA

The Clerk called the bill (H.R. 12990) for the relief of Maria de Conceicao Botelho Pereira.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

VINCENZO PELLICANO

The Clerk called the bill (H.R. 13712) for the relief of Vincenzo Pellicano.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MRS. MARIA ELOISA PARDO HALL

The Clerk called the bill (H.R. 13895) for the relief of Mrs. Maria Eloisa Pardo Hall.

There being no objection, the Clerk read the bill as follows:

H.R. 13895

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Mrs. Maria Eloisa Pardo Hall shall be held and considered to be an immediate relative as defined in section 201(b) of that Act and the provisions of section 204 of the said Act shall not be applicable in this case.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ANAN ELDREDGE

The Clerk called the bill (H.R. 2849) for the relief of Anan Eldredge.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MRS. MARCELLA COSLOVICH FABRETTO

The Clerk called the bill (H.R. 13383) for the relief of Mrs. Marcella Coslovich Fabretto.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

The SPEAKER. This concludes the call of the Private Calendar.

CALL OF THE HOUSE

Mr. DAVIS of Wisconsin. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 225]

Adair	Daddario	Meskill
Addabbo	Davis, Ga.	Montgomery
Alexander	Dawson	Ottinger
Anderson, Tenn.	Delaney	Pollock
	Diggs	Powell
Baring	Dulski	Rarick
Berry	Edwards, La.	Reid, N.Y.
Blatnik	Fraser	Rogers, Colo.
Brock	Gallagher	Roudebush
Brooks	Gilbert	Rousselot
Burke, Fla.	Gray	Roybal
Burleson, Tex.	Green, Oreg.	Ruppe
Burton, Utah	Hébert	Ryan
Button	Ichord	Scheuer
Cabell	Kee	Sisk
Caffery	Keith	Steiger, Wis.
Camp	Kirwan	Stephens
Celler	Kuykendall	Stuckey
Clay	Long, La.	Taft
Collier	Lukens	Weicker
Crane	McCarthy	Yates

The SPEAKER pro tempore (Mr. ALBERT). On this rollcall 368 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PERSONAL ANNOUNCEMENT

Mr. HANLEY. Mr. Speaker, due to a longstanding prior commitment, I was not present on the floor of the House yesterday during consideration and passage of H.R. 9476. This measure, which I heartily support, provides for the use of national service life insurance funds to guarantee home loans to our war veterans. I have long been a proponent of this program and I enthusiastically endorse the action taken in this Chamber yesterday in passing the bill 326 to 0. I can assure my colleagues that if I had been present the vote would have been 327 to 0.

PROVIDING FOR CONSIDERATION OF H.R. 18515, DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATIONS, 1971

Mr. YOUNG. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1151 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1151

Resolved, That during the consideration of the bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes, all points of order against said bill for failure to comply with the provisions of clause 2, rule XXI are hereby waived.

Mr. YOUNG. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from California (Mr. SMITH), pending which I yield myself such time as I may consume.

Mr Speaker, House Resolution 1151 is a resolution waiving points of order against certain provisions of H.R. 18515, the Departments of Labor, Health, Education, and Welfare and related agencies appropriation bill for fiscal year 1971.

Legislative authorization for several activities, for which funds are included in H.R. 18515, expired at the end of fiscal year 1970. These are all activities currently in progress; funds for all are carried in the budget; legislation to extend them all is in the legislative process. The activities involved are listed on page 42 of the report on the bill.

Because the authorizations have not been enacted, points of order are waived against the bill for failure to comply with the first provision of clause 2, rule XXI. By mistake, the second provision was covered by the rule—so I have an amendment at the desk to correct the resolution.

Now, Mr. Speaker, as stated there is a clerical error in the rule and at the proper time I shall send to the desk a committee amendment to correct the clerical error.

Mr. Speaker, I urge the adoption of the resolution.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. YOUNG. I yield to the gentleman from Iowa.

Mr. GROSS. With regard to waiving points of order, the gentleman just said that he expects to offer an amendment to limit it to eight areas or provisions of the bill; is that correct?

Mr. YOUNG. Yes. There were several provisions, as I have stated, relating to programs that are in progress currently but for which the authorizations expired at the end of the last fiscal year.

The chairman of the Committee on Appropriations and the ranking minority Member, together with others from the Committee on Appropriations appeared before the Rules Committee and asked that the points of order be waived with regard to these specific provisions.

Now, I would say to the distinguished gentleman from Iowa that the rule, through a clerical error, waived points of order against two other provisions which were not intended to be waived. That is why I previously stated that a committee amendment would be offered to correct that situation.

Mr. GROSS. Mr. Speaker, if the gentleman will yield further, in reading the report, on page 42, I find only one reference to a legislative provision in this bill.

The gentleman from Texas is talking about waiving points of order on a multiplicity of provisions.

Is the report faulty in that it lists only one legislative provision under the heading of limitations and legislative provisions.

Mr. YOUNG. I will say to the gentleman from Iowa that it is my understanding that the points of order are waived insofar as the application of the first provision of clause 2, rule XXI applies to this list of items, because they are appropriations without authorizations having been signed into law.

The second provision has to do with legislation on an appropriation bill which would violate the rules of the House.

Mr. GROSS. I am sure the waiver of points of order is not to protect the cutting of the salaries of anyone. So it must be to protect language in the bill or items in the bill that have not previously been authorized.

Rule XXI, clause 2, would protect both, but I cannot conceive of anybody around here cutting anybody's salary.

I thank the gentleman for his explanation.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I concur in the remarks of the distinguished gentleman from Texas (Mr. YOUNG) and wish to associate myself with his remarks in explaining House Resolution 1151.

For the information of the gentleman from Iowa (Mr. GROSS), my understanding is that the language which will be offered as an amendment will waive all points of order against appropriations carried in the bill which are not yet authorized by law—just those. They are listed on page 42 of the report.

As an example, the Clean Air Act, H.R. 17255, passed the House on June 10. Hearings are being held in the Senate, but no action has been taken.

The Solid Waste Disposal Act, H.R. 15847 passed the House on June 23, but has not yet been acted on by the Senate.

The Public Health Service Act, H.R. 18110 was ordered reported on June 23.

H.R. 14237 is the Mental Retardation Facilities and Construction Act. A rule was granted on that on July 8, and it has been set for floor action later this week.

The rule waives points of order on the appropriations for these subject matters where the authorizations have not yet been signed into law. They are listed on page 42 of the report.

Mr. Speaker, I urge the adoption of the rule in accordance with the amendment to be offered.

Mr. YOUNG. Mr. Speaker, I yield 10 minutes to the distinguished gentleman from Illinois (Mr. YATES).

Mr. YATES. Mr. Speaker, I thank the gentleman for yielding.

I just took a clipping off the wire service in which remarks of the gentleman from Michigan (Mr. GERALD R. FORD) were quoted after he had come out of the White House, saying that congressional big spenders were distorting President Nixon's budget, and adding funds where they were not needed.

Pressed by newsmen to name fiscally irresponsible Congressmen, FORD named me and my colleague, JEFFERY COHELAN, Democrat of California.

The minority leader has been decrying Federal spending for Health, Education, and Welfare programs for years and there is nothing new in his utterance.

I suppose that he does not like the fact that I joined other Members of the House in voting for the so-called Joelson amendment which added several hundred million dollars for education; that he was referring to the fact that I voted to override the President's veto on the extension of the Hill-Burton Act—and I may say in passing that a number of his own colleagues on the Republican side did that as well—and I suppose the minority leader was referring to the fact that today I am joining with several other members of the Committee on Appropriations in offering an amendment to add approximately $360 million in funds over the budget in order to take care of the medical and dental needs of the people of this country. I believe the funds are necessary. The health of our people is of utmost importance.

Even Mr. Nixon recognizes that there is a crisis in our health care system although he has done little about it. The President himself a year ago said that there was a massive crisis in the area of health care, and unless action was taken to meet the crisis we were going to break down in our medical care system that would have consequences affecting millions of people.

That is what the President himself said; but his budget did not begin to take care of the people's health needs.

We propose to try to deal with that medical crisis in the amendment to be offered by the gentleman from Massachusetts. And when the President says Democratic spending is distorting his budget, it is well-known the President's budget was distorted even at the time it was first issued. However, it is the President's economic policies that have placed his budget out of kilter, policies that clamped companies in a tight money vise that brought earnings to a halt.

The President's budget would be in fairly good shape today if the revenues he anticipated for the Nation's earnings had produced the taxes he counted on.

In great measure the deficit is caused by the dramatic drop in Federal revenues and the tremendous increase in costs of financing the national debt because of high interest rate. Major unemployment has resulted.

Mr. Speaker, unprofitable businesses and unemployed men do not pay any taxes. Federal tax revenues are down by hundreds of millions of dollars as a result of the administration's economic policy. The programs that we believe

should be financed—the educational appropriation bill, which the President says he is going to veto—and the HEW bill which we are considering today—if Mr. Nixon asks us, and if the gentleman from Michigan (Mr. GERALD R. FORD) asks us to balance the budget by slashing money for education and by cutting funds to build desperately needed hospitals and by keeping health manpower appropriations at a level which is disastrously low in this country, well, Mr. Speaker, I, for one, am not going to help do so.

I am not going to help him to balance that budget by denying children a chance for a good education and by forcing citizens to obtain necessary medical treatment in some obsolete under-equipped hospitals or by denying the Nation's citizens the doctors, dentists and technicians who are needed to protect their health.

Let Mr. Nixon and Mr. FORD shift their priorities. They think it is proper today to spend more than $1 billion for the SST—$290 million this year. I offered the amendment to cut all SST funds. We can certainly wait on that program.

They insist on spending billions of dollars for the ABM. I offered the amendment to cut out all funds for deployment of the ABM. It is not needed at the present time.

Mr. Speaker, I consider that the children of our country are entitled to a decent education, the people of our country are entitled to adequate health care, care that is deteriorating rapidly because of the lack of funds. I consider these to be of the utmost priority and deserving of help from the Federal Government.

If Mr. Ford considers this viewpoint as budget busting he is closing his eyes to reality, for everybody—I repeat, everybody—recognizes that there is an enormous and growing crisis in our Nation's health care system. Even President Nixon who put it this way a year ago:

> We face a massive crisis in the area of health care and unless action is taken both administratively and legislatively to meet the crisis within the next two or three years, we will have a breakdown in our medical care system which could have consequences affecting millions of people.

The "everybody" who talks about the crisis in medical care is very much like Mark Twain's "everybody" who talks about the weather. Nobody does anything about it. Certainly, the President has done little about it. Even though he recognized the massive crisis which confronts our people, the amounts he recommended for dealing with the projects in his budget this year were outrageously inadequate. Words will not solve this problem. Dollars are needed. As an editorial in the Evening Star pointed out recently, there can be no serious grappling with the paltry supply and spiraling costs of medical services until the critical shortage of medical personnel and facilities is alleviated. The outlook for that is gloomier than ever. Many medical schools are in desperate financial straits, largely because of declining grants, and curtailments of already insufficient programs.

The physician shortage is estimated at more than 50,000 and is getting worse each year by 5,000.

At least 25 percent of nursing posts throughout the country are not filled.

Medical schools annually turn down thousands of qualified applicants for lack of space.

While thousands of American college graduates are attending foreign medical schools, we are importing almost as many doctors every year as our medical schools turn out.

More than half the Nation's medical schools are receiving distressed grants and these are being scaled down.

For an administration which recognized "the existence of the massive crisis," the amount made available in the budget is like throwing a rope 30 feet long to a man drowning 50 feet away.

The Committee on Appropriations is not profligate in its allowances. Ordinarily it will take the budget requests as a ceiling and cut appropriations below the budget. But the committee was shocked by the inadequacies of this administration's budget requests and rejected many of them out of hand.

I commend the committee in its effort to meet the crisis but I think they still grossly underestimated it. They were timid, rejecting the determined attack that a massive crisis requires.

It increased the highly critical program for medical manpower institutional support by only $18 million over the budget.

For the Hill-Burton program which the Congress insisted be carried out over the President's veto, it granted $122 million in additional funds, a figure roughly $200 million below the amount authorized by the Congress.

Community mental health centers were increased by $20 million and the National Heart and Lung Institute were increased by $6 million.

All these are critical areas and the amounts allotted by the committee are woefully inadequate.

Even the Boland amendment cannot be described as a massive attack on the medical crisis but it at least provides reasonably adequate funds to deal with the problems at hand. It does attack the health care crisis in some of its major aspects. It concentrates on the training of people, people who are desperately needed in all aspects of medicine.

It is an attempt to balance the need for more physicians with the need for more hospital beds. It recognizes the necessity of providing aid not only for the students but also the institutions which must train them.

In the United States of America in the year 1970, medical care is still not available for our people. The Boland amendment proposes to remedy the medical care gap.

A member of the New York Academy of Medicine has said:

> If we practiced medicine properly, we would have empty hospital beds all over the country instead of their being overcrowded in some areas and unavailable in others.

The modernization needs of our hospitals alone amount to $11 billion.

Seven years ago, in 1963, that figure was $3.2 billion. Hospital needs have more than tripled in less than a decade.

It is amazing that as the needs increase and grow more serious, congressional support for the program has dwindled. Attributable in greatest measure, I believe, to the habit of the Appropriations Committee in clinging to the budget requests.

In 1968 the Congress appropriated $293,357. In 1969, it apropriated $258,368. In 1970 the amount approved dropped to $172,270, which is the same figure the committee recommends for this year.

But if the committee insists that it is making available the same amount this year as it did last year, it is in error because the program has lost 5 percent to 6 percent due to inflation, and secondly, the construction of teaching hospitals has been transferred to the program.

Thus, this year the Hill-Burton program is required to do a greater job with less money—this in the face of congressional determination to move ahead with the hospital bed construction as was so recently evidenced by its voting to override the President's veto on the Hill-Burton bill.

We must make the same kind of progress and delivery of health care that has been made in the conquering of disease. The triumphs that have been achieved in the laboratory mean little if they cannot be transferred to our entire society. The gap between what we know and what we do is so great that thousands of people die needlessly every year. I am told that with regular checkups we could prevent most of the deaths from all forms of cancer, and I must congratulate the committee upon recognizing the needs for additional funds for cancer research and providing them in this bill.

Heart disease is still the Nation's No. 1 killer and the committee's increase will not provide the additional momentum needed to cut down the deaths from this killer.

The Boland amendment gives recognition to the feeling of urgency that must be generated if this Nation is to halt the burgeoning deterioration of our medical care system.

This country has the brains and the resources to provide the best medical care of anywhere in the world and we are not doing it.

We can reach out and bring an end to diseases which still plague our people. We must develop a medical care system that delivers health rather than merely treats an illness.

The health of our children, all of our people, is a paramount priority. We must give it recognition by supporting the additional funds in the Boland amendment.

AMENDMENT OFFERED BY MR. YOUNG

Mr. YOUNG. Mr. Speaker, I offer a committee amendment.

The Clerk read as follows:

> Amendment offered by Mr. YOUNG: Strike out lines 5 through 7 of the resolution and insert in lieu thereof the following: "purposes, all points of order against appropriations carried in the bill which are not yet authorized by law are hereby waived."

The amendment was agreed to.

Mr. YOUNG. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

CALL OF THE HOUSE

Mr. ARENDS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 226]

Adair	Cunningham	Mathias
Anderson, Tenn.	Davis, Ga.	Meskill
	Davis, Wis.	Monagan
Baring	Dawson	Montgomery
Berry	Delaney	Murphy, N.Y.
Bingham	Diggs	O'Neill, Mass.
Blatnik	Dulski	Ottinger
Brock	Evins, Tenn.	Patman
Brown, Calif.	Gallagher	Pollock
Burke, Fla.	Garmatz	Powell
Burleson, Tex.	Gray	Rarick
Burton, Utah	Green, Oreg.	Reid, N.Y.
Button	Grover	Rogers, Colo.
Caffery	Hanna	Roudebush
Camp	Hawkins	Rousselot
Carey	Hébert	Ruppe
Cederberg	Heckler, Mass.	Ryan
Celler	Ichord	Scheuer
Chappell	Kee	Sisk
Clay	Kirwan	Stubblefield
Collier	Long, La.	Taft
Cramer	Lukens	Weicker
Crane	McCarthy	

The SPEAKER. On this rollcall 363 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATIONS, 1971

Mr. FLOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate continue not to exceed 3 hours, the time to be equally divided and controlled by the gentleman from Illinois (Mr. MICHEL) and myself.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Pennsylvania.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 18515, with Mr. HOLIFIELD in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous consent agreement, the gentleman from Pennsylvania (Mr. FLOOD) will be recognized for 1½ hours, and the gentleman from Illinois (Mr. MICHEL) will be recognized for 1½ hours.

The Chair recognizes the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, this is the third appropriation bill the Subcommittee on Labor and Health, Education, and Welfare, has brought to the House this year. This is an unusual, extraordinary, and historical effort by a subcommittee of the great Committee on Appropriations.

This year we separated the Office of Education bill from Labor, and Health, Education, and Welfare, to expedite it and to be sure that the people responsible for the budgets, and the administration of these programs in the school districts back home would have more time to know what Federal funds would be available and to plan the local programs.

On February 19—and I wish you would note these dates to show you how we have worked—we brought to the House the Labor-HEW bill to replace the one vetoed by the President on January 25. You will recall that veto.

On March 3, Mr. Chairman, we were back with the conference report on that bill.

To show you how this committee has acted with diligence and expedition, Mr. Chairman, believe it or not the very next day, at 10 o'clock in the morning on March 4th, we started hearings on the Office of Education appropriation bill for 1971 to which I referred a minute ago. We brought you that bill on April 14. Of course, you now know, Mr. Chairman, we brought in the conference report on that bill to the House just last Thursday.

On the day after the Office of Education bill was passed by the House, we started hearings on the Labor, Health, Education, and Welfare bill that we bring to you today.

This is for those who for various reasons would cast aspersions upon what this House does and what the Members do, day and night and month after month. There is exhibit "A."

Before we drew up this bill, Mr. Chairman, we held 2 solid months of hearings—every morning, every afternoon except Saturdays and Sundays—and long mornings, and I mean, long, mornings and long afternoons, with no stop and no letup, hour after hour. Just to show you—these hearings are printed—take a look at that table—at the committee table in front of me here. These are printed in seven volumes and they total 7,400 pages.

We have not had the time to count the number of witnesses that we heard, but I assure you it runs into the hundreds. Did you ever try a lawsuit? Do you know what hundreds of witnesses mean? Well, we heard them—including 193 nongovernmental witnesses—the so-called public witnesses, who asked to be heard. It is not a closed corporation. Those in this Nation who wished to be heard on this tremendously important bill which affects every man, woman and child in this country were heard. Most of them testified with regard to what they saw as deficiencies in the budget. So, Mr. Chairman, it is obvious that we have not acted in haste, nor have we acted on the basis of inadequate information.

This is an important point on this bill: All members of the subcommittee, every member of the subcommittee on both sides of the aisle, Democrat and Republican, believes that under all the circumstances—and they are difficult, many, varied, and highly complicated—this is a good bill. The subcommittee was unanimous.

Some are dissatisfied with the bill. Well, well, well. Can you imagine in this marvelous institution, this House of Representatives, that someone would not be? What is wrong with dissent? You know my ancestry: DANIEL JOHN FRANCIS ALOYSIUS FLOOD. What is wrong with dissent? My people have been dissenting for a thousand years. There is nothing wrong with that, provided they do not get carried away, as some of my people did, literally and figuratively.

But these knights in shining armor have amendments as pendants on their lances. Only they are the pure in heart who learn and are concerned about what is needed in this Nation for labor, health, education, and welfare. Only they alone? Oh, no. Take a look at this subcommittee. There is no more dedicated group of people, a group who have worked for hour after hour, for months and years, this subcommittee, with great compassion, understanding and, in addition, they are informed, which is something else.

Now, as I said, not everyone is satisfied with this bill. We have limited dissenting views attached to the committee's report. However, I would just like to point out that of the 51 members of the Appropriations Committee, these dissenting views are signed by an overwhelming number of five. That should stagger one. And I repeat for the purpose of emphasis, not one of the members of this subcommittee who heard this over 2 months and over 7,000 pages of testimony on this bill from all parts of this Nation—not one of them signed these separate views.

The Members know me, my record here speaks eloquently for itself, better than I. I have been on this side of this aisle for 25 years through five Presidents—I would fly in the face of that record today? Not I.

The bill in round figures, Mr. Chairman, includes $18,800 million. That is $18,800 million. Why, that is not hay, even for my friends with the bleeding hearts on this subject.

The report on this bill should be kept in the pockets of Members until each Member reads every word. Keep it for your radio and television broadcasts and for your newsletters and for your speeches back home and for your visits back home. And when you hear, "What have you done for us?" you have answers in that report.

Oh, please do not anyone mention what we have done for the war in Viet-

nam, this can of worms, this frightful heartrending thing. I speak of this appropriation bill for this fiscal year, and if a wand could be waved and that horrible thing stopped, it would not affect this bill by 5 cents. Do not trot that out in mock horror when we know this is the appropriation bill for fiscal year 1971 that has already begun.

This bill is $2,300,000,000 over the comparable appropriations for 1970. That is $2,300,000,000. It is $93 million over the President's budget for 1971.

So the committee does not know and does not understand and does not feel? Oh, Mr. Chairman, these people come before us, and these are all good people, these witnesses, dedicated and honest and sincere and knowledgeable and learned. There is not a top man in the National Institutes of Health who could not leave there in the next minute and make much more money next year. Why are they there? They are dedicated and sincere.

The public witnesses who come in all have their special causes. Their integrity is san peur et sans reproche—with a few exceptions—hundreds of them. Oh, they say to us, to the committee, "We want to see the budget balanced." Then the inevitable, in capital letters, "But take care of my most worthwhile project or program." Heart. Cancer. Stroke. Arthritis. Children. Hospitals. Medical schools. Whatever it might be—"But take care of us." That is the pain your committee must go through. That we did.

There are only two increases over the budget, outside of the National Institutes of Health, that amount to as much as $2 million.

The first of these is $20 million more, $20 million above the $60.1 million requested for the staffing of community mental health centers. We took that budget of $60.1 million and added $20 million because of what we know and what we believe should be done. But we also know and believe, in our heart of hearts, from our information and knowledge, that is enough. That will do this job this year. That is all we are talking about today.

The budget included only enough for staffing grants in 1971 to continue those that were staffed in 1970 and nothing for the new centers. This to us presented a rather ridiculous situation. When the local people and the Federal Government have spent considerable money, and especially the local people, a lot of time and effort to set up the facilities and to do all the planning to get these centers ready for operation, and then to be told, "There is no money to operate," after all that—"no money to operate"—it is ridiculous.

The $20 million added to the bill will certainly provide for these new centers. I believe it will provide all the staffing funds needed in 1971. We heard the testimony. That is what we believe.

The second large increase, aside from the NIH, is $92.2 million over the request for construction of hospitals and other medical care facilities. Now hear these figures. There is $338.3 million worth of construction provided in this bill. That is an increase of $92.2 million over the request and an increase of $166 million over the 1970 appropriation.

We ignore these things? We are unaware? We are callous pennypinchers?

And let me say this, too, Mr. Chairman: that is the largest amount ever provided since the Hill-Burton Act became law. Now put that in your pipe and smoke it. Oh, do not tell me about the parade of Members, including me, who voted to override the President's veto on the Hill-Burton Act. That was an authorization bill. I would do it again tomorrow, but I am sure that the overwhelming majority of the Members who voted to override the President's veto will not destroy an appropriation bill. It is a different thing.

What is even more important to many people is that this increase over the budget is all in grant funds so that as much is available for grants in 1971 as in 1970. That is grants. The budget request was only for $50 million in grants, but there is $172.2 million recommended in the bill. This will be especially helpful to hospitals that started construction with partial funding—remember those 35 hospitals we have heard so much about—they require their share of a continuation of the grant program for completion of the facilities, and the dough is there. It will also be most helpful for those hospitals that cannot under their current State laws borrow money.

Both the request and the bill include $5 million to start this newly authorized interest subsidy program. This will be sufficient to subsidize interest payments on $166 million of mortgage loans.

For the research components of the National Institutes of Health, Mr. Chairman, the overall request that came to us was a standstill budget. There were a few increases for things like the virus-cancer program and the cardiovascular research centers, but they were made at the expense—and we did not like this—they were made at the expense of cutting other research and research related activities below even the 1970 program level.

That is what came to us. Now, what did we do—this heartless, thoughtless, penny-pinching subcommittee on appropriations? The first thing this subcommittee did was to add $38,461,000 to restore every one of those activities, every one of those that were cut below the 1970 program level Then we added enough to make the total increase—now hear this—we then added enough to make the total increase for the Cancer Institute $25 million. And that brings the National Cancer Institute to almost one-quarter of a billion dollars.

There are a few other items at NIH that we increased. They are in this report that we plead with you that you read. In total the bill contains $92.7 million more than the budget request for all of the National Institutes of Health.

Mr. Chairman I have discussed about 95 percent of the increases so far as total dollars are concerned. We also made 15 or 20 decreases but two account for most of the total. One of them is Work Incentives.

This is a program that we sponsored, that we are for 1,000 percent and have been for from the first day of its existence, but under the circumstances we made a reduction of $50 million from the $170 million requested for the program.

The objective of this program is admirable beyond your words or mine. That is going pretty far. It is to get people off the welfare rolls and into gainful employment. We have supported and encouraged this and urged this from the very beginning. However, this program is badly behind schedule. This distresses us but it is so. The amount we recommend in this bill, even with the $50 million cut, is $18 million above that appropriated in 1970. We are satisfied that this program will not be restricted by the cut. Otherwise we would be no party to it.

Then, Mr. Chairman, we come to the Office of Economic Opportunity, where $34 million is cut from the requested $2,080 million. Now, let us be frank about this, Mr. Chairman. This is nothing more than a plain open and aboveboard, naked cut, exclamation mark. That is all it is, nothing else. Why? I am one of its friends and believe me I have been from the day it was born. Ask them. They knew and we knew that whatever they asked for a cut would be made. So, it was made. But they still have $98.2 million over 1970. They will not bleed. If I thought so I would have an amendment on the floor today, make no mistake about it.

Mr. Chairman, the other items we cut are relatively small and mostly salaries and expenses items. The committee is concerned about the ever increasing number of people on the payroll of these agencies, especially the Department of Health, Education, and Welfare. We plan to look into this matter in more detail before next year's hearings.

There is one language item I should mention. Many States were concerned about section 208 that the budget recommended be included in the bill. This would have affected nearly 40 States to various degrees. This section would have placed a limitation on the public assistance funds which would prohibit paying to any State for 1971 more than 110 percent of the amount they received for 1970 for social services, staff training, and administrative expenses. This would have been grossly inequitable between States. Those States that had built up their programs to a proper level would have been allowed enough to continue at that level; those who had been slow to get started and have inadequate programs would have been kept from improving them. The subcommittee has not included this proposed provision in the bill.

Mr. Chairman, this is a good bill. It deserves the support of the whole House, the Congress and the President.

Mr. MARTIN. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I will yield to the gentleman from Nebraska.

Mr. MARTIN. Mr. Chairman, I want to commend the gentleman from Pennsylvania for his eloquent remarks, and

for the bill which the committee has reported.

I was particularly interested in the gentleman's remarks about the Hill-Burton portion. As the gentleman knows, I have been concerned about the fact that some hospitals in the nation, particularly the Mary Lanning Hospital in Hastings, Nebr., in my district, and two in Lincoln, Nebr., St. Elizabeth's and Madonna Nursing that had been promised funds under the Hill-Burton Act, and that had proceeded with construction, but have not been completely funded. These hospitals are in serious financial plight today because of this fact.

In view of the appropriations recommended in the bill, and the remarks of the gentleman in the well, is it the intent of the committee that the director of the Hill-Burton program fund these hospitals that have been promised the money, but have not had it forthcoming?

Mr. FLOOD. As far as this subcommittee is concerned, I assure the gentleman the answer is "Yes." The question was raised in the full committee, and the question was raised—and properly so—when we went to the Committee on Rules yesterday, and it is the feeling of this subcommittee that there should be sufficient funds for the State agencies that control, to a great extent, the allocation of these funds to individual projects to take care of the needs of the hospitals to which the gentleman refers. We want their needs cared for and we certainly expect they will be under this bill.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, did any member of the Committee on Appropriations vote against the bill when it was reported out of committee?

Mr. FLOOD. Against the bill?

Mr. YATES. Yes.

Mr. FLOOD. Not that I know of.

Mr. YATES. It had the full vote of the committee, did it not, even though it was $93 million above the budget, all Democrats and all Republicans who were present voted for the bill; is that correct?

Mr. FLOOD. As far as I know there was no vote against the bill in the full Committee on Appropriations. That is why, I might add to my friend, that all of a sudden, out of the clear, blue sky, I am surprised to find solicitations are being made to enlist colleagues to present amendments to the bill today.

Mr. SCHADEBERG. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman.

Mr. SCHADEBERG. Mr. Chairman, first of all, I would like to thank the gentleman from Pennsylvania for bringing out this bill. He is aware, of course, of my interest in hospitals that have not been fully funded. I would like to take this opportunity, to thank the gentleman from Pennsylvania (Mr. FLOOD) for the courtesies that he has extended to me and for his understanding in this long process we have been through. I appreciate very much the effort of the committee in making these funds available for hospitals such as I have in my district.

Mr. FLOOD. Oh, we will continue to do that—we will never stop that—within the rule of reason.

Mr. SCHADEBERG. I thank the gentleman. Of course, I understand that.

Mr. BURKE of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman.

Mr. BURKE of Massachusetts. Mr. Chairman, I would like to ask the gentleman from Pennsylvania if the administration had requested any increase in funds for child welfare this year?

Mr. FLOOD. No. I have before me a table prepared by the Department of Health, Education, and Welfare, and I read item No. 6 on page 13, "Child welfare services." It is $46 million across-the-board—they asked for nothing more than was appropriated for last fiscal year.

Mr. BURKE of Massachusetts. That is the same amount that they asked for last year; is that not correct?

Mr. FLOOD. That is correct. They asked for $46 million for 1970, that amount was appropriated for 1970, and they again asked for $46 million for fiscal year 1971.

Mr. BURKE of Massachusetts. I was wondering if the gentleman would be surprised to learn that the administration indicated to our committee, the House Committee on Ways and Means, that they were going to seek an increase in funds in this particular item. The facts are these—that is one of the most scandalous conditions existing in our Nation today. This deals with the most underprivileged children in America. This item deals with those children who are thrown upon the State—and the Federal Government only contributes 6 percent to their upkeep, while in the case of AFDC the Federal Government contributes from 75 percent to 83 percent, which is a reasonable amount. For the life of me, I cannot understand why this administration or any other administration should justify this very unfair and inequitable action where they will only contribute 6 percent toward the upkeep of children who are without parents and without guardians and are thrown upon the State and assigned into institutions and some of them farmed out in homes, 10 or 12 of them for about $2 or $3 a week, for their upkeep.

I cannot understand why the administration has not kept their word and has not come in here and brought this appropriation at least up to the authorization, which is $110 million right now.

I know that the gentleman from Pennsylvania has done an outstanding job. I know that he cannot cover all the bases, but I am merely pointing out here that in this area the Federal Government has a lot to answer for and we have a lot to answer for here in failing to properly take care of these children under child welfare who are the most disadvantaged children in America—little black children, little Indian children, little Puerto Rican children who are without any political muscle and with no one to speak for them in America. Yet, this appropriation is held down to the meager amount of $46 million.

It is my intention, and I want to inform the gentleman, to offer an amendment later increasing the amount at least up to the authorization figure of $110 million. I hope that this House will adopt it.

The CHAIRMAN. The gentleman from Pennsylvania (Mr. FLOOD) has consumed 40 minutes.

Mr. MICHEL. Mr. Chairman, I yield myself 20 minutes.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I am happy to yield to my chairman.

Mr. BOW. In view of the colloquy that has just taken place, I should like to again refer to the remarks of the distinguished gentleman from Pennsylvania. There have been substantial increases in this bill over the last 10 years.

I believe it would be useful to read into the RECORD what has happened to spending for just health, education, and manpower since 1961.

In 1961, during the Kennedy administration, total spending for these purposes was $2,372,000,000.

In 1962, it was $2,871,000,000.

In 1963, it was $3,125,000,000.

Then, in 1964, during the Johnson administration, it was $3,765,000,000.

In 1965, $4,263,000,000.

In 1966, $7,066,000,000.

In 1967, $11,856,000,000.

In 1968, $16,684,000,000.

Now, the amounts for the Nixon administration are as follows:

In 1969, $18,521,000,000.

In 1970, $20,803,000,000.

In 1971, $23,086,000,000.

These are actual outlays, not just amounts appropriated.

So you see, throughout the years there have been increases, and a substantial increase in spending for these programs has been achieved during the Nixon administration. It is a fallacy to charge that this administration is not concerned with the health and education of the people of this country. It seems to me that we must be realistic and fair. These figures clearly point out that spending for health, education, and manpower during the Nixon administration exceeds the amounts spent for these purposes during both the Kennedy and Johnson administrations.

I thank the gentlemen for yielding.

Mr. MICHEL. Mr. Chairman, the distinguished chairman of our subcommittee (Mr. FLOOD) has made his usual colorful and eagerly looked for presentation. It is a real pleasure for us to work so closely with him and all the members of our subcommittee throughout the days and weeks and months of hearings. You see those volumes of printed hearings there on the desk—better than 16 inches high and covering nearly 8,000 pages of testimony. Today is the day of decision for all the deliberations that fill those pages of testimony.

For over 180 years the members of the House Appropriations Committee have had a similar task, and our efforts are wasted unless we can convince the other Members of this House that the funds appropriated are justified and arrived at only after complete and objective hearings. I hope to be able to do that in my

presentation here this afternoon. Members of the Appropriations Committee normally cannot fund the various agencies and projects empirically. We must rely on the testimony given to us by departmental heads, expert witnesses, and concerned parties. This is both good and bad.

Good, because we must try to remain unemotional when funding projects—such as cancer research and hospital construction—or else spend wildly in that one area to the detriment of other, and just as important, areas. Bad, because at times we may not be fully aware of the needs of a particular program or institution and fail to properly fund it.

Nevertheless, it is our duty on the Appropriations Committee to come up with the best and most viable bill we can and at the same time assure the American public that they are getting a dollar's worth of benefits for a dollar spent.

I believe H.R. 18515 is such a bill.

In his book "The Power of the Purse," Richard Fenno says this about Federal appropriations:

> A necessary condition for the survival or stability of any political system is that it do what people want it to do in a way that people want it done. A political system, that is to say, must satisfy expectations in order to survive. But two questions immediately arise: what expectations and whose expectations?"

The Appropriations Committee faced this problem during our lengthy hearings. On the one hand there is a crying need for more and better health services, research projects, pilot programs—you name it. On the other side of coin we had to be conscious of the fact that we still are confronted with a problem of inflation.

The committee has tried to compromise this paradoxical situation in H.R. 18515 by giving everyone something and at the same time refusing to over fund in any one area.

Now let us get to the milk in the coconut.

BUDGET ESTIMATES

The Labor and HEW bill for 1971 contains funds in the amount of $18,824,663,000, an increase of $92,926,000 over last year. These funds are exclusive of education appropriations which, for the first time this year, were considered as a separate bill.

In addition, the bill incorporates funds for the construction of certain Government activities without consideration by Congress during the annual appropriations process. These trust funds for 1971 amount to $53,775,871,000—a net increase of nearly $5 billion. In total, then, we are talking about a bill that encompases $72,600,534,000.

Of the $18.8 billion in the bill, over $11.5 billion is classified as "relatively uncontrollable" in the budget of the President. These funds include grants to States for public assistance programs, including medicaid, payments to the social security trust funds, and unemployment compensation for Federal employees and veterans, so controllable items amount to approximately $7.5 billion.

Nonreimbursable details of personnel—Under this section of the bill, the committee believes that the borrowing of staff from other agencies without reimbursement should be reserved for situations which are of a temporary or emergency nature, and that the Office of Management and Budget should take steps to assure that the 1972 budget estimates reflect full, not partial, costs of all interdepartmental committees, councils, and similar groups.

Returning paramedical personnel should be encouraged to remain in the medical field when they return to civilian life. It is the opinion of the committee that this effort is not being made with the energy it deserves. These paramedical people can make a valuable contribution toward relieving our serious shortage of medical care personnel. We urge both the Department of Labor and HEW to give this matter their closest attention.

TITLE V—DEPARTMENT OF LABOR

Within the Department of Labor, manpower development and training activities received $671,696,089 in 1970. This year their request of $747,494,000 was whittled down in committee to $744,494,000, a reduction of $3 million in the areas of employment security services, State institutional training services, on-the-job training services, planning and technical assistance and labor market information and job matching. The committee felt these cuts were justified.

For example, in the area of planning and technical assistance it seemed to us that as a program is implemented, the amount of money for planning and technical assistance should decrease, not increase. Then too, it was felt that there was some dual funding taking place within OEO and the Department of Labor with respect to labor market information and job matching.

Nevertheless, MDTA funds for 1971 will provide for 26,600 more slots in public service careers in institutional programs, 3,940 in the Job Corps and 600 in Operation Mainstream which is an attempt to increase job opportunities in rural areas. This is a vital program if we are ever going to be able to solve the problem of over-crowding in our urban areas. To make rural living attractive, we must provide good-paying, career-type employment in these areas.

Again, the committee has allowed all funds requested for training and allowance payments but has reduced the amount requested for program services by $3 million. This still leaves an increase of about $18.5 million for these services, most of which would be for job banks programs and closely related activities.

Moving on to the Manpower Administration, salaries and expenses section of the bill, an increase of $3,092,800, over 1970 was asked for by the Manpower Administration. This increase—half of which has been allowed—will provide sufficient funds to cover mandatory cost increases and about one half of the program increase requested. Summarizing, the bill includes $42,165,000, a reduction of $1,502,000 from the request, and an increase of $6,149,000 over the 1970 appropriation while allowing the creation of 115 new positions mainly in the area of training employment.

The Bureau of Apprenticeship and Training of the Manpower Administration asked for and received an additional $85,502 over 1970 appropriations of $6,872,498. The increase was due to mandatory pay increases.

The committee was pleased to note that this particular Bureau has developed and installed 4,000 new apprenticeship programs during the period 1960 to 1970. The number of apprentices, while still falling far short of meeting the need for trained people in the apprenticeable occupations, has reached a record high of 110,000 apprentices over the more than 331,000 participants in 1969 in Federal and State registered programs.

For a more complete picture of the distribution of registered apprentices now in industry, I would like to insert the following figures:

DISTRIBUTION OF REGISTERED APPRENTICES BY INDUSTRY AND SELECTED OCCUPATIONS [1]

	1968	1969	1970	1971
Construction	164,441	181,719	189,570	194,910
Brick, stone and tile workers	11,944	13,265	13,839	14,228
Carpenters	34,946	37,434	39,051	40,151
Electricians	34,409	35,435	36,966	38,007
Ironworkers	10,329	11,448	11,943	12,279
Plumbers-pipefitters	33,247	34,345	35,829	36,838
Sheetmetal workers	17,609	18,172	18,957	19,491
Manufacturing, metal	58,956	79,109	73,840	76,650
Machinists	23,711	28,442	26,582	27,594
Tool and die makers	26,249	31,644	29,536	30,660
Patternmakers	2,886	3,164	2,954	3,066
Manufacturing, nonmetal	18,496	21,184	21,655	23,360
Compositors	5,661	5,932	6,063	6,307
Pressmen	4,742	5,296	5,414	5,840
Lithographers	3,079	3,601	3,681	3,971
Public utilities and transportation	13,294	9,597	10,295	12,045
Electrical workers (P and L)	640	991	1,060	1,241
Linemen	3,116	2,422	2,594	3,035
Carmen	835	1,321	1,420	1,662
Trades, services and miscellaneous	30,923	36,079	56,800	54,750
Auto mechanics	10,010	12,458	15,448	16,423
Auto body builders	2,623	3,226	3,968	4,763
Maintenance mechanic	7,729	9,020	13,632	14,632
Butcher	4,761	5,237	5,761	6,337
Draftsmen	3,519	3,935	5,680	6,022
Mining	2,601	2,979	3,195	3,285
Total	289,000	331,000	355,000	365,000

[1] Selected occupations are listed under industry in which the majority of apprentices are employed.

An uncontrollable item within the Department of Labor is unemployment compensation for Federal employees and ex-servicemen and trade adjustment activities. The bill includes $200,100,000, the amount of the request, and an increase of $12,170,000 over the 1970 appropriation. The additional funds are due, in part, to the over 150,000 military separations in the first half of this year.

Grants to the States for unemployment compensation and employment service administration include appropriations of $717,700,000, an increase of $51,928,000 over 1970. These funds will be transferred from the employment security administration account of the unemployment trust fund.

The only program increase included in the request was $5,787,000 for the computerized job matching program which permits a much more rapid and effective matching of job vacancies with the skills of the persons unemployed or seeking better paying jobs. This amount is offset by a projected savings of $12,181,000 due to management improvement and cost reduction savings.

The bill authorizes $4,274,000 for unemployment insurance service. It is estimated that in 1971 unemployment compensation payments will run over $145 million from last year.

Average annual unemployment rate, 1960–70

Year:	Average annual unemployment rate
1960	5.5
1961	6.7
1962	5.5
1963	5.7
1964	5.2
1965	4.5
1966	3.8
1967	3.8
1968	3.6
1969	3.5
1970	[1] 4.3

[1] January-April average, seasonally adjusted.

Source: Bureau of Labor Statistics.

LABOR-MANAGEMENT RELATIONS

We now come to the Labor-Management Services Administration. The request for $17,169,000 was reduced by $669,000 but was $3,362,000 in excess of the 1970 appropriation. The larger increases requested were $1,408,000 to provide support to the President's program against organized crime and $1,767,000 for activities required under Executive Order 11491 which vests in the Assistant Secretary for Labor-Management very broad responsibilities in the field of Federal labor-management relations which in many ways are similar to the responsibilities of the National Labor Relations Board in the private sector.

The sum of $45,000,000 was appropriated for wage and labor standards. While not the full request, it is an increase of $4,180,430 over 1970. An item in the appropriation figure includes $1 million for 90 new positions to handle the heavy backlog of employees compensation cases. To get an idea of the proliferation of cases of this kind, let me cite a few figures: In 1963 wage and labor standards handled 17,504 compensation cases. In 1969 there were 30,718 cases and in 1970 this rose to 32,000.

Also included in this portion of the bill was an increase of $926,000 for the construction safety program which will provide for 45 new positions.

Requested appropriations for employees' compensation claims and expenses this year amounted to $109,800,000 which was an increase of just over $54 million for 1970. Payments under this appropriation are prescribed by law and are not subject to administrative control.

Increased medical costs and the liberalization of benefits under 1966 amendments are the main causes for the 100 percent increase in payment and expenses. In addition to these estimated figures in 1971, it will be necessary to pay over $25 million from the 1971 appropriation to cover the shortage of funds in the 1970 appropriation. In the opinion of the committee the request if less than the amount that will eventually be required for 1971.

The Bureau of Labor Statistics requested $27,578,000, or an increase over 1970 of $3,484,546. The appropriations bill includes $26,150,000, a reduction of $1,428,000 from the request but an increase of nearly $3.5 million over the preceding year.

Increases are for providing better data on international prices with the aim of improving our competitive position in export markets; to provide better information on the costs of consumer items to aid the buyer when spending his income; to furnish a better data base for improving employee-management relations in State and local government and to institute a project for the development of data on State and local area economics.

The committee recommendation provides for all mandatory cost increases and one-half of the $2.8 million requested for program increases. The committee intends that the amount recommended provide the full amount of the increase of $870,000 budgeted for revision of the Consumer Price Index.

The Bureau of Labor Statistics has come up with the following figures concerning the increase in defense-related employment during the Vietnam buildup.

Concluding my summary of Department of Labor appropriations, the Bureau of International Labor Affairs was granted $28,000 in additional funds over last year. The special foreign currency program request was $9,044 less than 1970. Funds of $75,000 will be available only for the purchase of surplus foreign currencies that have been generated under Public Law 480 and, thus, are no drain on the Federal Treasury but only a bookkeeping transaction.

The Office of the Solicitor requested and received an additional $162,500. This will cover all mandatory cost increases and will provide for an increase of six positions. The total funding for this Department is $6,041,000.

Funds for the Office of the Secretary of Labor were increased by $3,654,100 over 1970 with only a 50 percent increase for evaluation allowed. The full appropriation for 1971 is $10,340,000. In view of the increase in the manpower program and some backlog of audit work, the committee has allowed the increase of $275,000 requested for this purpose.

TITLE II

Under title II of H.R. 18515 we have the department of HEW appropriations. Again I say, the committee has endeavored to fund every worthwhile project and at the same time hold the line wherever possible.

Food and Drug Administration is the first item. FDA requested $81,617,500. This is an increase of $7,931,500 over 1970, of which $1,806,000 is for so-called "built in" or mandatory costs. Our bill calls for $89,546,000. The sum of $6,125,000 is for a general strengthening of several programs: $4.6 million for the food and pesticides program: $800,000 for drug and medical devices, and $700,000 for product safety.

ENVIRONMENTAL HEALTH SERVICE

The air pollution control section of the committee bill includes $106,003,000, the amount of the request, and $891,000 above the amount appropriated for 1970. Faced with the grave situation of air pollution, the committee has approved the agency request which will provide program increases of $5,052,000 for abatement and control; $4,511,000 for research, development and demonstration; and $411,000 for manpower training. This is one section of the appropriations bill that I feel we must fully fund and I am sure Members of this body will support the committee in this respect.

Another important area is environment control. The bill includes $52,580,000, an increase of $1,800,000 above the request and $3,385,000 above the appropriations for 1970 by a straight comparison, but as our committee report states, "when transfers are taken into consideration the increase over 1970 on a comparable basis is $1,253,000." Also, on a comparable basis the budget request is $547,000 less than the funds available for the same activities in 1970.

Increases for 1971 include $200,000 for noise and byssinosis in the cotton-textile industry and $1,800,000 was added to the $1,200,000 budgeted for solid waste management.

In the Office of the Administrator of EHS some transfer of funds was involved making the appropriated level of $4,244,000 the same as last year. This bill allows for no new positions.

Appropriations for Health Services and Mental Health Administration are $1,384,090,000, an increase of $114,210,000 over the amount requested and $329,633,000 over 1970.

Funds for mental health are in excess of the requested $346,656,000. The bill includes $368,516,000 for this very vital field. The committee added $20,000,000 to the bill for staffing grants for new mental health centers around the country. Without these funds, the new centers, which in many instances were constructed with Federal money would not be able to open. This seemed completely unreasonable and therefore we granted the additional funds.

We now have in the bill $31.5 million for community mental health centers staffing grants for a total of $80.1 million. The sum of $5.3 million for narcotic addiction, drug abuse, alcoholism, violence and early child care. The sum of $4.7 million for community narcotics and

alcoholism rehabilitation programs, $3.0 million for additional aftercare and rehabilitation services for drug users, and $720,000 for public information on drugs and alcoholism.

Just a few facts at this point might be of interest and give the Members an idea of why the committee felt it necessary to fund the amounts we did.

There are between 4 to 6 million alcoholics in the country. Over 20 percent are women with 200,000 new cases each year and 13,000 deaths a year attributed to alcoholism. Over 50 percent of all traffic accidents involving fatalities are attributed to drinking. The cost to industry is $4 billion annually. Finally each alcoholic affects an average of four family members.

The committee granted $1,025,000 to expand research on alcoholism and to fund 18 new centers for community rehabilitation. Each of the centers will be able to treat 500 patients.

Narcotic addiction and drug abuse is a major concern these days. The committee was told that there are from 100,000 to 150,000 users of hard narcotics in the United States. We have allowed ample funds for treating this cancerous condition in our society. The following chart gives the amounts being spent in this area:

NARCOTIC ADDICTION REHABILITATION GRANTS—NEW AWARDS

ALCOHOLISM REHABILITATION GRANTS—NEW AWARDS

	1970 estimate		1971 estimate	
	Number	Amount	Number	1971 amount
Staffing: New projects	16	$2,671,000	7	$2,340,000
Training and special projects: New projects	3	300,000	5	500,000
Planning and initiation: New projects			2	100,000
Consultation services: New projects			3	100,000
Total	19	2,971,000	17	3,040,000

	1970 estimate		1971 estimate	
	Number	Amount	Number	Amount
Staffing: New projects	18	$3,175,000	21	$4,200,000
Training and special projects: New projects			10	1,000,000
Planning and initiation: New projects			10	500,000
Consultation services: New projects			15	300,000
Total	18	3,175,000	56	6,000,000

St. Elizabeths Hospital will receive the budget request of $14,823,000 which is $644,000 above the 1970 appropriation. The amount included in the bill will cover mandatory cost increases and provide for an increase of approximately 48 new employees.

Health service research and development was fully funded in the amount of $57,403,000 which is an increase of $14,901,000 over last year. Priority items under this section of the bill include the costs of hospital care. At present, three projects are under way to find ways to contain medical costs. Also the committee gave consideration to the 10 to 15 OEO neighborhood health center which are being spun off to HEW.

A very urgent program—medex—is funded under health service research and development. This progam is underway to utilize the talents of returning medical corpsmen from the armed services. This is a 5-year study involving 700 corpsmen.

The committee also allowed full funding of comprehension health planning and services. The $247,178,000 in the bill was the amount requested and $39,376,000 above the 1970 appropriation. There is funding in the program for 10 new comprehensive health services projects; $16 million for rubella, german measles, and $15 million for rat control. Inserted at this point is a chart showing the location of rubella immunization projects:

RUBELLA IMMUNIZATION PROJECTS

Grantee and location	Coverage of projects	314(e) funds: Fiscal year 1969 supplement	314(e) funds: Fiscal year 1970 appropriation	314(e) funds: Total	Non 314(e) grantee support	Total

Note: Total number of grants 70.

Another program in which the full request was granted by the committee in the area is maternal and child health. The bill includes $225,339,000 which is $30,758,000 more than the amount available for the same activities in 1970.

The principle increase is $10,715,000 for family planning activities. Most of their funds will be used for project grants to State and local health department and nonprofit organizations to provide family planning services for women who want such services but cannot afford them, through expanding existing clinics and creating new ones.

It was interesting to note that in 1969, 450,000 women availed themselves of family planning services while in fiscal year 1970 some 700,000 women, in both city slum and rural poverty areas, have used family planning services.

There is also an increase of children receiving health services. In 1969, 362,000 registered in 57 projects. In 1970, 59 projects handled an estimated 380,000 youngsters.

A recent study conducted by a planned parenthood group showed that although one-fifth—or 5 million—of the estimated 25 million women of reproduction age in the United States were in need of subsidized family planning services, only 750,000 were actually reported in 1968 and were patients of all known public and private agencies offering family planning services. The study also revealed that only 1,800 of 3,000 counties in the country offer family planning services. Nine-tenths of the approximately 4,000 nonprofit general care hospitals, in which most low-income mothers deliver babies offer no family planning programs at all. Yet, we have learned that mothers who have just given birth are highly motivated concerning family planning.

We must have ample funds for this program and to correct a situation where we find something like 2.2 to 2.7 million unwanted births in the country during 1960 to 1965. Think about that for a moment. There are between 370,000 to 445,000 unwanted babies born annually and most all of them have parents who are poor or on the borderline of poverty. The problem is a critical one.

We were happy to learn in committee that 53 of the 55 prospective programs of the regional medical programs are finally in operation after much confusion and delay. These programs are helping hospitals, other medical service providers and communities to identify and address specific and broad health problems and needs. They are mobilizing human and physical resources required to meet their problems and needs and are extending professional expertise and leadership to provide maximum assurance that improvements will be meaningful and lasting.

For example, at the national clearinghouse for smoking and health studies show that there is new evidence that smoking among children, which appeared to be declining is no longer doing so and may be rising again.

At the same time total cigarette consumption is declining and the number of adults who were successful in giving up smoking last year is now estimated at 2 million. The regional medical programs portion of the bill includes $96,502,000, the amount of the request, and a reduction of $98,000 from the amount appropriated for 1970, however, that reflects unobligated balances and transfer of funds.

Funds this year for communicable disease amount to $41,938,000 with an increase of $400,000 over the agency request which will restore the venereal disease program to last year's level. With the incidence of venereal disease reaching epidemic proportion in America, the committee felt the program should be continued at full strength.

More money than requested has been appropriated for rubella vaccination. While grant funds for rubella are in the appropriation "comprehensive health planning and services" the communicable disease center furnishes the technical assistance to the States in implementing the program. The committee strenuously urges that this program move ahead with all possible speed.

Medical facilities construction funds includes $181,521,000, an increase of $92,200,000 over the request and are $5 million above 1970. The sum of $338,200,000 is slotted for construction of hospitals and other medical care facilities with $5 million going for interest subsidies.

The $338 million plus figure is an increase of $166 million above the amount provided in 1970.

The patient care and special health services has been granted the full $79,889,000 of its request which is $2,424,000 above last year. The PHS system of hospitals and clinics has as its responsibility the provision of comprehensive medical care to American seamen, owners and operators of fishing vessels, the Coast Guard, the Public Health Service, and individuals afflicted with leprosy.

The next item is beyond administration control; $19,501,000, an increase of $2,801,000 over 1970 has been allotted for retire pay of commissioned offices.

The $9,668,000 funded for national health statistics will provide $166,000 and 18 new positions for initial funding of family growth studies. There is an additional $150,000 and 10 positions for operation of a uniform national system for the statistical reporting of family planning activities. The full NHS funding was a reduction of $250,000 from the request and $498,000 above the appropriations for 1970.

The Office of Administrator of NSMHA was given its full request of $11,812,000 which was $1,223,000 above the 1970 appropriations.

THE NATIONAL INSTITUTES OF HEALTH

Let me move on now to the renowned National Institutes of Health. The bill includes $1,634,739,000 which is $92,700,000 above the NIH request. As we say in our committee report, we think it vital to continue to insure the citizen of the county with the best health standard possible. This will be difficult with the current fiscal problems, but we have tried, at least, to maintain the momentum of NIH and avoid any backsliding of the standards the Institution has set.

A sum of $38 million has been added to

restore all research components that were cut below the 1970 level. Also $25 million has been added to the Cancer Institution in order to go forward with their special emphasis areas in virus cancer research. Finally, $10 million has been funded to the National Institute of General Medical Services to launch a major program in genetic research.

There is reason for considerable optimism of medical breakthrough in all these fields and the committee in all good conscience could not refuse the required money to aid NIH in their fight against disease, disability and premature death.

The Division of Biologies Standards funds includes $8,838,000, an increase of $198,000 over the amount requested and $615,000 over last year's appropriations. This Division is responsible for some 300 products licensed for treatment and prevention of human diseases.

Among the projects it is currently engaged in is the development of a sufficiently sensitive and reliable test for hepatitis virus in blood and blood products so that hepatitis infections that sometimes follow transfusions may be prevented. You might also recall that Biologies Standards played a major role in the developing and licensing of the rubella vaccine.

The amount in the bill for the National Cancer Institute is $227,383,000, an increase of $25,000,000 over the amount requested; $46,685,000 over last year, and $46,051,000 over 1970 funds after a few relatively minor small transfers are taken into consideration. We are trying to do everything in the area of cancer research as witnessed by the fact that this year's funds represent an increase of $91,383,000 over 1961 appropriations of $111,000,000.

It is estimated that there will be 325,000 deaths in 1971 which can be attributed to cancer or one every 2 minutes.

Using 1940 as an index of 100, it is demonstrable that by 1967 the cancer mortality index reached a level of 196 compared with an index of 150 for growth in population of the United States.

It is encouraging that the private sector of our country is putting in about $100 to $150 million for cancer research.

The National Cancer Institute is also making forward strides in its fight against childhood leukemia. Listen to these figures: In 1960—9 percent of afflicted patients survived 2 years after diagnosis; in 1961, 18 percent; 1962–63, 29 percent; 1964–65, 42 percent; 1966–67, 52 percent; and 1969–70, 75 percent. This is encouraging.

The increases in National Cancer Institute funds are $18.8 million for studies of virus cancer research and an increase of $2 million for the chemical carcinogenesis program. The rest of the $25 million is left to the Institute.

The appropriations bill provides $178,479,000 for the National Heart and Lung Institute. This is an increase of $6,732,000 over the amount requested.

The bill includes $2,225,000 for new activities in connection with lung research and $7 million for special cardiovascular research and training centers.

It is estimated that over 1 million deaths occur annually due to heart disease. There are 3.7 million Americans who have heart disease including 1.4 million who have already had at least one heart attack. The Institute is making progress in the area of heart disease and for a detailed description of what has been done in the heart transplant field, I include the following chart:

REPORT OF HUMAN HEART TRANSPLANTS, AS OF APR. 1, 1970

Number	Recipient Age	Recipient Sex	Donor Age	Donor Sex	Date of transplant	Survival	Reported cause of death	Country
1	53	M	25	F	Dec. 3, 1967	18 days	Infection/rejection	South Africa.

Total	80,426	381,041	461,467

Funds will, of course, also be available for work on respiratory conditions. Presently, approximately 36,000 people die every year from chronic respiratory conditions apart from cancer of the lung or respiratory infection. In addition, another 20,000 infants die each year from hyaline membrane disease.

With the money provided this year by the committee, hopefully more Institute programs can get off the ground and into practical application to fight heart and lung disease.

This year we also have boosted slightly, funds for the National Institute of Dental Research. The sum of $34,563,000 was requested by the Institute and the committee increased that amount by $6,703,000 making the total appropriation of $35,257,000.

Dental decay affects 98 percent of our population. Studies conducted through the Armed Forces show that for every 100 Army inductees there are 600 fillings, 112 extractions, 40 bridges, 21 crowns, 18 partial dentures and one full denture. Considering that there is only one dental researcher for every 44 active non-Federal dentists and only one Ph. D. researcher for every 53 such dentists make it imperative that we grant funds for an intensified program of research and development that—we are told—may well lead to the means for almost complete prevention of dental decay by the end of the decade. The committee feels this is a very worthwhile project.

A few facts might help illustrate the value of the funding: In 1967, of the 6,800 philanthropic foundations listed in the Foundation Directory, only three mentioned dentistry as one of their areas of interest and only one limited its interest to dentistry.

Tooth decay, in the meantime, is developing three times faster than available manpower can beat it. Approximately $2 billion is spent each year for treatment of tooth decay by 40 percent of the population and the estimated care for all cavities incurred each year is $10 billion.

Cleft lip palates makes up 13 percent of all birth anomalies. When you consider that 250,000 people in America have some form of oral cleft and that 6,000 babies born this year will have similar problems, the seriousness of the situation becomes evident.

There is hope, however, in the fight. For instance, it has been found out that children living in communities enjoying the benefits of water fluoridation, generally have 50 percent to 65 percent less tooth decay.

The $5 million in the bill will help sustain this type of research in the dental decay field. Incidentally, the appropriation increase for the National Institute of Dental Research is the largest, percentagewise, of any institution.

Another National Institute of Health—the National Institute of Arthritis and Metabolic Diseases, received an increase over requested funds of $6,000,000. They wanted $132,152,000 and the committee funded $138,339,000. The members of the committee were informed that arthritis and rheumatoid diseases afflict more than 16 million people in the United States and their afflictions are estimated to adversely affect the economy by about $3.6 billion annually. We learned that diabetes alone affects more than 4 million people and that the prevalence of the disease has doubled since 1950. The 1971 appropriation will allow the Institute to extend their research in this area over the next year.

In the area of kidney disease the Institute is moving both in the areas of kidney machines and transplantation. They presently have developed an artificial kidney which is about the size of a large flashlight and commercial production is about to begin. The cost, however, is still prohibitive. I offer the following information from the report on the National Institute of Arthritis and Metabolic Diseases:

Cystic fibrosis (CF) is a grave disease of children and young adults caused by an inborn error of metabolism. The basic chemical defect is not yet fully understood, but it is known to be genetically transmitted. Estimates of the incidence of cystic fibrosis in the population today range as high as 1 in 1,400 live births. As a cause of death in children under 15 years, cystic fibrosis outranks many of the better known diseases such as poliomyelitis, rheumatic fever, and diabetes, and now that it is being diagnosed with increasing frequency throughout the world, it is recognized as a serious public health problem.

The Department of Health, Education, and Welfare's research activities in cystic fibrosis are centered in the National Institute of Arthritis and Metabolic Diseases of the National Institutes of Health; service activities of the Department related to this disease are centered in the Maternal and Child Health Service of the Health Services and Mental Health Administration.

The Federal Government is deeply committed to a broad multi-disciplinary research program on cystic fibrosis through the National Institute of Arthritis and Metabolic Diseases, a component of the National Institutes of Health. The research conducted and supported by the Institute is aimed at specifically defining clinical manifestations and biochemical aberrations responsible for this inherited metabolic disorder. In addition to the research being conducted in the Bethesda laboratories, this Institute provides grant support to many cystic fibrosis research projects at medical centers and institutions across the country. Among promising new findings this past year is a cellular model for a more direct approach to learning the biochemical abnormality of cystic fibrosis.

OBLIGATIONS FOR PROGRAMS IN CYSTIC FIBROSIS

NATIONAL INSTITUTES OF HEALTH

National Institute of Arthritis and Metabolic Diseases

Cystic fibrosis is characterized by an abnormality in the products of the body's exocrine glands which secrete fluid to body surfaces, the skin and the gastrointestinal and respiratory muscosal linings. The basic metabolic disorder of exocrine secretion results in three principal clinical problems. The first of these is the production of sweat with a high salt content. Due to this defect, patients are unable to conserve salt and the very young are in constant danger of developing profound dehydration, or "heat exhaustion" in the summer months, which may lead to death.

A second facet of the disease stems from the abnormal functioning of the mucus-secreting glands of the body. In cystic fibrosis, the mucus-producing glands fail to secrete normal, clear, free-flowing fluid. Instead they produce an abnormally thick, viscous mucus which tends to obstruct the ducts or openings of the glands. When the viscous mucus accumulates in the ducts of the pancreas, it interferes with the ability of this gland to supply digestive enzymes to the intestinal tract, thus leading to poor digestion and malabsorption of a number of nutrients. Depending on the severity of this complication, the patient may suffer from varying degrees of malnutrition—one of the major factors resulting in general underdevelopment, poor musculature, and retarded bone growth.

The third and most serious complication involves the lungs. Nearly all cystic fibrosis patients develop progressive chronic lung disease. Thick mucus obstructs the smaller air passages in the lung, causing labored breathing and a chronic productive cough. In time, bacteria multiply in the accumulated secretions, and the child may fall victim to chronic bronchitis or pneumonia, a leading cause of death in these patients. Chronic lung changes may increase resistance to pulmonary blood flow and thus, may lead to an increased blood pressure in the lung; this can result in chronic heart strain and eventually in heart failure.

Research developments and trends

Cystic fibrosis research presents difficult problems because a variety of organ systems is involved. At present, no one hypothesis can link all the diverse and often conflicting observations which have been made concerning the widespread malfunction of exocrine glands in cystic fibrosis. In particular, it is not yet possible to give a reasonable explanation for the abnormal behaviour of mucus and sweat glands in this disorder. Recent studies, however, have helped to narrow the field for speculation and to clarify some of the mechanisms of the disease.

New Techniques May Pinpoint Molecular Defect

Cystic fibrosis is inherited from parents who carry the genetic *trait* for the disorder (both parents may be asymptomatic). When both parents carry the trait, the chances are one in four that cystic fibrosis will be manifested in the severe and classical form in the offspring. If only one parent carries the trait, it may be transmitted to the offspring; and although the child will be asymptomatic, the trait may in turn be inherited by his offspring. Thus, for every overt case, there is a large reservoir of hidden carriers, recently estimated at 2 to 5 percent of the general population. Clearly, since the genetic character of cystic fibrosis makes the disorder particularly pernicious, a method of identifying such carriers would be a major achievement for facilitating effective genetic counseling.

Institute-supported scientists at the Cornell University Medical Center two years ago pinpointed a cellular difference between normal persons and those in affected or carrier states of cystic fibrosis. Using a special staining technique, this genetic cell marker was seen in fibroblasts, the flat elongated cells which form fibrous tissue. Cell cultures of fibroblasts from healthy individuals and from persons with a variety of other diseases showed only occasional cell metachromasia—a condition in which portions of the cell fail to stain uniformly and in the same color as surrounding cells. In all cultures from children with cystic fibrosis, and their parents, cell metachromasia appeared in over half of the fibroblasts. Although the test permits identification of carriers of the trait for cystic fibrosis in cases where potential parents have requested genetic counseling, the fibroblasts require a month in culture before they will react positively to staining.

This past year, employing an extension of the special staining technique, the Cornell University scientists have reported a shortcut method that can detect the abnormal cystic fibrosis gene in patients and carriers in a family within a week of obtaining a blood sample, by culturing shorter-living white blood cells, instead of the cell fibroblasts.

In addition, early results in the screening procedure have shown that different familial lines of cystic fibrosis patients exhibit two distinctly different cell-staining types, and a third variety that may or may not be related to either of these. This finding may lead to a more definitive picture of cystic fibrosis because it suggests that the disease is inherited in at least two varieties based on two major distinct patterns of staining.

One variety is classified either Ia or Ib; both of these types appear to have the same degree of aberration of some mucopolysaccharides (a group of complex carbohydrates). In contrast, class II, found in nearly 75 percent of patients and carriers examined, shows a distinct elevation of *all* mucopolysaccharides; this elevated cell carbohydrate content has long been identified as part of the chemical abnormality in cystic fibrosis.

While these staining properties would indicate that cystic fibrosis is inherited in at least two separate forms, no difference in the clinical picture has been seen as yet. A familiar correspondence however, does appear in all three varieties. Thus, if a patient is found to belong to class II, the other affected persons among his relatives (be they homozygous patients or heterozygous carriers) also will have class II metachormasia in their white blood cells.

Since the new cell test does not differentiate between patients and carriers, it would not be specific enough to indicate the presence of a homozygous fetus destined to become a cystic fibrosis patient is performed with a fetal cell sample taken by aspiration from the uterus of a pregnant woman. The identification, however, of carriers enables rational marriage and genetic counseling before the chance is created that the children of a family would be afflicted with CF.

One of the most important implications of the recent findings will lie in the results of subsequent investigations into the molecular defect of this metabolic disease. Up to now, clinical and chemical studies have indicated that cystic fibrosis is a generalized exocrine disorder. These new findings hint that the defect in cystic fibrosis is not limited to a single class of cells but involves, among others, the body's connective tissue, as well as blood cells. Further biochemical analysis of the metachromatic cellular substance may prove to be a step forward in elucidating this theory.

Salivary Gland Secretion Studies

Since the components of external secretions play such important roles in the pathogensis of cystic fibrosis, intensive studies are being conducted to isolate the abnormal factors in such exocrine gland secretions as saliva.

Previous studies revealed elevated sodium concentrations in sweat and saliva of patients with cystic fibrosis. Two years ago Institute grantees at the University of Wisconsin demonstrated that perfusion of the rat parotid (salivary) gland with sweat and saliva from patients with cystic fibrosis caused a large increase in sodium output of the rat salivary glands. The implication of this finding is significant: the same factor in the sweat and saliva from patients with cystic fibrosis which causes salty saliva in rats may be responsible for the high salt content of the patient's own sweat and saliva. Studies are continuing in the effort to isolate such a factor to aid in elucidating the inherited molecular defect which causes cystic fibrosis.

Calcium concentration in saliva also is known to be high in cystic fibrosis patients, suggesting a defect in calcium metabolism. Little is known, however, about the mechanisms of calcium transport into the gland or the manner in which it is stored. Institute scientists are designing new studies to understand better the role of the automatic nervous system in normal salivary gland secretion mechanisms. These studies should define the mechanisms that are disrupted in such diseases as cystic fibrosis.

Glucose Intolerance

Several recent studies have suggested that the increased life span of patients with cystic fibrosis is accompanied by a rise in the frequency of glucose intolerance, or inability to handle dietary sugar. Since glucose intolerance is often the first indication of the diabetic state, Institute scientists began comparing cysic fibrosis patients who exhibit this intolerance with young victims of diabetes to see whether the cystic fibrosis patients might also be suffering from coexisting classical, inherited diabetes.

The researchers discovered that four out of every ten patients with cystic fibrosis exhibited moderate to severe glucose intolerance. None of these patients, however, had clinical complications or abnormal tissue changes that are characteristic of diabetes, and none had a significant family incidence of diabetes. Subsequent post mortem examinations of cystic fibrosis patients with glucose intolerance revealed that the pancreas had been massively invaded by fibrous tissue but that the individual specialized insulin-producing cells (the so-called beta cells) were well preserved; the later is not the case in classical juvenile diabetes.

Thus, the glucose intolerance which may accompany cystic fibrosis was attributed to anatomic disorgnaization of these nests of beta cells as an aftermath of fibrotic processes of this disorder and not to the concomitant presence of classical inherited diabetes.

As a byproduct of this investigation, the resting levels of growth hormone in patients were found to be normal, rising appropriately following insulin-induced hypoglycemia (low blood sugar). Retarded growth has been considered in the past as an almost constant companion of cystic fibrosis. Therefore, the findings that growth hormone levels in CF patients are in the normal range is of special interest because it is contrary to the widely held belief that growth retardation is an obligatory innate feature of cystic fibrosis. When growth retardation does occur it is probably the effect of severe chronic illness and, possibly of chronic malnutrition due to intestinal malabsorption and not the result of growth hormone deficiency.

Micropuncture Studies of Sweat Glands

Further evidence of the pathogenetic roles of inhibition of normal sodium reabsorption

in exocrine gland ducts of cystic fibrosis patients has been provided by applying micropuncture and microanalytical technics to the study of the function of normal and pathologic human sweat glands.

Institute scientists have employed these technics in cystic fibrosis patients to help clarify the genesis of excessive salt content of sweat. Fluid was obtained from the sweat gland coil (site of production of sweat) of patients with cystic fibrosis. Evaluation revealed salt content of sweat in this location was near normal; elevated sodium and chloride concentrations appeared only on the skin surface. These findings resolve an important area of controversy by showing for the first time that the abnormality in sweat gland function in cystic fibrosis does not occur in the formation of the precursor solution in the coil, but is confined, most likely, to the sweat gland excretory duct and probably consists of a disturbance in salt reabsorption at that site. Current studies are designed to explore further the function of this duct in order to determine the abnormality in salt reabsorption.

Cystic Fibrosis Factor Inhibits Cilia Movement

Present in the air passages in lungs of all mammals, including man, the microscopic eyelash-like cilia normally sweep moisture droplets, foreign particles and mucus collections from the lungs to the trachea and pharynx, from where they are coughed out. In recent years several studies have indicated the presence of an abnormal factor in the serum of cystic fibrosis patients that causes cessation of ciliary action in the bronchial mucosa of experimental animals.

It is suspected that the same inhibition of bronchial ciliary action in man is one contributing factor to the characteristic lung congestion in CF. The previously observed abnormal cilia-inhibiting serum factor can be used in identifying CF patients and carriers, according to researchers at the University of Texas Medical Branch in Galveston, who accomplished inhibition of ciliary action in oyster gills with serum from CF patients and from their parents (carriers).

The serum tested was taken from 47 CF patients, 19 CF carriers, 25 allergic asthmatic children, and 39 healthy individuals. Serum from both the normal and allergic groups failed to inhibit the motion of oyster cilia; movement persisted as long as 40–50 minutes after contact.

The typical reaction produced by serum from CF patients was an immediate expulsion of debris from tubules between the gills, indicating the compound produced tissue injury, followed by cessation of ciliary movement within 30 minutes. None of the serum from CF patients and their parents permitted ciliary action for as long as did serum from the normals. Further, saliva from CF patients, but not from normal individuals, often inhibited ciliary action within 20 minutes.

At Duke University Institute grantees demonstrated several years ago that an abnormal factor existed in serum taken from CF patients and their parents which inhibited ciliary synchrony in rabbit tracheal explants. Possibly, this factor is identical to the one inhibiting ciliary action in oyster gills.

Intestinal Malabsorption

Because cystic fibrosis impairs pancreatic functions, consequently affecting intestinal digestion, infants and young children with cystic fibrosis with absent or decreased pancreatic digestive enzymes have traditionally received pancreatic replacement therapy. It has been a clinical observation, however, that malabsorption symptoms such as azeotorrhea (excessive loss of nitrogen in the feces) and streatorrhea (excessive loss of fats in the feces) in CF patients generally improve with age despite absence of pancreatic function.

The question posed by Institute scientists was: did these symptoms gradually disappear because other gastrointestinal enzymes capable of digestive action similar to pancreatic enzymes were being elaborated later in life? For this study adolescents and young adults with cystic fibrosis were given a battery of tests over a period of several weeks to measure intestinal absorption, to re-evaluate pancreatic function (found to be absent in all cases) and to determine the amount of fecal fat and nitrogen while on a known dietary intake.

Results were surprising: malabsorption in cystic fibrosis may be minimal despite massive steatorrhea, and the latter may be compatible with a good state of nutrition. In fact, some obese patients with massive fecal fat loss had the least problem with nutritional status. It was apparent also that steatorrhea may be absent even in the presence of pancreatic deficiency.

Further, the amount of fat excretion varied greatly among patients; the degree of azotorrhea and steatorrea bore little relation to growth, nutritional state, respiratory tract involvement or pancreatic function. Thus, previous assumptions that intestinal digestion and absorption are impaired in direct relationship to absence of pancreatic function have been invalidated.

Treatment

Short life span of children with cystic fibrosis has been an agonizing realization that doctors, patients and parents eventually must face. Can the lives of these patients be prolonged? Studies by a grantee at the University of Nebraska Medical Center have shown that one way to reach this goal may be immunization against Pseudomonas infections. This microorganism, which appears frequently in dead tissue, is notoriously resistant to antimicrobial therapy. It attacks lungs weakened by chronic broncho-pulmonary diseases, such as cystic fibrosis. A vaccine that already has had some trial use against Pseudomonas in severe burn cases will be tried in cystic fibrosis patients in hope that immunity can be built up before Psuedomonas infection occurs.

Since chronic obstructive lung disease is responsible for death in 90 percent of cystic fibrosis patients, control of pulmonary infection is an important component of cystic fibrosis therapy. Recently, a grant supported scientist at Case Western Reserve University School of Medicine in Cleveland has had encouraging results in eradicating pulmonary infections caused by Pseudomonas bacteria with a new antimicrobial agent, carbenicillin, a semi-synthetic penicillin.

Patients with acute chronic pulmonary lung disease also have been treated with a new antibiotic Gentamycin, in combination with the usual regime of vigorous pulmonary toilet, by Institute investigators during the past year. Gentamycin is bactericidal against the two most commonly cultured organisms in sputum of cystic fibrosis patients—certain types of Staphylococcus and Pseudomonas. The drug appears to be one of the first which has a favorable effect on the clinical complications due at least in part to bronchial tree infection by Pseudomonas. Continued evaluation of this drug in the clinical setting is currently in progress.

Scientific Communication and Information

The Institute has consistently made efforts to communicate, effectively and promptly, diagnostic and therapeutic developments in cystic fibrosis to practicing physicians and research workers throughout the country. One particularly effective means of communication will be the new comprehensive scientific exhibit on cystic fibrosis presenting the latest research findings and therapeutic applications. This exhibit, along with detailed practical literature, will be brought to the attention of thousands of practitioners and research workers at medical meetings and conferences throughout the United States early this year.

Outlook

Clinically, cystic fibrosis is a disease of many disguises. For the basic research scientist, it offers puzzling fragments which have yet to be linked together in a way essential to a full understanding of the disease's basic mechanism. Yet, promising findings in basic research, as well as new methods of diagnosis and treatment, have opened up new avenues for investigating cystic fibrosis, while bringing about a more optimistic outlook for patients with this disorder. Mainly as a result of research supported or carried out by the National Institute of Arthritis and Metabolic Diseases, the average life span of children afflicted with the disease has been increased considerably and the quality of their life has been improved. Now that a significant number of girls with the disease survive to childbearing age it has become even more important to develop reliable and simple tests to detect carriers of cystic fibrosis and to initiate active genetic counseling wherever indicated. Institute scientists and grantees fully expect to meet this and the other challenges posed by cystic fibrosis.

HEALTH SERVICES AND MENTAL HEALTH ADMINISTRATION

Maternal and child health service

Forty-four State crippled children's agencies accepted children with cystic fibrosis for diagnosis, treatment and care in Fiscal Year 1969. As of June 30, 1968, crippled children's agencies reported to the National Cystic Fibrosis Research Foundation that 4,506 children were treated at a cost to these State agencies of more than $2,750,000.

For every child with suspected cystic fibrosis, who is referred for diagnosis, 7–10 children with chronic pulmonary of gastrointestinal conditions (not cystic fibrosis) are found. Thus, a large group of children with unmet chronic health problems are uncovered.

Again, the appropriation includes an increase of $6,187,000 over the budget request to maintain at the 1970 program level those activities that were cut below that level in the budget.

Our next consideration is the funding for the National Institute of Neurological Diseases and Stroke. The amount of the bill is $100,807,000, an increase of $452,000 over the request and $3,875,000 above 1970.

The major emphasis of the programs of the neurology institute is on research leading to effective treatment and, eventually, the prevention of neurologic disorders which affect some 20 million Americans.

A dramatic example of success is the effort in the effective treatment of Parkinson's disease with a new drug, L–DOPA. In the area of multiple sclerosis, the missing enzyme which breaks down the particular fat that is otherwise stored in the brain has now been identified in six of the so-called lipid storage disorders, including Tay-Sachs disease in babies. There is now hope that treatment can be developed for these disorders and that they can possibly be eliminated.

Funds also were made available for the treatment of spinal cord injury. It is thought that 100,000 persons are paralyzed due to spinal cord injury, resulting, mainly, from auto, motorcycle, and sports accidents.

There are now over 100 medical schools doing work in this field and appropriations have been made available for the establishment of additional spinal cord injury treatment centers and for the maintenance of those already in existence. Inserted at this point is a chart giving the location of the medical schools doing research in spinal cord injury:

MEDICAL SCHOOLS—FACULTY IN 2 SPECIALTIES

	Clinical neurology	Neurological surgery
1. University of Alabama	10	10
2. Albany Medical College	13	2
3. Albert Einstein College of Medicine	21	11

POSTGRADUATE MEDICAL SCHOOLS—FACULTY IN 2 SPECIALTIES

1. Mayo Graduate School of Medicine, Rochester, Minn	24	8
2. University of Pennsylvania	10	5
3. New York University	27	17

This year the increase in funds will restore the activities of the Institute that were cut below the 1970 level by the budget, back to that level.

The National Institute of Allergy and Infectious Diseases was allowed an increase of $843,000 over its request. The full amount is $102,249,000. Approximately 22 million Americans suffer from some form of allergy and the number is growing as the environment is increasingly inundated by synthetic pollutants.

In 1968 there were 250 million reported cases of infectious disease in the United States, resulting in 144 million lost schooldays and 130 million lost workdays. The economic loss is more than $3 million. One hundred thousand people die each year because of infectious disorders.

The field of hepatitis research has been stimulated by the recognition of a particle, called Australia antigen, which may be related to the causative agent of serum hepatitis.

Early testing of an experimental vaccine against lobar pneumonia, a disease which claims 25,000 to 40,000 American lives each year, is scheduled to begin this year. In short, the Institute has been productively busy and the funds are justified.

The National Institute of General Medical Sciences is an organization that supports projects that would automate clinical laboratory procedures. Since most patients spend at least 1 day in the hospital for testing, by reducing hospitalization by 1 day some $1.7 billion a year would be saved. This amount is equal to the entire Federal expenditure for medical research and development.

This is the main reason the committee increased the 1971 appropriation for the Institute by $65,000 over the request, or to $166,072,000. In addition, the bill provides $10 million for a genetic related task force. As we say in our report:

The committee feels that this is an idea whose time has come. It recognizes the importance of the synthesis of the gene and other equally dramatic developments in the science of inherited human qualities.

The National Institute of Child Health and Human Development portion of the bill includes $94,436,000, an increase of $1,133,000 over the amount requested and $20,262,000 over the amount appropriated in 1970. The $28.3 million of the bill is for family planning which is an increase of $12.8 over last year.

The mission of the institute is perhaps the broadest of all the research Institutes of NIH—that is, the study of human development from conception through old age.

Testimony from the National Eye Institute indicates that 3.5 million Americans have some type of visal impairment. In 1 million the defect is serious enough to interfere with work and some 400,000 Americans are legally blind. Other visal disorders include 70 million people over 40 years of age and 56 million under age 15.

These figures expand as the population continues to grow. The total amount of the bill is $30,986,000 which is $5,300,000 over the request and $8,150,000 over last year.

Funding for the National Institute of Environmental Health Sciences include $20,620,000, an increase of $777,000 over the amount requested and $3 million over 1970.

The institute is doing work in pesticides, heavy metals such as lead due to the number of automobiles in use, tobacco and nitrates. It is interesting to note that the tobacco industry has been cooperating fully with the department in their studies of smoking and health.

The John E. Fogarty International Center for Advanced Study maintains assessment of medical education, examination of ethical problems arising from the application of medical research findings in clinical practice and advances in human genetics, environmental pollution and family planning.

The bill this year includes $3,582,000, an increase of $918,000 over the amount requested and $631,000 over 1970 appropriations. The center's program this year will bring 12 to 18 distinguished scientists to the center who will become involved in scientific activities at NIH.

HEALTH MANPOWER

Health Manpower funds were increased by $18,700,000 over the amount requested and $48,219,000 over 1970. The full amount of the bill is $260,934,000.

In the health field there is a grave shortage of qualified professionals. We need 50,000 more physicians, 17,800 more dentists, 150,000 more nurses, and 227,700 more qualified people in the allied health field. The physician augmentation program calls for 448 places in 29 medical schools in 1970. In 1971 there will be 502 first year places.

An increase of $27.3 million will be used to place emphasis on, first, improving grants for schools of health professions and nursing; second, nurse scholarships; third, grants for the development of training programs for new types

of health workers, and fourth, allied health traineeships.

The $2.7 million has been added by the committee for formula grants for schools of veterinary medicine and $10 million for a total of $22 million for direct loans to students of medicine, dentistry, and so forth, and $6 million for a total of $15.6 million for direct loan funds for students of nursing.

Health education loan funds appropriations cover the interest payment on these loans in the amount of $2,126,000 and $957,000 on interest due to holders of participation certificates. From fiscal year 1968 through 1970 about 54,000 loans have been made to students in schools of medicine, dentistry, optometry, podiatry, osteopathy, pharmacy, veterinary medicine, and nursing.

The request for direct loans to students in health areas was $12 million, a reduction of $3 million from 1970 after the reduction under section 410, and $11,781,000 less than carried in the 1970 appropriations. The committee has increased the amount requested to $22 million.

Dental health has been funded in the amount of $10,954,000 which was the sum requested and an increase of $130,000 above the 1970 appropriation which was mandatory.

The Institute is working on projects on financing dental care in cooperation with OEO; improving the quality and delivery of dental care and projects to train team dentistry. With the assistance of the dental health program, dental schools will teach students how to head a dental team and how to delegate clinical procedures to auxiliaries in order to increase the productivity of the dental team.

The Institute also concerns itself with fluoridation in our water supply and the following information on fluoridation may be of some interest to Members:

COMMUNITY WATER FLUORIDATION AND TOTAL FLUORIDE INTAKE

In determining the fluoride level for drinking water which will have optimal dental health benefits but no adverse effects, the intake of fluoride from dietary sources has been taken into account. Studies have shown that the average diets of children and adults provide from one-fifth to one-half milligram of fluoride per day.[1-6] Further information on adult dietary fluoride intake is being obtained in a current Public Health Service-supported study. Atmospheric fluoride has been found to contribute relatively little to human intake (maximum: 0.046 milligram per day).[7-11] The available fluoride from pharmaceuticals, other than for those formulated as fluoride supplements for specific and known therapeutic use, is negligible.[12]

Because fluorides occur so commonly as natural constituents of water supplies, research scientists have had a great natural laboratory in which to work for several decades.[13-20] Studies of large numbers of long-time residents have been made in areas of the United States having naturally fluoridated water with up to eight parts per million or more fluoride. In these areas, the water was used for drinking, cooking, and food processing. These studies include 10-year medical investigations of large groups of individuals, roentgenologic surveys for bone changes, postmortem examinations and chemical analyses of tissues, and metabolic assessments.[21-32] Extensive research also has been done using laboratory animals.[33-34] Health statistics in high-fluoride and low-fluoride areas have been compared.[35-36] The findings from these studies have provided consistent evidence that, in addition to all food and ambient sources of fluoride, humans may daily ingest water having up to at least eight times the amount of fluoride provided by optimally fluoridated water without adverse effect other than mottling of tooth enamel. Mottling, however, does not result from the use of optimally fluoridated water.[37-39]

The Food and Nutrition Board of the National Research Council has stated that fluoride is a normal constituent of all diets and is an essential nutrient (1968).[40] The American Institute of Nutrition has recognized fluoridation as a safe, effective, and low-cost means of improving nutrition.[41] The U.S. Department of Agriculture Extension Service regards fluoridation as an important community health benefit.[42] Each of these organizations is directly concerned with proper nutrition; each endorses community water fluoridation.

In recognition of the dental benefits that accrue from fluoridation—benefits which continue in adult life [43-45]—the United States Army, Navy and Air Force provide fluoridated water at all bases where children are in regular residence.[46-48] For the military personnel who come to the bases at an age when water fluoridation is not effective, the Armed Forces have a dental preventive program which includes the clinical application and personal use of fluorides.[49-51]

Dental researchers who are exploring new techniques for combating tooth decay are not seeking to supplant water fluoridation. Rather, their successes will provide decay resistance for persons who have not had the protective benefits of water fluoridation and possibly provide some additional resistance for those who have.[52-61] However, not all of the new decay preventive methods envisioned will be adaptable to public health.[62]

The policy of the Public Health Service on fluorides and fluoridation is founded on extensive scientific knowledge. The Service makes every effort to develop, obtain, and evaluate current relevant information by supporting research, by reviewing current scientific literature and the popular press, and through interdisciplinary contacts with other governmental and professional organizations. The Service also makes every effort to share what is learned through these mechanisms with interested organizations, institutions and individuals.

Fluoridation has undergone a nearly constant process of reevaluation since its inception. Detailed reports have been published on all aspects of fluoridation from cities in the United States and other countries that have been fluoridating for 25 years, and from others with extensive but shorter experience.[63-64] Publications of the National Research Council and the American Association for the Advancement of Science concerning the relationship of fluorides to dental health and general health appeared as early as 1942 and as recently as 1968.[4-40 65-70]

The accumulated dental, medical, and public health evidence concerning fluoridation has been reviewed and judged at various times by committees of experts and special councils of most of the world's major national health organizations. Their findings and conclusions are public information.[71-72] In several of the more than 30 other countries where fluoridation is practiced or planned, commissions have been appointed to obtain and review all information relevant to fluoridation and to make recommendations according to their findings. Some of these commissions made special efforts to seek out and consider the statements of both professional and lay critics of fluoridation. Such commissions reported to their respective governments in Great Britain in 1952 and 1962; in Canada in 1955 and 1961; in New Zealand in 1957; in Australia in 1954, 1963, and 1968; in Ireland in 1960; in South Africa in 1966; and in Norway in 1968.[73-83] In July 1969, the delegates to the World Health Organization of the United Nations, meeting as a body, considered the Director General's evaluatory report on water fluoridation.[84] They approved a resolution, cosponsored by 37 nations, that embodied their findings and recommendations, which, like those of the other commissions, supported and encouraged fluoridation of community water supplies.[85]

The impressive body of information available concerning community water fluoridation and fluorides is constantly increasing and continues to support the validity of community water fluoridation as a safe and effective public health measure.[86] There is no evidential basis for questioning the medical safety, effectiveness, and practicality of community water fluoridation as a public health measure for preventing dental caries.

LAW AND MEDICINE

LEGAL STATUS OF FLUORIDATION

After a stormy decade, how does the fluoridation of public drinking water stand legally? A 1969 case indicates that despite a few victories, its opponents have not given up the fight. In *Graybeal vs McNevin* (439 SW 2d 323) the Kentucky Court of Appeals considered the legality of fluoridating the public water supply of Somerset, Ky. A chiropractor obtained an order from a lower court preventing fluoridation claiming it violated a law governing the dispensing of drugs, his religious freedom, and his Constitutional rights. Testimony supporting fluoridation was given by an impressive array of public health figures who had extensive experience with the process. Included were the State Commissioner of Health, the executive secretary of the state dental association, a pedodontist, the dean of a dental school, and a consulting engineer. The purport of their testimony was that it has been well-established scientifically that there is a significant reduction in tooth decay among children who drink fluoridated water. Their testimony further indicated that no adverse effects are known.

In opposition, the chiropractor testified that sodium fluoride is a virulent poison, which was not denied, and that its use caused him to fear for his own safety and that of his family. Other witnesses, including an instrumentation engineer, a practicing physician, and an individual with a master's degree in public health, testified that fluoride was used originally as a rat and roach killer, that it corrodes water pipes, that it does not reduce dental caries, and that possible side effects of its use in drinking water were not known. In reversing the opinion of the trial court, whose holding it characterized as "clearly erroneous," the court said:

"Nearly every great medical and scientific discovery has fought the battle of 'trial and error' and has been opposed by the skeptics and the incredulous. But progress demands that research persist unhampered by the courts."

HISTORY OF FLUORIDATION

As far back as 1892, the opinion was expressed in scientific circles that increased dental caries in England might be related to a fluoride deficiency (*Hastings Law Review 3*:1, 1952, citing materials collected by the California State Department of Public Health). Extensive tests have been conducted over the years and community fluoridation programs were inaugurated in 1945 in Grand Rapids, Mich, Newburgh, N.Y., and Brantford, Ontario. The programs were extended in 1946 to Sheboygan, Wis., and Marshall, Tex., and in 1947 to Evanston, Ill. and Lewiston, Idaho. The results uniformly indicate that fluoridation was followed by reduction in dental caries.

In 1950, The American Dental Association recommended fluoridation of municipal water supplies. In 1951, the House of Delegates of the American Medical Association endorsed the principle of fluoridation of community water supplies. In 1956, the AMA's House directed that the Council on Drugs and the Council on Foods and Nutrition review the matter. A joint resolution of these councils concluded:

"1. Fluoridation of public water supplies so as to provide the approximate equivalent of 1 ppm of fluoride in drinking water has been established as a method for reducing dental caries in children up to 10 years of age. In localities with warm climates, or where for other reasons the ingestion of water or other sources of considerable fluoride content is high, a lower concentration of fluoride is advisable. On the basis of the available evidence, it appears that this method decreases the incidence of caries during childhood. The evidence from Colorado Springs indicates as well a reduction in the rate of dental caries up to at least 44 years of age.

2. No evidence has been found since the 1951 statement by the Councils to prove that continuous ingestion of water containing the equivalent of approximately 1 ppm of fluorine for long periods by large segments of the population is harmful to the general health. Mottling of the tooth enamel (dental fluorosis) associated with this level of fluoridation is minimal. The importance of this mottling is outweighed by the caries-inhibiting effect of the fluoride.

3. Floridation of public water supplies should be regarded as a prophylactic measure for reducing tooth decay at the community level and is applicable where the water supply contains less than the equivalent of 1 ppm of fluorine.

This report was adopted by the House of Delegates of the AMA in December 1957.

Practically every scientific authority of note, including the United States Department of Health, Education, and Welfare, the American Public Health Association, the Johns Hopkins University School of Hygiene and Public Health, and the College of American Pathologists, has endorsed fluoridation of public drinking water as a safe and practical method of reducing the incidence of dental caries. Scientific literature supporting it is voluminous.

COURT ATTACKS ON FLUORIDATION

The legal history of fluoridation has been extensive and the theories put forth in opposition to it are many and varied. The legal challenges are collected and analyzed by Clark and Sophy in "Fluoridation: The Courts and the Opposition" (*Wayne Law Rev 13*:338, 1966). The authors point out that the challengers have sued in a variety of capacities as residents, citizens, taxpayers, consumers, electors, and as members of religious sects. Some have argued that municipalities lack specific power to fluoridate and that it is unreasonable to imply such power from a general authority to provide for public health. Connecticut (Title 19, Section 19–13 [G]), Illinois (Title 111½, Section 121 gl), and Minnesota (Section 144, 145) are the only states which have expressly permitted or required fluoridation by law. The 1965 Connecticut statute directs those who supply water to communities of 20,000 or more to maintain a stated fluoride level. The Illinois and Minnesota statutes provide for addition of fluorides to maintain a specified range of fluoridation.

Those claiming fluoridation is an abuse of municipal authority have asserted it is unnecessary, unsafe, wasteful, unlawful class legislation, a breach of contract between a municipality and its water users, an illegal use of public funds, a nuisance, compulsory medication, socialized medicine, or that reasonable alternatives were available.

Still others have claimed the process violates religious freedom by compelling them to consume water additives against their religious convictions.

Finally, there has been a group of objections based on specific statutes such as those relating to poisons, adulteration of foods, and the unauthorized practice of medicine, dentistry, or pharmacy. With regard to the unauthorized practice argument, the Supreme Court of Oklahoma remarked:

"The City of Tulsa is no more practicing medicine or dentistry or manufacturing, preparing, compounding or selling a drug, than a mother would be who furnished her children with a well-balanced diet, including foods containing vitamin D and calcium to harden bones and prevent rickets, or lean meat and milk to prevent pellagra (*Douell vs City of Tulsa*, 273 P 2d 859, 1954, review denied 348 U.S. 912, 1955)."

In court tests, fluoridation has been upheld in 15 states (Kentucky, California, Oklahoma, Louisiana, Ohio, Washington, Wisconsin, Oregon, Iowa, Missouri, Florida, Illinois, Michigan, South Carolina, and New York). The U.S. Supreme Court has repeatedly refused to review fluoridation cases on the ground that they do not present a cognizable federal question.

No court has struck down fluoridation on the ground that it is harmful. The handful of cases in which its attackers have been successful has been decided on procedural grounds. In *McGurren vs City of Fargo* (66 NW 2d 207, 1954), the North Dakota Supreme Court sent a case seeking to halt fluoridation back to a lower court for trial because it was of the opinion that the facts alleged stated a cause of action *if they could be proved*. The Indiana Supreme Court held, in *Miller vs City of Evansville* (219 NE 2d 900, 1966), that fluoridation was not proper in the absence of a city ordinance authorizing the process. A California court found that where 15% of the voters in a community objected to fluoridation, the city council should have presented the matter to the citizens for a vote (*Hughes vs City of Lincoln*, 232 Cal App 2d 741, 1965). In *New Haven Water Co. vs City of New Haven* (210 A 2d 449, 1965), the Connecticut high court said that where one water company furnished water to 13 municipalities through a single system, the ordinance of two of the municipalities directing that their water be fluoridated was invalid and that the state reserved control of water companies serving more than one community.

CONCLUSION

Chlorine, which like fluoride is toxic in concentrated form, and which was used as a gas in World War I, has been added as a

purifying agent to public water supplies for some years and has not caused a fraction of the public controversy that has attended fluoridation. Distinctions can be drawn between the two situations but even so the amount of controversy is difficult to understand. Much of it has not been confined to the public health merits of fluoridation. Some have suggested that the "antis" have the advantage, for all they need to do is create doubt and fear. Others have pointed out that true public acceptance comes slowly through education. Nevertheless, when New York city began to fluoridate its public water supply in September of 1965, it was estimated that some 65 million Americans were drinking artificially or naturally fluoridated water. There will be further efforts to halt fluoridation in the courts and in the public forum but, for all practical purposes, the process is gradually being accepted and no longer qualifies as a major public "issue."—RICHARD P. BERGEN.

The committee, recognizing the increased need for adequate research on animals prior to the application of new therapeutic treatment to man, has added $2.5 million for a total of $15 million for animal research centers under the Division of Research Resources of NIH. This total appropriation amounts to $66,201,000, an increase of $3,509,000 more than 1970.

The bill includes $126,100,000 for the construction of health educational, research and library facilities. This was the amount requested and the same as 1970 funds.

At the end of 1969, 175 awards totaling over $550 million have created over 4,900 new first year student places in schools of health professions. Twelve new schools of medicine and six new schools of dentistry were also federally funded. These same funds have also made possible an enrollment increase of 2,000 first year medical students and over 900 new first year dentistry places.

The $94.5 million is for grants for teaching facilities at schools of medicine, osteopathy, pharmacy, optometry, podiatry, veterinary medicine, and public health. The $23.6 million is for schools of dentistry and $8 million is for schools of nursing. The following chart gives more complete information on construction expenditures:

[In thousands of dollars]

	Amounts appropriated cumulative 1965–70	Approved applications, Federal share cumulative	
		1965–Mar. 31, 1970 (actual)	1965–June 30, 1970 (estimate)
Health professions schools	678,100	1,056,405	1,237,344
Nursing schools	81,000	101,500	113,300
Allied health professions schools	4,800	10,582	10,582
Health research facilities	193,400	293,162	293,162
Mental retardation research centers	[1] 20,000	[2] 22,043	[2] 22,043
Medical library facilities	11,250	28,520	28,520

[1] In addition, $6,000,000 was available from 1964.
[2] In addition, there were approved applications from 1964 totaling $10,062,000.

The National Library of Medicine faces a tremendous workload and the committee was impressed with its ability to meet this heavy responsibility when it is up against a hold-the-line budget and rising costs. The library has begun charging a $2 user fee for foreign institutions that might be making inquiries and this becomes important when you consider that about 25,000 loans are made abroad annually. Also this year steps will be taken toward development of a computer-based system for toxicology information programs.

The library was funded the full amount of its request, $19,769,000 which is an increase of $397,000 over 1970.

In the Office of the Director of NIH the bill includes $8,206,000, the amount requested and an increase of $895,000 over last year. The increase covers mandatory costs and NIH handling of added departmental services. There will be a reduction of one position in the activities covered by these funds.

The scientific activities overseas of NIH received the full amount of its request of $32,444,000, an increase of $28,989,000. These funds appropriated for this program are paid to the Treasury for foreign currencies already owned by the United States but which must be spent in their country of origin in accordance with Public Law 480. The committee feels that this is an excellent way to use these surplus foreign currencies.

SOCIAL AND REHABILITATION SERVICES

The social and rehabilitation services was funded in the amount of $9,500,092,000. This was a reduction of over $66 million but an increase of nearly $2 million over 1970.

A few facts at this point should be enlightening. In my State of Illinois, for example, public aid costs have jumped nearly 39 percent in the past year. This means $53 million a month in payments as compared to $41 million a year ago.

Each month in Illinois some 5,500 to 6,000 cases are added to our rolls. The average AFDC payment is $68.28 a month compared to last year's payment of $60.61. Disabled persons get $175.49 compared to $171.21 last year.

There are 622,000 on the rolls in Illinois—every small increase becomes a major budget item. The State buys 500,000 prescriptions a month for public aid families, so a nickel increase in prescriptions will cost $300,000 per year. Forty-five percent of the State's $53 million a month welfare budget is supplied by the Federal Government.

Eighty-three thousand persons were added last year.

Our director, Harold O. Swank, feels that the real problem is the growing number of recipients. The reason for the increase he feels is threefold: First, fathers are deserting their families at a growing rate, forcing more mothers to seek ADC. Unemployment, jobs that pay too little, families too big, and debts from installment buying are reasons for desertion. Second, about 200 welfare families a month move to Illinois from other States with lower benefits; chiefly, Missouri, Kentucky, and Mississippi. Third, free birth control services are not used—last year 7,000 children were born to mothers already receiving ADC.

The largest single appropriation in the bill under "social and rehabilitation services" is grants to States for public assistance. The amount is $8,651,950,000—which was requested, and is an increase of $1,153,646,000 over 1970. Of the total appropriation, $8,588,100,000 is for the Federal matching of State welfare and medicaid costs, which is noncontrollable. The appropriation is 46 percent of the total amount in the bill and a 47-percent increase over 1970.

The 110-percent limitation proposed in the request was deleted, but I am going to offer an amendment at the appropriate time to put it back in the bill.

Work incentive funds include $120 million, a reduction of $50 million from the request, but an increase of $18 million over the amount available in 1970. The objective of the work incentives program is to help people get off the welfare rolls and to place them in productive jobs. While the committee supports the program, it has just not been getting off the ground for several reasons, such as poor day care standards for children. The $50 million cut is budgeted for costs which will be incurred by the States in fiscal year 1972.

The bill includes $655,640,000—a reduction of $5 million from the request, 1970 appropriations for "Rehabilitation services and facilities."

The largest increase is $67 million for basic grants to the States for vocational rehabilitation services for a total of $503 million. This, along with matching State funds, will rehabilitate some 288,000 persons for gainful employment; $5 million has not been allowed to start a new program of services for migratory agricultural workers. The committee continues to feel that instead of starting a new Federal program, the vocational rehabilitation needs of the workers should be met through the regular programs in the States where they are living and working.

Programs for the aging were fully funded in the amount of the request of $32 million, an increase of $4,241,000 over 1970; $15,200,000 was made available for State grants which include programs for senior citizen information centers: $10 million is for the foster grandparents program and $15.8 million is for research and training.

Juvenile delinquency prevention and control programs also received full funding by the committee. The $15 million is the amount of the request and is a $5-million increase over last year. This increase will be directed toward service-oriented programs for youth, with special emphasis on prevention service projects.

The bill included $75,435,000, a reduction of $6 million from the request and an increase of $17,401,000 over the amount available in 1970 for research

and training. An increase of $4 million for income maintenance experiments has not been allowed. Plans for the use of this money are very indefinite, and although the committee is sympathetic to experiments which may lead to improvements in the Nation's welfare system we have decided to increase the appropriation for this purpose at this time.

The committeee has reduced by $3 million a request for $7 million for the social and rehabilitation activities overseas. We feel that there is not much likelihood that studies of social problems in countries where we have U.S.-owned foreign currencies will produce results which are useful and applicable here. The appropriation does, however, increase by $2 million the funds granted in 1970.

For salaries and expenses the bill includes $35,067,000, a reduction of $2,372,000 from the request, and an increase of $2,344,500 over 1970 funds. The bill allows 65 of the 100 positions requested and aproximately two-thirds of the requested increase for contractual services to improve State and Federal management of medicated and welfare programs.

SOCIAL SECURITY ADMINISTRATION

The next request is simply a mathematical computation of the amounts that will be required under the Social Security Act. For payments to social security trust funds the bill allows $2,599,886,000, the amount of the request, and an increase of $585,322,000 over last year.

Ninety-four million people will be covered by social security this year. That is nine out of 10 jobs. Ninety percent of people over age 65 receive social security while the face value of survivors insurance alone under social security is $1.13 trillion.

In 1965 the social security system was paying benefits at an annual rate of $17 billion. In June 1970 the program, including medicare, will be paying benefits at an annual rate of $38 billion—120 percent increase in 5 years. Medicare payments constitute over $7 billion of that total.

In 1970, 4.4 million aged will receive reimbursed health services paid for by the hospital insurance program, and 9.3 million will receive reimbursed physician and other services covered by the voluntary medical program.

For special benefits for disabled coal miners, the budget estimate considered by the committee included no funds for benefit payments under the Federal Coal Mine Health and Safety Act of 1969. The President has indicated that he will submit a request for 1971 when a more precise estimate of requirements can be made.

So that beneficiary payments will not be interrupted, the committee has made available an indefinite amount to be charged against subsequent appropriation for this purpose. The 1971 request is for $2,759,886,000.

Payments to social security trust funds include $997,461,000—the amount of the budget request—and an increase of nearly $65 million over 1970. This appropriation does not involve any expenditures from the general funds of the Treasury.

SPECIAL INSTITUTIONS

Under the special institutions portion of our bill, the American Printing House for the Blind received an amount of $81,000 over the budget request which will provide educational materials for 1,200 blind children in private, nonprofit institutions. The total amount of the bill is $1,557,000.

The National Technical Institute for the Deaf appropriation includes $19,744,000—the amount of the request—and an increase of $16,893,000 over last year. The institute is operated by the Rochester Institute of Technology and can accommodate a total of 750 deaf students. Enrollment this year is expected to reach 315.

The $2,432,000 was allotted for the Model Secondary School for the Deaf. This is an increase of $1,654,000 over 1970. Fiscal year 1971 will be the first full year of operation of the pilot program of the school which is located on the campus of Gallaudet College. An enrollment of 120 students is expected.

Gallaudet College funds this year were reduced by $280,000. The bill includes $6,870,000. The amount allowed will provide for upgrading of faculty salaries and for a number of improvements in the college's instructional program.

The committee has not approved an increase of $279,000 to offset reductions in revenue from non-Federal sources. A large portion of the loss in income arises from a decision to reduce the tuition charge from $500 to $357.

Howard University received full funding in the amount of $36,185,000—but a reduction of $25,209,000 below 1970. The appropriation includes an increase of $2,891,000 for operating costs of the university and an increase of $1,310,000 for the operation of Freedmen's Hospital.

DEPARTMENTAL MANAGEMENT

An increase in funds for the Office of of Civil Rights will provide 144 new positions bringing the total staff of the Office to 545. This year's appropriation includes $7,927,000 in appropriated funds and authorization to transfer $947,000 from the social security trust funds for a total of $8,874,000.

In the Office of Child Development the bill includes a reduction of $5,917,000 from the budget request of $5,538,000 and an increase of $4,010,000 over last year. This is a new appropriation, funding certain activities formerly carried on in the Children's Bureau. The Office also administers Headstart.

Departmental management funds include $35,100,000—a reduction of $1,970,000 from the request, and an increase of $3,964,000 over 1970 appropriations. The bill also allows 180 of the 361 additional positions requested.

OFFICE OF ECONOMIC OPPORTUNITY

The economic opportunity program request was reduced by $34 million which represents, nevertheless, an increase of over $98 million above 1970 appropriations. The total funds granted is $2,046,200,000.

Of the total budget request, 58.4 percent is for the support of programs delegated to the Departments of Labor, Health, Education, and Welfare, and Agriculture. Of the funds appropriated, 41.6 percent is for the support of programs administered directly by the Office of Economic Opportunity.

The committee incorporated into the bill the language requested by the President, and strongly advocated by the OEO Director, which sets aside certain mandatory funding provisions of the economic opportunity amendments although it is my understanding the gentleman from Kentucky (Mr. PERKINS), objected to this language and will offer an amendment to the bill at the appropriate time.

THE 110-PERCENT LIMITATION AMENDMENT

And finally, Mr. Chairman, I should like to devote the balance of my time to a discussion of the amendment I propose to offer to the bill at the appropriate time. The text of the amendment is as follows:

None of the funds contained in this title may be used for payments to any State for fiscal year 1971 for services, staff training, and administrative expenses under titles I, IV (part A), X, XIV, and XVI of the Social Security Act which, in the aggregate, exceed 110 percent of the aggregate amount estimated for these purposes for such State for fiscal year 1970.

This language is precisely the same as that found in the section which our subcommittee deleted from the bill except for the following words:

Except where the Secretary determines that such a limitation would impair in a significant way the effective operation of the program involved.

This wording obviously makes the amendment subject to a point of order and under the rules of the House my amendment must be drawn in such a fashion as to be strictly a limitation on an appropriataion bill, which this is.

My amendment would limit payments to the States for social services, staff training, and administrative expenditures under public assistance to 110 percent of the aggregate amount estimated for these purposes for such States for the fiscal year 1970.

Without this provision in this bill, we will have to face up to approximately a $300 million supplemental appropriation.

Unfortunately, at the time of our hearings the last information available to us on public assistance costs were for the November estimates from the States. On the basis of those figures, the Department estimated that inclusion of the 110-percent limitation on social services, administration, and training would result in a savings of $45 million.

Throughout the year the States' estimates changed and based on the May estimate, the amount of savings had increased to $300 million.

It is difficult to analyze precisely why the estimates of cost have risen.

The November State estimates predicted a 10-percent increase in welfare caseloads for 1971 and a 16-percent increase to cover services, administration, and training. The May estimates indicate that the States expect caseloads to increase by 14 percent and they have proposed a 44-percent increase in services, administration, and training.

This 44-percent increase consists of a 54-percent increase in social services and a 27-percent increase in administration.

The 54-percent increase in services is not only precipitous, it is undefined as to its substance, and is questionable on two scores: First, whether or not States which claim they will double their social services program in 1971 have the serious intent to do so, and second, whether they have the capability, if indeed they are serious, to accomplish their objectives.

For instance, Pennsylvania proposed to increase Federal services dollars per AFDC recipient from $37 in 1970 to $152 per recipient in 1971. California would go from $110 to $168 per recipient. Not only do these predictions seem unrealistic, they also indicate the substantial fallacy in the assertion that the principal burden of the limitation will fall on small States just getting started.

In summary, the estimates are probably inflated—at least partially for purposes of demonstrating that the limitation would be extremely burdensome. It is probably, true, however, that the final savings will be closer to the $300 million figure than to the $45 million figure in the President's budget. The principal point, however, is that, to the degree that the May estimates are accurate, they reflect a program increase in relation to recipients which is now justifiable in today's fiscal situation.

Our committee report indicates that the limitation would "discriminate unfairly against those States which have been slow in developing their programs but are not ready to expand them."

In fact, the majority of the States affected by the limitation and the vast preponderance of the savings are associated with large States which have had programs for a number of years.

One of the principal goals of the new welfare legislation that passed the House was to equalize the level of services among the States. If we permit costs to rise indiscriminately, this will increase the disparity between the States.

Another point which we probably should have recognized long ago is that open-ended appropriations are only justifiable in relation to benefit payments. Conceptually, there is practically no case to be made for applying an open-ended concept to either services or administration.

Now, finally, Mr. Chairman, my amendment would permit a 10-percent increase in funding.

In a restrictive fiscal climate, there is no reason to permit administrative resources to expand by more than 10 percent a year. This would be inequitable in comparison with other governmental programs at the Federal, State, or local level.

The Social Security Administration, for example, does not receive an annual expansion in its administrative resources commensurate with its workload increases.

By far the biggest increase in recipient workload in public assistance is in large States which already have sizable welfare staffs. Like, SSA, they are better able to absorb workload increases.

That, Mr. Chairman, concludes my presentation of the 1971 Labor and HEW appropriation bill. Essentially, it is a good bill and I would urge my colleagues to support it.

Mr. HALL. Mr. Chairman, would the gentleman yield?

Mr. MICHEL. I am happy to yield to the gentleman from Missouri (Mr. HALL).

Mr. HALL. Mr. Chairman, I certainly appreciate the gentleman yielding, and also appreciate the statement that he has made and that of the chairman of this distinguished subcommittee.

I would like to discuss just a little bit further the remarks that the gentleman in the well from Illinois has just made about medical manpower, and its adjunctive requirements for paramedical personnel.

Do I understand from the remarks of both the chairman and the ranking minority member on the committee that due consideration and allocation has been made for the so-called State teaching hospitals in order that we can increase the output of critically short categories of medically trained personnel in States, particularly that because of usury laws or others, are not allowed to borrow on the market to meet a guaranteed loan appropriately?

Mr. MICHEL. In our opinion we have gone over all of the testimony very carefully. We have $401 million in this bill, as I recall, for health manpower. A $50 million increase over 1970. Our committee added $18.7 million over the budget increase of $31 million for manpower training, bringing the 1971 amount for this purpose to $401 million. So that in the aggregate is $50 million more than we spent for health manpower in the year 1970.

I think this is a very significant increase, and one earmarked to do surely the job particularly that the gentleman makes reference to.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. MICHEL. Mr. Chairman, I yield myself 2 additional minutes.

Mr. SCHADEBERG. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Wisconsin (Mr. SCHADEBERG).

Mr. SCHADEBERG. Mr. Chairman, first I want to thank the gentleman for the cooperation he has given me with regard to hospitals, and ordinarily I would start my remarks by asking am I right by assuming—but I would prefer rather to start with a direct question: Is there enough money in this appropriation bill to take care of those hospitals that have started construction under Hill-Burton funds, but have not had it fully funded?

Mr. MICHEL. I believe the chairman, the gentleman from Pennsylvania (Mr. FLOOD), pretty adequately answered that question, which was propounded earlier by the gentleman from Nebraska (Mr. MARTIN), as I recall. But I should tell the gentleman, as I am sure he well knows, that last year appropriated for Hill-Burton grants $172.2 million in outright grants. The budget came to us this year at $50 million for grants and $30 million for direct loans, and $5 million for interest subsidies. The subcommittee and the full Committee on Appropriations backed that figure up to $172.2 million again for outright grants which surely, in my estimation, ought to provide more than enough since it is the same allocation they had the previous year, because the amount is the same.

Then the States can themselves allocate within their own resources so that it would seem to me that those hospitals underway would surely be going ahead pretty much on schedule.

Mr. SCHADEBERG. Was this amount expended last year?

Mr. MICHEL. This was the same amount as carried for direct grants last year as is in the bill this year for grants. Over and above that we provide $5 million for interest subsidies, and that gives us $166 million of additional construction over the $172 million in grants.

Mr. SCHADEBERG. If there were not enough in the fund for each specific hospital, would it be the prerogative of the State to use some of the guaranteed loans to which they are entitled for the same purpose?

Mr. MICHEL. No question about it. As a matter of fact, one of the very fine things about the new amendments to the act is the fact that for the first time we can now combine grants with a guaranteed loan, and under that kind of a provision we should be able to build many additional hospitals around the country.

Mr. SCHADEBERG. Mr. Chairman, I thank the gentleman for yielding.

Mr. FLOOD. Mr. Chairman, I yield 10 minutes to the gentleman from Texas (Mr. MAHON), the chairman of the Committee on Appropriations.

THE INDIVIDUAL'S STAKE IN THE CONTROL OF FEDERAL SPENDING

Mr. MAHON. Mr. Chairman, I hope that the scarcity of Members on the floor does not indicate a lackadaisical attitude on the part of the House toward high taxes, big Government spending and Government programs generally.

I would rather hope that the scarcity of Members on the floor would indicate that the Members have great confidence in the Committee on Appropriations and are willing to approve the bill as drafted by the committee without amendment. I hope that that will be the result.

Mr. Chairman, as we begin consideration of one of the biggest spending bills of the session, it is fitting that we speak about spending. The President and his fiscal advisers spoke about spending over the weekend, provoking in the Washington Sunday Star a massive headline entitled, "Nixon Berates Hill on Spending."

The President should speak about spending because he has a great responsibility in this field. Practically all Federal money is spent under his direction and the direction of top people in the executive branch.

WASTE IN GOVERNMENT

No President, Democrat or Republican, seems to do a sufficient job in promoting efficiency and controlling spending. Always, it seems to get out of hand. Congress, the General Accounting Office, the executive branch, and the press uncover in every administration innumerable in-

stances of gross waste of dollars in miscalculations which lead to shocking cost overruns.

There are many types of waste. Do you remember the story about the submarine *Guitarro* which, as a result of carelessness, sank at the dock while under construction last year at a cost to the taxpayers of $30 million?

To call the roll on Government waste in defense and nondefense areas would consume far more time than is allotted to me. I think my point is clear. There is waste and mismanagement in Government, and neither Congress nor the Executive have succeeded in controlling it.

RESPONSIBILITY FOR SPENDING

The executive branch administers the Government, appoints the executives, hires the employees, makes the contracts, and spends most of the money.

Congress appropriates the money and is not blameless with respect to all waste and mismanagement, but the major responsibility in the field of actual spending and the administration of programs is with the administration in power.

It is not inappropriate for Congress—in seeking to do the best possible job—to call upon the administration to try harder to do a better job in the field of spending the money which Congress makes available. In that spirit I call upon the administration for a more vigorous effort in this direction.

The President has a difficult job—an almost impossible job. He is doing his best and I want to help him as much as possible. It is easy to see that an administration which is spending at a rate in excess of $200 billion a year is confronted with problems of overwhelming complexity and difficulty.

I think it is fair to say that all Presidents try, in a measure, to blame Congress with what goes wrong, and all Congresses try, in a measure, to blame the President.

The present scenario is not untypical but let me say that what we need is not so much fixing the blame as fixing the country.

Yes, the headline said, "Nixon Berates Hill on Spending." In fairness it must be said that the President is compelled to try to keep the Government spending from getting completely out of hand.

NEED TO HOLD THE LINE

Let me say that I am not unsympathetic to the President's request that we seek to hold the line on spending. The Appropriations Committee has done its best to hold the line—not always successfully. It has at times been overridden by the House and by the other body and overwhelmed by its own enthusiasm for favored programs. The joint Senate-House Committee on the Reduction of Federal Expenditures, which I head, has made available the facts of the precarious fiscal situation. I would call attention to the most recent report of the committee in the July 16 RECORD.

Mr. Chairman, I am in favor of the Congress trying to hold the line on Government spending and I am not in favor of exceeding the President's budget for spending except in very extraordinary circumstances. I am in favor of making reductions wherever we reasonably can.

DEMOCRATIC PARTY ROLE

As a Democrat of some experience in fiscal matters, I wish to say that the Democratic Party must do its best to hold the line on Federal spending and do the best possible job of balancing national priorities. I am not talking politics, I am talking commonsense and without a great deal of commonsense and self-restraint we are going to fall in this great hour of national need and let inflation and fiscal uncertainty defeat the hopes and dreams of the poor and destroy the economic base of the general prosperity which we have enjoyed for so many years in this country.

If Congress and the administration want more revenues to spend for improving the environment and other attractive and necessary programs, let us raise the needed revenue. But if we do not have the money we must restrain ourselves.

As a Democrat, I am not anxious to project the image that as a Democrat I want to outspend the Republicans. I am not interested in outspending anybody. I am interested in preserving the economic strength and integrity of this country, thereby retaining the means to promote the welfare of the rich and poor alike. It is in this area that the administration and the Congress could, if the hand of restraint is not applied, jeopardize the Nation's best interests. Of course, I realize that a big country has big needs and requiries big spending.

The President says that we are exceeding his budget and spending beyond our means and we are exceeding the President's budget and we are spending beyond our means. This is not to say that I hold a brief for the economic policies of the administration. I am willing to join my Democratic brethren in saying that a better job should be done by the administration in the handling of our fiscal problems, but I am not willing to say that we ought to dismiss the matter of our precarious fiscal situation with a mere brushoff statement about politics.

In matters of foreign policy and in matters involving the economic integrity and stability of the country, Democrats and Republicans should join together—the administration and the Congress should join together—in an effort to meet our situation in the best possible manner.

That is not only good business, it is good politics, in my judgment, for both Democrats and Republicans.

Politics must not be permitted to obscure the precarious fiscal situation which confronts this country.

REDUCTIONS SHOULD PRECEDE INCREASES

There are those who say they favor staying within the overall budget of the President but who want vast increases for the social programs over the budgeted amounts and who seem to take the position that they will increase the funds for the social programs and nullify the inflationary impact on the budget by reducing by billions of dollars funds in the budget for defense and for space.

Very well. When and if those reductions have been actually enacted into law, it will be appropriate to apply available excess funds to high priority programs but not before. As of now, those reductions have not been made.

However, I should make it clear that many reductions in defense and space programs were made last year, and there is a reduced budget this year. The reductions last year aggregated some $6 billion. We are now spending more for social programs than for defense. Previously, this had not been the case. For this fiscal year, 37 percent of the budget is for defense and 41 percent is for the so-called human resources programs.

A JOINT RESPONSIBILITY

Mr. Chairman, holding the line on spending and practicing sufficient fiscal restraint is a joint responsibility of the President and the Congress. And neither the administration nor the Congress is doing a sufficient job. And neither is without substantial responsibility for our national budget course and our national budget results.

Let me cite some facts, beginning with the fiscal 1970 budget.

When this administration took office, it immediately launched a review of the fiscal 1970 budget of the previous administration, and announced the results in April of 1969. It first undertook to "correct" the budget of the previous administration, and then announced spending reductions of $4 billion.

The revised administration budget showed a projected budget surplus of $5.8 billion for fiscal 1970. But it still projected spending at $192.9 billion—an $8 billion increase over what was then foreseen for the previous fiscal year 1969. The administration—after the extensive review—still proposed spending $8 billion above the previous year.

According to the administration's budget revisions of May 19—2 months ago—fiscal 1970 spending was about $198 billion—some $13 billion, plus, above fiscal 1969. There were many contributing factors—including miscalculations of requirements in certain items, such as interest, and so forth—but that was the result.

The budget surplus originally projected by the administration in April 1969 for fiscal year 1970 had also vanished—and turned into a deficit.

In the fiscal 1971 budget, submitted last February, the President projected a slim budget surplus for 1971 of $1.3 billion.

But on a Federal funds basis; that is, leaving out the borrowings from the trust funds, the fiscal 1971 budget submitted in February was in the red by some $7 billion. As a result of miscalculations of the revenue outlook, miscalculations of certain expenditure requirements, and other changes—by the administration and by Congress—on May 19 the President upped the Federal funds deficit projection to $10 billion.

This is cause for alarm. I am further alarmed because it does not seem that enough people are alarmed about the situation.

POSSIBLE $20 BILLION DEFICIT

I am even more alarmed about the possibility that the Federal funds deficit

in this current fiscal year 1971 could go as high as $20 billion. That is a distinct possibility.

I would not be surprised if the deficit on the unified budget basis goes to $10 billion and the deficit on the Federal funds basis goes to $20 billion. This could well come from administration miscalculations of revenues, underestimates of spending for so-called uncontrollables such as interest, and so forth, and congressional add-ons. And we are responsible for congressional add-ons.

The CHAIRMAN. The time of the gentlemen from Texas has expired.

Mr. NATCHER. Mr. Chairman, I yield 5 additional minutes to my chairman.

Mr. MAHON. Mr. Chairman, in the May 19 budget revisions, the administration has already conceded some miscalculations on revenues and underestimates of uncontrollables. The Joint Taxation Committee staff has recently cast some doubt—to the extent of about $3 billion—on the validity of the administration's revenue projections. And in revenue forecasting, experience teaches that it is always best to assume the low side rather than the high side. Congress seems pointed toward further aggravation of an already aggravated situation.

As of July 9, the House, by its actions on both spending and revenue measures, had increased the projected unified budget deficit by about $2.9 billion—reflecting such actions as a $1.5 billion social security increase, a delay in the family assistance proposal, and other mandatory spending authorizations, totaling $2.8 billion in all, and a net increase of about $100 million in spending related to the various appropriation bills.

As of July 9, the Senate, on both spending and revenue measures, has increased the projected deficit for fiscal 1971 by a net of about $2.3 billion. This net increase in the projected deficit reflects Senate actions on various mandatory spending authorizations similar to but not corresponding exactly to those reported for the House, totaling $1.2 billion in all, and increased spending related to appropriation bills totaling $1.3 billion, offset by nonbudgeted revenue increases voted by the Senate but not yet acted upon by the House. This word of explanation is needed in order to put House-Senate actions in proper focus: The Senate has not yet acted on the social security increase or the family assistance proposal, and has acted on only six of the fiscal 1971 appropriation bills in contrast to the 12 passed by the House.

In addition to the actions taken to date, still awaiting action are about $4.4 billion of the administration's requests for legislative proposals that are counted in the budget as offsets to spending and new revenue proposals—both of which were counted in arriving at the deficit projected by the administration. Involved are such proposals as a new tax on leaded gasoline, accelerated collection of estate and gift taxes, certain user charges, and some spending offset proposals.

THE PENDING BILL

Mr. Chairman, I would like to pound the table and say with emphasis that we have a chance to exercise restraint in our consideration of the bill before us. As the bill stands now, it exceeds the budget estimates by $92 million. We exceeded the budget by $453 million in the companion education appropriation bill.

It is indicated that amendments will be offered later today or tomorrow to further increase the bill in excess of $300 million. At a time when we do not have the money in hand or in sight, I would plead with Members not to join in further aggravating our already serious fiscal difficulties by adding more fuel to the inflationary pressures and further downgrading the consumer dollar.

THE INDIVIDUAL'S STAKE IN THE CONTROL OF FEDERAL SPENDING

We all remember our responsibility to the voters back home, to the taxpayers. We remember that. We will have that matter called to our attention come November.

When we go home prior to November to meet our people, I would hope that husbands and wives would not point at Members of Congress and say, "Where is the man—where is he?—the man who helped cheapen my dollar and made it almost impossible for me to pay my grocery bill and feed my children?"

People have been talking here on the floor about doing something for the poor and the meek and the lowly—and we must. With that thought in mind, let us not shrink the value of the housewives' dollar at the grocery store and elsewhere.

Let us preserve the financial integrity of this country, for only through that procedure can we make it possible for this country to go forward. I plead with the Congress to support the committee on the bill which is before us and vote down the amendments and help take care of the poor who need some support as their dollar shrinks and their needs increase.

The CHAIRMAN. The time of the gentleman has expired.

Mr. NATCHER. Mr. Chairman, I yield the distinguished gentleman from Texas 3 additional minutes.

Mr. COLMER. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the distinguished chairman of the Committee on Rules, who granted us a rule for the consideration of this bill, for which I wish to offer thanks.

Mr. COLMER. I thank the able and distinguished chairman of the Committee on Appropriations for yielding to me.

My main purpose is to extend the congratulations and felicitations of this humble Member to the distinguished chairman of the Committee on Appropriations for this very timely speech that he has made here today calling the attention of the membership to the deplorable situation in which we find ourselves fiscally.

Of course, the gentleman knows and every Member of this House realizes that regardless of who the President of these United States may be, he cannot spend a dollar that this Congress does not authorize and appropriate. So, as the gentleman has so well pointed out, it is a joint responsibilty of the Executive and of the Congress.

Of course, as bad as this continued deficit spending is, the most important thing is the thing that the gentleman called to our attention at the last and emphasized; namely, the depreciation of the currency of this country, with the resultant devastating influence of inflation.

So I want to congratulate the gentleman, and I certainly hope, regardless of party politics, because, after all, if one party goes down the drain as a result of our fiscal irresponsibility, then both parties go down and so does this glorious young Republic of ours—regardless of party politics, I hope that we vote these amendments down. I hope that this membership will heed the advice and remarks of the man who is responsible, the chairman of the Committee on Appropriations, for bringing these appropriation bills to the floor.

I thank the chairman for yielding.

Mr. MAHON. I thank the gentleman for his very generous remarks.

Yes, particularly the poor. The rich can stand it, but particularly the poor must have their dollar protected by someone. The pre-World War II dollar is now worth only 35 cents. It has lost 65 cents. The dollar lost 6 cents last year. That makes it hard on the housewife and the poor little children. I think we ought to think about them in more ways than one. If we overspend and overspend and overspend, the rich will make out, but the poor will suffer. Only by maintaining a strong country can we move toward a better situation for all our people.

Mr. MICHEL. Mr. Chairman, I yield 10 minutes to the gentleman from Kansas (Mr. SHRIVER).

Mr. SHRIVER. Mr. Chairman, I wish to join in the remarks which have been made by the distinguished chairman of the Committee on Appropriations and to congratulate and commend the chairman upon his statement.

Mr. Chairman, the Appropriations Committee's recommendations before the House today call for a total of $18.8 billion in fiscal year 1971 for the Departments of Labor and Health, Education, and Welfare, the Office of Economic Opportunity and other related agencies. This represents an increase of $2.3 billion over last year's appropriation, and it is $92.9 million above the President's budget requests for this year.

In addition to these funds permanent authorization exists for the trust funds for social security, railroad retirement, and unemployment compensation totaling $53.8 billion, an increase of $4.9 billion over fiscal 1970. Thus, the total amount included under these departments and agencies for the health and welfare of our citizens is $72.6 billion.

This is a tremendous amount of money, and the committee has taken its responsibility seriously. For more than 14 weeks, Government and private witnesses produced nearly 7,400 pages of testimony.

I commend the chairman, the ranking member, and all of my colleagues of the subcommittee for their unselfish contribution in working out this bill and in doing so with complete agreement.

From these hearings, the committee presents the following recommendations:

For the Department of Labor $1,208,368,000. This is an increase of $118.3 mil-

lion over last year's appropriation, but a decrease of $8.2 million below the budget request.

For the Health and Welfare portions of HEW, $15,486,915,000. This is an increase of $2.1 billion over last year's appropriation and $134 million over the budget request.

For the Office of Economic Opportunity and other related agencies, $2,129,380,000. Ninety-six percent of this is for OEO. The total represents an increase of $85 million over the fiscal 1970 appropriation, but a decrease of $33 million below the budget request.

There are hundreds of projects and programs funded in this bill, far too many to discuss at this time. These range from open heart surgery research to solid waste management; from veterinary medicine to population control; and from child care centers to job training programs. I will mention only a few which have received special attention this year.

Within the Department of Labor, the committee has been impressed by the early results of the job opportunities in the business sector program. This program encourages the private sector to become more involved in terms of interest and input in on-the-job training projects. Only by mobilizing these private resources can the Federal Government hope to upgrade the skills and job opportunities of thousands of workers who have been especially hard hit by the slowdown in the economy. Accordingly, the committee recommends an increase of $77.4 million for this program.

Also regarding the slowdown in our economy, I might point out that the bill includes an authorization to transfer $717.7 million from the Employment Security Administration account to the unemployment trust fund, an increase of $51.9 million over 1970. It would be my hope that Congress would soon complete action on the employment security amendments of 1970 which will extend the time limit and expand the coverage of unemployment insurance. In many local areas the effects of the national slowdown are causing severe hardships for families whose regular benefit periods have expired. Much of this slowdown is due to changing national priorities, and the Federal Government has responsibility to share the burden of continued benefits with the States.

The bill includes $163 million for the environmental health service. About two-thirds of this amount is to be used for air pollution control. According to information furnished the committee at my request earlier this year, the total Federal pollution control activities obligations for fiscal 1971 will cost about $2 billion.

This represents a 60-percent increase over fiscal 1970 and a 123-percent increase over fiscal 1969. The committee has recommended a net increase of almost 10 percent for the air pollution activities in this bill.

For mental health activities under the Health Services and Mental Health Administration, the bill includes $368.5 million. This is an increase of $21.9 million above the President's request and $15 million above last year's appropriation. Most of the increase over the President's budget is found in the committee's proposed addition of $20 million for staffing grants for new community mental health centers.

It is estimated that $20 million will be available from past appropriations for the construction of additional community centers. In view of these new centers, it made no sense to the committee to provide no money for additional staffing grants. We trust that this increase of $20 million will be sufficient.

The committee has recommended $181.5 million for medical facilities construction, an increase of $92.2 million above the request and $5.2 million above last year. This is the popular and successful Hill-Burton program. Included in this figure is $5 million for interest subsidies which will support $166 million worth of construction and modernization loans. With this subsidy, the total for construction of hospitals and other medical care facilities is $338 million. With a backlog of an estimated $11 billion in needed construction and modernization projects in our hospitals, this is certainly the minimum amount needed at this time.

The recommendation for the National Institutes of Health is $1.6 billion. This is an increase of $212 million over 1970 and $92.7 million above the President's request for 1971. The committee added $38.5 million to continue the research activities of each Institute at the 1970 level, thus halting any further deterioration in research support. This deterioration has resulted in a reduction in the number of NIH research grants from $12,000 in 1967 to $9,800 in 1970.

Of the remaining NIH increase, $25 million is for the National Cancer Institute. The total recommended for cancer research is $227.4 million, which is an increase of $46.7 million over the 1970 amount. In addition to this, private sources of cancer research and treatment funds, such as the American Cancer Society and the Damon Runyon Fund and others, supply $100 to $150 million annually. This increase more than makes up for the reduction made by the Bureau of the Budget in the original request presented by the Institute.

It is sobering to note that about one in four persons will get cancer and two-thirds of those afflicted will die with the disease. Cancer will kill approximately 375,000 Americans this year. However, the committee heard repeated testimony that any crash program in cancer research would have to be phased in over a period of time rather than attempting a large expansion in 1 year. As Dr. Marston, the Director of NIH, testified: "A 6- to 12-year program can, therefore, be readily visualized as the time required for development, testing, and evaluation of a vaccine for use against a single form of human cancer. The same process might be repeated in developing and testing vaccines in other types of cancer," of which there are at least 100.

Thus, the committee is well aware that this is a long-term effort. However, the time to start that buildup is now, and the recommended increase reflects our constituents' demands that cancer research receive highest priority in our Nation's health expenditures.

Similarly, the committee recommends an increase of $17.4 million over last year for the National Heart and Lung Institute. Heart disease is the largest cause of death in this country, killing over 1 million of our citizens last year.

For the health manpower activities of NIH the committee recommends $260.9 million, an increase of $18.7 million over the budget, and $48.2 million over last year. In recommending this increase, the committee is following the advice of Dr. Egeberg, the Assistant Secretary for Health and Scientific Affairs.

Dr. Egeberg testified:

> In my professional judgment an increase of funds, should the committee determine to so recommend, could most effectively be employed in the area of health manpower development.

The increase over 1970 for health manpower is about evenly split between institutional support and student assistance. It is the committee's feeling that the student assistance programs should be restored to approximately the same level that existed before last year's cutback. At the same time, it is clear that our medical science colleges are in desperate need of financial support if they are to be expected to produce the health manpower necessary now and in the future. As Dr. Egeberg pointed out:

> For every student who enters medical school in this country there is at least one other person who has the necessary qualifications, but for whom there simply is no space.

The Federal Government is now the source of 52 percent of all medical school expenditures. Yet the need for additional doctors, dentists, nurses, and allied health manpower grows worse each year. The committee was told that if we added up all the private resources plus the Federal support going into health manpower training at the present time, we never would catch up with the need for additional personnel. Several of our medical schools are in a state of virtual collapse because of financial shortages. There simply seems to be no alternative to additional Federal support.

This bill also includes $9.5 billion for the Social and Rehabilitation Service and $2.6 billion for the Social Security Administration. Most of these funds are in the uncontrollable category.

Mr. Chairman, there is not time to discuss the rest of the items in this bill. None of these items is unimportant, as each deals with a certain aspect of the health and economic and social welfare of our citizens. The needs appear limitless; the means limited. It is easy to call for priorities; it is difficult to establish them, as higher priority for one program must bring lower priority for another.

Overall, this is a good bill, and I support the committee's recommendations.

Mr. FLOOD. Mr. Chairman, I yield 3 minutes to the gentleman from Iowa (Mr. SMITH).

Mr. SMITH of Iowa. Mr. Chairman, several times today this bill has been re-

ferred to as a $19 billion or $20 billion bill.

I would like to point out that the appropriations for the Department of Health, Education, and Welfare will really be $65 billion this year under the unified budget. One really cannot get an accurate picture or a balanced picture unless one looks at the unified budget which includes the trust funds.

Also, we have heard a lot lately from some people, as if they have invented it, of the shifting of priorities. Actually, we have been shifting priorities for years. We have a higher percentage of the budget this year going into human resources than we have for defense appropriations and the principal bill for human resources is this bill appropriating money for HEW. I am going to place certain tables in the RECORD which I think will really provide a better balanced picture of this comparison of human needs with the defense budget, and also the increase in the HEW and human resources budget over the years since 1954 when the Department was formed.

I secured these tables from the Bureau of the Budget and from Government sources, so that they would be accurate. I think it would be worthwhile for Members to study these tables which I set forth at this point:

BUDGETS ON NATIONAL DEFENSE AND ON HUMAN RESOURCES AS A PERCENTAGE OF OUTLAYS

Fiscal year	Defense unified budget	Human resources unified budget	Fiscal year	Defense unified budget	Human resources unified budget
1957	55.7	23.2	1965	41.9	29.9
1958	53.7	26.2	1966	42.2	31.0
1959	50.6	26.3	1967	44.3	32.0
1960	49.8	27.6	1968	45.0	32.1
1961	48.4	29.7	1969	44.0	34.4

Mr. MICHEL. Mr. Chairman, I yield 5 minutes to the gentlewoman from Illinois (Mrs. REID).

Mrs. REID of Illinois. Mr. Chairman, as a member of the Subcommittee on Labor-HEW Appropriations, once again I want to pay my respects to my chairman, the gentleman from Pennsylvania (Mr. FLOOD) and the ranking minority member, the gentleman from Illinois (Mr. MICHEL). Under their leadership, our subcommittee has worked diligently in bringing this bill to the floor.

The legislation before us today—H.R. 18515—carries funds totaling approximately $18.8 billion to cover all activities of the Departments of Labor and Health, Education, and Welfare—with the exception of the Office of Education which was covered in a separate bill—and various related agencies. This bill represents the bipartisan decisions of the members of our subcommittee after some 3 months of intensive hearings. As the seven volumes containing over 7,000 pages of printed hearings indicate, the subcommittee conducted a very thorough investigation and review of the budget requests and individual views brought before us. Representatives from the executive agencies, as well as those outside of the Federal Government, made excellent presentations. I am sure all of us are aware not only of the growing needs in the field of manpower, health, and welfare, but also the necessity to place these needs in a realistic framework of priorities in view of current budgetary limitations.

It has been pointed out that this is the largest of the appropriation bills excluding defense. However, when we take into consideration the money carried in other bills, the 1971 Federal expenditures for health, education, welfare, and services to individual Americans will exceed defense expenditures for the first time since World War II—and I think that is significant.

Naturally, in an appropriation bill of this size—and dealing with matters which are related so closely and directly to people—there are bound to be honest differences of opinion regarding specific amounts. I certainly have great sympathy with many of those who testified—particularly in regard to appropriations for health care and research. The needs are great and more funds could be effectively utilized in some of these programs if available, but we must remember that our resources are not unlimited—and we have a responsibility to do our best to allocate these limited funds wisely and where they will prove to be most effective.

I believe no one would question that we have better medical care in this country than anywhere in the world. However, we know there is a critical shortage of trained medical personnel—hospital costs are high and still rising—and there are many diseases for which there is still no cure.

In this regard I would like to point out some of the specific areas which have been of particular concern to me and many others. Hundreds of people throughout the Nation and in my own congressional district have written to me to urge increased funds for cancer research, and I am pleased that our committee provided an additional $25 million over the President's budget recommendation for the National Cancer Institute for fiscal 1971. The bill, as reported, provides a total of $227.3 million for cancer research—$46 million above the amount appropriated last year. As I have pointed out previously, I am generally not one to exceed the President's budget because I do recognize the urgent need for sound fiscal management in Government if we are ever to control inflation and reduce taxes, but I do feel that a greater national effort is needed in our war on cancer, both in treatment and prevention technology and, in my judgment, the majority of Americans are willing to pay the cost of an accelerated attack on this dreaded disease.

Another area in which we increased appropriations was for the National Heart and Lung Institute where we provided $178.4 million—$6.7 million above the President's budget and $18 million above the amount appropriated last year. In our report last year, the committee noted the rising incidence of chronic respiratory disease and suggested that tem. I am pleased that the Institute is, the Heart Institute give greater emphasis to these disorders which inevitably involve and affect the cardiovascular sysindeed, broadening the scope of research on these problems and that, to give visible evidence of this new commitment, the name of the Institute has been changed to the National Heart and Lung Institute.

Much concern has been expressed, also, about the continuation of the Hill-Burton hospital construction program. I have long felt that this is one of the most successful Federal-State programs in existence, but the goal of increasing hospital beds is even more critical today than it was when the program was instituted. Therefore, our committee gave this matter top priority by recommending appropriations that will provide construction totaling $338.2 million. This consists of $172.2 million in direct grants and $5 million to subsidize interest payments on $166 million worth of loans.

In a continuing effort to meet the shortages of personnel in the health field, our committee included $260.9 million for the health manpower program—

$18.7 million above the budget request and $48.2 million over the amount appropriated for 1970. Included in this total was $2.7 million for formula grants for schools of veterinary medicine. The goal is to provide more doctors, dentists, nurses, and other health personnel to overcome the existing shortages and meet the increasing needs.

Another subject which the committee gave special consideration was mental health. The budget for staffing grants for community mental health centers was $60.1 million, but testimony revealed that this amount would staff only those centers that received grants prior to 1970. Therefore, we included $20 million additional to staff new centers that will be ready to go into operation in 1971. In my opinion, the community mental health centers program has saved many dollars to say nothing in human suffering by reducing the number of patients who are confined to mental hospitals.

It is obvious that I have mentioned only a small percentage of the items in this bill. But I feel it is important that our taxpaying citizens know that much is being accomplished in these important fields.

Mr. Chairman, in my opinion, H.R. 18515, the bill before the House, is a good compromise, in that we have made every attempt to establish priorities among those programs which have proven their worthiness for the health and welfare of our people. We have recommended a net increase of $92.9 million over the budget estimates—mostly for the National Institutes of Health and for medical facilities construction, as I have pointed out. However, this increase should have very little effect on the total expenditure estimate for 1971 since it is mostly for grants that will increase obligations in 1971 but will not have a major impact on expenditures until 1972 or later.

Our committee's task in establishing priorities was not easy under the very difficult fiscal situation which continues to face our Nation today—and I am hopeful that the House will approve our recommendations.

Mr. FLOOD. Mr. Chairman, I yield 10 minutes to the gentleman from California (Mr. COHELAN).

Mr. COHELAN. I thank the gentleman from Pennsylvania for yielding me this time.

Mr. Chairman, I was quoted on the wire service by the gentleman from Michigan (Mr. FORD) as being one of the spenders on the appropriations committee along with my colleague (Mr. YATES). I am very proud of the fact that I have been placed in that category if it means that I am one of the people who believes that we should reorder our priorities in this country and put the emphasis on our domestic programs which have been sorely neglected because of the Vietnam war.

Very few talk about the economic impact of that war. There are many of us here who have been talking about resetting national priorities by cutting back military manpower, eliminating obsolete weapon systems and a few other substantial budget claimants. We have been talking about some of the very things that have been discussed by Chairman MAHON. We call for a shift in emphasis to the urgent needs of our cities.

Mr. Chairman, I wish to make it perfectly clear that this is a constitutional democracy. Charles Shultz, former budget director, reminds us that the U.S. budget is not the document of an executive whose decisions are law, nor is the President a prime minister, whose party must support him or bring down the Government. This is not a parliamentary democracy. This is a constitutional democracy. The budget is, rather, a set of proposals sent to Congress for action on appropriation and tax measures. If only I had the time I could show that in the Charles Shultz paper on "Setting National Priorities—The 1971 Budget," we were presented with a contrived budget by the President. The Shultz paper shows how a potential surplus became a potential deficit.

As a member of the Appropriations Committee, I heard the Secretary of the Treasury suggest to committee members that the fiscal policies in this country were all that have been described here by our distinguished chairman, but significantly the Secretary of the Treasury said that we might have to go to selective wage-price controls. What happened? The next day the President contradicted him and told him to shut up. And the battle rages on.

The power is in the Executive to control and redirect this economy, not only in terms of monetary and fiscal controls, but in terms of economic policies and the allocation of resources for their most efficient use. As long as I have my warrant in the House of Representatives, I will be coming to the well to tell my colleagues that the people of the Seventh California District and other districts throughout the country believe that our program and spending priorities should be redirected to the cities. The major problems that this country is facing are internal, and if we neglect domestic problems too long, we do so at our own peril.

I will develop these thoughts in a more formal paper which I shall present later. But I want to call your attention to the fact that Mr. Shultz, in analyzing the 1971 budget, points out very clearly that the dollars allocated for education and medical manpower and facilities are inadequate.

They must be increased. It is for this reason I have led fights to increase education, medical manpower, and urban renewal funds.

I suggest to my colleagues that the President is not facing those domestic difficulties with the greatest candor when his minority leader strikes out at members of the other party, labeling us "spenders." It seems to me that anybody on the Republican side who voted for the education appropriation bill this year with its necessary $400 million increase, can with pride classify himself as a spender.

But I have studied the rollcall. We were all together—Democrats and Republicans, and thank goodness. I believe one of the reasons we were all together is because some of us who are now being accused of being "spenders" were around here last year to do some of the work on this education bill. It is our deep personal belief that these are the important and urgent national priorities.

The President formed the Commission on Student Unrest. I suggest we take a look at some of the implications of what the findings may be. I think one of the things they will find is that for peace on the campus we should get out of Vietnam. If we do not, we will have not only campus problems but our budget cannot effectively be transformed to attack our pressing domestic problems.

We are trying to say two things: We have to set about our business of reordering our priorities, and we must fund these new directions. It is for this reason, as a Member of the most representative Legislature in the world that I come before you and make this case. In fact, it is our obligation and responsibility to do this.

Mr. Chairman, I want to say one thing in levity. To my distinguished friend, the gentleman from Michigan, I want to express very deep regret that he did not make that statement a little sooner. It might have helped me out in the great Seventh District of California.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I yield to the gentleman from Michigan.

Mr. GERALD R. FORD. Mr. Chairman, if I had known a statement of this sort by me concerning the gentleman's amendment could have been helpful to him in the Democratic primary, I would have said it sooner and louder and repeated it many times, because the gentleman knows I think he is a first-class Member of the House of Representatives.

Mr. COHELAN. Mr. Chairman, I thank the gentleman.

Mr. Chairman, on the bill at the appropriate time, the distinguished gentleman from Massachusetts is going to propose a package amendment. This package amendment has all the characteristics of the education bill. It fully funds vital programs that were left underfunded but I am not going into that now. It will be my task at the appropriate time when the bill is being read to explain a certain section of the package in relation to construction of medical facilities, as indeed I did before our full Appropriations Committee.

Let me tell the Members a little bit about what the problem is all about in the time I have left.

Our distinguished chairman was telling us about the uncontrollables in our budget. When we take the $200.8 billion and add it all up, there are $180 billion in uncontrollable items. The distinguished Member from Illinois made reference to the uncontrollable characteristics in the budget.

We all know what they are—interest on the public debt, social security, and so forth. How do we get interest on the public debt up to the level it is? It is because something is wrong with the whole fiscal policy. Prices have gone up. There is rigidity in the system. There are sticky prices and sacred cows being protected in that budget. Some are uncontrollables.

For example, it is not only the interest on the public debt, but take the Commodity Credit Corporation, which is a highly controversial and political issue, but, nevertheless, uncontrollable. We do not know what that bill is going to be from year to year. The point is that someone's ox is always being gored. but decision must be made.

Now we come to the famous uncontrollables medicare and medicaid. What about them? There are enormous problems being created here. There was a $200 million estimate as our first year costs, instead they have gone up over $2 billion. Why? Because of lack of medical manpower and lack of medical facilities, and lack of paramedical services, and all the categories we are discussing in this bill. If we do not fund existing medical programs, we are going to compound our ills. It will get worse.

A week ago I read in the paper that the Blue Cross plan is going to pot. Why? Because of the incredible rising costs of medical care: $100-a-day hospital beds; uninsurable groups. The high cost of medical care demands that something be done to control these costs. To attack the problems we need more medical manpower and facilities. This is what the emergency health amendment is about.

I urge an aye vote on the Boland amendment when we vote tomorrow.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. YATES. Mr. Chairman, may I ask the chairman of the committee whether my time may be allotted to the gentleman from California?

Mr. FLOOD. Not at this time, Mr. YATES.

Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts (Mr. BOLAND).

Mr. BOLAND. Mr. Chairman, let me say I want to compliment the distinguished gentleman from California (Mr. COHELAN) on his very excellent statement. I regret that his talents and his ability will not be available to the Appropriations Committee in the 92d Congress. But I am confident that his absence from this body will be temporary. He has contributed much in the years he has been here, in the very field about which we are talking now. He has been and is a distinguished member of the Appropriations Committee. No one has worked any harder than he has in the time he has served on the committee.

Coming to this well after hearing some of the speeches that have been made here this afternoon in this Committee of the Whole, one would think one would come with some trepidation. That was a powerful speech by the chairman of the full Committee on Appropriations (Mr. MAHON). There was a magnificent dissertation on the bill and explanation of the bill by the distinguished chairman of the subcommittee, the gentleman from Pennsylvania (Mr. FLOOD).

But, as the gentleman from California has said, there is the matter of priorities with which this Congress must deal. There is a matter of priorities with which this Committee of the Whole must deal.

So, powerful as the speech of the gentleman from Texas has been, I believe we have to face the fact that we must meet these priorities in the field of public health. This is one area in which the Congress ought to be deeply concerned.

Let me say to the gentleman from Pennsylvania, he has done excellent work on this bill and all the bills he has ever handled as well as on other appropriation subcommittees on which he has served and is now serving.

He has, I believe, won the respect and admiration and esteem of all the Members of Congress for the way he has pulled himself up from a very serious illness to the good physical condition in which he is today. I admire him for his spirit and his determination.

May I also say, Mr. Chairman, when one leaves the theater one has to walk into the street of reality. That is what we are trying to do with the package amendment that will be offered tomorrow.

When this bill was considered in the full committee I stated, and I repeat now, that this Subcommittee on Appropriations, Mr. FLOOD's Subcommittee for Labor, Health, Education, and Welfare, has one of the toughest and I believe the most difficult tasks of all the appropriation subcommittees. There is more interest, more pressure, more testimony relating to this bill than to any other budget with which the Congress deals.

I suppose that this is so because it touches more people and more programs relating to people than any other budget the Congress considers. I imagine that there are few people in this Nation who are not affected in some way by what this bill seeks to accomplish.

The amendment I will offer and have titled, the "health emergency amendment", seeks to establish some priorities in the field of health. The health emergency amendment is not named for purposes of rhetoric. It is so named to reflect the condition of this Nation's health system.

This amendment seeks to do something about the crisis in health. This is a cry that we have been hearing much about—doing something about—but not near enough.

People are getting nowhere near the quality of health care they have a right to expect.

These are not my words. They are the words of former secretary of Health, Education, and Welfare, Robert E. Finch.

Crisis in health is not merely a slogan—it is not just another empty shibboleth.

It is, today, a striking reality. Without exception, everyone concerned with, and responsible for, the health of our Nation—from President Nixon to distinguished experts in the health professions, to ordinary citizens—has expressed deep concern about this plight.

There are other members of the committee who will discuss various aspects of this package amendment. They will expand on specific amendments in the package.

Let me detail briefly what the package amendment does. The emergency health amendment contains the following increases:

Medical manpower institutional support and student loans	$138,954,000
Health educational facilities construction	100,000,000
Hill-Burton direct grant program	80,000,000
Community mental health centers, staffing grants	20,000,000
National Heart and Lung Institute	15,000,000
Pilot dental care projects for needy children	6,000,000
Grants to medical school libraries	500,000
Total	360,454,000

Mr. Chairman, so that the Members will have some knowledge of the programs that the package amendment affects, let me elaborate briefly on them.

First. Institutional support of health schools. Formula grants and special project grants are awarded to schools of medicine, dentistry, osteopathy, optometry, podiatry, pharmacy, veterinary medicine, nursing, public health, and the allied health professions. The purpose of these grants is to increase the output of health professionals, rescue schools in financial difficulties, and improve the quality of instruction.

The legislative authority for these programs authorizes a total of $255,500,000 for fiscal year 1971. The administration requested only $147,966,000, and the committee increased this request by just $2,700,000.

The health emergency amendment would fund these programs of institutional support to the full amounts authorized, resulting in an increase of $104,834,000.

Second. Loans for health professions students. The programs of direct loans to students of medicine, dentistry, osteopathy, optometry, podiatry, pharmacy, veterinary medicine, and nursing provide these students with much-needed funds for their professional education.

Fifty-six million dollars is authorized for these loans in fiscal year 1971. The administration requested only $21,610,000 a sharp reduction from the previous year. The committee increased the request by $16,000,000, still far short of the amount authorized and needed.

The health emergency amendment would fully fund these loans programs by increasing the appropriation by $18,390,000.

Third. Traineeships for health professions students. Traineeships are provided to selected students of public health, nursing, and the allied health professions.

Thirty-eight million dollars is authorized for these traineeships in fiscal year

1971. The administration requested only $22,270,000, and the committee made no change in this request.

The health emergency amendment would fully fund these health traineeship programs by increasing the appropriation by $15,730,000.

Fourth. Construction of health education facilities. Matching grants are made to the schools of the health professions for construction of new teaching facilities and for renovation of existing facilities. At the beginning of the current fiscal year, approximately half a billion dollars worth of construction grant applications had been approved by HEW, but were unfunded for lack of money.

A total of $260 million is authorized for these construction grants. The administration requested only $126,100,000, and the committee made no change in this request.

The health emergency amendment would increase the request by $100 million.

Fifth. National Heart and Lung Institute. The major source of funds for research into the causes and treatment of heart disease is the National Heart and Lung Institute of the National Institutes of Health. Research on heart disease—still the major killer disease—deserves more financial support than provided for in the committee's bill.

The National Heart and Lung Institute has an open-ended authorization. The administration requested $171,747,000 and the committee raised this request by only $6,732,000.

The health emergency amendment would increase this request by an additional $15 million.

Sixth. Special dental care projects. Section 510 of the Social Security Act authorizes a program of pilot dental care projects for needy children which is aimed at finding ways to control dental disease. The administration requested, and the committee approved, a totally inadequate appropriation of just $180,000 for this program.

The health emergency amendment would increase this request by $6 million.

Seventh. Hospital construction grants. The program of grants for hospital and medical facilities construction and modernization, commonly known as the Hill-Burton program, is designed to provide assistance in meeting the great need for more hospitals and other health care facilities.

The administration requested only $89,321,000 for the Hill-Burton program. The committee raised this request to $181,521,000 by increasing the amount for construction grants and eliminating the amount requested for direct loans.

The health emergency amendment would increase the request for construction grants by another $80 million, which would produce a total amount for grants which is less than the amount appropriated in fiscal year 1969.

Eighth. Community mental health centers staffing. Community mental health centers are designed to reduce the number of patients in mental hospitals by emphasizing outpatient care in the local community as a more effective method of treatment. The greatest need of the centers is money to pay staff during the early years of a center's existence.

The administration did not request an appropriation adequate to continue staffing grants for those centers currently in operation. Only $60,100,000 was requested for this purpose. The committee increased the request by $20,000,000 but admitted in its report that even this amount would probably not be adequate to keep existing centers operating.

The health emergency amendment would insure that these centers continue to function by adding another $20,000,000 for staffing grants.

Ninth. Medical libraries assistance. The National Library of Medicine administers a program of assistance to medical libraries throughout the country.

The administration requested only $5,792,000 for this program in fiscal year 1971. The committee did not change this request, despite an authorization of more than $12,000,000 contained in the Medical Libraries Assistance Extension Act of 1970 for nonconstruction assistance.

The health emergency amendment would increase this request by $500,000.

Mr. Chairman, the amendment I will introduce is intended to meet the minimum needs of nine HEW health programs. These health programs will be listed when we get back into the House. I will list all of the health programs and list the amount of money requested by the administration and the amount of money provided by the Subcommittee on Labor-HEW and the amount requested in this amendment.

So, Mr. Chairman, I would hope when we reach that part of the bill tomorrow where this amendment will be offered, the members of this committee will recognize the fact that there is a crisis in health and that the Members on both sides of the aisle will support the effort to meet that crisis.

Much has been printed and said about the "gap in the health needs of the Nation." Let us close this gap. Let us close ranks on both sides of the aisle and march down that aisle with the knowledge and the satisfaction that we measured up to our responsibility to provide the manpower and the programs that will bring happier and healthier tomorrows for the people of this great land.

Mr. FLOOD. Mr. Chairman, I yield 4 minutes to the gentleman from Illinois (Mr. YATES).

Mr. YATES. Mr. Chairman, it is time to talk about doubletalk, doubletalk from some of those on the Republican side.

We heard today from the minority leader that certain Democrats, including me, were guilty of budget busting and he warned against voting for the Boland amendments to increase funds for various health programs in the HEW appropriations bill. Apparently he forgot the release put out by the National Republican Congressional Committee on July 15, 1970, only a few days ago, which said:

THE MEDICO GAP

Dr. Roger O. Egeberg is preparing a request for the Nixon Administration for $150 million to be applied toward closing the doctor gap in America, Scripps-Howard has reported. The newspaper chain conducted a survey recently across the Nation which revealed a serious shortage of medical care available in many parts of the country.

The survey shows a need for a crash program to increase the number of health workers, with emphasis on doctors. The survey disclosed that physicians are over-concentrated in surburbia, with scarcity in the ghettos and rural areas. Many of the Nation's medical colleges are on the verge of bankruptcy. Medical education has become so costly that lower income groups are being foreclosed from training for careers in medical fields.

Dr. Egeberg is Assistant Secretary for Health at HEW. The $150 million he reportedly wants would boost financial grants to medical, dental nursing and other health-related schools. It would increase the amounts and numbers of Federal scholarships and loans to medical, dental and nursing trainees. The U.S. needs 50,000 more doctors, 150,000 more nurses, 10,000 more dentists and thousands of health-care specialists. There are now 325,000 doctors, 100,000 more dentists and thousands of health-care specialists. There are now 325,000 doctors, 100,000 dentists, 700,000 nurses and 3 million other health-care workers, according to Scripps-Howard.

The 109 medical schools in operation graduated 9,000 doctors last year. Dr. Egeberg wants to double this yearly output to 18,000. "If the Government doesn't help the medical schools and medical students soon, we'll have a doctor shortage for the next 20 years," he warns.

Surprisingly, the U.S. is eighth per capita in the number of doctors, with Austria, Australia, Denmark, Israel, Italy, Russia and West Germany ahead. Health officials say that "maldistribution" is the main problem, with large areas suffering a gap in health care, and others having more than an adequate number of doctors. Dr. Egeberg also wants changes in the 13-year program now required to educate and train a doctor. The total cost of the present program runs nearly $50,000 over the long years of schooling, internship, military service, medical residency and specialized medicine.

Dr. Walter C. Bornemeier, president of the American Medical Association, says the Government should provide "full scholarships and maintenance" for Negro, minority and poor white students who want to become doctors. He also advocates ghetto clinics financed by the Government, under private operation.

The doctor gap was created under the Democrats. The Nixon Administration wants a program to close it up.

Mr. YATES. How, Mr. Chairman? How does the Nixon administration propose to close the gap? With words? Words will not do it without dollars to back them up; and, even the minority leader knows that if the Congress stays within the President's budget as he says he wants to do, neither the doctor gap nor the hospital gap will be closed.

The Nixon administration and the minority leader cannot have it both ways. They cannot cling to the budget's admittedly inadequate figures and still call for closing the health gap.

We will find out tomorrow which side they choose when the votes are taken on the bill and on the Boland amendment.

Mr. VAN DEERLIN. Mr. Chairman, I am happy to add my support to the emergency health amendment. The $360 million which the amendment would provide may seem like a great deal of money, but it is really a modest invest-

ment when matched against a medical bill now hovering at around $70 billion a year, which the American people are paying.

The consequences of our failure to adopt this amendment would be grievous indeed. Some of our most esteemed programs, for training sorely needed health care personnel, for supporting medical and dental schools and for assisting hospital construction, will suffer needlessly.

I for one cannot understand the logic in refusing to fund, in full, these essential and basically noncontroversial programs. Take traineeships and loans for students of the health professions. Everybody agrees we have a critical shortage of qualified health manpower; here's our opportunity to do something to rectify the shortage. Mr. BOLAND's amendment would simply raise the appropriations for the two programs to the authorized level of $94 million, surely a sound move in these difficult times.

Other programs which the amendment would help are equally meritorious. Our medical schools are in trouble, and the amendment would respond to this problem by adding $104.8 million to the $150.7 million recommended by the Appropriations Committee for institutional support of these schools. Again, the ultimate purpose of these grants is to increase the output of health professionals by rescuing the schools from financial distress and improving the caliber of the instruction they offer.

The House has just expressed its own stanch support for the Hill-Burton Act for aiding hospital construction, by decisively overriding a Presidential veto of legislation extending this popular program. The emergency health amendment offers a logical sequel to the override action, by adding $80 million to bring the Hill-Burton funding in this bill to $261.5 million—still less than the amount we appropriated for fiscal 1969.

I should like to include at this point a letter sent last night by 10 members of the Commerce Committee to all House Democrats, as part of the effort to rally support for the emergency health amendment:

WASHINGTON, D.C., *July 21, 1970.*

DEAR COLLEAGUE: As members of the Interstate and Foreign Commerce Committee, which is responsible for authorizing legislation in the field of health, we are vitally concerned about full funding for our health manpower programs.

It is our understanding that the Appropriations Committee has recommended more funds for student loans than the Administration requested, but no additional funds for the schools of the health professions and nursing, except $2.7 million to continue aid to schools of veterinary medicine.

The emergency in funding for our health manpower schools is grave, and is worsening every day. We should act now to meet this crisis.

An "Emergency Health Amendment" will be offered by Congressman Edward Boland to the Labor-HEW Appropriations bill, scheduled to come to the floor today. The amendment calls for greater funds for health manpower programs, as well as increases for Hill-Burton grants, Community Mental Health Centers, and the National Institutes of Health. We support that amendment, and hope you will also.

Sincerely,

Samuel N. Friedel, John E. Moss, Lionel Van Deerlin, Fred B. Rooney, John M. Murphy, Brock Adams, Richard L. Ottinger, W. S. "Bill" Stuckey, Robert O. Tiernan. Richardson Preyer.

Mr. WOLFF. Mr. Chairman, I would like to make it known my full support of the emergency health amendment which would provide $350.6 million to help meet our Nation's grave health crisis. This appropriation would specifically aid medical schools and will be very helpful in the attempt to bridge our deficiency of 52,000 doctors in the country.

Time and again, we have failed the medical schools and their dedicated faculties. We have demanded of them herculean tasks and given them only minimal support. We have demanded of them increases in their enrollments, aid to disadvantaged people in rural and urban areas, and higher quality health care and services. Moreover, we have demanded of them all this but turned a deaf ear to their cries for financial assistance.

Mr. Chairman, we have only approximately three active medical doctors for every 2,000 people, while the Soviet Union has five doctors per same number of people.

Our Nation deserves better care than this. But the only way to achieve a more realistic ratio and every improving care is to enable the medical schools to train more doctors. For this, they need our help. That is why Congress must give its full support to this important legislation.

Mr. MINISH. Mr. Chairman, the Departments of Labor and Health, Education, and Welfare, and related agencies appropriations bill for fiscal year 1971 would appropriate $18.82 billion. While the amount is $2.32 billion over last year's level, increases in uncontrollable programs such as grants to States and trust funds account for $1.7 billion of the higher figure.

In the area of health care the bill is woefully inadequate. Fortunately, the committee saw fit to increase the requests by the administration for health programs such as Hill-Burton construction, the National Institutes of Health, and mental health programs. However, even with the committee increases, the legislation falls far short for providing the much-needed funds to respond to the Nation's health crisis.

Therefore, I support the "emergency health amendments" adding $360.5 million for medical construction, health training programs, the National Heart and Lung Institute, the special children's dental program, medical student loans, and community mental health centers. I urge all our colleagues to support this worthwhile amendment. Overwhelming support by the House for adequate health funds would demonstrate a concern for the welfare of our citizens—a concern which takes priority over wasteful and unnecessary spending for programs like the SST and NASA.

Mr. FLOOD. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

H.R. 18515

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes, namely:

TITLE I—DEPARTMENT OF LABOR

MANPOWER ADMINISTRATION

MANPOWER DEVELOPMENT AND TRAINING ACTIVITIES

For expenses, not otherwise provided for, necessary to carry into effect the Manpower Development and Training Act of 1962, as amended (42 U.S.C. 2571–2620), $744,494,000 to remain available until June 30, 1972.

Mr. FLOOD. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. HOLIFIELD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE

Mr. FLOOD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days during which to extend their remarks on the bill H.R. 18515 and to include extraneous material.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

POSTPONEMENT OF WHEAT REFERENDUM

Mr. SISK. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1148 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1148

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 3978) to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Agriculture, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto

to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from California, Mr. SISK, is recognized for 1 hour.

Mr. SISK. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1148 provides an open rule with 1 hour of general debate for consideration of S. 3978 to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971.

Under the present law, the Secretary of Agriculture is required to hold a marketing quota referendum no later than August 1, 1970.

In view of the fact that new farm legislation to replace the expiring Food and Agriculture Act is expected to be reported at an early date, it is felt that a postponement of the referendum is desirable. If the referendum were to be held and then new farm legislation enacted, there would be a waste of time, effort, and money.

The purpose of S. 3978 is to authorize the Secretary to postpone the conducting of a national referendum on the 1971 wheat program. He could conduct the referendum not later than the earlier of two dates: 30 days after adjournment sine die of the second session of the Congress; or October 15, 1970. Thus he would be free to set a date earlier than October 15 if he felt that no new legislation were possible and that such action were needed in order to give wheat farmers greater certainty in planning for their 1971 crop.

Mr. Speaker, I urge the adoption of House Resolution 1148 in order that the bill may be considered. Mr. Speaker, I reserve the balance of my time.

Mr. LATTA. Mr. Speaker, I agree with the statement just made by my friend and colleague, the gentleman from California (Mr. SISK), concerning this rule, and this bill, but I hasten to point out that I am not too happy with the action of the committee so far as setting the date of October 15, 1970, or 30 days after the adjournment sine die of the second session of the 91st Congress, for the holding of this referendum. As was pointed out to the Committee on Rules, in the winter wheat areas they will be sowing their wheat long before October 15. In Ohio we usually sow our wheat some time around September 20 or September 25. This referendum could be held as late as October 15, when some of this wheat or most of the wheat in Ohio and in many other wheat areas would be in the ground, and these farmers would be forced then to tear up their fields.

Well, Mr. Speaker, I am happy to report to the House that I read on the wire today that the House Committee on Agriculture has tentatively agreed on a farm bill, and they hope to agree tomorrow. That would do away with the necessity for this wheat referendum, and my reservation about the date would no longer apply.

For this reason, Mr. Speaker, I support the rule, and I support the bill with the hope that the Committee on Agriculture will follow through tomorrow and report out a farm bill.

Mr. SISK. Mr. Speaker, I have no further requests for time.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. POAGE. Mr. Speaker, I ask unanimous consent that the bill (S. 3978) to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971, be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the bill, as follows:

S. 3978

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 336 of the Agricultural Adjustment Act of 1938, as amended, is amended by adding at the end thereof the following: "Notwithstanding any other provision hereof the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971, may be conducted not later than the earlier of the following: (1) thirty days after adjournment sine die of the second session of the Ninety-first Congress; or (2) October 15, 1970."

Mr. FINDLEY. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, it is true that the House Committee on Agriculture today did reach a tentative agreement on a general farm bill and also on a provision which would establish a limitation on individual payments.

The Washington Post in reporting this event this morning was in error, however, in describing the limitation as a limitation at $55,000 per farm. As I understand the agreement, it would be at $55,000 per crop, and dealing with the three major crops in the bill—feed grains, wheat, and cotton, and if that in fact is the case the limitation in reality is not $55,000 per farm but at least $165,000 per farm.

I do not view that as a responsible limitation on payments which this bill sets and if a responsible limitation on payments is not accepted when the general farm bill is before the House, I think the prospects for enactment of a general farm bill this year may indeed be rather dim. If this should not occur, then there would be a delay in the wheat referendum that we are voting on today, and which I oppose. It would be a grave injustice to the wheat farmers.

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. FINDLEY. I yield to the gentleman.

Mr. YATES. How does this statement that the gentleman just made relate to the limitation recently passed in the Senate of $20,000 per farm?

Mr. FINDLEY. I would say to the gentleman that the limitation provided in the Senate action on the appropriation bill for agriculture is at a proper and responsible level, which is $20,000 per farm and at the proper time, if I am recognized for that purpose, I will seek to amend the limitation provided in the general farm bill to bring it down to the $20,000 level.

Mr. YATES. How does it pertain to the present bill now under consideration? Is it related and does it relate in any way to the present bill—that is, the $20,000 limitation?

Mr. FINDLEY. No, it is not. It is not in the bill at the present time, but I hope it will be before it is enacted.

Mr. YATES. I thank the gentleman.

Mr. SEBELIUS. Mr. Speaker, the House Agriculture Committee this morning acted to insure prompt action on new farm legislation. This action has a direct influence on House consideration of S. 3978, a resolution passed June 19 by the Senate postponing the wheat referendum scheduled for July 27–31 until October 15 or 30 days after adjournment, whichever comes first.

A referendum of wheat farmers forcing a choice between two mediocre farm programs would create unnecessary friction and division in rural America. In addition, the USDA has estimated the cost of conducting a referendum at $2 million. This money should be applied to improve farm income and save the family farm operation rather than conduct a divisive farm vote.

I urge favorable consideration of S. 3978 to give the USDA the authority to delay the wheat referendum. A referendum will likely not be necessary since new farm legislation should be enacted during this session of Congress. We do not need an unnecessary expenditure of $2 million and a controversial and unnecessary vote in rural America during these most divisive times.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AUTHORIZING CLERK TO RECEIVE MESSAGES FROM THE SENATE AND THE SPEAKER TO SIGN ANY ENROLLED BILLS AND JOINT RESOLUTIONS DULY PASSED

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that notwithstanding the adjournment of the House until noon Wednesday, July 22, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

JIM G. LUCAS, GREAT REPORTER, DIES IN WASHINGTON

(Mr. EDMONDSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. EDMONDSON. Mr. Speaker, Oklahoma lost one of its finest native sons and the Nation lost one of its greatest newsmen last night.

Jim G. Lucas, a smalltown boy who won immortal fame as a Marine combat correspondent in World War II, and who went on to become one of the world's most respected war correspondents as a reporter for the Scripps-Howard newspapers, died last night at the veterans hospital here in Washington, D.C.

Jim Lucas was a newsman who covered war as the GI saw it and the GI fought it. From the beaches of Tarawa to the jungles of Korea and the rice paddies of Vietnam, he worked alongside America's fighting men and told their story with fidelity, bravery, and integrity.

From his starting days as a reporter for the Muskogee Daily Phoenix, Jim Lucas was a man who believed in going where the action was.

As a reporter for the Tulsa Tribune, he became one of Oklahoma's best known newsmen. In later years, with Scripps-Howard, he was the acknowledged successor to Ernie Pyle and one of America's most honored reporters.

In today's edition of the Washington Daily News there appears an editorial under the title of "Jim G. Lucas," part of which reads as follows:

Jim Lucas was a great reporter with a rare gift for chronicling the miseries and joys, heroism and humdrum of the life of the American soldier on the front lines in three wars.

Thousands upon thousands of ex-GI's will long remember him from the clips of his stories they have pasted in their scrapbooks.

American servicemen all over the world, who knew him as a friend, will join in mourning this brave Oklahoman.

Mr. Speaker, I include at this point in my remarks the full text of the editorial:

JIM G. LUCAS

One of many amazing things about Scripps-Howard War Correspondent Jim G. Lucas was that a lifetime of witnessing and writing about the tragedy of wars left him without a trace of inner hardness or cynicism.

He was, until the end, what one speaker said of him years ago in bestowing upon him some particular medal: "A truly modest man—an old Marine with a soft heart."

And he could, and did, write with the best of the journalists of any era.

He undoubtedly saw more combat than any newspaperman in U.S. history. He seemed to be always at the front—until age and a long, losing bout with cancer caused him to return from Vietnam three years ago for the last time. When, for example, Gen. Omar Bradley at a Washington banquet in 1953 awarded Jim in glowing terms the VFW's Gold Medal for conveying the feel of the battlefield in his stories, Jim was on the frontlines in Korea. When he was awarded the 1954 Pulitzer Prize for his human interest stories from Korea, he already was in Hanoi covering still another war. (He was in Hanoi when Ho Chi Minh's troops took over North Vietnam.)

Still, 25 years of frontline reporting in three major wars never shook his belief in the worth of the individual, the value of life, or the love of country.

He never married. He loved young people and there are countless stories of his help to the young, particularly young newspapermen on their first assignment to a war zone. He could, and did, oratorically wave his country's flag at the slightest provocation.

Jim Lucas was a great reporter with a rare gift for chronicling the miseries and joys, heroism and humdrum of the life of the American soldier on the frontlines in three wars.

Thousands upon thousands of ex-GIs will long remember him from the clips of his stories they have pasted in their scrapbooks.

Scores of young newspapermen in the future, we are sure, will be studying his work and seeking to emulate it—just as has been true in the case of Jim's predecessor, Ernie Pyle.

For those of us in Scripps-Howard, it has been an exceptionally rare privilege to have worked with Jim Lucas.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I am glad to yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, I join my colleague in what he had said about our late friend Jim Lucas, who was one of the most outstanding constituents of the gentleman from Oklahoma (Mr. EDMONDSON).

Mr. Speaker, Jim Lucas knew where the news was, went and got it regardless of how dangerous or how tough the undertaking, and I doubt that many reporters have covered the war in Vietnam as closely, as thoroughly and over as long a period of time as did Jim Lucas.

He was truly on instinctive and great natural reporter. America has lost one of its finest newsmen.

Mr. EDMONDSON. Mr. Speaker, I thank the distinguished majority leader for his comments.

Mr. RIVERS. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I am glad to yield to the distinguished chairman of the Committee on Armed Services.

Mr. RIVERS. Mr. Speaker, I guess I knew Jim Lucas about as well as any Member in the Capitol. He was a marine at heart. He covered the battlefronts as a marine GI would cover it. He was loved by everyone who wore the uniform. He was intense in his patriotism and he was as intense in his reporting the truth to the American people, regardless of how they took it. He was an honorable reporter, a great American and a great credit to his profession.

Mr. Speaker, now that Jim Lucas has gone, a great American, a great American journalist has left this scene and he will be missed.

Mr. Speaker, I applaud the distinguished gentleman from Oklahoma (Mr. EDMONDSON) for what he has said about the late Jim Lucas and I wholeheartedly join in the sentiments which he has spoken so well. I thank the gentleman for yielding.

Mr. EDMONDSON. I thank the distinguished chairman of the Committee on Armed Services for his kind remarks.

Mr. BELCHER. Mr. Speaker, will my colleague yield?

Mr. EDMONDSON. I am glad to yield to my distinguished colleague from Oklahoma.

(Mr. BELCHER asked and was given permission to revise and extend his remarks and to include an editorial.)

Mr. BELCHER. Mr. Speaker, I wish to join my colleague in paying tribute to Jim Lucas. He was not only a great reporter but he was a great fellow and certainly was a dear friend of mine.

Mr. Speaker, I include at this point an editorial entitled "Jim Lucas Dies Here":

FAMED WAR REPORTER: JIM LUCAS DIES HERE

Jim G. Lucas, Pulitzer Prize-winning war correspondent for the Scripps-Howard Newspapers, died early today of abdominal cancer in the Veterans Hospital here. He was 56.

Mr. Lucas began his war reporting career as a Marine combat correspondent in the Pacific islands campaigns of World War II.

For the next quarter century, in dispatches datelined around the globe, his accounts of the heroism and agony and tedium of war gained him recognition as America's best known war reporter since Ernie Pyle, also of Scripps-Howard Newspapers and one-time managing editor of The Washington Daily News.

A versatile writer who covered many other types of stories, Mr. Lucas died three days before publication of his latest book, a biography of Vice President Spiro T. Agnew.

But the assignment he most desired was that which brought him to the frontlines, and to the side of those he respected above all others, American GIs. Mr. Lucas possibly saw more actual combat and more of the maimed and dead of war than any other newspaperman in U.S. history.

His period of front-line reporting spanned 25 years, including World War II in the Pacific, and the wars in Korea and Vietnam.

Many in his profession believed him to be the greatest since Ernie Pyle in his ability to write with compassion and understanding about the American soldier, sailor or marine in battle. He was twice the recipient of the Ernie Pyle Award for writing in the Ernie Pyle tradition, the only newspaperman to be so honored.

Only once was he wounded and that lightly by a piece of shrapnel over the eye near Da Nang in Vietnam in 1964.

He believed that the "fantastic luck" which had carried him safely through so many battles and firefights would stand by him in his bout with cancer which began with a major intestinal operation a year ago. But such was not to be.

SCOOP IN PACIFIC

Mr. Lucas first acquired journalistic fame at the bloody and epic Battle of Tarawa in the Pacific in late 1943. His story, written as a Marine combat correspondent, was the first out and for three days was the only word the outside world had. It was on Tarawa that he received a battlefield promotion from master sergeant to second lieutenant and a Bronze Star. His story produced for him the National Headliners Award for the best combat reporting of 1943. He was listed as dead for a brief time on Tarawa. The dead Marine turned out to be another combat correspondent who was wearing Jim's shirt.

In all, he made eight D-day landings with the Marines in the Pacific in World War II. Battles in which he participated included Guadalcanal and Iwo Jima.

After VJ Day, many newspaper organizations bid for his services. He joined the Scripps-Howard Newspaper Alliance in Washington and became that bureau's military correspondent.

He covered the first atomic bomb test at Bikini and in 1947 went with the late Adm. Richard E. Byrd to the South Pole.

He went to the front lines at the start of the Korean War and spent 26 of that conflict's 36 months in Korea, being present at the end of the fighting. His reporting from Korea (which included making 17 B17 bomber runs over North Korea) won him

the Pulitzer Prize in 1954, as well as his first Ernie Pyle award and a flock of other honors—including the George Polk Memorial Award, the Veterans of Foreign Wars' Omar Bradley Gold Medal and the Marine Corps Reserve Officers' Association's "Not for Self But for Country" award.

After the Korean Armistice, he went to then French Indochina to cover the French war with the Viet Minh, and was based for 18 months in Hanoi. He was in Hanoi when Ho Chi Minh's forces marched in to take over the city.

After the Indochina armistice, he went to Goa to report on hostilities between the Portuguese and Indians. He went to Lebanon when President Eisenhower sent in the Marines and Army paratroops in 1958 and liked to remember that episode as "the only war I ever covered from an air-conditioned hotel room and dressed for dinner every night."

In 1959 he spent several months in Vietnam and in January, 1964—before the big American buildup—stationed himself at Can Tho, in the Mekong Delta of South Vietnam, for the first of several tours that were to constitute coverage of his last war.

WENT ON PATROLS

When U.S. Marines poured into Da Nang, Mr. Lucas shifted the base of his operations there and continued the type of reporting which won for him his second Ernie Pyle award. Even tho then past 50, he continued to go on patrols and stay up all night when events demanded, as when the Reds overran the A Shau Valley.

He returned to the United States in the summer of 1967, hopeful of returning to Vietnam despite the fact he was 53 "and youngsters could do my job better." But health never permitted a return. A book of his Vietnam columns, "Dateline: Vietnam," was published in the summer of 1966 and sold well.

Early this spring he took vacation time to write a biography of Vice President Spiro T. Agnew. It is being published by Universal Publishing Co. of New York and was reviewed in this newspaper last Friday.

Mr. Lucas was born June 22, 1914, in Checotah, Okla. His father died when he was young and he was forced because of lack of finances to cut short his education at the University of Missouri. His first newspaper job was with the Muskogee, Okla. Daily Phoenix. After a stint as a reporter for the Tulsa Tribune, he enlisted in the Marines in 1942.

NEVER MARRIED

He never married, but once (after World War II) was engaged to a Wave lieutenant. The story around his home office was that the romance went on the rocks because the weekend he was to visit her parents in upstate New York an emergency assignment came up. The fiancee is supposed to have said: "It's the office or me." Mr. Lucas took the assignment.

His apartment in an Alexandria highrise was literally filled with awards, scrolls and testimonials. One picture shows one of the highlights of his life: President Lyndon Johnson in September, 1966, introducing him to 100 Congressmen LBJ had called in for Mr. Lucas to brief on Vietnam. It was the only time President Johnson asked a newsman to give such a briefing. Mr. Lucas was given a standing ovation at the close of his remarks.

He was an excellent public speaker and made scores of addresses thruout the country over the years before groups of all kinds.

He is survived by a sister, Mrs. Mary Moore of Bowie, a brother, J. Bob Lucas, state capitol reporter in Oklahoma City for the Tulsa Tribune, a niece, Mrs. Beth Marshall of Torrance, Calif., and a nephew, Peter W. Hudson of Silver Spring.

Funeral arrangements are not yet complete.

GENERAL LEAVE TO EXTEND

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days during which to extend their remarks on the life and service of Jim Lucas.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

LET US PUT THE "TIGER CAGES" AT CON SON PRISON IN PROPER PERSPECTIVE

(Mr. BIAGGI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BIAGGI. Mr. Speaker, the current furor in this body over the "discovery" of the so-called tiger cages at Con Son prison is somewhat out of focus, but nevertheless necessary.

First, let me say that atrocities of any kind, whether performed by ally or enemy, must be condemned. And surely if the Con Son prison conditions are as bad as the reports of two of our colleagues and others suggest, I condemn the situation loudly and vehemently, and demand that immediate action be taken to correct the injustice.

And let me also add an "I told you so," to my statement made at the time this body approved the sending of an investigating committee to South Vietnam.

In voting for the resolution, I had cautioned that it was imperative that the group take ample time to gather facts and information prior to their departure in order to make their journey more meaningful and productive. Obviously, the gentlemen from California (Mr. HAWKINS) and Tennessee (Mr. ANDERSON) had a good supply of information on the "tiger cages" and successfully sought them out.

However, let us not confuse the Con Son prison situation with that of the POW camps in North Vietnam. If I may, I would like to put the whole matter in perspective.

First, the South Vietnamese maintain separate prison camps for POW's, which are operated according to the Geneva accords and are open to inspection by international bodies such as the Red Cross. North Vietnam—which has signed the Geneva accords—has repeatedly refused to let the International Red Cross inspect their prisoner-of-war camps.

Second, the South Vietnamese Government has not exactly been hiding the Con Son prison. If an Associated Press wire service report dated July 15 can be believed, the International Red Cross has inspected the prison three times in the last year and a half, and in a "sharply worded" report declared the conditions unsatisfactory and made recommendations for improvement.

Third, in my investigations of stockades on U.S. military bases, I have found many appalling conditions that are just as despicable as those at Con Son prison. Likewise, the American press—particularly columnist Jack Anderson—has revealed horrifying conditions in many of our State penitentiaries.

However, none of this is meant to excuse the existence of the Con Son tiger cages. It is meant only to put it into perspective. I would welcome an investigation of the situation, but I wonder whether it is wise for the Congress to request such an investigation by the executive branch at this time.

I rather feel, Mr. Speaker, that we should await the results of investigations being conducted by the executive branch of the Saigon government and also by our counterparts in the Vietnamese Congress. The International Red Cross has also promised to make another investigation later this year.

Further, let us see if President Thieu carries out his promise, reported last week, to destroy the tiger cages.

Hopefully, reports of all investigations will be made public and will reflect the positive action of the Saigon government to rid Con Son of any inhuman conditions. If, however, they reveal that no action has been taken, then it would be advisable for the U.S. government to reconsider its AID policies which help finance some of the prison programs in South Vietnam.

In the meantime, I think our investigative efforts would be well spent on U.S. military and civilian prisons here at home.

Let us remember that when the Communist threat in South Vietnam escalated the United States manifested its "only we can do it right" attitude and took over the war. That has been proven unsuccessful. This time let us let the Saigon government correct its own prison deficiencies with our help if it is asked for.

It is a bit presumptuous of this body to expect a democracy of less than a decade to exhibit model penal institutions when this democracy of almost two centuries stands shamefaced on the issue of penal reform.

NO-KNOCK: A PROVISION BY ANY OTHER NAME

(Mr. PODELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PODELL. Mr. Speaker, I, along with other concerned Americans, deplore the passage by the House of the District of Columbia crime bill with its no-knock provision. There was a suggestion this very morning by Attorney General John Mitchell that the name "no-knock" be changed. Mr. Speaker, if the substance of this clause remains unchanged, then it will continue to pose a grave and direct threat to the freedoms of the American people. It also will open the door to further incursions in the future.

The citizens of the District of Columbia must be guaranteed security in their homes. They should not be subject to intrusion of any sort without, at least, the courtesy of a knock on the door.

The fourth amendment to the Constitution protects "the right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures." The Founding Fathers adopted this amendment be-

cause they remembered how the British troops had abused the rights of the American colonists. They remembered how the English troops had entered colonial homes without warning—armed with guns rather than with writs. They remembered how the troops had seized the personal belongings of colonists and often took the colonists themselves into custody. The fourth amendment was adopted so that such practices would not continue.

Yet the present no-knock provision of the District of Columbia crime bill directly contradicts the fourth amendment. It permits the government to do exactly what the fourth amendment was designed to prohibit. It makes the American people, and in particular the residents of the District of Columbia, vulnerable to abuse by the police.

Of course, we must also consider the safety of our Nation's police forces. Our law officers would be placed in grave peril were they to break into homes without announcing that they were law officers. I know I would shoot someone who forced his way into my house without announcing that he was a law officer. I am sure many of my fellow Americans would do likewise.

I recognize that the increasing crime rates in our cities are one of the major domestic problems confronting this Nation. I am a strong advocate of reducing this crime rate so that our citizens will not live in any fear or danger. Yet I recognize too that the rights of the individual have been the cornerstone of liberty in this country. These rights are finite, and serious inroads into their exercise are not easily recaptured. The crime rate in this country is high and must be reduced, but not at the expense of individual liberties.

We, the leaders of this Nation, must act to insure that these freedoms do not die. It is for this reason that I opposed the no-knock provision of the District of Columbia crime bill when it was voted on by this House. This provision by any other name will pose a dangerous threat to American liberties. I hope that the Senate will oppose the no-knock provision of this bill so that we may preserve those freedoms the Founding Fathers intended us to enjoy.

PRINCIPAL PROVISIONS OF AGRICULTURAL ACT OF 1970

(Mr. POAGE asked and was given permission to address the House for 1 minute.)

Mr. POAGE. Mr. Speaker, a few minutes ago the House Committee on Agriculture instructed the chairman and the ranking minority member to introduce a general farm bill, which bill has been introduced and will be available as soon as it can be printed, which we hope will be tomorrow.

So you may have some idea of what is in this bill, we have prepared a very brief summary of the provisions of the bill. I ask unanimous consent to insert this in my remarks.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. POAGE. Mr. Speaker, the principal provisions of this bill are as follows:

PRINCIPAL PROVISIONS OF THE "AGRICULTURAL ACT OF 1970"—H.R. 18546

This bill is made up of eight titles which contain the following major provisions (*unless otherwise noted, all provisions will be in effect for the next three years*):

TITLE I—PAYMENT LIMITATIONS

(To be included in bill as a committee amendment.)

TITLE II—DAIRY

1. Extends and amends the authority for the Dairymen's Class I Base Plan in federal milk market order areas. It specifically guarantees competitive access to Class I Base markets by established producers outside the market order area. Appeal procedures under present law remain unchanged.

2. Suspends the operation of the mandatory butterfat price support program for farm-separated cream and permits the Secretary to set lower support prices on butter.

3. Extends the Secretary's authority to donate dairy products owned by CCC to the Armed Services and Veterans Hospitals.

4. Extends the Secretary's authority to make indemnity payments to dairy farmers who through no fault of their own have their milk contaminated by and condemned because of the presence of pesticides and residues.

TITLE III—WOOL

1. Extends the National Wool Act of 1954, as amended, through December 31, 1973.

2. Continues the present incentive price of 72 cents per pound for shorn wool and 80.2 cents per pound for mohair for each year of the extension.

TITLE IV—WHEAT

1. Suspends both the marketing quota program for 1971, 1972, and 1973.

2. Provides domestic marketing certificates to farmers participating in the set-aside program in an amount equal to U.S. food consumption (about 530 million bushels annually).

3. Sets the face value of these domestic certificates at the difference between the wheat parity price (currently $2.82 per bushel) and the average price received by farmers during the first five months of the wheat marketing year (which starts on July 1).

4. Provides for a "preliminary" payment to participating farmers as soon as possible after after July 1. This payment would be the amount estimated by the Secretary to be 75 percent of the value of the domestic certificate. The balance of the payment (if any) would be paid in December. If the Secretary's estimate were too high, no refunds by farmers would be required.

5. Continues the cost of certificates to wheat processors at 75 cents per bushel.

6. Authorizes the Secretary to set nonrecourse loans to participating farmers from zero to 100 percent of the parity price for wheat.

7. Establishes a "set aside" program under which wheat farmers, in order to be eligible for loans, certificates, and payments under the program, must set aside or divert from the production of wheat and other crops an acreage determined by the Secretary.

8. Authorizes payments to participating farmers for any additional set-aside acreage and for permitting public recreational access.

TITLE V—FEED GRAINS

1. Establishes a voluntary feed grain (i.e. corn, grain sorghum, and barley) program for 1971, 1972, and 1973.

2. Provides that price support payments to participating farmers on one-half of their feed grain base will be the difference between not less than $1.35 per bushel (for corn) and the average market price for the first five months of the marketing year (which starts on October 1 on corn and grain sorghum and July 1 on barley). In no event, however, would these payments be less than 32 cents per bushel for corn (with corresponding rates on grain sorghum and barley).

3. Authorizes the Secretary to set nonrecourse loans at zero to 90 percent of feed grain parity prices.

4. Authorizes additional set-aside and public recreational access payments.

5. Establishes a "set-aside" program under which participating farmers would be required to set aside or divert feed grain or other cropland in order to become eligible for feed grain loans and payments.

6. Provides for a "preliminary" payment of 32 cents per bushel on corn to participating farmers as soon as possible after July 1. If the difference between the average market price and $1.35 were more than 32 cents during the first five months of the marketing year, an additional payment would be made. In no event would refunds by farmers be required.

TITLE VI—COTTON

1. Provides a guaranteed support of 35 cents per pound (middling one inch basis) on the estimated production from 11.5 million acres for the 1971 crop and an equivalent amount for the 1972 and 1973 crops.

2. Makes assistance available to participating cotton farmers through loans and payments. The loan would be 90 percent of the estimated average world price. The payment would be the difference between 35 cents and the average market price for the first five months following the beginning of the marketing year (which begins August 1), but in no event less than 15 cents per pound. No refunds by farmers would be required in the event market prices were greater than 20 cents per pound.

3. Authorizes payments to participating farmers on acreage made available to the public for recreational purposes.

4. Provides for a set-aside of cropland (not to exceed 33⅓ percent of the cotton allotment) as a condition of eligibility for benefits under the program.

5. Establishes a voluntary program under which marketing quotas, penalties, and acreage restrictions would be suspended for three years.

6. Requires participating farmers to plant cotton to receive payments, with two exceptions: (a) if unable to do so because of natural disaster or other condition beyond producers' control: (b) if not less than 90 percent of allotment is planted.

7. Allows the sale of cotton allotments within a State, permits the lease of allotments within a State, and provides for the release and reapportionment of allotments during the 3-year life of this legislation.

TITLE VII—PUBLIC LAW 480

1. Extends without change the provisions of P.L. 480 (the "Food for Peace" program) which authorizes donations and long-term dollar credit and foreign currency sales of U.S. farm commodities to underdeveloped nations. Under the Act most foreign currency sales are scheduled to end by December 31, 1971.

TITLE VIII—GENERAL AND MISCELLANEOUS

1. Continues the "Cropland Conversion" and "Greenspan" (long-term land retirement programs) at an authorized appropriation level of $10 million annually for each program.

2. Continues the current exemption from marketing quotas for boiled peanuts.

3. Permits farmers or other land owners who do not desire to hold an allotment on any crop under a government program to voluntarily relinquish it. (This would be a permanent provision.)

4. Establishes an indemnity program to reimburse beekeepers for losses caused by pesticide residues.

Mr. Speaker, this is a good bill. We were instructed to introduce it by a vote of 25 to 7 in the committee. It has the endorsement of the administration. It has the support of the overwhelming majority of the members on both sides of the committee, and it will render a real service to agriculture and to consumers. I hope the membership will give it every consideration.

PLACE THE BLAME WHERE IT BELONGS

(Mr. FOREMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FOREMAN. Mr. Speaker, in strictly a partisan political approach, the Democrats have served notice that they will make inflation, Vietnam, and domestic disorder key campaign issues this year.

If they do not—we should.

Because it was the Democrats who controlled this Government during the first 8 years of the 1960's when the runaway deficit spending spiral was set in motion, when the American manpower commitment in Southeast Asia escalated from 793 to 550,000, and when riots, disorder, and rampant crime reached an all-time record high.

President Nixon did not start inflation—he was loaded down with it when he took the oath of office. The runaway spiral was set in motion by the "new economics" political doctrine of the 1960's which promised lower taxes and inaugurated a Federal spending spree that sank the Government into a $59 billion hole—culminating in the record-staggering $25 billion deficit in 1968 alone. The new administration initiated sound, responsible economic policies that gave us a fiscal year 1969 surplus of $3 billion, reduced the annual increase in Federal spending by better than 50 percent, and curbed the causes of zooming prices.

President Nixon did not start the war—he inherited it. Since that inheritance, he has completely changed the direction through his Vietnamization program from an American responsibility to a South Vietnamese responsibility. There has already been an overall reduction of 125,000 Americans who were committed in Southeast Asia, and there will be 150,000 less by spring of next year, meaning that one-half of the boys committed to the war in 8 years of the two previous administrations will have been brought home in the first 2 years of the present administration.

President Nixon did not start riots, disorder, and rampant crime in America—it was at an alltime high when he took office. But since taking office, he has established an effective, capable Department of Justice that is letting the hopheads, thieves, crooks, and criminals understand that crime does not pay like it once did—and as a result of President Nixon's appointments, for the first time in 13 years, the Supreme Court is becoming independent of the activist, liberal coalition which has ruled it.

The Democrat-controlled Congress continues to drag its feet on needed anticrime legislation, attempts to tie the President's hands and cut off supplies to our troops in Southeast Asia, and, blocks proposed Government efficiencies and works against the Republican administration's hard fight to hold down spending and curb the inflationary clutch that is despoiling the paychecks and the savings of American wage earners.

Let us pin the tail on the donkey, and place the blame where it belongs.

It is, indeed, a powerful campaign issue.

PFAFFTOWN, N.C., JUNIOR CHAMBER OF COMMERCE

(Mr. MIZELL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MIZELL. Mr. Speaker, dedication to excellence is the hallmark of any successful venture, whether in professional or personal items.

The size of an enterprise can enhance the appearance of its success, but size alone is no measure of true greatness or achievement.

It is my pleasure to bring to the attention of my distinguished colleagues an example of the dedication to excellence about which I have spoken.

It was recently announced that the Pfafftown, N.C., Junior Chamber of Commerce has been named the No. 1 Jaycee organization in the Nation for 1970.

This is a great honor in itself, but the prize is all the more deserved and should be all the more cherished when one considers that it was the work of only 59 men—59 men in competition with organizations many times larger—that earned the highest award bestowed by the National Junior Chamber of Commerce at its recent convention in St. Louis.

It is fitting at this time, Mr. Speaker, that the names of these 59 men should appear in the CONGRESSIONAL RECORD as deserving recipients of this outstanding designation, but more, as symbols of dedication, of faith, of ambition, of excellence.

The Pfafftown Jaycees are Archie Anderson, Richard Austin, Thornton Beroth, Winfield Beroth, Ray Bottoms, John Burton, Ralph Burton, Stephen Callaway, Billy Carter, Jerry Carter, William Case, Norman Cash, James Cass, Jimmy Cline, Max Covington, Tommie Dalton, Stephen Elam, Robert Ely, Phillip Fleming, Terry Harrell, Edwin Henson, James Hewett, Jerry Johnson, Roger Jones, Roger Jordan, Thomas Jordan, Thomas Logan, Robert Lukach, Arnold Marshall, Kenneth McKaughn, Charles McMillan, Billy Mendenhall, Stephen Miller, William Mueller, Fredrick Mulcox, Joseph Ottaviani, Kenneth Parker, Douglas Parrish, Jack Patterson, Cecil Peeler, David Poindexter, Dr. Barry Ramsey, Celtus Robertson, Stuart Rollins, James R. Scales, Jack Stewart, Aaron Veach, James Wagoner, Dale Watson, Jesse Watson, Paul Watson, Jimmy Westmoreland, Jack White, Johnny Williams, Ronald Williams, Alan Willis, Donald Wooten, Michael Vehorn, and Michael Yates.

Without objection, I include the following newspaper account of their achievement, and a subsequent editorial, published in the Suburbanite-Weekly News, of Winston-Salem, N.C., in the RECORD:

[From the Winston-Salem (N.C.) Suburbanite Weekly News, May 14, 1970]

Pfafftown Jaycees last weekend won the top Jaycee award in the nation at the annual national convention in St. Louis.

It was the second time in the past four years the chapter has been Number One in the United States.

It won the state title this year, as it did in 1967.

Competing against some 3,500 chapters in 50 states, the Pfafftown chapter, which has only 60 members, also won the Clarence Howard Award for the best overall chapter in its division in the nation. Divisions are based on population of towns and cities in which chapters operate.

Ron Williams, who was president of the Pfafftown chapter during the year for which the awards were made, attended the convention in St. Louis, along with his wife, Sue.

"It was one of the biggest thrills of my life," said Williams, an energetic 34-year-old employe of R. J. Reynolds Industries.

"Jim Ollis, our state president, was so happy about our winning that he hugged my neck while I was on the way to get the award. I missed a step coming from one stage level to the other and fell."

Ollis had just been elected a national vice president of Jaycees.

Pfafftown Jaycees now will enter international competition and will submit the entry as soon as final instructions are forwarded from the national office. Greensboro Jaycees once won the international award.

In fact, Pfafftown and Greensboro Jaycees have monopolized the state award for the past five years, Greensboro winning it three times and Pfafftown the other two.

The national awards were made for the excellence of the overall performance in each of eleven project activity areas.

The Pfafftown chapter placed first nationally in recreation and sports, chapter management, publications, and was in community health and safety.

The chapter received a plaque in recognition of its showing in these categories.

Two other North Carolina chapters took first place awards in their population divisions. They were Greensboro and Forest City, which won Howard Awards in their respective divisions to give the state three of the six division awards.

"I said a year ago when I took office my wife and I had an impossible dream—that Pfafftown Jaycees would be chosen the number one Jaycee chapter in the United States on this 50th anniversary of the national organization. Thanks to the members of our chapter and their wives, and to North Carolina Jaycees, this dream has come true," Williams said.

"I also want to thank the citizens and business men of the community, who in large measure made it possible for us to enjoy such tremendous success in our undertakings," Williams said. "I would rather we were number one with them than number one in the nation."

The Pfafftown chapter was chartered in March, 1965, with only 30 members. That year, it won the state and national Milestone Awards for the best first-year chapter in North Carolina.

The following year, it was declared the number one chapter in the state and nation and consistently has ranked among top chapters in North Carolina.

The thing which makes the Pfafftown accomplishments uniquely significant is the small size of the chapter and the community in which it operates. Greensboro, for example, has more than 500 members and almost unlimited resources as sponsor of the Greater Greensboro Open Golf Tournament.

In state competition this year, Pfafftown Jaycees won first place in seven out of 11 categories in which they competed, plus two second place finishes and the "project of the year" award in the state and division.

The chapter was judged at the national level in the same categories as at the state level.

The chapter last year raised and disbursed for charitable purposes more than $69,000—more than $1,000 per member. The members put in more than 15,000 manhours in community work, which if performed by an individual working 24 hours a day would amount to more than 1.8 years of continuous work.

Its award-winning project of the year was the Guardsmen's Assistance Fund. The drive, conducted in October, raised more than $41,000 in about 15 days following a gas explosion at the local National Guard armory on Link Road. Four Guardsmen were killed and a dozen others injured.

The first $10,000 of the fund went to pay travel expenses of immediate families of the victims, who were taken to Houston, Texas, for treatment at the Army Burn Center and later were visited by their dependents.

The remainder of the money—more than $30,000—was put in trust for the education of children of the men who died in the explosion.

In addition to Williams, other officers of the chapter during the project year included Roger Jones, internal vice president; Jim Westmoreland, external vice president; Don Wooten, treasurer; Jack Patterson, secretary; directors Fred Mulcox, Dr. Barry Ramsey, Ralph Burton, Jerry Johnson and Mike Yates. Jim Cass was the club's representative on the state board of directors and Norman Cash was chairman of the project of the year.

[From the Winston-Salem (N.C.) Suburbanite Weekly News, May 14, 1970]

A SALUTE TO YOUNG MEN

Unique honor was bestowed during the weekend upon Pfafftown Jaycees, who for the second time in four years were declared the best chapter in North Carolina. That, even for such a gigantic and renowned organization as Greensboro Jaycees, who have won the top honor the other two years, is a rather significant accomplishment. But for a chapter like Pfafftown's—which is in only its fifth year—the success is phenomenal.

Moreover, during its second year, when the chapter won the state award, it also was declared the number one chapter in the United States. On this the 50th anniversary of Jaycees, the chapter presumably stands an excellent chance of once more capturing the national title.

This, mind you, in a suburban community and a chapter with only 59 members. How can such accomplishment and honor befall so tiny a chapter, when there are others in the state with memberships of more than 500?

Involvement is the answer. During their five-year history, Pfafftown Jaycees have responded to community needs and have solved community problems by the simple expediency of recognizing and analyzing the problems, determining how they should be solved, and individually and collectively doing something about it.

We suggest that this nation and these wonderful communities of Forsyth County can, by the same strategy, solve the difficulties that beset us. Our problems are here, so to await solution from our national capital, or from Raleigh, is folly. Problems are best solved by the people which they concern. If we, as clubs and churches and societies and individuals will rationalize, we can by individual and collective effort obliterate some of our economic and social sores which are now festering and which left unsolved, may develop into malignancies.

Pfafftown Jaycees is a great organization because of the dedication, devotion, ability, and energy of its 59 members. This nation is great because of the basic attributes of each of its some 200 million individual citizens. If one dared determine what is wrong in this country, he would first assess his own shortcomings as a citizen, multiply the results by 200 million, and he'd be pretty close to the answer.

So there is something more than signal honor in the accomplishments of Pfafftown Jaycees, who, incidentally, won the state "project of the year" award, plus seven first place awards in the 11 categories in which they were judged. This chapter, like all Jaycee chapters, is made up of young men 21 to 35 years of age. Its membership is well distributed within that age group. Certainly, from these 59 young men will come much of the community's leadership. And from the succeeding generation will come other dedicated young men who may hang another dozen plaques on the clubhouse wall.

Leadership, tenacity, singleness of purpose (though perhaps 59 divergent ideas about how the job might be done), energy, involvement, and dedication to duty are the attributes which enabled Pfafftown Jaycees to bring to themselves and to their community another unique distinction. The same can be achieved by every civic club, by every social order, by every fraternity, by every church, by every community, by every city, by every state, by this nation if we will, as individuals, but set our goals as high and devote ourselves as diligently to salving the wounds of our society and of mankind.

REPORT OF SPECIAL SUBCOMMITTEE ON MYLAI INVESTIGATION

(Mr. DICKINSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include an editorial.)

Mr. DICKINSON. Mr. Speaker, just last week the special subcommittee on the Mylai investigation made its report. Once again, it proved to be very newsworthy and was carried by the wire services across the country.

Mr. Speaker, I am very proud to have served on this committee because I feel we have performed a very valuable function.

Mr. Speaker, I cannot help but be concerned that the American people will view the United States as "the bad guy" in this instance, but it was one instance, it was news because it was unique, because it was different. A tragedy of this nature is not the policy of this country, and it has not been our policy in the past. Yet it seems that the news media and the public in general are either unaware or unconcerned about the atrocities committed by the North Vietnamese regularly.

Just prior to the Mylai incident, in a place called Hue, over 4,000 South Vietnamese were systematically slaughtered, many of them buried in mass graves, their hands tied behind them. Whole families were eradicated. The fact that over 4,000 human beings were slaughtered, was not even deemed particularly newsworthy by the media around the world.

In 1 month, in a South Vietnam village, the Vietcong went in with flamethrowers and burned to death every man, woman, and child in that village, over 200. Bodies were stacked like cordwood. These things did not get play in the press, and they did not hit the conscience of the public for some strange reason. I am tired of the Americans always being picked as the heavy-handed boy in Vietnam when it is the practice of the North Vietnamese and the Vietcong to commit these atrocities with premeditated regularity. At this time I would like to include an editorial from the Sunday, June 28, 1970, issue of the Birmingham News. I urge my colleagues to read the editorial opinion of James E. Jacobson. It will be well worth the few minutes it takes.

THE LESSON OF HUE

Uncounted columns of words have been written and uncounted feet of television film have been devoted to the alleged massacre of Vietnamese villagers at My Lai.

But one is hard to find a mention of the grisly story of Hue, where the bodies of more than 6,000 victims of Communist "liberation" have been recovered from mass graves.

The story of Hue is recounted in detail in a study written some months ago by Douglas Pike, a career official of the U.S. Information Agency and the author of books which have established him as perhaps this country's top expert on the Viet Cong.

Even more chilling than the story of what happened at Hue when the city was captured by the North Vietnamese in the 1968 Tet offensive is Pike's conclusion that as many as three million people might suffer a similar fate if the Communists are permitted to win a decisive victory in South Vietnam.

Those in this country who have urged a U.S. pull-out have tried to dismiss the suggestion that a bloodbath would follow a Communist victory as propaganda by the "hawks" to keep us in the war.

Hue is uncomfortable proof that the fears have a basis in reality. Maybe that's why it's so studiously ignored.

When the Communists took the city, Pike wrote, they began a systematic liquidation of those considered unfriendly. They were rounded up and machine-gunned—the more fortunate ones. Some were tortured and buried alive.

After the elimination of individuals whose names were on their death list, the Viet Cong assassination squads which surfaced after the North Vietnamese took the city began to move against "social negatives"—that is, those who were deemed potentially dangerous not because of who they were, individually, but because of the places they held in the community.

". . . Killing in some instances was done by family unit," Pike wrote. "In one well documented case during this period, a squad with a death order entered the home of a prominent community leader and shot him, his wife, his married son and daughter-in-law, his young unmarried daughter, a male and female servant and their baby. The family cat was strangled; the family fish scooped out of the fishbowl and tossed on the floor. When the Communists left, no life remained in the house. A 'social unit' had been eliminated."

Multiply that by the times it would happen in every town and village and hamlet in South Vietnam if the Communists prevail.

But Americans might never know about it, and thus their consciences need not bother them—or so some seem to think.

One of the Communists' first acts, Pike said, would be to clear all foreigners, especially the Western reporters, out of South Vietnam: "A curtain of ignorance would descend. Then would begin a night of long knives . . . But little of this would be known abroad. The Communists in Vietnam would create a silence.

"The world would call it peace."

The Communists *won't* prevail, if they must depend upon a military victory to do so. But in South Vietnam and in Cambodia their capacity for waging big unit war has been drastically reduced. This, Pike predicts, will motivate them to turn more to the strategy of terror, with an eye on the impact they can have on wavering public opinion in America, in the hope that the American people will lose their stomach for going on.

Vietnamization *can* succeed, giving the people of South Vietnam a fighting chance to survive the Communists' attempt to impose their rule, and thus to escape the fate of the 6,000 at Hue. Then, perhaps, peace can be achieved.

Are Americans really prepared to live with the other kind of "peace" which Hue forebodes?

Douglas Pike wrote:

"Apparently (the massacre at Hue) made no impact on the world's mind or conscience. For there was no agonized outcry. No demonstrations at North Vietnamese embassies around the world. Lord Russell did not send his 'war crimes tribunal' to Hue to take evidence and indict. In a tone beyond bitterness, the people there will tell you that the world does not know what happened in Hue, or if it does, does not care."

We believe some do care.

AGRICULTURAL PAYMENT LIMITS

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. BUSH) is recognized for 5 minutes.

Mr. BUSH. Mr. Speaker, the agriculture payments limitation issue is an emotional one. It is a many-headed monster that few really understand. And, I am convinced, that no one realizes all the adverse effects of a low level limitation such as the $20,000 limitation the Senate added to the Agriculture appropriation earlier this month.

I do not feel, Mr. Speaker, that a limitation like this should be added to an appropriations measure. If Congress is going to change the payments program; it should be done in conjunction with the farm program legislation. Only at that time will the Congress have sufficient foundation on which to render a truly judicious decision.

Behind the move to limit payments to a low level is the old complaint that farmers should not be paid for not growing crops. There is something about paying for nonproductivity that offends. But is this what we are really doing? Let us look for a moment at what we would be doing if we instituted a low level limitation.

Most importantly, we would have removed the incentive under the current farm program for a farmer to enlarge his operation or to seek greater efficiency. It would clearly jeopardize a man who has improved his operation over the years.

In addition, the low level limitation will cripple the commercial producer, the one that produces the majority of our production. It is said that the limitation can be established at a very low level before more than 80 to 90 percent of our producers are affected. However, the production that comes from the top 10 to 20 percent of our growers is substantial and without it we will see a disruption of our markets. The Lubbock Avalanche-Journal editorialized on July 13, 1970, that—

Many persons regret, on a number of grounds, that U.S. farms have been growing larger. Nevertheless, that is no reason to penalize their owners and operators with ill-advised legislation which, by itself, is unlikely to benefit small farmers to any great extent.

The primary cause for the growth of these large farms has been modernization and mechanization in other phases of our economy. This has also been the primary cause for the low prices Americans today pay for most farm products. By placing a $20,000 limitation on payments, we will be saying to the majority of farmers in our Nation, in terms of production, that they cannot enlarge, that they should not become more efficient and the result will be chaos. If, indeed, we remove the payments or cut them to a meaningless level, we will force the large and most effective producers out of the program and into other crops, thereby causing total havoc in other areas.

Unless, we in Congress take a long look at the farm program in its entirety, we will see the demise of our ability to produce so well at such relatively low cost by the addition of this amendment. The appropriate time for considering payment limitations is when a new legislative bill comes before the Congress.

GI HOME LOANS

The SPEAKER. Under a previous order of the House, the gentleman from Maryland (Mr. HOGAN) is recognized for 5 minutes.

Mr. HOGAN. Mr. Speaker. I have today introduced legislation which will rectify an injustice to certain veterans residing in my district. This injustice was not the result of direct action by the Federal Government, but due to certain circumstances which have combined to prevent these veterans from taking advantage of benefits which the Government intended them to have.

I am speaking of the GI home loan authority for World War II veterans. Certain provisions of Public Law 90–77 extended until July 25, 1970, the period of eligibility of World War II veterans for such loans. However, because of circumstances existing within the State of Maryland and the Fifth District of Maryland for the past year or more, eligible veterans have been virtually prohibited from purchasing homes of their choice with the assistance of such loans.

The Members are aware, I am sure, that in those States having usury laws, the present interest rate, which has been in effect for more than a year now, has had a drastic effect upon the housing and mortgage market.

In 1969 after the last two major increases in the interest rate, the State of Maryland remained bound by a State usury limit of 8 percent as well as a limitation on the number of points which could be charged. That low usury ceiling led to the withdrawal of private investment funds from the Maryland mortgage market and finally the withdrawal of the Federal National Mortgage Association resulting in a "no loan" situation.

Many real estate agents stopped sales completely. Others were forced to close down their business offices. Returning veterans from Vietnam were unable to take advantage of the benefits which Congress had given them under the VA mortgage provisions because lenders would not finance homes in Maryland.

After approximately 9 months of inaction and literal stagnation of the market in Maryland the State legislature passed remedial legislation.

No sooner had the housing and mortgage market begun to revitalize than on May 20, 1970, the Maryland Department of Health ordered a moratorium on building construction in five areas in the Maryland suburbs including much of Prince Georges County in my district.

This moratorium was the result of serious deficiencies in the system utilized to handle sewage treatment for the suburban Maryland area. The Interior Department thereafter quashed plans to expand the Blue Plains Treatment Facility in the District of Columbia which handles much of the sewage from Prince Georges County.

The Federal Water Quality Control Administration agreed to an expansion of that facility to only 309 million gallons per day which is inadequate to meet the needs of the Maryland suburbs.

Suburban and State officials, along with the Interior Department, have agreed that Maryland must provide additional plants to take care of new growth in the county and to cover present sewage treatment requirements. This moratorium will continue to be in effect until the Washington Suburban Sanitary Commission can provide assurances that the present overload situation has been alleviated, which may be another year away.

Just prior to this moratorium, similar bans were in effect in various parts of the area for periods of time. These are the circumstances which have combined to prevent World War II veterans from seeking loans under this authority in the last year or so.

Mr. Speaker, I have noted that during consideration of the legislation extending the period of eligibility of World War II veterans to July 25, 1970, Congress did not consider the cost of this program to be significant. If such is still the case, and in view of these factors which have prevented eligible veterans from participating during this period, I urge the subcommittee members to give consideration to further extending the period of eligibility for World War II veterans for 1 or more years in order that these veterans may be given full opportunity to take advantage of the benefits which Congress intended them to have when authorizing this program.

I have presented my views on this legislation to the Subcommittee on Housing of the Veterans' Affairs Committee and

am very hopeful that consideration will soon be given to extending the period of eligibility for these veterans for 1 more year, as is authorized in the bill I have introduced.

TAKE PRIDE IN AMERICA

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. MILLER) is recognized for 5 minutes.

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a nation. A pound of butter costs an average Soviet worker 163 minutes of working time; a Japanese, 84 minutes; a Frenchman 70 minutes; and Argentinian, 61 minutes; and a West German, 57 minutes. An American worker has to expend only 16 minutes of working time to buy a pound of butter.

S. 30 AND CONGRESSIONAL QUARTERLY

The SPEAKER. Under a previous order of the House, the gentleman from Arizona (Mr. STEIGER) is recognized for 10 minutes.

Mr. STEIGER of Arizona. Mr. Speaker, on June 29, 1970, in the CONGRESSIONAL RECORD, page 21890, I rose in this Chamber to call to the attention of the House erroneous and misleading analyses of S. 30, the Organized Crime Control Act of 1969, that had appeared in certain newspapers and even the usually unbiased Congressional Quarterly. On July 8, 1970, in the RECORD at page 23345, I had occasion to call to the attention of this body an article in the Congressional Quarterly which revealed as the source of that publication's erroneous news reports the biased and one-sided report on S. 30 by the Bar Association of the City of New York.

Today I rise to bring to the attention of this body a frank, fair, and unbiased presentation of the provisions of S. 30 which appears in the July 14 issue of Congressional Quarterly. The publication not only fairly analyzes the provisions of the bill but also calls attention to the confusion which has surrounded recent press reports concerning S. 30 and notes that some have confused this measure with the District of Columbia crime bill. Additionally, the last paragraph of the Quarterly's report on S. 30 points out that the fate of the measure now depends on two factors: First, the force and effectiveness of administration advocacy of the measure and, second, the reaction of Judiciary Committee Chairman CELLER.

I would now also like to emphasize the first of the Quarterly's crucial factors, which it accurately alleges will determine the future of S. 30. In this context, I am disturbed by a report contained in the July 17 issue of the Wall Street Journal—page 1, column 5—that Mr. MCCULLOCH of Ohio, the senior Republican on the House Judiciary Committee now backs a lengthy rewrite of S. 30, which passed the Senate after a year's consideration by a vote of 73 to 1. I certainly hope this report is erroneous. S. 30 is part of the President's anticrime program. In addition, the New York Times—July 17, 1970, page 12, column 8—now reports that the board of governors of the American Bar Association has approved in principle and recommended passage of the various titles of S. 30 with the exception, chiefly, of the provision of title I, which permit grand juries to criticize public officials. With ABA approval it does, indeed, seem that the tide is now changing in favor of passage of S. 30.

Mr. Speaker, because the recent analysis of S. 30 by the Congressional Quarterly of July 14 is one of the few fair hearings the measure has had in any publication, I include the article at this point in the RECORD:

ORGANIZED CRIME CONTROL BILL FACES BATTLE IN HOUSE

Endorsed by President Nixon and approved, with only one dissenting vote, by the Senate, the Organized Crime Control Act of 1970 (S 30) could nevertheless die in the House.

More than a year after Mr. Nixon's endorsement on April 23, 1969, and months after Senate passage on Jan. 23, 1970, vigorous opposition to the measure has developed among alarmed Democrats—led by House Judiciary Committee Chairman Emanuel Celler (D N.Y.)—who label it "repressive" legislation. (*Fact sheet, Weekly Report p. 1499; House hearings, p. 1632, 1582, 1438; Senate passage, p. 258; Nixon message, 1969, Almanac p. 43a; Congress and the Nation Vol. I, p. 1674–5, 1700, 1706, 1745–7, 1752–3.*)

Partisan reaction to S 30—and to the District of Columbia crime bill with which it has been confused—has tended to obscure the complexity of its provisions and the balancing safeguards which they contain. The opposition—led by the American Civil Liberties Union and the committee on Federal legislation of the New York City Bar Association—dismisses the source of many of the bill's proposals—the final report (February 1967) of the President Commission on Law Enforcement and the Administration of Justice, headed by then-Attorney General Nicholas deB. Katzenbach. (*1967 Almanac p. 873*)

The renewed Federal concern about organized crime reflected in the Commission's comprehensive study of crime was a legacy of the Kennedy Administration. Robert F. Kennedy had come to the Department of Justice early in 1961, fresh from his experience as chief counsel for John L. McClellan's (D Ark.) subcommittee investigations of labor racketeering (1957–1960). A stepped-up Federal effort against organized crime became a priority program during his years as Attorney General.

An organized crime and racketeering section had been created in the Justice Department in 1954, but it was composed of only 17 attorneys in 1960. Under Kennedy the section was expanded to 63 attorneys by 1964, spending 1,364 man-days in court, in contrast to 61 man-days in 1960.

Despite the increased Federal effort, between 1960 and March 1969, of 5,000 known or suspected organized crime figures, only 257 were indicted.

In 1965, President Johnson created the President's Commission (Crime Commission), headed by Katzenbach and authorized it not only to study the causes of crime and to analyze the Federal failure to cope with organized crime—but also to suggest cures.

Published in February 1967, the Commission's final report contained more than 200 recommendations for action to reduce crime. Twenty-two of these recommendations were directed specifically toward dealing with organized crime.

S. 30: AN OVERVIEW

The Organized Crime Control Act, introduced Jan. 15, 1969, by McClellan, with Sam J. Ervin Jr. (D N.C.) and Roman L. Hruska (R Neb.), the ranking members of his Senate Judiciary Subcommittee on Criminal Laws and Procedures, contained eight titles, six of which embodied Crime Commission recommendations. The Act as amended and approved by the Senate Jan. 23, 1970, contained ten substantive titles.

Evidence-Gathering. The Crime Commission reported that defects in the process of gathering legal evidence severely hampered the Federal effort to halt the growth of organized crime. The failure in that effort, it said, was not due primarily to a need for more men, more training, better facilities or better courts but to the need for revised laws.

Titles I–VI of S 30 followed Commission recommendations to strengthen the legal means of obtaining usable evidence:

Special grand juries, with unusual autonomy and the power to file reports on conditions they find, would be created in certain areas. Confronted by a witness refusing to testify because his testimony might incriminate him, the grand jury could immunize him from use of his testimony against him and then order him to testify.

If he still refused to testify, he could be held in contempt and detained until he testified or until the grand jury term ended. If he did testify, the Attorney General could protect him and his family in special facilities to ensure his safety from reprisals. If he lied, he could be convicted of perjury under new rules of evidence.

To protect the testimony of a witness from loss through intimidation, death or murder, the testimony could be recorded in a statement potentially usable at trial, if the witness was no longer available.

Proof. Title VII would nullify a recent Supreme Court decision in order to limit challenges to evidence and to restrict to possible relevant material the Government records disclosed to a defendant.

Gambling. Professional gambling is the syndicate's "lifeline," the source of its greatest revenue. Title VIII, incorporating an Administration proposal, would bring any major illegal gambling operation within Federal jurisdiction.

Corrupted Businesses. Title IX would make it a crime to use income from organized crime or racketeering methods to acquire, operate or establish an otherwise legitimate commercial operation. Title IX authorized the use of criminal and civil sanctions—antitrust remedies—against such activities.

Special Sentences. Title X would authorize courts to impose increased sentences of up to 30 years upon adult special offenders, who are defined as habitual, professional, or organized crime figures and who pose a continuing danger to the community.

DOUBLE STANDARD

The major objection levelled at S 30 as a whole argues that—although use of its provisions against organized crime is presented as justification for its passage—its changes in criminal laws and procedures are not limited to that use.

"Organized crime," the bill's advocates reply, is a functional concept like "street crime" or "white-collar crime not susceptible to hard definition in legal terms. Besides, at the outset of an investigation, the involvement of organized crime in a matter is not always clear. To find such an involvement may be the purpose of the inquiry.

McClellan pointed out that this objection implies a double standard of constitutional

rights: one applicable to persons involved in organized crime and one applicable to the rest of the nation.

S 30, McClellan said, "must stand or fall on the constitutional question without regard to the degree to which it is limited to organized crime cases." If it violates the rights of those engaged in organized crime, then it should not be approved, he said. If it does not, then it does not violate the rights of persons not engaged in such crime.

SPECIAL GRAND JURIES

"As an instrument of discovery against organized crime, McClellan has said, "the grand jury has no counterpart."

Title I, in line with recommendations of the Crime Commission, would reinforce and expand the investigatory powers of the grand jury. It would:

Establish special grand juries authorized to investigate offenses against Federal criminal laws in heavily populated areas and wherever the Attorney General determined a need.

Require the grand jury to meet at least once every 18 months; allow it to sit for as long as 36 months.

Expand the grand jury's autonomy by allowing it to select its own foreman and to appeal any dispute between the jury and the judge or prosecutor.

Allow the grand jury to file reports with the court concerning the noncriminal misconduct of a public official; vindicating the conduct of a public official; recommending legislative, executive or administrative action; or concerning organized crime conditions. (Twenty-two states now allow grand juries to make similar reports.)

Most of the criticism of Title I concerns the grand jury's power to file reports on the misconduct of a public official. The nonadversary nature of grand jury proceedings, critics say, makes it nearly impossible for an official to defend himself, and he has no chance to vindicate himself because there is no indictment and no trial.

McClellan, in a Senate speech June 9, explained that an official so criticized would—under S 30—have the right to appear before the grand jury, to present his witnesses and to file a rebuttal to the report, which becomes part of the report.

The court would study the report and rebuttal to ascertain that the report was supported by a preponderance of the evidence and that each person named was given a chance to testify. Only if both these requirements are met would the court release the report, with the rebuttal, for publication.

Publication would be further delayed, if the order of the court releasing the report were appealed. The report would be not published until there had been a final decision on its validity.

Comparing S 30's procedures with those under which the special grand jury in Chicago released a report May 15 concerning the shooting of Black Panthers by Chicago police, a Senate Subcommittee staff member said:

"The Chicago grand jury commented on both policemen, who are public officials, and the Black Panthers, who are private citizens.

"If you are dealing with . . . noncriminal misconduct, something that is censorable, but not a crime then the grand jury (under S 30) could indeed file a report . . . but included in the transcript would be the defense of the people commented on. They would have received a preliminary draft of the report and had 20 days plus postponements within which to prepare their own side of the story—and they could call witnesses. So while it wouldn't be a perfect adversary hearing, both sides would be in the transcript and only after the judge had reviewed both sides, could he then accept the report. And even after that, there would be an appellate review of his decision . . . and there would be no publication until it was all over. So when it was filed finally, it would carry with it the answer of the public officials.

"Now, none of these protections was given to the police officers in Chicago. . . . If they testified at the grand jury it was without knowledge of the context in which they were testifying; they didn't see a preliminary copy of a report. They didn't have the right to call witnesses. . . . They didn't have a right of judicial review . . . or of appellate review." And, under S 30, nothing at all could be said in such a report about the conduct of private citizens.

Concerning the publication, in *The New York Times* June 26 of parts of the secret report (also called a presentment, a formal request for an indictment) of a Baltimore grand jury regarding the involvement of Members and employees of Congress in influencing the outcome of a construction firm's bid for work on a House garage, the staff member said:

"That kind of document can or cannot be published depending upon what the judge wants to do. . . . Insofar as that presentment included materials that did not really indicate criminal matters . . . such as misuse of a Congressman's office . . . that could have been the subject matter of a report (under S 30) and insofar as the Congressman failed to exercise administrative control over the use of his own name . . . (he) might be censorable.

"A report could be filed, but he would have an opportunity to come in and testify; he would have an opportunity to call in other people to testify; and the full panoply of protections would be applicable to the Congressman and his staff in protecting their own reputations.

"It wouldn't have gone from the grand jury to the judge to *The New York Times;* it wouldn't have been leaked. . . . Under S 30 an unauthorized publication of a report is contempt and is punishable. . . . At least the remedy is there, while there is (now) theoretically no remedy for leaking a presentment unless there is a specific order (forbidding disclosure). . . . The ground rules set under S 30 are very clear and unequivocal about what happens at various points, and the existing law in this area is, to put it mildly, less than clear." (*Weekly Report p. 1707*)

WITNESSES

Witnesses are essential to a prosecutor's case. Titles II-VI of S 30 revise criminal investigatory procedures to facilitate securing reliable testimony from live witnesses.

Immunity. The 5th Amendment guarantees that "no person shall be compelled in any criminal case to be a witness against himself." Witness after witness in organized crime investigations "take the 5th" and refuses to testify. To overcome this objection and compel testimony, Congress has enacted a multiplicity of witness-immunity laws.

Title II would replace all existing witness-immunity laws with one comprehensive law, ensuring all witnesses compelled to testify before congressional, judicial or administrative bodies that neither their testimony nor any evidence obtained by exploiting that testimony would be used against them. The Crime Commission recommended enactment of a general immunity law.

S 30 would provide "use-immunity," a narrower grant than the "transaction-immunity" authorized in most existing law.

"Transaction-immunity" protects the witness from prosecution for any offense mentioned in or related to his testimony, regardless of independent evidence against him. This is sometimes referred to as an "immunity bath." "Use-immunity" protects him from prosecution directly or using his testimony or anything directly or indirectly derived from it against him.

Originally, S 30 authorized immunity granted by grand juries and courts, oriented to investigations of organized crime. But during Committee consideration of the bill, the National Commission on the Reform of Federal Criminal Laws, recommended enactmnet of one comprehensive Federal witness-immunity law. Title II was consequently expanded into a statute covering proceedings "before or ancillary to" a court, grand jury, Federal agency or congressional body.

Recalcitrant Witnesses. If an immunized witness still refused to testify, Title II provides, as under existing law, that the court could order him confined, in contempt of court, until he testifies or until the investigation ends.

The Crime Commission said that once a witness was immunized, he must testify or face jail for contempt. Title III would not change existing law, but would codify civil contempt procedures which have evolved in case-by-case decisions.

Bail normally is not available to persons held in civil contempt. Under S 30, however, if a person appealed a contempt order and the appeals judge found "a substantial possibility of reversal," bail would be allowed during the time that the appeal was pending. The appeal, states S 30, must be disposed of within 30 days.

Title III has been criticized as allowing a person held without bail for as long as three years. Yet a Senate subcommittee staff member points out that S 30 would allow bail in certain cases on appeal whereas now normally no bail is available to anyone held in civil contempt and existing law permits extended civil incarceration.

Perjury. To encourage a witness to give truthful testimony, the Crime Commission, as had the American Bar Association (ABA) in 1952, recommended that Congress abolish the two-witness and direct-evidence rules for perjury prosecutions. Title IV does just that.

The two-witness rule requires more than the sworn statement of one witness to prove a statement false. The direct-evidence rule requires clear noncircumstantial evidence that a statement is false.

Title IV defines perjury as a knowingly false statement made under oath and states that a witness can be charged with perjury if he makes contradictory statements under oath and does not correct them of his own volition.

Further, Title IV provides that a statement is false if it is proved, beyond a reasonable doubt, to be one of two manifestly contradictory statements which the same person made under oath. Proof need no longer be made by any particular number of witnesses or by any particular type of evidence.

Protection. Title V of S. 30 authorizes protection of witnesses; Title VI authorizes protection of evidence.

The Crime Commission recommended that the Federal Government set up residential facilities for the protection of witnesses from reprisals. Under Title V, the Attorney General could provide such security for witnesses, potential witnesses and their families.

When there is substantial risk that a witness might die, hide, flee, become ill, be killed, injured, kidnaped or bribed, Title VI would allow, upon court order, the recording of his testimony in a deposition, a sworn statement, which either side could take of its own witness. Taken under full guarantees of counsel and cross-examination, depositions preserve evidence in a form usable at trial if the evidence becomes otherwise unavailable.

USE OF EVIDENCE

The use of evidence, once obtained, frequently challenged by a defendant who claims that his constitutional rights were violated by the way in which it was obtained and who asserts that it should not be used against him.

Because of legal uncertainty and policy conflicts, evidence obtained by electronic

surveillance is particularly vulnerable to such challenge. The Supreme Court in March 1969 held that all Government records from a surveillance device must be disclosed to a defendant who claims that evidence against him is the result of that surviilleance and who proves that his rights have been invaded. If the Government does not disclose its records, the case can be dismissed. (*Alderman v. U. S. 1969 Almanac p. 145*)

McClellan has said that this decision encouraged a defendant at any time unlawfully surveyed to challenge evidence in any case against him—however unrelated—since he knows that he can thus win disclosure of confidential files or, if disclosure would be too harmful to the Government, dismissal of the charges against him.

Several times since this decision wholesale turnover of wiretap logs to defendants has resulted in the publication of material irrelevant to the case, but harmful and embarrassing to uninvolved third persons.

Title VII would narrow the time span within which challenges could be made to evidence alleged to have been indirectly derived from an illegal wiretap and would allow a judge to screen Government records before turning them over to a defendant.

It provides that no challenge to evidence which is the indirect product of an unlawful act can be considered if that act occurred more than five years before the event to be proved.

Disclosure of surveillance records, it provides, will be limited to that part of such records which a judge finds "may be relevant" and "in the interest of justice."

Critics of S. 30 express alarm that Title VII dilutes a citizen's protections against illegal acts by law enforcement agents. The ABA Criminal Law Council has, however, approved the five-year limit. McClellan has stated that the five-year limit does not affect challenges to evidence directly produced by an unlawful Government act. The law would continue to bar the use, as evidence, of such direct product as the transcript of an illegal wiretap. It would limit challenges to evidence obtained by the exploitation of such an unlawful act—by the use of that transcript.

In arriving at the five-year time limit, a member of the Senate Subcommittee staff explained that Justice Department records were checked to ascertain how long a "lead" from such records might last. The answer was two or three years. "If a lead doesn't produce evidence within that time, it's not going to."

Explaining the need for such provision, he pointed out that—under existing law—as soon as a criminal realizes that he has inadvertently been "caught" on a surveillance device which cannot be disclosed, he has virtually "a license to kill." If brought to trial for any crime he can challenge the evidence against him as indirectly related to the undisclosable surveillance and—because the Government cannot disclose the fact of the surveillance or the records—the case against him must be dismissed.

Under Title VII, a judge would see—from the Government records—that the surveillance had no possible relevance to the pending case, and there would be no disclosure. If more than five years had elapsed between the time the defendant was recorded on the device and the time of the crime with which he was charged, no challenge to the evidence would even be considered.

S 30 would decrease the likelihood of massive disclosures of surveillance records involving innocent third persons. By restricting the amount of material turned over to a defendant and by ensuring that all material turned over is of possible relevance to the charges against him, Title VII brings the defendant's self-interest to bear against publication of the material.

ILLEGAL GAMBLING

Gambling produces from $7 billion to $50 billion annually for the operations of organized crime. Title VIII would extend Federal jurisdiction over all major illicit gambling operations.

Title VIII contains most of the provisions of S 2022, an Administration bill of which the President spoke in his April 23, 1969, message on organized crime:

"The purpose of this legislation is . . . to give the Attorney General broad latitude to assist local and state government in cracking down on illegal gambling, the wellspring of organized crime's financial reservoir."

Title VIII defines an illegal gambling business as one which violates a law, involves five or more persons, operates for more than 30 days or has a gross income of $2,000 in a single day. It also declares it a crime for a law enforcement officer and a person involved in an illegal gambling business to plot to obstruct the enforcement of antigambling laws.

CORRUPTED BUSINESSES

Title IX, derived from S 1861 introduced April 18, 1969, by McClellan, contains the most innovative of S 30's provisions. (A companion House bill, HR 10312, introduced by Richard H. Poff (R Va.) has rested untouched in the House Judiciary Committee since April 1969.) To cope with the infiltration of organized crime into legitimate business and labor, Title IX declares it a crime to use organized crime profits or methods to establish, acquire or operate any legitimate business.

Title IX provides both criminal sanctions—fines, prison sentences and criminal forfeitures—and civil sanctions developed in antitrust cases to remove organized crime from legitimate organizations. Under this section, courts would be able to order crime syndicates to divest themselves of certain holdings, never to reenter a certain type of business and to dissolve infiltrated enterprises. The Attorney General would be able to initiate civil proceedings against persons suspected of this type of crime.

Organized crime, one Senate subcommittee staff member pointed out, is not used to operating against civil proceedings in which cooperation, between plaintiff and defendant, is the hallmark. And, in civil suits, if the defendant refuses to cooperate, the plaintiff wins his suit by default.

SPECIAL SENTENCES

The Crime Commission recommended that extended sentences be authorized for organized crime figures convicted of a felony. The ABA, American Law Institute, and the National Council on Crime and Delinquency have recommended similar measures. Title X authorizes sentences of up to 30 years for persons convicted of a felony—if they are found to be dangerous and found to be "habitual" offenders—convicted previously of two or more felonies, a "professional" criminal—whose felony was part of a lifelong pattern of conduct from which came a substantial part of his income, or an "organized crime figure"—whose felony was part of a conspiracy to engage in a pattern of criminal conduct.

A defendant would be found to fall into one of these categories only after a special presentencing hearing at which he has the right to counsel and cross-examination. After the decision, both the defendant and the Government would have the right to appeal.

The need for this title was pointed out by a Senate staff study for the Judiciary Subcommittee on Criminal Laws and procedures, which found that of all organized crime figures sentenced in Federal court from 1960 to 1969, two-thirds faced maximum jail terms of five years or less and fewer than one-fourth received a maximum sentence. The provision allowing the Government, as well as the defendant, to appeal a sentence, embodies another Crime Commission recommendation that there be some type of supervision over trial judges who, "because of corruption, political considerations or lack of knowledge, tend to mete out light sentences in cases involving organized crime management personnel."

OUTLOOK

The fate of the Organized Crime Control Act of 1970 is uncertain. Much depends upon the determination and the skill with which the Administration exerts its influence in favor of S 30 and the reaction of House Judiciary Committee Chairman Emanuel Celler (D N.Y.), within whose Committee S 30 now rests. If the House Committee delays action on S 30 too long past midyear, observers outside the Congress believe that the Senate might add S 30 as an amendment to the bill (HR 17825) authorizing Federal law enforcement assistance funds, a measure dear to Celler's heart.

THE STRUGGLE FOR THE STREETS—A LOCAL VIEW OF CRIME—THE CHALLENGE OF CHANGE

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, the problem of crime in our Nation's cities is one of great concern to everyone. Too many Americans have been confronted by the lawlessness existing in our country, especially in our Naton's Capital city. A need for effective law enforcement measures has long been voiced by the countless innocent people not wishing to be counted among those who have already been victimized by the frightening number of lawbreakers. It is indeed sad when residents and visitors in a city cannot enjoy the sights and beauties it has to offer in the evening as well as in the daytime. I speak with particular concern about our Nation's Capital. When brutal muggings, senseless murders, kidnapings, and other crimes of equal fright seem to be the most numerous "sights and beauties" a city has to offer, something is seriously wrong. When crime increases more than 600 percent in the last 10 years in the seat of our Nation's Government, a response is needed immediately for the present and for the future.

Last week, the controversial District of Columbia crime bill passed this House. Though this bill is not the immediate cure-all for all of the sicknesses of crime, it is without doubt a start in the right direction. This bill, since it has been introduced, has been subjected to some of the strongest talk about repression ever thrown at a bill of such importance and necessity. I recognize the fact that stricter law enforcement is not in itself the only solution. I am fully aware of the need for penal reform, court reorganizations, reforms in the juvenile code, better community relations, and other important factors to eradicate crime as well as preventing existing lawbreakers from doing any further harm. Many of these are, in fact, included in the District of Columbia crime bill. Too often denounced as "another fascist law-and-order bill," many provisions of the bill are completely overlooked. The District of Columbia crime bill is a single omnibus crime bill providing sound, comprehensive legislation. Our Nation's Capital needs a strong, sound, and progressive crime bill to bring order and tranquility to the city; our

Nation's Capital needs the District of Columbia crime bill.

The need for strong legislation is well-summarized by a brief, but concise editorial in the July 1970 edition of the In-Towner, a community newspaper from a section of Washington, D.C., where a member of my staff resides. With a community newspaper such as the In-Towner, the opinions of the editorial staff are much more clearly attuned to the readers' than are most large city newspapers for a simple reason: the editors of the small community paper are also members of that community. The opinions that are expressed in the newspaper are formed by events and circumstances often shared by both the editors and the readers—all of them belonging to the same community. The language of the editorial is simple enough to understand, but the thought behind it is something truly worth thinking about.

Among others I have been a severe critic of the shortcomings of much of the so-called national news media. In sharp contrast is much of the local media in my own district, which is particularly close to the people; weekly newspapers, small radio stations, and afternoon newspapers which flourish in this context. I am particularly pleased that in Washington, D.C., there is this same type of local press coming into existence.

I strongly recommend this editorial to the attention of my colleagues:

THE STRUGGLE FOR THE STREETS

It is no fun for an elderly couple, black or white, to have worked a lifetime, scrimping and saving, only to find that they cannot walk, sit, or even work in front of their own homes without fear of being robbed, raped or molested.

This is why much of the opposition to the crime bills before the Congress falls on deaf ears and no amount of charges of "racism" or "fascism" is going to allay these fears.

They want something done about it—and they want it now.

Well-intentioned liberals may philosophize, sociologize, and psychologize crime until the cows come home but a resident in the Inner City who is attacked is going to yell like hell for the Police.

Unless liberals can come up with a better formula than that which has been proposed, one that will work now and not in the dim future, then they would better serve the community by just keeping quiet.

MAIL REFLECTS STRONG OPPOSITION TO BAIL-OUT FOR PENN CENTRAL

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, hundreds of people from all over the Nation have written me about the bankruptcy of the Penn Central Transportation Co. These letters have come from people with all types of backgrounds and from all political persuasions. It is obvious from these letters that an overwhelming majority of the American people were opposed to the idea of a Government bail-out of the Penn Central Transportation Co. My mail has reflected almost total opposition to the administration's plans to grant this huge corporation hundreds of millions of dollars of loans guaranteed by taxpayers funds.

Mr. Speaker, a number of newspapers around the Nation have also editorialized in the same vein as these letter-writers.

I place in the RECORD a sampling of some of the letters from various points across the Nation. I also place in the RECORD editorials on the Penn Central case.

The material follows:

HOUSTON, TEX.,
June 24, 1970.

Hon. WRIGHT PATMAN,
U.S. Representative,
Washington, D.C.

DEAR MR. PATMAN: Although Mrs. Adams and I have never had the privilege to vote for you we have followed your service as well as our other Texas Representatives services in Washington. We appreciate the fine representation you have given us.

We want to thank you for your stand on the recent Penn railroad loan guarantee. Since they lost 80 million last year and more than 100 million the year before it is hard to see how a loan of 200 million could be very much help to them.

I do not know anything about railroading but if I was ever confronted with a problem of this kind I believe the first order of business would be to bring in some new blood for the management group.

Thanks for your past services. We know you will continue to look after our interests.

Sincerely,

FRANK C. ADAMS.

LA JOLLA, CALIF.,
June 2, 1970.

Hon. WRIGHT PATMAN,
House of Representatives.

DEAR MR. PATMAN: Million of citizens must share the appreciation I feel of your stand in behalf of the public in the case of Penn Central and your other efforts to protect all our citizens from the depredation of special interests.

Sincerely yours,

RUTH BANNING.

P.S.—Please do not trouble to acknowledge this.

N. & H. DISTRIBUTORS,
FRESNO, CALIF., *June 11, 1970.*

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.

Re Credit guarantee for Penn Central Railroad by U.S. Government.

Please let me know how I can qualify for this wonderful and helpful program "Nixonomics" is ruining us. Please continue your enlightened and progressive fight to help us common people. We really need your help.

NEIL D. BALLWEBER.

WICKENBURG, ARIZ.,
June 22, 1970.

Hon. WRIGHT PATMAN,
Washington, D.C.

DEAR SIR: Many thanks for your part in stopping the Penn Central steal. Keep up the good work.

Sincerely,

L. S. BRAMKAMP.

ROCHESTER, N.H.
June 24, 1970.

Representative WRIGHT PATMAN: Thank goodness the U.S. has one representative who is thinking of the American taxpayer! How many more businesses are we going to subsidize?

I am certainly glad you had courage enough to say "no" to Penn Central. You let one company have the taxpayer's money then there will be a hundred others looking for a handout! It's bad enough that we are letting the so-called welfareist sit on his ——— without working! I am just a little housewife with a retired husband who is trying to make ends meet. I am willing and we have paid plenty of taxes to meet Government expenses but by God there is a limit!

MRS. BENJ. BRIDEAU.

I am against putting huge profit making organizations like Penn-Central Railroad on welfare. I think poor people come first!

If Penn-Central is in the Defense Business, I am going into it myself!

MRS. M. BROUDE.

KATONAH, N.Y.,
June 22, 1970.

Hon. WRIGHT PATMAN,
Chairman House Banking Committee, House of Representative Office Building, Washington, D.C.

HONORABLE AND DEAR SIR: As a taxpayer and a patron of the Penn Central Railroad, may I take a few minutes of your time to express certain thoughts I have regarding your investigation.

If the Penn Central merger has resulted in unprofitable operations, I suppose the blame should be put directly on management. Therefore, why is this type of management rewarded in the form of high salaries and extremely attractive pensions. I call your particular attention to Mr. Gorman's salary as announced in the papers of $250,000.00 per annum. Also the pension allowances given to Mr. Stuart T. Saunders and Mr. Alfred Perlman have been reported as being up to $150,000.00 per annum each.

If some sort of government assistance will either now or later be granted to the Penn Central, the cost of which must come from the taxpayers such as myself and many others, it would be my opinion that the managers and pensioners should forfeit some of the high salaries and pension funds which have been granted to them by Penn Central.

I suppose that you are taking steps in your investigation to probe into the salaries and expenses paid to previous management (now retired) and to the present management to see if such payments were excessive.

Sincerely yours,

JAMES S. BROWN.

ELIZABETHVILLE, PA.,
June 20, 1970.

Representative WRIGHT PATMAN,
Chairman, Banking Committee, U.S. House of Representatives, Washington, D.C.

DEAR MR. PATMAN: It was with interest indeed to learn thru the public press, of your concern, by taking exception to advance the Penn-Central $200 million, thru the Defence Production Act, at a time of questionable financing.

With the present plight of the transportation industry by rail, that is traceable to gross mis-management, it would be unwise to advance taxpayer's credit as an assurance to pay for further failure.

The predictions made by these two huge corporations prior to consolidation, indicated, should the merger be approved by ICC, it would result in improved service and greatly enhance their financial status. Where have predictions materialized of rail consolidations, beginning with the Pennsylvania-Reading Seashore Lines, New Jersey, in 1933. Past performance should determine the merit, of advancing guaranteed credit at taxpayer's risk.

Instead, I should like to recommend in this manner, the Penn-Central should be confiscated by the United States Government, according to their own worth as quoted on the New York Stock Exchange at $10.00 per share; strip all high authority of their fancy titles, starting with the Board of Directors, together with those serving in official posi-

tions down to division superintendents; allow the accounting department or auditor of disbursements to handle the financial situation, place operation of service for the public in charge of trainmasters, yardmasters, station agents, etc., dedicated career men whose primary aim is to adequately serve, at not exceeding $25,000 per year, plus a limited expense account itemized.

This type of management would provide the desired supervision and operation to meet modern progress in-keeping with competition and public demand.

Based upon this brief analysis of a deteriorating industry, that has been fading into oblivion for thirty years, more or less, by reason of indifference to meet simple operating requirements, such as—maintain track conditions to eliminate numerous derailments, improve rolling equipment to comply with safety standards of good practice, on-time passenger schedules with clean coaches and sanitary conditions. Lengthy freight trains should be reduced to not exceeding 70 cars, by providing more frequent service to shippers. Until such times as the Penn-Central is placed in charge of more competent management, the loan should be denied, in its entirety.

Very truly yours,

W. STANLEY BUEHLER.

LOS GATOS, CALIF. 95030,
June 22, 1970.

Hon. WRIGHT PATMAN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: This note has for its purpose a compliment to you for your opposition to a government loan guarantee to lenders of the Penn Central Railroad.

These days when confidence in our government leaders is wearing so thin it is indeed refreshing to read of such courageous action as yours.

With the military now having the use of almost two-third of our national budget it is such action as yours gives us hope.

Thank you.

JAMES S. CANTLEN.

LONG BEACH, CALIF.,
June 22, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN PATMAN: It is indeed a pleasure to congratulate you on your recent stand relative to the Penn Central government guarantee of a loan.

It helps restore ones faith in our way of life to know there are men of your caliber in government at this critical time in our history.

Thank you for a job well done.

Sincerely,

DAVID A. CARDINALI.

NEW GARDENS, N.Y.,
June 22, 1970.

DEAR SIR: To read the Times and Wall St. Journal you were the only block between the Penn-Central-N.Y. Bankers—Washington friends of Penn-Central. Well, too bad for them and good for you.

Doesn't the average American have any friends in the Administration? Why does official Washington act so promptly to protect the Penn-Central and the Bankers investment but when it comes to bread and butter issues, important to the masses, well it seems like time is of no importance.

President Nixon gets on TV and asks for our support we give it. We ask for little enough in return we get the business.

Please keep after all the fat cat bankers. Why should the public have to pay to keep the bankers solvent. The finders fees and high interest rates and the one hand at Penn-Central Board of Directors washing the other would seem to need a little investigation.

Thank you.

BRENDAN CARNEY.

RESEDA, CALIF.,
June 23, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

MY DEAR CONGRESSMAN: You are to be highly commended for your successful fight to prevent the give-away of some two hundred million dollars of the taxpayers money to the Penn Central Railroad. This would have been only the beginning of a raid on the public treasury that would have made Boss Tweed's activities look like a church social.

Please continue to keep a watchful eye on these wolves as you have done in the past. You have the support, I am sure, of every alert and patriotic American. Yours in admiration.

Capt. R. C. MARBLE.

VERO BEACH, FLA.,
June 24, 1970.

Hon. WRIGHT PATMAN,
U.S. House of Representatives,
Washington, D.C.

SIR: Re: Penn Central $7 Billion Switch? What could be sweeter for Penn Central stockholders than to be bailed out by the Government (taxpayers) loans? It's like children, if you start something like this, you have to do it for all of the others. How do we the taxpayers know that we won't end up owning a huge deficit railroad colossus and the stockholders owning some of the most profitable real estate in the United States? Evidence on the television shows a badly run railroad system. Where did the money come from to buy Florida and other real estate ventures?

Very truly yours,

ROBERT A. CARTER.

Representative WRIGHT PATMAN.

DEAR SIR: God bless you and I hope every taxpayer in this country lets you know we have at least one man in Washington not afraid to stand up and be counted. Hope you don't turn around and vote $750 million for all railroads including the Penn Central. Too bad we don't have more men like you in Washington. I shall pray for you always.

Thank you.

Sincerely,

MARY CASEY.

ALEXANDRIA, VA.,
June 21, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR SIR: You are to be commended on your refusal to grant the taxpayers' money to the Penn Central Railroad. Why should the taxpayers make up losses for big business? Dear sir, if you do not take care of the little man in this country, who will. The Republicans will naturally favor the bankers and corporations. We appreciate your interest in the nation.

Sincerely,

JOHN DENT.

FORT WORTH, TEX.,
June 21, 1970.

Representative WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

Congratulations on stopping the Penn Central loan.

PAUL DEARMAN, Jr.

MOBILE, ALA.,
June 24, 1970.

Hon. WRIGHT PATMAN,
Washington, D.C.

DEAR SIR: May I say to you, Thank You Sir. You renew my faith in elected officials when you go to bat for the forgotten man, the overabused American Taxpayer, in this Penn Central Case.

I've grown so tired of Bankers who make loans of a dubious and not to say very risky nature to certain people by the millions when they would not lend a thousand dollars to a better risk unless they could get sufficient collateral to cover the loan. When these Bankers made these loans I believe there were about (17) seventeen of them involved did they not have the earnings reports of this big RR? Certainly they didn't make these loans on the basis of the Real Estate and if they did they deserve the consequences of their action.

I think we've had enough of fiscal irresponsibility, I saw so much of that in the last depression and it looks like the same old tactics are being tried all over again. It's too bad that there are so few people left that are familiar with the last big depression, if there were, we would not be having this kind of thing happening all over again.

Another thing I consider discriminatory is the raising to a minium of $10,000.00 the purchase of Treasury Certificates. I was buying them on a three month basis to try to protect my small income when suddenly I was told that I could only buy in lots of ten thousand dollars. In other words little man put your money in the Bank at 4½% we'll buy the Treasury certificates, and collect the difference of three to four percent without getting off of our fat bottoms. Then there is all this humbug about controlling prices and wages, I submit that prices are already controlled by all sorts of different methods to our detriment. In my State the price is fixed on Milk and Whiskey by the State. In the first case by a Milk Board, in the second by State owned Stores. In both cases competition has been eliminated so it doesn't take a genius to know what happens in a case of this kind.

We subsidize many food commodities, so we pay twice for the the end product, we pay the producer and we pay the retailer. Bread for instance and many others. If I am not mistaken we've even subsidized Brazil for Coffee and then we pay an ungodly price for it at retail. We subsidize a certain section of our population with Food stamps and put them in a class of buying not consistent with their income so we pay for the privilege of having these people run up prices on certain commodities that otherwise might be cheaper.

We regulate wages thru minimum wage laws and then cry about the young teenagers who can't get summer work while out of school. This class of employee does not deserve the wages of a breadwinner nor are they worth it but they could be employed if it were not for the law.

So all of this crying over wage and price controls we've got it partly, why not 100%.

Sincerely,

J. C. DUFFY.

BROOKLYN, N.Y.,
June 22, 1970.

Hon. WRIGHT PATMAN,
U.S. Congress,
Washington, D.C.

DEAR SIR: Through the years, though you represent Texas, I have always read about your activity and found you could not be swayed to vote against the people's interest, and means all the people of this nation.

The people in Texas have a good active representative in the Congress.

Sincerely,

BENJAMIN DUHL.

BELLEVILLE, MICH.,
June 26, 1970.

Representative WRIGHT PATMAN,
House Banking Chairman.

DEAR SIR: Please keep up your excellent work in the "Penn Central" probe. Why should the Federal Government "bail out" the big investors and banks. When I run short of operating capitol, no one helps me (and millions of others like me).

I have been following your activities for years and admire your "guts." Keep up your fine work—I wish you were from Michigan so I could support you.

Thank you,

SEYMOUR FENSTER.

HIGHLAND PARK, N.J.,
June 23, 1970.

WRIGHT PATMAN,
Chairman, Committee on Finance and Banking, Washington, D.C.

HONORABLE SIR: I am quite concerned about the fate of passenger trains and of the Penn Central in particular. Over the years I have traveled N.Y. Central frequently and Pennsy a number of times.

Had a foreboding when the two lines merged as N.Y. Central train travel had long been made uncomfortable whereas the Pennsy ran trains on time and seemed to maintain equipment.

Morale among N.Y. Central employees had long been low, that of Pennsy seemed high.

Since the merger, it has appeared to me the whole blooming business has taken on the coloration of N.Y. Central. Each trip I take to mid-Ohio now gets worse. (Crestline, Ohio).

But I would find it out of the way to try to fly and unsuitable in bad weather.

I surely hope some way can be found to persuade Penn Central to be more responsible and conduct its transportation system in a manner to inspire confidence. One would almost think they have a "death wish" for both the passenger and freight business.

And what a responsibility railroads have when they go trundling dangerous cargoes through towns and cities with poorly maintained equipment and tracks!

Good luck in your plan to get the facts of Penn Central's conduct of business.

Sincerely,

Miss HELEN B. FERGUSON.

ROTAN, TEX.,
June 25, 1970.

Congressman WRIGHT PATMAN,
Washington, D.C.

DEAR SIR: I want to thank you for your service in the recent action in preventing the guarantee to the Transportation Department of a loan to the Penn Central Railroad.

I feel without your quick and determined action and almost single handed, our government would have started a never ending underwriting or guaranteeing of loans for sick and ailing corporations thruout the nation.

It is disgusting to read and hear so little business judgment being exercised by our representatives. Thanks to you for your good judgment guts enough to stand up and fight.

Thanking you, and hoping you may continue to help trim our budget, and get our nation back on a business basis.

Your very truly,

M. T. FILLINGIM.

CHICAGO, ILL.,
June 20, 1970.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PATMAN: Your action in denying the Penn-Central Railroad government assistance in meeting its financial obligations is most commendable.

Why was this conglomerate allowed to divest itself of very valuable holdings such as the Pennsylvania Station to "insiders" who have made fabulous fortunes out of the development of these assets? Was not it the responsibility of the SEC to step in when this was going on? Also it is difficult to understand why these assets were not pledged as security for the millions of dollars that Penn-Central and its predecessors borrowed. These assets should have secured these borrowings and they could now have been used to retire them.

The same thing happened to the Northwestern Railway here in Chicago. A holding company was formed to hold the very valuable urban assets such as Northwestern Station and then this company divested itself of the "rolling stock," "trackage" and other assets of not too much value. Just why the $340,000,000 debts were passed off to the "operating company" is hard to understand.

Men like Ben Heineman, Perleman etc. have made billions out of these transactions and it is now time for the government to step in and repossess these assets for the railroads which are created to serve the people.

Again much praise is due to men like yourself and Senator Proxmire for your courage in opposing this.

Respectfully yours,

HOWARD FLEER.

JUNE 22, 1970.

Hooray Mr. Patman! It's time we bailed out the little people instead of the big ones.

If we lived in Texas we'd vote for you.

(Democrats from Louisiana.)

PAULA GEORGE.
TERESA VINET.

DALLAS, TEX.,
June 22, 1970.

Hon. WRIGHT PATMAN,
Rayburn House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE PATMAN: It probably isn't often that a Republican writes you to both commend you and tell you that you are both on the same side of the street, but that is what I'm doing in this letter.

I want to commend you for your firm action in resisting the poorly disguised effort of the Administration to save the Pennsylvania Railroad from reorganization, and assure you that you expressed my feelings in these actions. There is no justifiable reason why the Pennsylvania Railroad should be favored over others and given a long guarantee that it is in no way qualified to receive simply to either save the Administration from embarrassment or worse yet, perpetuate the disastrous management that has brought the railroad to this sorry state. If the corporation should be reorganized, let it be done and let them sell off some of their extremely valuable land or profitable subsidiary operations to meet their current obligations.

The Administration action if approved would mark a first step in the nationalization of the U.S. transportation system. If this were to come, it would mark the end of a great era and the beginning of a sad one. Again, Mr. Patman, let me thank you for your action which I believe clearly serves the public welfare.

Very truly yours,

ROBERT B. GILLESPIE.

ARLINGTON, VA.

Representative WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE PATMAN: I am writing to congratulate you on your stand in the matter of the Penn-Central RR. All too rarely do our Congressman look first to the public interest as you did in this case.

I hope that you do not lessen your constant vigil in protecting the public interest against the various private interests and governmental interests which align themselves with these vested groups. You are our only hope in many instances to give the people an honest and responsive government.

Keep up your good efforts.

Yours truly,

HANK GOLDMAN.

CLEVELAND, OHIO,
June 24, 1970.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PATMAN: You, more than anyone else, were effective in denying the Penn Central the recent loan and I take my hat off to you for your efforts.

I can understand and see some justification for subsidizing rail mass transit, but I shudder to think that the taxpayer could someday be expected to bail out enterprises suffering from bad management!

Many thanks again.

Respectfully,

G. H. GOODWIN.

SCARSDALE, N.Y.,
June 22, 1970.

Congressman WRIGHT PATMAN,
Washington, D.C.

DEAR REPRESENTATIVE PATMAN: Thank you, from a citizen, for helping put things in perspective regarding the Penn Central. The government cannot arbitrarily help a failing private enterprise, singled out for special help.

Only in wild dreams of power and importance are companies the size of Penn Central made. It is well known how Vanderbilt's wild dream of power and money put together the New York Central System. As much as businessmen try to justify these conglomerates that astound the imagination with their size by quoting statistics "proving" how profitable they will be, in reality it is just as much of a power play as running for President: these people want to be some sort of gods.

I am glad that CPC International stock is down over a hundred points since this monstrosity's inception, and that ITT is doing similarly. Vast combinations, whether or not in technical violation of the anti-trust laws as for restraint of trade, are still harmful to capitalism by their very size after a reasonable and almost discernible point.

I would like to take this opportunity to advocate support of Congressman William Ryan's proposal (I do not know whether it is a bill or an amendment) to take from the highway funds and use the money for mass transportation. I do not know to what extent your constituency is involved with commuter and long distance railroads but one cannot exaggerate their importance in metropolitan New York. Five million commute to New York City daily, and if they all came by car it would be, to say the least, bad. Today I had to go into New York and I took a train home during rush hour. Car after car filled with people, with fifty to a hundred getting off at even the most insignificant stops. Every two minutes for an hour and a half a train was scheduled to leave Grand Central for some point with a full load of passengers, each with the newspaper headlining the Penn Central's demise. Every fifteen to twenty minutes, a train would depart for the same destination again.

Not meaning to try your patience with a long letter, I have some concrete proposals of my own concerning commuter railroads and the Penn Central.

First, the Penn Central property should be taken over, owned and maintained by the government. Second, the Penn Central should be divided into not less than four nor

more than six private railroads. They must be able to exist and function profitably. Third, These companies may only handle freight, not passengers. They may rent the use of the tracks from the government. They may build new track, in accordance with State and Federal law, as long as the new track does not parallel or supplement the government-owned track.

Specifically, the Penn Central Company should be divorced from the Penn Central Transportation Company (the railroad). The new rail lines would be created out of the latter company. The former company would not be permitted to deal in railroads, but only its present real estate, and so on. The railroads created according to the second part of the plan would not be permitted to deal in real estate, banking, manufactures. The government would maintain passenger service on its lines, according to set standards. A new, temporary authority would be created to last one year only to administer this act.

The purpose of this act is to make yet another attempt to forestall government ownership of the railroads. Such ownership would run into difficulties I'd rather not see us face: government-owned railroads competing with trucks and air freight, a truly socialized industry in the U.S. (even electricity, gas and telephone are still private) and so on. This plan is designed to rid the railroads of the passenger service it wants to be rid of, but possibly not in a way much to the railroads' liking. Well, they can't have their cake and eat it too. The government should stop making a pretense of "aiding" passenger service, and run it. It should end dilapidated and run-down condition of so much rail property, and the dangers this imposes (look at the extraordinary amount of deaths and accidents since the Penn Central merger).

The object of the plan is to keep the railroads still competitive in the area of freight, to keep them still privately owned and run.

A corrolary proposal would be to establish a permanent commission (or assign this role to an existing body) with these powers: it would enforce detailed minimum standards of rail passenger service as laid down by the Congress. After a procedure allowing a railroad to correct a violation, it could do the same to delinquent roads as for the Penn Central: take over the property (or the passenger property only), separate its subsidiary non-rail business, run the passenger service and rent the use of the tracks for freight. It could also remodel the company on a more profitable basis.

But can the federal government rent exclusively the use of a facility to one company? Why must it?

Since the railroads use each other's tracks now, the same lines could use the federal government's tracks under an agreement with the federal government. Also, the railroads are presently granted a degree of exclusiveness by the state legislatures. The same exclusiveness could persist. After all, the railroads are a utility.

That the legislatures presently grant charters to a railroad could be used in another way. These charters grant the railroads exclusive use of certain routes *provided* they maintain certain minimum standards of service. Thus, a railroad could be found by the new railroads commission mentioned above, or be brought to court by the new commission under *state* law, for not providing minimal standards of service, as set forth in their charters and this new federal law. In this way they could also be legally held to account for good service.

I await your comments on this letter. Please excuse the underlining.

Yours truly,

MICHAEL GOODMAN.

P.S.—Concerning the top paragraph of this page: Governor Rockefeller of New York has announced that the state will take over soon the New Haven Railroad, that is, the portion lying in New York State.

SCARBOROUGH, N.Y.,
June 22, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR MR. PATMAN: I am not much at writing fan letters but I want to say hurray for you in your opposition to the Penn Central loan.

Sincerely,

WALTER HANLON.

DALLAS, TEX.,
June 26, 1970.

DEAR REPRESENTATIVE PATMAN: I am writing to congratulate you and thank you for your recent stand against the $200 million "gift" to Penn Central. Without guarantees to the government and for positive action by the company to help itself, this action would have been a down the rat-hole operation.

I also urge you to do everything possible to defeat the bill to give $750 million to the railroads. They are no different from other businesses such as laundrys, drug store, filling stations, etc., which should also receive loan guarantees if the railroads do. That would be impossible. It is of course argued that the railroads are federally regulated and therefore subject to special consideration. All utilities are also federally regulated, thus each utility would have a precedent on which to base a demand for a grant if this bill were to pass. Penn Central has said in the press that it would need at least another $500 million, thus it is saying that it needs ⅔ of the entire proposed grant to all railroads. This bill then is aimed almost exclusively at "bailing out" the Penn Central and is not designed for the general good of all people. Penn Central has filed bankruptcy to reorganize but has not sold any of its equipment, real estate, paper holdings, etc., to try to help itself. Therefore, why should the taxpayers' money be used to save the company when it won't help itself?

Thank you for your efforts through the years.

Sincerely,

LYNN B. HARDING.

OKLAHOMA CITY, OKLA.,
June 22, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR MR. PATMAN: I have read in the press of your putting your foot down on this loan of some 200 million dollars to the Penn Central Railway and I glory in your spunk. I of course realize the importance of the railroads and I know we must have them, but after all they are private enterprises and if the Federal Government starts bailing out every private business failure, then we are in a hell of a fix.

I am enclosing an article from Time magazine of June 22 which perhaps you did not read. In reading this article it is easy to see why this railroad is in this present mess. With the Pennsy's "red" faction vieing against the Central's "green faction" over business methods, etc., thus between them they have taken the railroad down the trail to bankruptcy.

I have marked a paragraph with red pencil that to me even seems *ten times* worse than loaning the Penn Central the 200 million. This paragraph relates that the Wall Street brokerage firms are now asking for a 1 billion dollar fund to prop and save the various brokerage firms, that through their own inefficient operations and failures are causing them to go broke. This One Billion dollars would be used to save them. To me this is the most God awful guts that I have ever heard of and it is my sincere hope and wish that you and your Committee will stop this bit of damn foolishness. If they can't make it, then let them go broke like any other private enterprise. If I go out and buy a prospective oil lease I do not expect the Federal Government in Washington to put it up for me and to my way of thinking these brokerage houses are no different.

May I add Mr. Patman, that Wichita Falls is home. My family moved there in 1918 during the Burkburnett boom and it has been home ever since. Although I moved to Oklahoma a few years back for the simple reason that from my viewpoint I could do better as a small operator. I have a sister in Wichita Falls (Mrs. Bailey R. Collins) that is quite a Democrat worker and between she and Rhea Howard they think they run the Democratic Party, and they sure get in their licks in Wichita County.

Trusting that I have not bored you with my opinion and with the wish that God give you the strength to keep up the good fight, I am,

Yours most cordially,

E. C. HARLIN, Jr.

ALEXANDRIA, VA.,
June 23, 1970.

Hon. WRIGHT PATMAN,
Chairman, House Banking and Currency Committee, Washington, D.C.

DEAR MR. PATMAN: You and I are well aware of the conduct as well as misconduct of this nation's Bankers. (merger Colonial National Bank and First Virginia Corporation).

The nation is indeed in your debt for the action you took this past weekend, which brought an end to perhaps one of the greatest frauds perpetrated on the American public (Defense Act and all its sins). The conduct of the Administration and the fraudulent abuse of the Constitution by the Department of Defense, was brought to a climax this past weekend when the Banks had the audacity to request the Government through the Defense Act, to save the Banks from their mismanagement of Public Funds. It is incomprehensible for the Bankers to conduct the Banking business in such an irresponsible manner as to make loans to such incompetent management as the Pennsylvania-Central Railroad has suffered these past 9 years.

You may recall the former chairman of the Pennsylvania Railroad is the same gentleman, who, as chairman of the N & W Railroad, sold an American flag carrier (Bull Line) to a couple of bankrupt foreigners. i.e. "Bull Line".

You are well aware that the small and independent businessman cannot afford to enjoy the folly of incompetence because the small businessman cannot qualify under the Defense Act to have his notes guaranteed at the Banks by the Defense Department.

It is with great pride that I nominate you, Wright Patman, as the Hero of the Hour.

God Bless You.

Sincerely yours,

GEORGE A. HATZES, Jr.

WASHINGTON, D.C.,
June 22, 1970.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PATMAN: It is reassuring to note that you are a member of a group questioning the propriety of guaranteeing loans to the Penn Central Company. I submit the following:

1. The paramount interest of the Department of Defense is in the maintenance of an adequate physical plant of any component of the domestic infrastructure.

2. The diversion of revenues (interest and

dividends, sinking funds, bond and note maturities) to the maintenance of plant and equipment is what the DoD should support.

3. The Penn Central Company has many assets which could be pledged for new loans or guarantees.

4. The sum now reported as being sought—$200 million—is substantial; however, the operating deficit is so vast as to make inevitable granting of much larger credits.

5. Many other companies are not far removed from insolvency. They would also seek guarantees.

It is possible that insolvency of Penn Central will have an effect on certain lending institutions, although it is improbable that this would have serious implications for any large, strong bank. Perhaps these should be consulted.

Consideration should be given to a plan of de-merging the Penn Central into smaller, regional viable operating segments.

Respectfully yours,

SAMUEL HILL.

FORT WORTH, TEX.,
June 24, 1970.

SIR: Too bad about the banks! Always they want a "cinch" on repayment of any loans they make. Let the P.R.R. do like any small business has to do, get broke & take their medicine. After all, the past 15–20 yrs. has been the most prosperous anyone can remember. So Pennsy's plight has to be a result of poor to bad management.

I don't profess to have anything to say with respect to banks lending money to railroads or any other business, but as a small part of what Lincoln said, "Of the people, for the people, by the people," I do say, don't quarantee *any bank loans* with any part of people's tax money. After all, the government is the people. Where else does government get money? I say no to government guaranteed loans of this type.

Yours truly,

M. L. IVY.

CORONADO, CALIF.,
June 21, 1970.

Hon. WRIGHT PATMAN,
Washington, D.C.

DEAR MR. PATMAN: I want to thank you for your courageous stand against Nixon's attempt to give $200 million of public funds to Penn Central.

Please keep up the fight against giving public funds to private corporations.

With all good wishes,

Sincerely,

ANDREW L. JOHNSON.

PITTSBURGH, PA.,
June 20, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR MR. PATMAN: Just a short note to commend you on your stand opposing the loan of $200 million to the Penn Central R.R. As a business man, I and my many business friends are sick and tired of these give away programs. We would suggest that a company with assets of over $6 billion dollars, dispose of some of these assets.

As you know the Penn Central owns several billion in real estate. Not long ago the company purchased huge tracts in Florida and also in Penna. (including Pittsburgh). An intensive investigation of these land buys in the past three years is scandalous.

Furthermore, the P.C. owns millions of dollars of real estate for which it has no use. As a matter of fact P.C. owns so much unimproved land, that no one office knows just what they do own. If the R.R. is so hard up . . . let them sell $1 billion dollars of real estate and stick to railroading.

Yours sincerely,

S. LEE KANN.

WASHINGTON, D.C.,
June 22, 1970.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PATMAN: While I am not one of your constituents and not always one of your admirers, I wish to take this opportunity as an American to express my deep appreciation and admiration in your courageous stand in opposition to the Administration's efforts to force the American taxpayer to underwrite the mismanagement of the Penn-Central Corporation.

As a believer in the American system of free enterprise, I do not believe that the Federal Government has any right or obligation to rescue any private corporation or individual, however large or small, from bankruptcy. If we are to save the Penn Central, then why should not the Government also make good the losses of American investors who have lost over $300 billion as a result of President Nixon's misguided and perhaps dishonest economic policies?

I have taken my share of investment losses in the last 18 months of Republican ineptitude. I believe, as I think any good American should believe, that these losses stem in large measure from my own shortcomings, and that it is up to me, and to me alone, to find steps that may lead to a satisfactory recovery. By the same token, I believe that it is up to the Penn Central Corporation to find its own way out of the mess created by its incompetent management. The same can be said, by the way, about Lockheed Aircraft and a host of other companies.

To be sure, some kind of Federal action will eventually be needed to correct the abuses of our dreadfully archaic transportation industry. I don't know the solution, but certainly it is not the stop-gap measure proposed by Mr. Nixon's henchmen to rescue the blue-blooded Republican Penn Central from financial ruin.

In the meantime, I wish to express my solidarity with your position in the Penn-Central case and my earnest hope that you will continue to be a tower of strength in opposing Federal attempts to use taxpayers' money to save this ill-starred private organization and others as well.

Sincerely yours,

ANDREW J. KAUFFMAN.

JUNE 26, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR MR. PATMAN: I was pleased to read about your forthright stand in regard to the unhappy Penn Central affair.

I agree with you that the government has no business bailing out private corporations. Free enterprise should be free to make profits and also to lose money.

I am writing you because I usually disagree with many of the economical positions you have taken during your long and distinguished career in the Congress. I feel certain that your actions will go a long way to protecting the Federal Treasury from any further Penn Central type demands.

I am, Mr. Patman,

Most sincerely yours,

GUSTAVE E. KIDDE.

HOUSTON, TEX.,
June 24, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

HONORABLE SIR: I wish to express my gratitude for your noble effort in blocking the $200,000,000 loan to the Penn Central. Such action is refreshing in these times of "giveaways," and such action will be most welcome to all citizens who are interested in fiscal responsibility.

Recently heard your statement, during an interview on television in which you stated that lowering the interest rates to a more realistic figure, would solve the inflation problem. To this, many millions of our citizens would concur.

In appreciation of your constant effort, I say thank you.

Sincerely,

HAROLD W. KILLEEN.

PHILADELPHIA, PA.,
June 23, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR MR. PATMAN: I was glad to hear your statement concerning the Penn Central Railroad situation. Although I am a stockholder I feel that this corporation has been mismanaged for a long time and I don't think the general public should be made to pay for it. I hope your investigation will dig into misuse of corporation money including some of the lucrative pension funds that the retiring executives have been setting up for themselves during the past several years. Those of us who run successful businesses don't expect something like that.

There should be an efficient high speed railroad system connecting Boston, New York, Philadelphia, Baltimore, and Washington, and with all of the Penn Central's propaganda that was put out at the time of the merger we still don't have an efficient transportation system. We certainly need one for economic reasons as well as for our national defense, and I sincerely hope that you will push for separation of the transportation portion of Penn Central and creating a public utility or authority. The air corridors over the East are already dangerously overcrowded because they are doing the job that the railroads should be doing.

The entire Penn Central holding company should be required to liquidate over a period of time (like 5 years). The real estate business for too long has been a convenient cover up for the mismanagement of the railroad.

Yours very truly,

WILLIAM KLEINHOFF.

GREEN BAY, WIS.,
June 24, 1970.

Hon. WRIGHT PATMAN,
Washington, D.C.

DEAR SIR: The purpose of this letter is to request that you do everything in your power to prevent the Penn-Central Transportation Company from securing a government guaranteed loan to bail the Carrier out of its current financial morass.

It is my opinion a guaranteed loan to the Penn-Central, or any other railroad company, would be impudent for the following reasons:

1. A government guaranteed loan to assist the Penn-Central or any other railroad company would be an open invitation to railroad management to mis-manage their properties. On certain railroads in this country mis-management is a way of life and subsidization by the government in the form of a guaranteed loan would encourage rail management to this end.

2. Guaranteed loans from our government, I believe, would encourage holding companies, such as the Penn-Central Company, North West Industries, and others, who own railroad properties, to siphon off money into the holding company coffers rather than put a share of the earnings back into the property of the railroad to up grade, or even just maintain, right-of-way and rolling stock. Even today, without government subsidization, the nation's rail carriers have let their property and equipment fall into disrepair, witness the holocaust at Crescent City, Illinois which occurred on June 22, 1970. It is reported the derailment was caused by a wheel coming loose from a tank car truck; an investigation by the Department of Transportation will reveal the true cause.

On the same date as the Crescent City disaster a derailment occurred on the Galena Division of the Chicago and North Western Railway at Wheaton, Illinois which resulted in 25 cars going in the ditch. The derailment occurred just 10 miles out of the initial terminal of the train, Proviso, Illinois. The derailment occurred in a highly populated area; fortunately no fires were ignited and no one was injured.

The purpose of the foregoing is to demonstrate what is happening now; I shudder to think what will happen if railroad managements could count on "Uncle Sam" to pick up the results of their mis-management.

3. Government guaranteed loans, in my opinion, would be the first step in the nationalization of the railroads. If the railroad owners (stockholders, holding companies) wanted to get out of the railroad business all they would have to do is secure a loan from the government, pocket the profits from the operation of the railroad and then default on payment of the loan. Upon default the government, we tax payers, would have to foreclose and we would be left with a piece of railroad that couldn't be sold for scrap value.

I recognize that the railroads in this country are in dire financial straights. But granting loans guaranteed by the government is not the answer to the railroad industry financial problem; all a loan would do is increase the indebtedness. The answer to the rail industries financial plight is less government regulation. Let railroads compete with the air lines, the truckers and barge lines for traffic by letting the railroads set rates that are competitive. If this is done the rail carriers will attract business to make them financially healthy.

At this point, if you have read this far, I should tell you I am personaly interested in the railroad industry. I hold seniority right on the Galena Division of the Chicago and North Western Railway as an engineer and fireman (helper). The financial health of our railroads is of great concern to me and all other citizens of this country who are employed by a railroad in any capacity. A financially healthy railroad is a railroad that enjoys safe operating conditions because the money is available to take care of and correct unsafe conditions; needless to say when unsafe conditions do not exist the railroad man and other people who live in the vicinity of a railroad benefit.

It is my opinion the Senate and House of Representatives should organize a thorough investigation of the Penn-Central and the Interstate Commerce Commission to determine just how this financial disaster occurred. Certainly the men who put together this gigantic merger knew, or should have known, what they were doing. The Penn-Central is in the category of private enterprise but it is also a semi-public utility and a large part of the nation's transportation "back bone". This whole affair should be looked into in detail if for no other purpose than discovering how it happened and to prevent, if possible, such a fiasco from happening again.

So please Congressman, do what you can to prevent any government loans to the railroad industry and do the whole country a good turn by exerting the influence of your office toward getting the railroad industry into a better financial posture through less regulation.

Yours truly,

ROY H. KOEPKE.

JUNE 22, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

MY DEAR MR. PATMAN: I applaud your opposition to any loan whatsoever for the Penn-Central Railroad. This company has in the past 25 years done untold harm to the citizens of New York State by denigrating the service steadily and without regard to the need for it. Commodore Vanderbilt's: "The public be damned" was a blessing compared to what they have done to the passengers who have finally learned to avoid their filthy, tardy, insolently-serviced trains. One cannot even get information about arrivals or departures from their surly employees: there are telephone lines but so ill manned that one cannot get through even during the hours they are supposed to be staffed. The company should stand or go bankrupt on its own demerits.

Respectfully,

DR. LAWRENCE A. KOHN.

P.S.—This needs no answer; none is expected.

MIAMI, FLA.,
June 21, 1970.

DEAR SIR: I strongly endorse your position concerning the guarantee of Penn Central's debts. I feel that the government has no authority or need to enter into such contracts. Poor management must suffer its own consequences and not be rescued by the Federal Government. Your stand on this issue is a step in the right direction.

Thank you.

J. FRANK L. DUE.

LOS ANGELES, CALIF.,
June 26, 1970.

Hon. WRIGHT PATMAN,
House Banking Committee,
Washington, D.C.

DEAR SIR: It took a lot of courage to fight the move to give hundreds of millions to Penn Central. You bucked not only Penn Central but the Administration.

The people of this country don't realize what a great American you are, but a hell of us know you are doing a fine job. Keep up the good work!

RUBIN LEFKOWITZ.

ONTARIO, CALIF.,
June 20, 1970.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR MR. PATMAN: This is my expression of gratitude to you for your stand against the Penn Central Co. in its attempt to get the government to guarantee a $200,000,000 loan to its railroad.

It gives me increasing concern to note this administration's attitude against excessive welfare costs, but think nothing of giving out countless millions to favored corporations.

I also noted with alarm that the proposed loan guarantee to Penn Central was being handled by President Nixon's former law firm in which Attorney General Mitchell was also a member.

Also I note with disdain that Sec. of the Treasury, David Kennedy is linked into the Penn Central "deal" through the Continental National Bank and Trust, from which company Mr. Kennedy came to his post in Nixon's Cabinet. That bank had loaned the Penn Co. $26.8 million. Apparently Mr. Kennedy's influence is expected to insure the Continental National Bank that the public purse is to be raided via the Penn Central Co. so that they will be repaid—by public expense—for a bad loan made while Mr. Kennedy was with the bank.

The unsavory deals by our public men and other violations of public trust must surely contribute to the disrespect for "the establishment" throughout the land. Therefore we have campus unrest, hippies, black panthers, etc.

I want to tell you I am gravely concerned about corruption in our democracy and hope there are enough men like you in the Congress to protect us from the lack of integrity among our high governmental officials connected with corrupt practices.

I am a retired superintendent of schools and have been a business man as well as an active politician but I am seriously worried about things like the Penn Central deal.

Most seriously,

CONRAD LANGE.

WINNETKA, ILL.,
June 22, 1970.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE PATMAN: Congratulations on your decades of serving the public as watch-dog against large-scale boodling at public expense, and most recently on your stopping the Penn-Central federal guarantee.

Aren't all these half-way measures wasteful, and shouldn't we now go to the logical conclusion that other free countries in Western Europe reached long ago: outright government ownership and operation of the railroads?

My own feeling is that the ills of the post-office proceed not from the principle of government ownership and operation, but from the failure of public and congressional alertness in supervision.

Sincerely yours,

WILLIAM B. LLOYD, Jr.

WESTCHESTER, PA.,
June 24, 1970.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.

DEAR SENATOR: This is just a note of appreciation for your action in reviewing the Penn Central situation and for your forthright inquiry as I believe without your sense of inquisitiveness, the American people would have been supporting the stockholders of a corporation that has suffered poor management.

Even though some of my family own a few shares of the Penn Central, I feel that it would have been improper to make a "No-Strings-Attached" loan to bail management out of a predicament caused by their own short sightedness.

Thank you once again for representing that Silent Majority of Americans who almost were caught in a give-away program.

Sincerely,

ROBERT A. LORGUS.

THE PENN MUTUAL LIFE INSURANCE CO.,
Philadelphia, Pa., June 23, 1970.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.

DEAR MR. PATMAN: I want to express my approval of your prompt action in stalling Penn Central's bid for a Government guaranteed bank loan.

There seems to be no valid reason why this or any other company should be "bailed out" of a situation resulting substantially from bad management.

Penn Central has tremendous assets which could be sold or pledged to handle their problems.

Yours truly,

GEORGE R. LOULAN.

[From the Houston (Tex.) Chronicle, June 24, 1970]

THE PENN CENTRAL CASE

The bankruptcy of the Penn Central, and the scrambling within the administration to prevent it, have raised many questions.

For example: How much special treatment should be accorded railroads by this administration or any other? Is the plight of the Penn Central a result of poor management

or the consequence of outmoded federal regulations for a method of transportation which has trouble competing with airlines and trucks?

To answer just these two questions would be as difficult as finding a lost dime on Galveston Beach.

It does appear though, that the administration was about to follow a devious and unwise course when it planned to guarantee loans totaling $200 million to the Penn Central through the Defense Department.

This guarantee was scrapped when Texas Rep. Wright Patman raised pertinent objections. The Texarkan congressman's points:

The bail-out arrangement was an unlawful use of the Defense Production Act which was designed for small contractors.

It would not be proper for the government to bail out large private companies.

There was a good chance that the proposed $200 million loan guarantee would become a loss of that amount to the taxpayers. (Reportedly, Penn Central officials told Rep. Patman and others that the railroad would need at least $500 million more to avoid bankruptcy.)

And, that the plan would set a precedent under which other companies would come to Washington asking for help. (Other sources have since said that some defense contractors were planning to take this step.)

The report from Washington is that the administration decided, after Rep. Patman's objection, that the political risk was too great to grant the guarantee. A sound decision, for the taxpayer who is ired by inflation, high taxes and questionable federal expenditures in many areas would not be overjoyed at the millions which would have to be committed to help a $7 billion diversified corporation.

It has been noted, too, that Penn Central filed bankruptcy for its rail operations only and that its other businesses, which produce a profit overall, are not included in the bankruptcy petition. Individuals, who do not have the advantage of holding companies in divorcing unprofitable companies by the bankruptcy route, find it hard to understand why a holding company with billions in assets would not be forced to sell several companies to make up the deficit before it declared bankruptcy for one wholly-owned subsidiary.

Even on the Penn Central, which operates the largest railroad in the most populous area of the United States, passenger service has not been profitable. Yet, passenger service is needed. It is still the most economical way of moving large numbers of people.

Thus, it may be necessary for the federal government to subsidize railroads. But a concerted and coordinated effort to determine what is needed and how much it will cost the taxpayer should be made before a single railroad is given special consideration.

[From the Houston (Tex.) Post, June 26, 1970]

A Dangerous Situation

The most interesting spinoff question of the Penn Central bankruptcy is whether the downfall of the railroad colossus will trigger a chain reaction of financial disasters. Although the financial community in New York has known of Penn Central's plight for months, the general public did not, and the event came suddenly, at a time when fears of a liquidity crisis were already widespread.

The danger of a chain reaction of bankruptcies is quite real. Penn Central does three-quarters of its business with other railways, and several of these were in exceedingly precarious financial shape before the news of the Penn Central failure was announced. And banks and other suppliers of the railroad will take a huge beating in the short run, to say nothing of the anguish of stockholders.

The Nixon administration was wise to back away from the $200 million rescue operation, which the Department of Defense was to have financed. The Defense Production Act of 1950, the legal instrument of the proposed rescue, was designed to help small and medium-sized war contractors, and only by a vastly strained interpretation of the act could it have ben used as a salvage vehicle for Penn Central.

Rep. Wright Patman of Texas deserves commendation for pointing this out to the administration, and for blocking the action. By his opposition to the hastily conceived scheme, the chairman of the House Banking and Currency Committee may turn out to be the best friend the Nixon administration has in this election year.

To ordinary citizens of every political persuasion, squeezed by inflation, tight money and increasing difficulty in meeting personal obligations, the Defense Department guarantee of $200 million in bank loans to Penn Central would have seemed a particularly rank and gamy act of political favoritism toward big business.

With Penn Central facing debt payments of $75 million by June 30 and nearly $600 million by Oct. 31, it is a virtual certainty that the taxpayers' loan dollars would have been money down the drain in any event.

The big railroad has an overall debt of $2.6 billion. Its services are highly essential in moving passengers and freight over 40,000 miles of track in 16 of the most highly industralized states of the nation. One-fifth of the nation's rail freight traffic moves on Penn Central tracks, and 70 per cent of the bankrupt's traffic moves on other lines.

In this perilous financial situation, no man, least of all any spokesman for Penn Central, can read the future. Even under the reorganization, the railroad will have to exercise great dilligence to maintain the inflow of revenue over the critical period ahead. Meanwhile, the nation can only hope and pray that the danger of a resultant financial panic is exaggerated and that one will not materialize.

[From the Anderson (S.C.) Independent, June 30, 1970]

Penn Central Not Exactly Poor, so Why Exempt From Its Bills?

We don't mean to be hard-bitten about things, but let us face the realities: If you couldn't pay your bills and wanted to go on public welfare, the government would want to assure itself, before giving you a hand-out, that you weren't sitting on a gold mine somewhere, or otherwise possessed assets which you might be able to convert into cash to tide you over.

Maybe a mammoth corporation can't be compared to an ordinary citizen, but on the the other hand why not?

Consider the Penn-Central Transportation Company. It's in such bad financial shape, two and a half years after its consolidation into one of the world's greatest corporations, that it can't pay current debts and couldn't even borrow at an astronomical interest rate of 11.5 per cent.

The company thereupon went, hat in hand, to the U.S. government, and the government, with exceptional alacrity, began taking steps to bail out the troubled corporation.

The Defense Department prepared to put the government's guarantee behind a $200 million bank loan, and President Nixon, in his economic message, called for legislative action to provide for emergency assistance to railroads in financial difficulties.

But at that point a number of congressmen, including that indefatible battler for the little man, Texas Democrat Rep. Wright Patman, began asking questions.

The Penn Central is not exactly in rags. It happens to own about $7 billion in assets—that is not a misprint, we said $7 billion. It owns some of the most valuable real estate in the world.

Representative Patman, who is chairman of the House Banking and Currency Committee, demanded to know precisely what legal authorization the government has for guaranteeing the Penn Central borrowing and, failing to get answers to this and other questions, refused to withdraw his opposition.

Interestingly enough, foreseeing legal and other problems, the Penn Central suddenly last April decided to retain President Nixon's and Attorney General John N. Mitchell's former law firm of Mudge, Rose, Guthrie and Alexander.

That notwithstanding, the Nixon administration decided to backtrack, at least temporarily, on the government guarantees.

Penn Central officials expressed their dismay, and we can't say that we blame them. For being dismayed, that is. But not for the way they've run their railroad. And not for the way they're trying to duck out of their responsibilities.

They have now filed a bankruptcy petition which, they emphasize, "does not apply to the Pennsylvania Company, the parent Penn Central Company or to the many affiliated or subsidiary companies."

Why should they be exempt from financial obligations?

Would it be asking too much for the parent company or other members of the immediate family to sell—say—a half a billion dollars of property in order to protect the other six and a half billion?

You might have to sell a piece of your land, or get a second mortgage on your house, if you were in similar difficulties. Why shouldn't the Penn Central, which brought its own troubles on itself, do likewise?

[From the Elizabeth (N.J.) Journal, June 27, 1970]

Business Ethics and Bankruptcy

The legal sanctuary used by the Penn Central Co. to avoid paying debts and taxes of the railroad has been justified on the grounds that the nation's biggest transportation network must be kept running for the good of the economy. There is no dispute over this. But surely when the enormous assets of the sixth biggest corporation in the United States ($7 billion) cannot be legally touched to cover the debts and operating costs of what once was the company's major enterprise, there is something wrong with the system and the law. Especially when, in the view of bankruptcy experts, the Penn Central can stay in its bankruptcy cocoon for as long as 20 years under the protection of the law and to the financial aggrandizement of a battery of lawyers who keep the arrangements going.

This is hard to swallow for other businessmen and individuals who suffer to avoid bankruptcy because of the legal and moral compulsion to pay off their creditors, including many who might otherwise founder. It should be disturbing, too, to any wage earner who finds the finance company repossessing his car for missing a few payments or to the middle-class wage earner who must liquidate his insurance to cover a hospital bill. He has no Park Avenue offices, no Miami Beach hotels, no oil pipelines and no Madison Square Garden interests to fall back on.

Despite its financial crisis, the Penn Central paid out $43 million in dividends last year, awarded generous stock options and retirement annuities to its executives, including a $140,000 a year pension to the recently ousted board chairman, and, according to Rep. Brock Adams, D-Wash., transferred some of the assets of the railroad operations into the holding company when

the railroad operations were going downhill. Those assets remain safe in the holding company. And it's all legal, too.

Penn Central, of course, like the bankrupt Jersey Central, can give a convincing argument that it has been forced by the government to carry on the deficit operations of its railroad company. If it were free of government interference, like other private firms, the Penn Central could have disposed of its commuter services and long distance trains. In no way should such deficit operations hamper its other profit making enterprises. All this sounds fair except when you begin examining the reasons why the Penn Central was able to accumulate its investments and form a conglomerate by originally borrowing on the reputation, credit and assets of the railroad. Furthermore, the railroad mismanagement suggests that the Penn Central Co. was devoting its money and energies into subsidiary investments that really had nothing to do with transportation, except that they benefitted by having access to rail service.

The cash crisis that the Penn Central was suddenly trapped in is partly due to this drive to acquire new firms, a situation that is afflicting other conglomerates that are in trouble. They have sunk their cash into property, buildings and firms that are almost totally unrelated to the parent company. This unprecedented move toward mass mergers in recent years has led to an economic derangement in the business world and centralization of economic power and decision making in the hands of about 100 large corporations.

The 700-page report of the Federal Trade Commission, issued last year, warns about the serious consequences of the conglomerates, which are a legal prop to skirt the anti-trust laws. The commission found that conglomerates do not enhance efficiency, lead to a system of reciprocal buying in closed markets, push out competition and run counter to many of the basic assumptions of a free market. Neither the consumer nor the employes of companies owned by conglomerates have much chance against these big cartels. They constitute a form of business socialism whose enormous power and legal protection removes them from public accountability and restraint. In this respect, they are a threat to the kind of democratic capitalism that is based on competition and the wide sharing of wealth and resources in this country.

Rep. Wright Patman, chairman of the Housing Banking Committee, has already quashed the Penn Central's request for a loan guarantee by the federal government. He has promised to lead a vigorous inquiry into the Penn Central and its connections with big banking interests. It can shed some new light on the dangerous growth of the conglomerates and, perhaps, on the dreadful record of the Interstate Commerce Commission in protecting railroads from competition in rates and in allowing labor practices to stymie improvements. But most of all, Rep. Patman, an earnest protector of the little guy, can start cutting the conglomerates down to size.

HIGHWAY SAFETY—IV: THE PROBLEM OF ALCOHOLISM

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker in my series of commentaries on highway safety, I have been trying to illustrate to my colleagues and other readers of the RECORD the serious situation that exists when Americans drink, not just socially but as a disease, and then drive. The alcoholic driver is probably the greatest safety hazard on our highways today. We must find ways to control this hazard and help make driving safer for everyone.

As Guy Halverson points out in the following article in the Christian Science Monitor, much of the problem of drunken driving in the United States can be traced directly to "alcoholism." He notes the shocking statistic that alcoholism hits every fifth home in the country. With this in mind, it seems apparent, then, that one way to stop the problem of drunk driving is to deal seriously with the underlying problem of alcoholism.

A first step in dealing with alcoholism is to treat it as a disease. We must realize that alcoholism is not restricted to one social or economic class, but can and does strike people from all backgrounds. Only when we realize this fact can we give the people afflicted with this illness the treatment they need.

Guy Halverson makes an effective case for promoting more effective rehabilitation of alcoholics. I believe that our highways can be made much safer for all drivers if such a program is carried out. We must do something to reduce the tragic toll taken by alcoholics on our Nation's roads and highways.

The article follows:

ALCOHOLISM BEHIND THE WHEEL

(By Guy Halverson)

MILWAUKEE.—A confused and lonely 21-year-old Florida woman races alone through a stormy night on a motorbike. An alcoholic since her teen-age years, she is drunk. Rain and wind slash against her as she tightens her grip on the bike's handlebars. She looks up and in an instant of blurred recognition sees the glare of headlights from a vehicle racing directly at her. She is hurled across the highway and a human life is wasted.

The woman is one of about 70 million Americans who both drink and drive. Of these, millions are either problem drinkers or chronic alcoholics.

Clearly, alcoholism itself underlies much of the spiraling liquor-related accident toll on United States highways. And the toll won't be cut until Americans start to cure this deeper problem.

Efforts in this direction are producing results in some instances:

Here in Milwaukee, at another moment in time, a silver-haired business executive strides quickly toward a massive building. The renewal he feels inside shines as bright as the spring day. The man is a recovered alcoholic, and this day is his last at an outpatient clinic at the privately funded DePaul rehabilitation hospital.

FRAGMENTARY RESPONSE

But in general, response by government and the public to the alcohol problem is only fragmentary and all too often lethargic and ineffective.

The drunk driver, safety experts insist, reveals only one aspect of the blotch of alcoholism that strains so much of American society. Divorces, shattered families, frequent home and industrial accidents, and mounting crime all testify to it. Industry loses over $2 billion annually to alcoholism in absenteeism and shoddy work.

"The central truth," says Sen. Harold E. Hughes (D) of Iowa, chairman of the special Senate subcommittee on alcoholism and narcotics, and himself a reformed alcoholic, "is that we must make up our minds to launch an all-out, adequately funded attack on the problem of alcoholism in America if we are to make significant reductions in the deaths and maimings on our highways. . . ."

Most safety experts agree there must be a sharp about face in the permissive attitudes about liquor now sweeping the land:

The mass media, in particular, must stop glamorizing drunkenness by identifying it with good humor and sophistication.

The home, the church, the school must do a better job of acquainting young people with the dangers and risks of drinking.

Employers, work associates, and relatives must stop overprotecting alcoholics who desperately need attention—not the hidden isolation that is often a sure passport to self-destruction and tragedy for others.

Courts must be given greater flexibility in dealing with drinking drivers. The present system—which seeks to control driving behavior through reliance on legal sanctions alone—is a failure. Modern rehabilition facilities and techniques are sorely needed in almost every major community in the nation.

The problem of alcoholism and liquor abuse seems almost overwhelming in its complexity and ubiquity. In one of the nation's largest metropolitan areas I walked into the office of the local sheriff to discuss highway safety and found him seated behind his desk with a highball in his hand. It was 2 p.m.

MOST NEGLECTED PROBLEM

In another city a local traffic safety council official could hardly keep his eyes open during our interview because of the drinks he has had during an afternoon meeting. He finally had to have a relative come and drive him home.

No matter where one goes—to the office of a police official, a safety expert, a highway engineer—the conversation inevitably swings around to a discussion of alcoholism. Yet, as John W. Gardner, former Secretary of Health, Education, and Welfare, has pointed out, alcoholism, the nation's No. 3 health problem, is also its most neglected. Alcoholism treatment lags far behind treatment for drug abuse, which touches a much smaller percentage of the population.

Alcohol is the most used—and widely abused—drug in society.

Health officials insist that alcoholism is a disease, not just a behavior problem as was assumed for so many years. Between 6 and 20 million people are believed to be chronic alcoholics or problem drinkers with a compulsive dependence on liquor. But there is also a staggering multiplier effect that adds a tangled new dimension to the problem. Every alcoholic, the experts say, directly affects up to three relatives. Thus, up to 60 million people in this country may be immediately touched by alcoholism. That would mean one out of every five homes.

For years the public stereotype of the problem drinker was that of the skid-row derelect, But, says William M. Moore Jr., executive director of the National Council on Alcoholism, "only about 3 percent of all alcoholics are derelicts. Most are the type of people you might meet anywhere in society—wage earners, homeowners, housewives, professional people."

Take what happened one day here. The local office of Alcoholics Anonymous received a frantic call that a woman, plainly drunk, was about to slide behind the wheel. AA called the local sheriff who dispatched a car. The woman was pulled from her vehicle before she could drive it off. It was a bus for elementary school children.

MANY DIFFERENT TYPES

Studies of drinking drivers clearly indicate that many are chronic alcoholics or longtime problem drinkers. Indeed, most studies show the typical drinking driver involved in a fatal or near fatal accident to have a blood-level content far above levels associated with normal social drinking.

Yet, when one talks about the "drinking driver" one is really talking about many different types of drinkers:

1. The chronic alcoholic or problem drinker who is suspected of causing perhaps the largest chunk of all fatal accidents.

2. The social drinker, whose blood level usually registers less than most problem drinkers, but still accounts for an important share of highway mishaps.

3. The novice drinker or occasional drinker, whose inexperience with liquor is a contributing factor to some accidents.

4. The young drinker. Some studies suggest that the youthful drinker is causing an increasing number of highway accidents. Of the first 10 auto fatalities this year in Michigan, for example, all were under age 26, and liquor was a factor or suspected as a factor in nine of the cases.

How does one stop these people from mixing their drinks with driving?

In most courts throughout the U.S., judges are still heavily dependent on punitive legal sanctions—fines, license suspensions and revocations, or jail sentences. But because of the hardship on the offender, whose livelihood is often dependent on use of his vehicle (particularly in the Western states with their large distances), juries and courts are reluctant to impose stiff sentences. Moreover, prosecutors, acutely aware of public sentiment, carefully weed out thousands of marginal cases each year, even though they know the defendant is guilty of a road violation. Or they deliberately seek a lesser charge, such as "reckless driving," instead of "driving while intoxicated."

"HEALTH-LEGAL" APPROACH

The resulting "control system" is just not working. In Chicago several months back, a 28-year-old man was slapped with a $20 fine and court costs for staggering drunk in front of a stream of cars at a busy intersection. The very next night he was again arrested—this time for drunk driving.

Last year some 300,000 drivers had their licenses suspended or revoked. Yet, it's believed that as many as 200,000 of them continued to drive illegally.

What's needed, say many jurists, is a multipronged attack on the drunk driver—a "health-legal" approach, as Lyle Filkins of the Highway Safety Research Institute of the University of Michigan has dubbed it. On the one hand, judges should be allowed to impose stiff sanctions for those drivers who respond to punishment—such as social drinkers, occasional drinkers, and young people. On the other hand, rehabilitation should be available for those drivers who need a change in *drinking* behavior more than *driving* behavior.

And that's the rub. Few jurists today have any place to send the problem drinker for rehabilitation.

In many cities I found businessmen and teen-agers, problem drinkers, and hard-core derelicts all thrown indiscriminately together into grim drunk tanks. In one Southwest city I found a middle-aged man lying face down on a concrete floor where he had tumbled from a bunk.

PROGRAMS JUST NOT ENOUGH

There are only about 200 facilities of varying types around the country to handle the problem drinker, including halfway houses and clinics. Only about six cities have major detoxification centers, including important installations at Washington, St. Louis, and Des Moines. Even more significantly, only about six cities have comprehensive treatment programs, including Minneapolis, Atlanta, and the private DePaul program here in Milwaukee.

The federal response has so far been spotty and piecemeal.

The main thrust to date, most experts feel, has come out of the National Center for the Prevention and Control of Alcoholism in the Department of Health, Education, and Welfare. Budgeted at around $4 million annually, the program has dealt with the research, education, and treatment areas.

Rehabilitators maintain that the programs are just not enough. More money is spent each day on liquor purchases in the U.S., they say, than the entire federal government spends on alcoholism treatment in the course of an entire year.

A measure recently introduced into the Senate by Senator Hughes, along with Sens. Jacob K. Javits (R) of New York and Frank E. Moss (D) of Utah, would earmark a more realistic amount of $435 million over a three-year period for a comprehensive alcoholism program, including grants for construction of facilities by state and local communities. It would set up a control agency located most likely in the National Institute of Mental Health (that section is being hammered out in committee as of this writing). The measure would require establishment of prevention and treatment programs for federal employees and armed forces personnel, and also provide that group health and disability policies for federal employees must include alcoholism.

The Hughes bill (S3835) in effect supersedes an earlier, less comprehensive bill introduced several years ago by Senators Javits and Moss. The newer Hughes-Javits-Moss bill has so far snapped up endorsement from close to 50 senators, including a spectrum as diverse as Sens. George Murphy (R) of California, Charles H. Percy (R) and Ralph Tyler Smith (R) of Illinois, and John J. Sparkman (D) of Alabama.

PROPONENTS OPTIMISTIC

Proponents of the Hughes-Javits-Moss bill are optimistic of passage during the next year. They note that the Hill-Burton hospital construction bill—enacted over a veto by President Nixon last month—contained a provision establishing new priorities for treatment of alcoholism within hospitals. In the past most hospitals have tended to shun the alcoholic. The Hill-Burton Law, rehabilitation enthusiasts assert, shows that a national consensus is building toward a broad-based federal rehabilitation program.

The new $18 million program under way at the Office of Alcohol Countermeasures in the Department of Transportation is also geared in great part to an identification—and then control—of the problem drinker. Under the program, announced June 26, demonstration grants have been awarded to a number of communities around the nation: the state of Vermont; Marathon and Sheyboygan Counties in Wisconsin; Nassau County in New York; Washtenaw County in Michigan; King County, Washington; the cities of Eugene and Portland, Ore.; Denver; Seattle; Albuquerque, N.M. and Charlotte, N.C. DOT officials hope the roster can be upped by an additional 20 localities next year.

The imaginative program—a small, but important first step in the control of the drinking driver—will test out some 50 or 60 countermeasures, including use of chemical agents that cause the driver to react unfavorably when he imbibes alcohol, tying gas station operators into special traffic grids so they can check licenes numbers of motorists suspected of being intoxicated, and even special buzzer devices on the cars of drinking drivers that may be activated due to erratic driving conditions.

THE 40TH ANNIVERSARY OF THE VETERANS' ADMINISTRATION

(Mr. PELLY asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PELLY. Mr. Speaker, today marks the 40th anniversary of the Veterans' Administration. On July 21, 1931, President Herbert Hoover signed an executive order creating the Administration as a new agency of the Federal Government. Prior to that time, the various benefits established for veterans had been under diverse bureaus which had grown from previous governmental activities.

Today, 4.5 million veterans and dependents receive direct financial aid through the VA, and the number of hospitals totals 166.

This anniversary comes following by 1 day the passage in the House of legislation to increase the availability of guaranteed home loan financing for veterans and to increase the income of the national service life insurance fund. Our unanimous vote on this bill yesterday will go a long way toward helping our Nation's sagging homebuilding industry, and at the same time greatly aid the veteran. One of the basic benefits of the GI bill of rights which has been available to veterans of World War II, Korea, and now Vietnam, is the home loan program, and the bill passed yesterday will provide a needed boost.

However, our job is not completed. The conditions in some of our VA hospitals are deplorable, and today, this 40th anniversary of the Veterans' Administration is a good time to reflect on our responsibility and to dedicate ourselves to pioneering new paths to serve in civilian walks of life those who served the Nation in its time of need.

OBJECTIVITY FROM THE SOUTH VIETNAMESE EMBASSY

(Mr. LEGGETT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. LEGGETT. Mr. Speaker, my office periodically receives the "Vietnam Bulletin" a publication of the South Vietnamese Embassy here in Washington. Normally, the contents of this publication range from trivia through hogwash to propaganda.

But, to my amazement, on picking up the most recent issue, I found a sophisticated and objective military analysis of the Cambodian incursion. Among other things, the analysis cautioned against committing the South Vietnamese forces to more than short-term thrusts into Cambodia, lest they overextend themselves and allow the other side to increase its strength in South Vietnam, and thus entrap the Vietnamese army.

The name of the author of the article is not listed. This is unfortunate; it might have been interesting to trace the course of his career as he works his way toward the Con Son tiger cages.

Under unanimous consent, I insert two sections of the article, entitled "Current Strategy" and "Trapper's Trap" in the RECORD at this point.

CURRENT STRATEGY

The Communists naturally know what they are good at. Their current Cambodian strategy appears to be one of two prongs they really know how to exploit. It is the view of this column that they seek at present to

asphyxiate the Lon Nol administration economically and politically while drawing the South Vietnamese Army deeper and deeper into Cambodia, where the role for other allied forces would be minimal and where they think they have a better chance of defeating their enemy, especially if the latter should be foolish enough to take over the territorial defense of an extensive part of the neighboring country.

For students of Vo Nguyen Giap's strategy and tactics, the current military developments in Cambodia present little or any novelty. The top Communist military commander in Indochina had done something similar in past campaigns. By throwing whatever troops he had at his disposal in 1953 against townships in the Thai country and Laos, he succeeded in holding tens of thousands of French troops in enormous traps, thereby reducing to nil the newly acquired mobility of General Henri Navarre's troops. Dien-bien-phu was to be only the final blow to an overextended French expeditionary corps.

The men from Hanoi, once again, apparently think they can induce South Vietnamese generals into committing the mistake made by Navarre. If Saigon should take over the leading role in the defense of Cambodia, its armies will risk being trapped or bogged down. The Communists will then return to the pacified areas of South Viet-Nam the way they reentered the Red River Delta in 1953–54 and mount a scenario reminiscent of what they did 16 years ago to reduce the French government to suing for peace.

TRAPPER'S TRAP

South Vietnamese leaders, it must be said to their credit, fully realize the dangers of getting too deeply involved in neighboring Cambodia. The dozens of military pushes into Cambodia, for all the publicity they receive abroad, are essentially short-term campaigns designed to consolidate political and military achievements on this side of the border. Even such assaults as those against Takeo and Kompong Speu and possibly such other attacks as the Vietnamese may be called upon to mount against Communist units deep inside the Cambodian hinterland are not necessarily deviations from the general strategy of Saigon.

Indeed, so long as Saigon uses its troops as strike forces with no territorial duties, they simply cannot be trapped or bogged down. And if the new Cambodian administration should be able to live through the next few difficult months, a new alliance will certainly emerge from the new conditions in Southern Indochina, possibly resulting in the creation of an immense politico-military trap for the Communist trapper himself.

CAMPAIGN STRATEGY IN SOUTH VIETNAM—MANIPULATE THE BALLOT BOX

(Mr. LEGGETT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. LEGGETT. Mr. Speaker, all of us who run for public office are faced with a number of basic decisions we must make regarding the conduct of our campaigns. Should we emphasize newspaper, radio, or television advertising? Should we attack our opponent or ignore him? Should we concentrate on economic issues, the war, or the environment?

In one of the world's other great democracies, the Republic of South Vietnam for which 50,000 Americans have given their lives, those who run for office must also make decisions on the best way to campaign. The tactics employed by the incumbents are of particular interest to the student of electoral politics.

In 1967 the Thieu-Ky government's campaign strategy consisted primarily of disqualifying every other candidate who had a chance of winning. But now it seems from a recent New York Times article that the government realizes true democracy involves allowing the opposition to run for office.

So the Government's current electioneering places heavy emphasis on ballot-box stuffing, combined with the use of soldiers to advise the peasants on which candidate to choose. In the province discussed in the article, however, these tactics proved insufficient. But the military-appointee province chief rose nobly to the occasion—he simply threw out the vote totals and substituted his own figures.

The object of the exercise was, the province chief said, to prevent the Buddhists from gaining a majority in the provincial council, since they were "proneutralist, and a victory on a national scale might provoke enraged army officers into a coup."

Since the population of South Vietnam is 85 percent Buddhist, this might be said to create something of a problem. But we can be confident that General Thieu who is, we are told, one of the world's four or five best politicians, will continue to display the resourcefulness he has demonstrated in past crises.

I include the article entitled "Vote-Rigging Dismays a Vietnam Province," from the New York Times of July 15, 1970, in the RECORD at this point:

VOTE-RIGGING DISMAYS A VIETNAM PROVINCE

(By Takashi Okal)

SAIGON, SOUTH VIETNAM, July 14—A case of flagrant vote-rigging has discouraged officials and reinforced the cynicism of villagers in a small province along South Vietnam's coastline.

The province cannot be identified because the officials, the candidates and the villagers who told of the incident fear reprisals from the province chief, a military officer on active duty, appointed, like all his colleagues, directly by Saigon.

On June 28, South Vietnam held elections for provincial and municipal councils. The elections were hailed in Government statements as another step in the official policy of decentralization, giving local bodies progressively larger responsibilities. News media considered the elections a useful test of voter sentiment before the more important elections this year and next year for the Senate, the lower house, and the presidency. American observers felt that by bringing out the vote, especially in rural areas, Saigon could demonstrate its control over the countryside in the face of Communist intimidation and disruption.

A 75-PERCENT TURNOUT REPORTED

Nation wide, many American observers considered the elections a success. Out of 6,113,286 eligible, 75.9 per cent voted, according to official statistics. The voting seemed to be reasonably honest, American and other observers said. Communist efforts to disrupt the process were judged, on the whole, to have failed. But in the Province of A——— girdled by mountains and looking out in the blue South China Sea, June 28 and its aftermath were bitterly disillusioning, not only for many voters but also for officials forced to change vote totals.

Information on the vote-changing was provided by local leaders of the Vietnam Quoc Dan Dang one of South Vietnam's oldest political parties, by villagers who voted, by candidates and by certain officials.

As a result of the vote-rigging, these informants said, two of four Buddhists elected to the seven-man provincial council lost their seats to two candidates favored by the province chief.

Since one of these two candidates is a Roman Catholic, and since Catholics hold three other seats on the council, the vote-rigging transformed a Buddhist majority into a Catholic majority. Several Catholic priests and laymen are deeply disturbed over the change, which they fear could lead to a new upsurge of political enmity between Buddhists and Catholics.

Informants said that the day before the election, the province chief called in his civil and military assistants and told them that it was essential to keep Buddhists from a majority in the provincial council. The Buddhists, the province chief reportedly said, were proneutralist, and a victory on a national scale might provoke enraged army officers into a coup. To avoid this, the province chief reportedly said, the officials must see to it that the Buddhists were denied a majority.

The province chief reportedly then told his assistants, who were in charge of the province's 51 polling stations, to increase totals for acceptable candidates by 10 per cent by stuffing the ballot box from time to time, for example during the noonhour when few people come to the polls.

Under South Vietnam's voting system, for each candidate there is a slip of paper bearing the candidate's symbol—a lotus, for example, or a candle, a buffalo or an elephant. Since A——— Province had 29 candidates, a voter received 29 slips of paper and an envelope. Inside a curtained booth, he chose seven slips, put them into the envelope, and dropped the envelope into the ballot box. The other slips were discarded.

To many voters, the names of the individual candidates were meaningless. Many voters did not bother to attend campaign meetings, and many of those that did complained that all candidates promised the same things.

"Candidates, are like birds without feathers," one village voter said. "We, the voters, give a candidate his feathers—each vote being another feather. When he has enough feathers, off he flies—and we never see him again."

A number of voters, especially older people and housewives, simply ask election officials to pick candidates for them—which the officials are happy to do. As one district chief, a colonel, commented: "You journalists make things so complicated. Elections are really quite simple. You can't expect most voters to know who is good and who is bad. Either they don't bother to come and vote, or else they choose their candidates at random. Far better to let us choose the candidates for them."

The province in question is not atypical in South Vietnam and the tampering was generally discreet and, so officials who participated said, confined to 10 per cent of the total vote. Votes were not taken away from any candidate; they were added to those the province chief favored.

Each candidate is permitted to send an observer to watch the voting. In one hamlet, fairly early in the day, an observer, a woman teacher 19 years old, noticed an official slipping something under the table. She challenged the official, and found an envelope of seven slips. The official had evidently been waiting to slip the envelope into the ballot box.

REPORT ON INCIDENT

The teacher demanded that the official in charge of the polling station make a written report on what has happened. This was done.

At the end of the day, the count began, in the presence of the observers. The work was finished about 8:30 P.M. and the officials left, after the hamlet chief and the observers had signed the written report, which included both the totals and an account of the day, including the stuffed envelope.

Back at province headquarters, as officials from the various polling stations began to add their totals, they found that four out of the seven candidates elected were Buddhists, and that two candidates particularly favored by the province chief were trailing so badly that a 10 per cent shift of votes would be insufficient to elect them.

The province chief insisted that two of the four Buddhist candidates be eliminated, to accommodate his two candidates. The president of the election commission, a youthful judge from a neighboring province adamantly opposed this, in the presence of other officials present. The judge said that it was better to declare the whole election invalid than to try to eliminate two elected candidates.

Finally, the account went, the province chief won out. Officials who had been in charge of four or five key polling stations were ordered to go wake up the hamlet chiefs and get them to sign new reports.

NEW FORMS SIGNED

One hamlet chief reluctantly admitted that this had, in fact, happened to him. He had been routed out of bed at 5 o'clock in the morning, during the curfew, when no villagers are supposed to be about except soldiers on patrol. He was told there had been several mistakes of form in the report he had signed and he was asked to sign a new report. Trained through long years to do as he was told, he said, he signed "four or five new official forms." The forms were blank he said.

TELL IT LIKE IT IS

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, the so-called generation gap has resulted chiefly from a communications breakdown between the youth of America and their elders. It is for this reason that the commencement address, delivered by President Charles E. Perry of the Florida International University, to the graduating class of Broward Junior College on April 30, 1970, is particularly relevant.

President Perry has gained a valuable insight into this question by simultaneously having the responsibilities of a college president and being a member of the "younger generation" in age. I recommend this speech to both young and old as a clear, enlightened, and honest appraisal of this misunderstood problem:

TELL IT LIKE IT IS

(By Charles E. Perry)

President Adams, members of the faculty, distinguished guest, ladies and gentlemen of the Broward Junior College Class of 1970.

I am not going to deliver the typical commencement speech tonight; the kind of speech which applauds you, the members of the graduating class, for the splendid job you have done in getting this far in your academic career; or the kind which discusses how you have overcome hardships and made sacrifices; or how you are going to go on to bigger and greater accomplishments—even though all of these things are true.

I am also not going to give you the traditional commencement address which points out how you will be the leaders of tomorrow, and that overnight you will become a highly paid corporation executive, a successful professional, a top government official, or even a college president.

And I am not going to tell you that life is pleasant and bright, and that once you have the A.A. or A.S. degree in your hand, the world and a high paying job are yours for the asking.

In addition, I am not going to use this special occasion in your life for an oratorical workout to show you how "cool" I am with words. Motherhood, apple pie, George Washington, Abraham Lincoln, and even Babe Ruth will be pushed aside this evening, although they all had their place in traditional commencement speeches.

No, I am not going to talk about these things tonight, because I am going to *tell it like it is.*

Tell it like it is. This has become a notable phrase in our modern-day language, signifying honesty and candor, but often used to the point of being meaningless. Yet, I wonder, if we had been willing to *tell it like it is* a long time ago, and had come to grips with the real priorities in our national life, would we not now be so deeply enmeshed in the problems confronting us today?

In fact, if we dare be so bold to *tell it like it is,* it could result in some unprecedented soul-searching among young Americans who find themselves inheriting a world they did not make, but in which they must live.

Telling it like it is may be very frightening to many older Americans. They see not only questioning and dissent, they see rejection, they see rebellion and, ultimately, they see the possibility of revolution. And it frightens them.

But it also frightens many young Americans because they don't understand why the "over 30" generation is not more concerned about the problems facing this nation of ours. And in a nation that is united by allegiance and by a shared heritage, it is not a hopeful symptom for the future when the old fear the young, when the suburbs fear the cities, when Americans of one color distrust Americans of another color and when votes are cast not thoughtfully, but in fear or in anger.

Accelerating change in this nation is producing a great many new problems and aggravating old ones, leaving nothing untouched, aside from your own personal concerns about just plain living, the changes related to the precarious balance of nations between war and peace—particularly in Southeast Asia, inflation and the high cost of living, the need for more and better jobs, the pollution of our environment, the increasing alienation of our people (young and old alike), the problems of racial injustice, and the darkening shadows of national poverty—face all of us today.

You can say that you did not cause these things—and you will be right. Most of you are not old enough to have to take that kind of blame, but, young as you are, you are now allowed to be full participants in this society of ours. This didn't used to be so. I guess I, myself, am a good example of the new era.

At the age of 32, I was selected to be the first president of the new state university to serve Dade and Broward counties. It is a great honor—and an even greater responsibility. But my point is that it would have been unthinkable to have given someone of my youth this responsibility and authority a few short years ago.

Like all the things we deal with, this change in attitude has two sides to it. It means greater opportunity and a far more significant status in society for people of your age and my age. But it also means the imposition of much greater responsibility at a very early state of adult life.

I don't mean just income or job responsibility. I mean the responsibilities of citizenship. The responsibility for making the kind of choices every adult constantly faces in a free society. When leaders were in their 40's and 50's and 60's, young people in their 20's were considered to be babes in arms. They were not expected to be very responsible in terms of citizenship—and they weren't usually given much of an opportunity to show they could be responsible citizens.

But now that has changed—and I think it has changed for the better. There is no reason whatever—and really there never was—why people of your age and my age could not take and handle this kind of responsibility. We have shown we could in one continuing situation throughout history—and that is in war. Now we have both the opportunity and the obligation to show we can do as much in peace . . . if that condition ever comes to this "war-weary" nation of ours.

What does what I've said so far really mean? How does it affect you and the things you do?

First of all, it means you have to understand the kind of world you are living in. It is no good just being "against" the world or the conditions in it. It has never been very different. It has never been kind or friendly or very peaceful. And this world has only made the bits and pieces of progress we call freedom at the expense of enormous human effort.

That human effort was made not by chance—but by choice. It was exerted by people just like you and me who lived with the belief and the conviction that things could be made better and that they could, in some small way, help achieve that condition. You have the same opportunity; that is, if you choose to take it.

I don't mean being concerned or being dedicated on a short-term basis. That's easy. The tough thing is to be concerned and dedicated all the time, even when your own personal and family demands are increasing or when there is a great desire to say, "the hell with it, let someone else worry about it for awhile."

My friends, there is no someone else. There is only you. No one will pick up the torch you put down. It will just go out and there will be that much less light and that much less fire and that much less effort to make of this world. A slightly better and somewhat more liveable place than it is today.

There are so very many ways of turning your back on the problems of your world. You can become involved in study. You can be concerned only about your own job. You can get immersed in the details of living. You can do all this and still complain, but who will "take up the battle?" Who will be concerned enough to do something about prejudice, about quality education, about justice and equal opportunity, about drug abuse, about inflation, about pollution, on our streets? *You can,* or you can just about the ghetto, about war and about crime give up.

You can take the position that nothing any of us can do will make the slightest bit of difference. And so you will no longer try. You will say you are a good and a fine person—but since the bad and the evil ones outnumber you, you are resigning from the team.

There is really no end to the excuses and, in time, you will see them all used. But I hope you will not yield. I hope you will not use them. I want you to stay just as concerned and just as dedicated as most of you are now. I want you to keep on questioning, to keep on being dissatisfied.

There are solutions to all the problems we face: but it's going to take an enormous and a sustained effort to find them. It's going to take some pretty blind faith and lot of brainpower. And it's going to take a "deep down gut belief" that things in America don't have to be the way they are.

We need to examine our nation's institution—the government, the educational system, the business establishment and so on—but we need much, much more to examine our personal priorities. Institutions are impersonal. They do nothing on their own, much as we may like to think they cause the evils that beset us. It is people who activate institutions. And it is people—people like you and me—who can change them, who can make them responsive.

All of us are aware of what has happened on American campuses since 1960. In the past decade, students have achieved greater personal freedom than in the prior half century. The doctrine of *in loco parentis*, for example, is almost gone. Parental rules governing campus activities are fast disappearing. And this is a result of the fact that students no longer want to be treated like children. They want to be treated like adults, and with that they must be willing to take on certain responsibilities. And in most cases, students have been very capable in assuming this new burden.

The 1960's also included much needed reforms in American higher education and I hope more will come, one of the changes that will greatly assist the learning experience is centered around the concept of giving students a major role in all university programs—from curriculum planning, to governance, to evaluation of programs and professors.

In addition, students are now turning their attention to problems off the campus, their concern about the "real world" will have a tremendous positive effect on the future programs of the nation's colleges and universities. The days when the institutions of higher education can divorce themselves from the problems of our society are over.

For example, last Wednesday, Earth Day, I spoke to an audience in Miami on the role of the urban university in the fight to improve our urban environment. Many activities were held to draw attention to how we are mistreating our environment, and Earth Day turned out to be fairly successful in that regard. But more needs to be done and one day's effort is certainly not going to be enough. Every day is really Earth Day, and I urge you to continue to be concerned about "Planet Earth."

But I hope that your concern for the environment is not based upon the fact that it's "in vogue" to talk about ecology these days. In fact, there are people making speeches now on this subject that did not even know the definition of ecology six months ago.

And I hope that you will not take the easy way out by blaming business and industry for all the problems of pollution and our environment. They have been the "scapegoat" for many attacks, but we must all share the responsibility for these vast problems and we must all work together—education, business, government and private citizens—to solve these complex problems facing our nation.

In addition, I hope that you will not forget that it was the black man that first started to "talk about" the problems of the environment. He was the first to complain about the stench of the ghetto, the lack of clean air and water, and the almost unbearable sanitary conditions that he lived in. But the black man's voice was not heard . . . or if heard, it was not listened to with much sincerity or desire to do something about it.

So, let's not "cop-out" by using the now fashionable jargon of ecology and forget some of the basic problems still facing Americans of all colors . . . whether those are problems related to education, to housing, to transportation, to better and more jobs, and so on.

There are lots of ways to help solve these problems—lots of ways to become involved in the many problems of society and most all of them will show results. Ladies and gentleman of the class of 1970, working to change our nation is a tough job, but by being involved together—businessman, teacher, government worker and citizen—it can be done!

One of the major ways to get involved is to be concerned about government and politics. A lot of people in this nation act as if politics is something "dirty." But in a free society, the political process *is* government, and the way to affect government or to make government responsive to the needs of society is to become involved in politics.

There will probably be on the ballot in November a constitutional amendment to give 18-year olds the right to vote in Florida. *I'm all for it.* But where 18-year olds have been given the right to vote, not too many of them use it. In fact, I'm disappointed to tell you that the percentage of voters under 30 who have used their right to vote is far below those voters over 30. That is not just non-involvement, that is a total refusal to use the most precious right that you and I have in this free nation of ours.

The day you have the privilege of voting, register to vote. Pick a party, *or*, if you don't like parties, pick a candidate. And then go to work for him. Every candidate needs all the help he or she can get, and none can get elected without it. If you want to be involved and see change, get out and work for it!

And when the election is over, don't forget about the people you elected. Keep a check on what they do, and what they don't do. And let them hear from you. No one in America—absolutely no one—has a more sensitive feedback mechanism than an elected officeholder. The problem is that they seldom hear from anyone except paid lobbyists, extremists on the far right or the far left, or from other officeholders. If they hear from you, they'll react. It's all part of the input every officeholder is constantly using, and it affects their votes in city councils, state legislatures, or the congress, and their vote in those governmental bodies affect your lives in many, many ways.

And your involvement will affect the future of Florida. You know, Florida is a wonderful place to live, to work, and to raise a family. It's a state that's among the big 10 of the 50. And it's the fastest growing of the big 10. How Florida grows and how it develops will decide how you and your children and their children will live. It will mean the difference between swimming in clean water or staying out of polluted water. It will mean good schools and good roads and good law enforcement, or bad schools, bad roads, and bad law enforcement. It will mean good jobs, or bad jobs, and possibly no jobs.

These are the kinds of choices you will be making—and, remember, if you do nothing, that is a choice too. *Negative, but still a choice.*

Tonight is a significant landmark in your lives. You will often look back to it as marking a dividing line in the time of your life. I hope you will also look back on it as marking a dividing line in the *tone* of your life. I want the tone of your life to reflect your involvement and dedication. Will you be a lifter or a leaner? A creator or a conformist? A driver or a drifter? These choices are yours, but, remember, the old biblical phrase: "As a man thinks . . . so he is."

In closing, let me say that it is not nearly as difficult for me to *tell it like it is*, as it will be for you to get involved and to stay involved tomorrow, the next day, and all the days that follow. Whether you agree or disagree, are for or against, is not half as important as being involved and taking a stand. This state and this nation are not finished. They are still being shaped and moulded. Don't let anyone—and don't let yourself through non-involvement—deprive you of the right . . . not just the chance, *but the right* to place your imprint on the America that you will leave to a new generation.

MERCURY CONTAMINATION—ADMINISTRATION'S ACTION—PAPER OR REAL

(Mr. MONAGAN asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. MONAGAN. Mr. Speaker, Time magazine on May 4, 1970, reported:

> Last week Interior Secretary Walter J. Hickel ordered Federal investigation of all discharges into the Great Lakes' U.S. waters . . . As for mercury, Hickel will stop all lakeside discharges if Governors of the affected states ask him to do so.

Time indicated the action was taken because the suspected ultimate poison methyl mercury constituted a clear threat to human health. Two months later, mercury residues have been found in fish and water in 20 or more States. As a result, last week, it was reported in the press, Secretary Hickel had now sent telegrams to the Governors of the effected States urging them to take strong action against plants which dump mercury into waterways. He further stated that if the Governors did not take action and that if the industrial plants did not stop dumping mercury that he would take action by asking the Justice Department to file suit. The drastic step proposed by Secretary Hickel amounts to public notice that he will not necessarily wait for the Governors to ask him to act before he carries out the water contamination responsibilities of his office which do not require him to ask prior permission of the Governors.

However, the Justice Department a few days prior to Mr. Hickel's statement indicated that it would file suit if requested by the Federal Water Quality Administration, of the Department of Interior, but that it would not file suits under the 1899 Refuse Act against pollution of navigable waters with refuse. Justice contends that it would use the 1899 act against "accidental and infrequent" pollution, however, the Federal Water Quality Administration must handle the mercury situation, because it is purposeful, continuing, and certainly frequent. A day to day dumping by an industrial plant is to be ignored under the strong 1899 Refuse Act by the Justice Department's guidelines to its attorney.

The actions of the Departments of Interior and Justice appear to be too late, too little, and paper thin and considerably less than their mandated responsibilities. We do not need new laws. We need responsible leadership. The mercury contamination problem warrants congressional hearing and I shall seek such a hearing.

UNJUSTIFIED CRITICISM OF PRESIDENT NIXON

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point.)

Mr. GERALD R. FORD. Mr. Speaker, the unjustified criticism of President Nixon by an official of the National Association for the Advancement of Colored

People has drawn an appropriate response from a Negro leader in Michigan, Ulysses W. Boykin. Mr. Boykin's comments were carried by the Michigan Chronicle in its July 18, 1970, edition. I include this news item at this point in the RECORD:

UNJUSTIFIED CRITICISM OF PRESIDENT NIXON

Uly Boykin, president of Urban Community Consultants Inc., black Detroit-based management consulting, research and economic development firm, last week blasted back at black leaders who maintain President Nixon is insensitive to needs and problems of minorities. Quoth Uly: "These critics are blind to the good the President has done. Such (unfounded) criticism is destroying public confidence in the executive branch of the government because of mistakes in policy committed by Democratic presidents who preceded him (Nixon) . . . What does Mr. Nixon have to do to convince my fellow blacks that they have never had a better friend in the White House. He has appointed more blacks to responsible positions, he has made more funds available to black minority business ventures, and he has made good on every promise—a record no other president can match."

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. KEE of West Virginia (at the request of Mr. ALBERT), for the 21st of July, on account of official business.

To Mr. ADAMS of Washington, for July 23 to July 27, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. SCHMITZ), to revise and extend their remarks and to include extraneous matter to:)

Mr. BUSH, today, for 5 minutes.

Mr. HOGAN, today, for 5 minutes.

Mr. MILLER of Ohio, today, for 5 minutes.

Mr. STEIGER of Arizona, today, for 10 minutes.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MAHON to revise and extend remarks to be made today and to include certain extraneous matter.

Mr. SMITH of Iowa to include extraneous matter in his remarks made in Committee of the Whole today.

Mr. YATES and to include extraneous matter.

Mr. COHELAN and to include extraneous matter during his remarks in the Committee of the Whole on H.R. 18515.

(The following Members (at the request of Mr. SCHMITZ) and to include extraneous matter:)

Mr. KYL.

Mr. BETTS.

Mr. ANDERSON of Illinois.

Mr. BEALL of Maryland.

Mr. HANSEN of Idaho.

Mr. SNYDER.

Mr. WYMAN in two instances.

Mr. MINSHALL in three instances.

Mr. DERWINSKI in two instances.

Mr. COLLINS in five instances.

Mr. LANDGREBE.

Mr. STEIGER of Arizona.

Mr. HOGAN.

Mr. EDWARDS of Alabama.

Mr. FOREMAN.

Mr. MIZE.

Mr. DON H. CLAUSEN.

Mr. JOHNSON of Pennsylvania.

Mr. WHALEN.

Mr. PELLY.

(The following Members (at the request of Mr. ANDERSON of California) and to include extraneous matter:)

Mr. RIVERS.

Mr. WILLIAM D. FORD.

Mr. BOLLING.

Mr. EILBERG in two instances.

Mr. JACOBS.

Mr. O'NEILL of Massachusetts in two instances.

Mr. HELSTOSKI in two instances.

Mr. FULTON of Tennessee in two instances.

Mr. WOLFF.

Mr. HANNA in five instances.

Mr. HATHAWAY in two instances.

Mr. STOKES.

Mr. KYROS.

Mr. MARSH.

Mr. DIGGS in three instances.

Mr. BINGHAM.

Mr. PATTEN.

Mr. DINGELL.

Mr. DANIELS of New Jersey.

Mr. RODINO in three instances.

Mr. FOUNTAIN in two instances.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table, and, under the rule, referred as follows:

S. 2104. An act for the relief of Milton Kyhos; to the Committee on the Judiciary.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 417. An act to authorize the Secretary of the Interior to convey certain lands in New Mexico to the Cuba Independent Schools and to the village of Cuba;

S. 778. An act to amend the 1964 amendments to the Alaska Omnibus Act;

S. 885. An act to authorize the preparation of a roll of persons whose ancestors were members of the Confederated Tribes of Weas, Piankashaws, Peorias, and Kaskaskias, merged under the Treaty of May 30, 1854 (10 Stat. 1082), and to provide for the disposition of funds appropriated to pay a judgment in Indian Claims Commission Dockets numbered 314, amended, 314–E and 65, and for other purposes; and

S. 3685. An act to increase the availability of mortgage credit for the financing of urgently needed housing, and for other purposes.

ADJOURNMENT

Mr. ANDERSON of California. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 41 minutes p.m.), the House adjourned until tomorrow, Wednesday, July 22, 1970, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speakers' table and referred as follows:

2226. A letter from the Administrator, Small Business Administration, transmitting a report on disbursements to small business investment companies during June 1970, pursuant to section 301 of title III of Public Law 91–151; to the Committee on Banking and Currency.

2227. A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to establish within the Department of the Interior the position of an additional Assistant Secretary of the Interior, and for other purposes; to the Committee on Interior and Insular Affairs.

2228. A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to provide for financing the economic development of Indians and Indian organizations, and for other purposes; to the Committee on Interior and Insular Affairs.

2229. A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to amend certain laws relating to Indians; to the Committee on Interior and Insular Affairs.

2230. A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to regulate the importation, manufacture, distribution, storage, and possession of explosives, blasting agents, and detonators, and for other purposes; to the Committee on the Judiciary.

2231. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated April 17, 1969, submitting a report, together with accompanying papers and an illustration, on Six Runs River, N.C., requested by a resolution of the Committee on Public Works, House of Representatives, adopted August 16, 1950. No authorization by Congress is recommended as the desired improvement has been approved for accomplishment by the Chief of Engineers under the provisions of Section 205 of the 1948 Flood Control Act, as amended; to the Committee on Public Works.

2232. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated December 24, 1969, submitting a report, together with accompanying papers and illustrations, on Sabine-Neches Waterway, Tex., requested by a resolution of the Committee on Rivers and Harbors, House of Representatives, adopted April 11, 1946, and in response to an item in section 11 of the Flood Control Act approved July 24, 1946. No authorization by Congress is recommended as the desired improvements essentially have been provided under other authorizations; to the Committee on Public Works.

2233. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated November 18, 1969, submitting a report together with accompanying papers and an illustration, on the Inland Route, Mich., requested by a resolution of the Committee on Public Works, House of Representatives, adopted February 24, 1960; to the Committee on Public Works.

2234. A letter from the Secretary of Health, Education, and Welfare, transmitting the first annual report on services to families receiving aid to families with dependent children, pursuant to section 402(c) of the Social Security Act, as amended; to the Committee Ways and Means.

RECEIVED FROM THE COMPTROLLER GENERAL

2235. A letter from the Comptroller General of the United States, transmitting a report on potential savings by centralized control of overseas air passenger transportation; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. POAGE: Committee on Agriculture. H.R. 15560. A bill to amend the Federal Insecticide, Fungicide, Rodenticide Act, as amended (7 U.S.C. 135–135k), to prohibit the importation of certain agricultural commodities to which economic poisons have been applied, and for other purposes; with an amendment (Rept. No. 91–1320). Referred to the Committee of the Whole House on the State of the Union.

Mrs. HANSEN of Washington: Committee of conference. Conference report on H.R. 17619 (Rept. No. 91–1321). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. POAGE (for himself and Mr. BELCHER):

H.R. 18546. A bill to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. BENNETT:

H.R. 18547. A bill to amend title 10, United States Code, to provide for the apprehension, restraint, removal, and delivery of certain persons serving with, employed by, or accompanying the Armed Forces outside the United States, and for other purposes; to the Committee on Armed Services.

H.R. 18548. A bill to amend title 18, United States Code, to subject certain nationals or citizens of the United States to the jurisdiction of the U.S. district courts for their crimes committed outside the United States; to the Committee on the Judiciary.

By Mr. BETTS:

H.R. 18549. A bill to amend sections 902(b) and 902(c) of the Internal Revenue Code of 1954 to reduce the 50-percent requirement to 10 percent between first and second levels and to include third-level foreign corporations in the tax credit structure if the 10-percent test is met; to the Committee on Ways and Means.

By Mr. CELLER:

H.R. 18550. A bill to amend the act of June 10, 1938, relating to the participation of the United States in the International Criminal Police Organization; to the Committee on the Judiciary.

By Mr. FOLEY:

H.R. 18551. A bill to provide for the establishment of the George Washington Memorial Institute for the Social Sciences; to the Committee on Education and Labor.

By Mr. HALPERN:

H.R. 18552. A bill to amend section 13 of title 17, United States Code; to the Committee on the Judiciary.

By Mr. HOGAN:

H.R. 18553. A bill to amend title 38 of the United States Code to extend by 1 year the period in which guarantee and insurance entitlement may be used by World War II veterans; to the Committee on Veterans' Affairs.

By Mr. McMILLAN:

H.R. 18554. A bill to amend section 8 of the act approved March 4, 1913, (37 Stat. 974), as amended, to standardize procedures for the testing of utility meters; to add a penalty provision in order to enable certification under section 5(a) of the Natural Gas Pipeline Safety Act of 1968, and to authorize cooperative action with State and Federal regulatory bodies on matters of joint interest; to the Committee on the District of Columbia.

By Mrs. MAY (for herself, Mr. McCLURE, and Mr. HANSEN of Idaho):

H.R. 18555. A bill to amend the Soil Conservation and Domestic Allotment Act, as amended, to permit sharing the cost of agriculture-related pollution prevention and abatement measures; to the Committee on Agriculture.

By Mr. OBEY:

H.R. 18556. A bill to amend the National Environmental Policy Act of 1969 to provide for class actions in the U.S. district courts against persons responsible for creating certain environmental hazards; to the Committee on Merchant Marine and Fisheries.

By Mr. PELLY:

H.R. 18557. A bill to authorize the President to restore and maintain the military balance in the Middle East; to the Committee on Foreign Affairs.

By Mr. ROSTENKOWSKI:

H.R. 18558. A bill to amend the Internal Revenue Code of 1954 to provide refunds in the case of certain uses of tread rubber; to the Committee on Ways and Means.

By Mr. SANDMAN:

H.R. 18559. A bill to establish a Department of Education and Manpower; to the Committee on Government Operations.

By Mr. TALCOTT:

H.R. 18560. A bill to amend section 8c(6)(I) of the Agricultural Marketing Agreement Act of 1937 to permit projects for paid advertising under marketing orders applicable to lettuce; to the Committee on Agriculture.

By Mr. ALEXANDER:

H.R. 18561. A bill to amend the Internal Revenue Code of 1954 to provide for the continuation of the investment tax credit for small businesses, and for other purposes; to the Committee on Ways and Means.

By Mr. BROYHILL of Virginia:

H.R. 18562. A bill to reorganize the government of the District of Columbia by the establishment of a Board of Governors to replace the Commissioner of the District of Columbia and the District of Columbia Council, and for other purposes; to the Committee on the District of Columbia.

H.R. 18563. A bill to deem service with the United States-Puerto Rico Commission on the Status of Puerto Rico as service with an executive agency, and for other purposes; to the Committee on the Judiciary.

By Mr. BURKE of Massachusetts (for himself and Mr. BETTS):

H.R. 18564. A bill to amend the Tariff Schedules of the United States with respect to the rate of duty on olives packed in certain airtight containers; to the Committee on Ways and Means.

By Mr. CHAMBERLAIN:

H.R. 18565. A bill to amend section 7275 of the Internal Revenue Code of 1954 (as added by the Airport and Airway Revenue Act of 1970) to require that airline tickets, with respect to the transportation of persons by air which is subject to Federal tax, show the amount of such tax separately from the cost of the transportation involved; to the Committee on Ways and Means.

By Mr. FALLON (for himself, Mr. HECHLER of West Virginia, Mr. KEE, Mr. BYRNE of Pennsylvania, Mr. KLUCZYNSKI, Mr. JOHNSON of Pennsylvania, Mr. DENT, Mr. MADDEN, Mr. FRIEDEL, Mr. FISHER, Mr. McMILLAN, Mr. DONOHUE, Mr. SAYLOR, Mr. FOREMAN, Mr. OLSEN, Mr. ROONEY of Pennsylvania, Mr. RIVERS, Mr. FULTON of Pennsylvania, Mr. BUTTON, Mr. MOLLOHAN, Mr. DULSKI, and Mr. WATKINS):

H.R. 18566. A bill to amend the Tariff Schedules of the United States with respect to the duties on stainless steel sheets and on articles made from such sheets, to the Committee on Ways and Means.

By Mr. FULTON of Tennessee (for himself and Mr. BROYHILL of Virginia):

H.R. 18567. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges and quality of medical service; to the Committee on Ways and Means.

By Mr. McMILLAN (for himself (by request) and Mr. DAWSON, Mr. FUQUA, Mr. FRASER, Mr. JACOBS, Mr. HUNGATE, Mr. KYROS, Mr. BLANTON, Mr. NELSEN, Mr. SPRINGER, Mr. O'KONSKI, Mr. HARSHA, Mr. BROYHILL of Virginia, Mr. WINN, Mr. GUDE, Mr. THOMSON of Wisconsin, Mr. HALL, Mr. STAGGERS, Mr. JARMAN, Mr. OTTINGER, Mr. PREYER of North Carolina, Mr. CARTER, Mr. HANSEN of Idaho, Mr. HASTINGS, and Mr. HORTON):

H.R. 18568. A bill to provide support for the health manpower needs in the medical and dental educational programs for private nonprofit medical and dental schools in the District of Columbia; to the Committee on the District of Columbia.

By Mr. ROTH:

H.R. 18569. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure that U.S. requirements for low-cost energy will be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

By Mr. SAYLOR (for himself, Mr. BERRY, Mr. BURTON of Utah, Mr. KYL, Mr. STEIGER of Arizona, Mr. POLLOCK, Mr. McCLURE, Mr. DON H. CLAUSEN, Mr. WOLD, Mr. CAMP, Mr. LUJAN, Mr. ASPINALL, and Mr. HALEY):

H.R. 18570. A bill to establish within the Department of the Interior the position of an additional Assistant Secretary of the Interior, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 18571. A bill to provide for financing the economic development of Indians and Indian organizations, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 18572. A bill to amend certain laws relating to Indians; to the Committee on Interior and Insular Affairs.

By Mr. McCULLOCH (for himself, Mr. GERALD R. FORD, Mr. ASHBROOK, Mr. AYRES, Mr. BETTS, Mr. BOW, Mr. DON H. CLAUSEN, Mr. CRAMER, Mr. MACGREGOR, Mr. McCLORY, Mr. MAYNE, Mr. MINSHALL, Mr. POFF, Mr. RAILSBACK, Mr. SMITH of New York, Mr. TAFT, and Mr. WIGGINS):

H.R. 18573. A bill to regulate the importation, manufacture, distribution, storage, and possession of explosives, blasting agents and detonators, and for other purposes; to the Committee on the Judiciary.

By Mr. BROYHILL of North Carolina:

H.J. Res. 1318. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. DENNEY:

H.J. Res. 1319. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. GROVER:

H.J. Res. 1320. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. SYMINGTON:

H. Con. Res. 690. Concurrent resolution relating to treatment and exchange of military and civilian prisoners in Vietnam; to the Committee on Foreign Affairs.

By Mr. STAGGERS:

H. Res. 1152. Resolution providing for printing additional copies of House Report 91-1319; to the Committee on House Administration.

By Mr. BROOMFIELD:

H. Res. 1153. Resolution urging withdrawal of Russian personnel from the Middle East; to the Committee on Foreign Affairs.

By Mr. SYMINGTON:

H. Res. 1154. Resolution urging withdrawal of Russian personnel from the Middle East; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California:

H.R. 18574. A bill for the relief of Miss Maria Fedelia Martinez Hernandez; to the Committee on the Judiciary.

By Mr. HELSTOSKI:

H.R. 18575. A bill for the relief of Salvatore Baio; to the Committee on the Judiciary.

By Mr. WRIGHT:

H.R. 18576. A bill for the relief of Mrs. Crescencia Lyra Serna and her minor children, Maria Minde Fe Serna, Sally Garoza Serna, Gonzalo Garoza Serna, and James Garoza Serna; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII,

428. The SPEAKER presented a memorial of the Legislature of the State of California, relative to Pyramid Lake natural resources, which was referred to the Committee on Interior and Insular Affairs.

PETITIONS, ETC.

Under clause 1 of rule XXII,

550. Mr. PHILBIN presented a petition of the Newton, Mass., Board of Aldermen, calling for a reaffirmed U.S. commitment to a lasting peace between the Arab States and Israel arrived at by direct negotiation and by recognition by the Arab States of sovereignty of the State of Israel, which was referred to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

YOU DARE NOT FAIL—ADDRESS

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1970

Mr. COOPER. Mr. President, one of Kentucky's outstanding citizens in the field of industrial development is also one of our State's most devoted friends of education. He is Mr. Rexford S. Blazer, chairman of the board of Ashland Oil, Inc. In a recent commencement address entitled "You Dare Not Fail—You Must Succeed," delivered at Union College, Barbourville, Ky., Mr. Blazer voiced some challenging statements about some of the assumptions many people have made in connection with the present generation of college students. Mr. Blazer, who points out that Socrates and Cato and other ancients were dealing with the youth problem long ago, discusses some of what he calls the divisive myths and slogans such as the generation gap and the establishment.

Mr. President, I ask unanimous consent that Mr. Blazer's address be printed in the Extensions of Remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

YOU DARE NOT FAIL—YOU MUST SUCCEED

(By Rexford S. Blazer)

It has been more than thirteen years since I enjoyed the privilege of visiting this campus on Senior Day to talk with high school students who had been invited to be the guests of Union College on that occasion. At that time I emphasized my feeling that the Commonwealth of Kentucky has many reasons to be proud of Union College; its scholastic standards are notable and many of its graduates have become leaders in Kentucky and throughout the nation.

And I mentioned that even though such occasions as Senior Day and Commencement are primarily for the purpose of honoring students, it is often true that the members of the older generation benefit most from such occasions. For us, there is the very real pleasure and inspiration derived from association with attractive, ambitious young men and women at the threshold of a future bright with promise.

There is, of course, the temptation of an older person to lecture the young. This consideration imposes a duty upon me not to be impossibly boring and long-winded—for I realize that brevity is almost always a virtue. When I was last here I told the story of an uncle who took his six-year-old nephew to church. After the service, uncle said, "And how did you like it, Johnny?" To which his nephew replied, "I liked the music but the commercial was too long." So I'll try to keep the commercial within reasonable balance.

Nevertheless my position on this Sunday afternoon affords me a rare opportunity to congratulate you, your parents and your instructors on this moment of high accomplishment in which each of you has played an important part.

It is good to be invited back to Union College and to see the physical evidence of the great progress which has occurred here during the intervening years. Were this a less formal occasion, I would prefer that we found a comfortable, quiet place and simply sat down and talked. Each of us might profit and our exchange of ideas would be stimulating—at least to me. At heart, I am still a student myself and experience has continued to teach me that what I don't know far exceeds what I think I know.

Within the hour you graduating seniors will make the transition from students to alumni—and the beginning of a new journey toward horizons not yet visible. I wish only that I could make the trip with you and that we could return thirty years hence to ask where we had been, what we had learned, and what had been accomplished.

Although my wish will not be granted, ancient tradition requires that today I issue the charge and endeavor to point a course. I well remember my grandfather's words when I was preparing to leave the University of Illinois in 1928 to hitchhike several hundred miles, first to Kentucky and then to Cleveland, in search of a job. "Many people will offer you advice," he said. "The art is choosing your counselors wisely."

For today I have been chosen as your counselor. Whether this was a wise choice will be for you to judge. One thing is certain: I am honored by the opportunity you have given me.

As a Kentuckian and a senior officer of Kentucky's largest home-based industrial firm, I have strong personal feeling of our Kentucky colleges and universities which are doing such an outstanding job under conditions which are often trying, worrisome and discouraging. I am a serious worker in behalf of my alma mater, the University of Illinois, and of Mrs. Blazer's alma mater, the University of Kentucky; and with great satisfaction I serve as Regent of The University of the South at Sewanee, Tennessee. Mrs. Blazer is a Trustee of the University of Kentucky—only the second woman to ever serve in that capacity—and she served for four years as Vice Chairman of the Governor's Commission on Higher Education in Kentucky. Additionally, she has given leadership and has worked hard in Kentucky and at the national level to bring Educational Television into our homes. So education is of profound interest to our family. Events occurring in recent weeks on college and university campuses across the nation have brought real sadness to our hearts and are to us a matter of deep personal concern.

Commencement addresses at colleges and universities in recent years have become repetitive in theme: Speaker after speaker, from government and education and business, has dwelt on the theme of law and order. Their conclusions have also been practically identical: "Freedom perishes unless law and order prevail." All responsible political segments agree on this thesis—they know that freedom is not free! These are, of course, fundamental truths for any organized society, but it is a mistake to oversimplify. The last resort, as Justice Holmes once observed, for the preservation of social order is the policeman's club. But it must be the *last* resort. Riots and civil disorder will rarely occur where the citizens are in basic accord on fundamental values. But a democratic society is in danger when there is profound disagreement on its underlying assumptions—what might be called its constitutional axioms. Thus, the effort of responsible citizens must be toward accord on the deep issues arrived at through persuasion and reasoned discussion, not through force and violence.

It's essential also in order to preserve our freedoms that we resist the efforts of forces designed to divide us—and having divided us, to exploit us and, eventually, to conquer us. One of the most diabolic of all the techniques of discord is the repeated insistence on "The Generation Gap." Frankly, I don't know where the Generation Gap occurs. Is it after high school? After college? After age 30? Or is the trick of this illusion that it automatically compels the listener—any lister—to identify himself as either young or old, committing him to take sides in a

contest, instead of participating rationally in a discussion?

Teachers of the Latin and Greek classics must be amused: Socrates, Cato, and dozens of other philosophers and critics have pondered over youth and prescribed for its problems only to be succeeded by the young who in turn grew old and raised a quizzical eyebrow at their progeny. Their writing was confined to philosophic observation, without the amplifications of mass media or an opportunity for immediate and direct reply from the young on video tape. It is the accelerated speed of communications in the twentieth century that encourages quick, hot replies in the place of the more carefully considered reactions of the past. All the more reason, I would suggest, for us to preserve communications at all age levels and to reject divisive slogans like "Generation Gap."

The situation is aggravated, I think, by overemphasis on youth as a distinct class in our society. Even in sophisticated circles, there is accepted an oft-repeated fallacy: Half our population is under twenty-five. That's not true, and probably never will be true within our lives. It was true once—very briefly—in 1920. Moreover, our median age is growing older because our birth rate is declining and people are living longer; also an important segment of the under-25 group includes babies still in diapers, school children and immature youth.

But I'm not talking about statistics. I'm talking about the cleavage so erroneously implied—perhaps first popularized in a book about nephew and uncle who exchanged life roles. It was called The Generation Gap.

In truth, there are no such distinct separations of ages—but a continuity of ages. Divisions into classes based upon birth dates are arbitrary and unreal.

And then there is another divisive myth called "The Establishment"—somehow it is no longer the thing to be a "doer". It is considered more respectable to be a "will-doer" (meaning will do in the future), or perhaps an "undoer" which is a fitting name for students who want to undo what has been done by earlier generations. They of the so-called Establishment have made it possible for their children to grow up in a world which, with all its imperfections, is still far better than anything their offspring have yet contributed.

Our generation has had its share of successes and failures—and so will yours. If your generation has more successes and fewer failures, we will say "God Bless You!"—but we feel rather strongly that the shouters, the burners, the rioters of your generation, even though they be only a very vocal minority, should hold their peace, go to work and be satisfied to rest their cause on the results of their own labors—their own successes and failures.

May I say that failure and success are relative terms. Neither exists in a vacuum, but only in relation to specific situations.

We cannot say it has been a failure to take an empty continent and in two centuries convert it into the most prosperous nation in the world.

We cannot say it has been a failure to accept millions of immigrants, most without education, and transform them into millions of prosperous citizens—many of whom have reached positions of outstanding leadership in business, science, education, the professions and the arts.

We cannot say it is a failure to produce the best educational system in the world, and the highest level of advanced education anywhere.

Seldom has there been a success story like ours—and most of it accomplished without excessive bureaucratic controls. It has been the triumph of democracy, and even today our so-called "poverty level" is above the average income of all families in the Soviet Union.

Our country has not failed. Our standards and our levels of aspiration have simply been raised.

But we would be blind if we failed to see that we are passing through something very different at least in degree and scope than we have known before. Some call it a revolutionary age—yet virtually every age of our country has thought of itself in these terms. We are told that the modern revolution was touched off by the explosion in new knowledge—in the first instance, scientifically and technologically based—and that we now face incredibly complicated by-products of this scientific-technological revolution which are mainly political, social, economic and cultural in character.

Others see us reacting mechanically to another social force: the stress of too many people in too little space. Robert Audrey, social anthropologist, goes so far as to imply that a small part of our society may in fact be following the example of the lemming—reacting to congestion with stress symptoms—which, in our case, may include narcotics, antisocial behaviors and other forms of self-destruction.

Oversimplifications of this kind are gravely misleading. Our tendency today to talk in terms of mass morality may in fact be a distraction in itself. For the real problem today is individual morality: You and I are not only our brother's keeper, we are our own keeper.

Our fascination with the mass, with the big generality—with mountainous figures—tends to divert our attention from the rise in individual crimes, individual cheating, individual moral deterioration, and general disruption inspired by individuals. It provides an atmosphere for mob psychology—if others do it, so may I. All manner of vulgarity and aggression is justified in the name of doing the "in" thing and even its most disgusting exponents are dignified by newspaper and TV coverage.

Carried to its limit, the logical progression is to a dictatorship—a total loss of the very freedom for which we strive—as anarchy gives way to the imperatives of order.

The test of your generation could well be whether it can continue the forward progress of this country, while preserving the timeless values on which our civilization rests. If it fails, the alternative is to continue down the road of rebellion, destruction of property, defiance of authority until we must choose between the logical consequences—a country destroyed by revolution and delivered into the hands of International Communism or a homemade dictatorship demanded by the final need for centralized authority to prevent rebellion and mob rule. The clear lesson of history is that violence begets violence.

It is our great good fortune to meet here today, on this peaceful campus, with students, parents, faculty and a college administration under the strong leadership of President Mahlon A. Miller, who together have succeeded in preserving mutual respect and a willingness for each group to play its appropriate part in an institution dedicated to the best interests of our young people.

It is difficult indeed for us to realize that our world and our country and many of our colleges and universities are now in a state of crisis, approaching collapse, and that several have suspended normal functions. As much as we might like to isolate ourselves and our thinking from what is going on around us, we should not do so even if we could. Every one of us is a part of the world and if we would enjoy the ageless wonders and beauties of our world, we must contribute to the limits of our abilities to the solution of its problems which threaten the very future of civilization.

Your intelligence and your skills, your reason, your sensitivity, your active participation will be required in a world which is profoundly insecure—a world which perhaps was never designed to be totally secure in the Great Scheme of things. Security and happiness are never guaranteed—but we can tremendously improve the odds if we proceed intelligently.

And in the final analysis, solutions to our problems, most of which are inherently moral in nature, will not be won by an exploitation of differences but by a fusing of understanding and compassion based on fundamental Christian attitudes.

One could talk for hours about recent campus problems and we could speculate on the future outcome. The Communists told us many years ago that by 1972 every college and university in this nation would be closed by revolution. To our horror, we suddenly realize that this could be true! With hundreds of colleges and universities closed down for many days, or for the balance of the spring semester, there is room to believe that the Communist instigators and promoters of campus violence will do everything possible to keep many of our large educational institutions from opening this fall. If anyone here today doubts that our campus problems are being compounded and our differences magnified, or that the fires of hate among student groups are being fed by the Communist philosophy advocated by representatives of Communist-affiliated organizations which are providing financial support and firearms for the organizers they send from campus to campus—he is gravely uninformed. Documented evidence supporting my statement is freely available.

Those of us who would preserve peace and learning and mutual respect on our campuses are opposed by the same enemy who drew us into the Vietnam conflict. Whatever the merits of our initial involvement in Vietnam, we must now unite in seeking an honorable and orderly disengagement which makes adequate provision for the security of those whom we committed ourselves to defend. Our differences as to methods of de-escalation and ultimate withdrawal are sharply divisive, perhaps because our patience has been sorely tried and we have grown cynical as to our mission. But the national interest calls, above all else, for an end to internal feuds and civil strife. We must find our solution of this desperately urgent problem in a spirit of cooperative unity. Our present condition of anger and hatred for each other is the sure and certain road to a loss of national self-respect and purpose which would leave us helpless before the enemies of freedom.

Likewise, on our campuses nothing is gained by endeavoring to rationalize or justify riots, property destruction and violence. Defiance of the canons of organized life by the disaffected and estranged is practically guaranteed to end in the withdrawal of public support for higher education, with disastrous consequences for us all, but especially for our youth.

Let me tell you candidly how I feel about this so-called younger generation—those who find themselves, willingly or unwillingly, involved in the turbulence of many of our university campuses. These young people are part of a college generation that is probably one of the most idealistic and humane of our history. These young people, to a greater degree than any previous generation, are devoted to racial understanding and justice and to religious tolerance.

I think that the human idealism of so many young people today, immature as their expression may be at times, is nevertheless a reflection of the fact that our world has moved so swiftly in the past twenty years. There has, indeed, been a tremendous ex-

plosion of knowledge, along with instant communications, with the result that this college generation, I believe, includes the best informed, the most worldly, and the best prepared class of graduating seniors that the world has ever known. You have passed your childhood in this postwar era of high mobility and instant communications and to a large degree it may well be that this exposure to a wide variety of American communities and cultural forms lies at the root of your tolerance and idealism. I remain very optimistic that as the great majority of today's young people mature, this idealism will be channeled in increasingly constructive directions, giving rise to a high degree of compassion and social commitment, a merging of our finest cultural traditions, and an exalted personal freedom based upon mutual respect.

If I should endeavor to put my finger on the one critical weakness of this college generation, it would be one that has existed throughout history—the inclination of a minority to follow any leader who promises an immediate release from authority, responsibility or the necessity for continued respect for established conventions. Of course, this willingness of some to be attracted by radical activists is not limited to youth. Labor unions in industry are of genuine value to the workers of this country but the substantial gains which they frequently accomplish for their membership are often overshadowed and destroyed by the acts of unreasoning and radical leadership. Just as the casual union member who is loyal to the purposes and objectives of his employer too often lets union leadership fall into the hands of the more radical and less restrained members, so do the large majority of our college students who just want to be left alone to pursue their education become victims of the more vocal and restless minority who, without regard to merit or experience, are impatient to usurp authority and to dominate the docile mass.

In recent weeks construction workers in New York and thousands of workers elsewhere have demonstrated their unwillingness to tolerate certain students, teachers, and administrators who advocate violent upheaval in our society. This should be no surprise, for these are mature workers who have struggled to earn their places in society, the right to own their own homes and to raise and educate their children in peace. They labor to earn wages and salaries and to pay the taxes that have built and support universities, colleges, courts of law, highways, cities and a thousand other structures and services for the use and welfare of society. And from their taxes are financed a benevolent government that endeavors to protect every one of us in our lives and property and to provide all the social services required for the aged, the sick and the very young. Would anyone expect these stable workers whose labors have done so much to provide the endless opportunities which are available to the succeeding generation, to stand still very long for the irrational irresponsibility of a minority of students, most of whom have never labored a day in their lives, have never paid a penny tax, have contributed almost nothing to the institutions of this country; and who now express their lack of appreciation through obscenities and defiance of authority at every level from college president to the President of the United States?

All of these failures are not with students—some of them are among the faculty and the administrators of some of those institutions which are in trouble. To me, it is ludicrous for corporate and private taxpayers to pay the salaries to feed, house and clothe those administrators who fail to perform the functions of their office; to recompense teachers and professors who use their positions to expound their own biased opinions without recognizing that, in the true spirit of academic pursuit of truth, there are divergent opinions; and to contribute to the cost of the education of those students who dissipate time, defy authority or destroy property.

We have so many other problems confronting us today—pollution, overpopulation, poverty, hunger, neglect—that I can't help but wonder why youth's energy cannot be directed toward solving these problems. I was, for example, greatly impressed earlier today when several students asked to talk informally with me about the pollution problems of the petroleum industry. Here, at their very best, were interested, intelligent and thoughtful young people wanting to broaden the horizon of their own thinking rather than burning down buildings and demanding the right to run our colleges and universities, the right to decide when to have law and order and when to ignore them, and the right to dictate the policies of our nation and to criticize our President and those to whom authority has been delegated through the democratic processes.

To me, it is as simple as this: The college graduates of 1970, perhaps the most outstanding such group this world has ever known, may very well have the capability of assuming increasing responsibilities and making greater contributions sooner than those who have preceded them. The fact that 1970's graduates may be better informed and more mature at this point in their lives, is a tremendous plus for the future of America. This blessing, however, will not give you and your counterparts across the country the right to demand immediate authority or to dictate to others who have more and better experience, have made more contributions and are, therefore, entitled to the right of leadership until you are qualified to take over. Looking back over the forty-two years which have elapsed since I received my degree at the University of Illinois, I am grateful that God, somehow, gave me the patience, the ability and the humility to recognize that the privilege of leadership, and the opportunity and the right to direct others, were goals which I might some day achieve if I was able to labor and to learn and to wait until these marks of progress were earned and, having been earned, were deserved.

If you graduates are able to relate what I have tried to say to all here this afternoon to the tremendous opportunities which lie before this graduating class, along with the frightening risks and dangers which threaten to engulf everyone of us in this nation, I hope you agree that my counsel to you arises from the high respect I have for the vast majority of our young people, for the faculty and teachers who are the mainspring of our educational system, and for our college and university administrators who are working so diligently, often struggling against great odds to maintain the institutions of learning for the benefit of the young people of today and tomorrow.

It is because of the tremendous worth of the vast majority of those who are a part of our educational system; because informed and intelligent young people are our greatest hope for the leadership and preservation of our nation tomorrow; and because of the prayers and compassionate interest of your parents and the sacrifices they have so willingly made to provide educational opportunities for their children, that we must do whatever is necessary to make sure that in the future every American college and university can look forward to pleasant and peaceful commencement exercises. For this is a time when the finest groups of our nation's young people leave behind their college years, sometimes arduous but always happy, to take their places in a world which is often demanding but will always promise just rewards to those who contribute their fair share. May you enter into your responsibilities as adults with a discipline of mind and spirit, a love of learning and a respect for truth and the rational processes by which it is to be discovered, upon which alone a civilized life can be built.

So to you graduating seniors and to all the others who are gathered here because of their sincere interest in you, I say that you represent the finest examples of human aspiration and hope. You are, roughly speaking, the 300,000th generation of mankind. Generations yet unborn, count upon your judgment, your wisdom, your good works. You dare not fail. You must succeed. And as you leave these hallowed halls of learning, remember that what you do and what you say can mark you as the most remarkable and most successful generation of all time.

You will find opportunities wherever you look and you will some day assume the positions of authority and responsibility which have been vacated by the generation which preceded you. And if God in His greatness and wisdom gives you the strength to prevail in your time, then you can expect some day to stand where President Miller, also where Mr. Edward L. Cawood and Mr. Richard Eubanks who are receiving Honorary Degrees, and others of our generation are privileged to be today—looking to the future which, because of your graduating seniors, surely will be brighter and better than ever before. May God be your constant partner along life's road which will be beset with problems and challenges but can reward you with peace, happiness and endless satisfaction!

Thank you for the privilege of sharing this significant occasion with you.

SOUTH VIETNAM IS TASTING VICTORY

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. DON H. CLAUSEN. Mr. Speaker, many times when we are away from a given situation, we can return to it and view it with greater clarity. Columnist R. D. Heinl, Jr., writing in the San Diego Union, has returned to Vietnam following an 18-month absence.

In his article "South Vietnam Is Tasting Victory," Mr. Heinl discusses who is winning, the success of the Cambodian operation, the status of Vietnamization, and the present strength of the Communists.

Having initially advanced the "phase-in phaseout concept" through the creation of a free Asian security organization, and because I feel Mr. Heinl's observations will be of interest to my colleagues, I request that this editorial be printed in the RECORD:

[From the San Diego Union, June 28, 1970]

SOUTH VIETNAM IS TASTING VICTORY

(By R. D. Heinl, Jr.)

Here is South Vietnam, the nearer you approach the front, the brighter things look. Despair and gloom and rumor are always thicker in the rear than among the riflemen.

Combat soldiers know this well. And even in this topsy-turvy war with no precedent, the pall lightens and confusion diminishes

as the distance lengthens from domestic America.

Here, then, are first impressions that registered most vividly on my return to Vietnam after 18 months absence from the war.

1. In the field, the war itself, we are winning. Inside South Vietnam, the Viet Cong fighting (or "main force") units shattered themselves at Tet in 1968, and have been pushed away from the populated areas where a guerrilla army derives its support and sustenance. The remaining fighting units, virtually all North Vietnamese, even in the far south, have also been shouldered back into remote and inhospital sanctuaries. The government has never been stronger in the countryside.

2. The low-risk virtually sure-thing Cambodian incursions proceeded on schedule and lived up to—or exceeded—every prediction except President Nixon's forecast that we would find and overrun some kind of chopstick "Pentagon" in the jungles of Cambodia.

The real military objective of the Cambodian raids—to dislocate the Communists' logistic system in the south—is being handsomely attained.

Out of about 320 enemy base areas painstakingly plotted by intelligence along the far side of the Cambodian frontier, only 70 remain undiscovered.

Meanwhile, like archeologists probing for lost cities in the jungle, our soldiers and the South Vietnamese worked ahead tracing tunnels, opening caches, destroying what they could not haul away, and heaped up enemy documents to be translated and analyzed. Incidentally, they have killed just under 10,000 Communist troops in the process.

No doubt is expressed anywhere that the President's word will not be kept and the last U.S. soldier will be out of Cambodia by Tuesday.

3. Vietnamization has been greatly advanced. In the first place, the capture or destruction of many months' supplies and material (not just the rice, but more important, the weapons and ammunition, all of which come from abroad) incapacitates the Communists for many months to come.

The period immediately ahead—eight months to a year—is the crucial time when ARVN (the Army of the Republic of Vietnam) attains its final buildup and fighting capability and when, correspondingly, it will be most vulnerable to spoiling attacks by the Communists. The sinews of such attacks during the months ahead are what we are destroying in Cambodia.

In the second place, Cambodia has served as a graduation exercise for the ARVN. For the first time in its weary history, the ARVN has taken the field in coordinated offensives, and has surprised itself and highly skeptical foreign observers by doing well.

The professional experience and self-confidence generated within the ARVN at all levels by Cambodia is the best possible practical augury for the eventual success of Vietnamization.

4. The Communists are in every respect—save for the hysteria in some segments of the American public—weaker now than at any point in this long war.

It seems unbelievable today to look back on 1965 when the Viet Cong were in the act of sawing South Vietnam in two from Duc Co, Pleiku, and An Khe to the sea; when every bridge in the delta was out and every village was solid VC; when Buddhist monks were immolating themselves and the government being clawed to pieces by internal factions at each other's throats.

Any negotiated end to the war that would accurately reflect the current state of the struggle would only be a defeat for Hanoi.

Were fighting to end tomorrow on the basis of political and military actualities, Hanoi would not have gained a single one of its stated objectives other than ultimate withdrawal of American forces (which, indeed, will continue ahead, but to our tune and in no fashion to cheer the Communists).

To some, those first impressions will seem euphoric. But it is impossible, after long absence, not to see the changes at first glance and to remember, as well, the 1918 remark by Ferdinand Foch:

"Victory belongs to the side that can hang on for the last 15 minutes."

OUR LIVES, OUR FORTUNES, AND OUR SACRED HONOR

HON. J. GLENN BEALL, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BEALL of Maryland. Mr. Speaker, former Assistant Postmaster General Edward V. Dorsey wrote an excellent editorial recently in the Postmaster's Gazette. The tribute, for the Fourth of July issue, is a well reasoned and interesting commentary on the principles that have made this a great Nation. I ask that it be included in the CONGRESSIONAL RECORD so that it may receive the attention that it deserves:

OUR LIVES, OUR FORTUNES, AND OUR SACRED HONOR

We have been told (although we have never been able to verify it) that after ". . . The Representatives of the United States of America, in General Congress, Assembled" declared on July 4, 1776 "That these United Colonies are, and of Right ought to be Free and Independent States," Thomas Jefferson, the author of the Declaration of Independence, observed that that event represented man's last opportunity to be free.

It is not difficult to imagine what may have been Jefferson's reasons for such an observation. His knowledge of history, political science, and man's centuries long quest for freedom must certainly have conjured up in his mind's eye a picture of past attempts by people to throw off the shackles of oppression and slavery only to find themselves under a despot worse than before.

Jefferson knew that freedom was a very fragile thing and nothing less than eternal vigilance could protect it so it could prosper and grow. It was this realization, we suspect, that caused him to have the signers of the Declaration of Independence to ". . . mutually pledge to each other our Lives, our Fortunes and our sacred Honor." Nothing short of total commitment would suffice in an undertaking of that magnitude. A study of the men who dared to affix their signatures reveals that many were called on to fulfill that pledge. Had they not done so, we would not be enjoying the freedom we have today. Freedom which we all too often simply take for granted.

There are those in the world who say that our kind of government is doomed to destruction. Nearly two hundred years of historical fact is proof that they are wrong. The forces of tyranny and oppression can never triumph in this country so long as Americans are mindful of their rich heritage and vow to do no less than the signers of the Declaration of Independence ". . . mutually pledge to each other our Lives, our Fortunes and our sacred Honor."

There are many who say there are things wrong with America. No rational human being can argue with that statement. The thing that is *right* with America is that we have never ceased to strive toward the full realization of man's everlasting quest for freedom and equity. A society which proclaims ". . . these truths to be self-evident that all men are created equal, that they are endowed by their Creator with certain inalienable Rights, that among these are Life, Liberty and the pursuit of Happiness" is not without its problems. But they are problems that a free people can and will solve.

It may appear to some that our striving seems to be less than it should be. Freedom is not an easy task. But then anything that is worthwhile never is. It is an incontrovertible historical fact that we have never ceased our endeavor to rid from our people the fears of want and political and religious persecution and to confidently pass these gains on to the next generation for even greater achievements and accomplishment. This is the strength of America.

There are those that say the only way we can have true freedom is through violence. They mistakenly base this premise on the historical fact that this nation was born out of violence. What they overlook is that out of that violence there evolved a system of government that has proven to be responsive to the people who freely agreed to be governed by it.

Perhaps it can be argued that the response has not been as quick or as full as everyone might have wished but, nevertheless, the response has come. And, there is no reason to believe that it will not continue to respond in the days, years and centuries of the future if we and those who follow continue to use the orderly and political process to make changes. A process that is so much a part of our way of life.

The proclamation of forefathers to ". . . establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity" was not just so much high flown rhetoric. It was and still is the great American charter for human freedom and the good life.

There are some who look upon dissent as a threat to our survival. Orderly and peaceful dissent within our free political system is not a threat but a positive indication of the ultimate strength of our government and the fulfillment of true freedom. Freedom without orderly and peaceful dissent is not possible.

No one is free unless all are free. The very instant that Americans can not peacefully and orderly disagree with their government and use the established political processes to make the changes they want will be the day we pass back across that very thin and fragile barrier that separates a free people from those who live in constant fear and dread of their rulers.

As Americans, we should not allow even one day to pass without pausing to reflect how blessed we have been and each new day ought to start with a resolve that the freedoms enjoyed yesterday are to be protected and extended today.

We are still man's last opportunity to be free and if we allow that opportunity to slip from our grasp, we may never be able to retrieve it. Freedom will exist only as long as we want it to and have the will to protect and defend it. The moment we, as a people, are not willing to ". . . mutually pledge to each other our Lives, our Fortunes and our sacred Honor" freedom, as we know it, will cease to exist.

Do we dare do anything less? Can we afford not to do more? Only we, as a free people and a free nation, can answer these questions.

DOLLARS FOR SCHOLARS

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BETTS. Mr. Speaker, an enthusiastic Dollars for Scholars organization recently raised $6,300 in Norwalk, Ohio. I am pleased to call attention to this most worthwhile civic project which I understand is one of 330 Dollars for Scholars chapters throughout the United States. The importance of private initiative and resourcefulness in supporting students desiring to attend college cannot be underestimated. The officers and patrons of this program in Norwalk, which includes hundreds of good citizens, should be commended for providing scholarships to 15 young people.

As part of the promotion for the 1970 fund drive an essay contest was sponsored. The two winners have presented important ideas which reflect on their maturity and wholesome outlook. I am pleased to include these essays so my colleagues might have the benefit of reading these inspiring statements:

[From the Norwalk Reflector, Tuesday, May 19, 1970]

LORD ADDS FEATURE TO BASIC MODEL

(By Bob Mayle)

(EDITOR'S NOTE: Bob Mayle, a senior at St. Paul's High School, won the Dollars For Scholars essay contest at his school with this essay on "The Worth Of An Individual". He received a $25 prize at the St. Paul Band Concert Sunday).

How in the world did God ever happen to make man as individual and priceless as He did? Maybe He started with something basic and added a little extra . . . maybe it was like this . . .

Hello there, Mr. God sir, . . . oh, your friends call you Lord. Well Mr. Lord Sir, I represent Human Being Industries, a subsidiary of General Animal Corporation, and I want to tell you about a new line of products we're coming out with called men. Today we are introducing for the first time our 1970 line in Humans. To keep things simple we offer only two models the "Male" and the "Female," and both sell for the same price. Because Humans are more expensive than other animals I imagine that You're wondering "Why should I spend all that extra money on a Human when I can get any other animal much cheaper?"

Well, let's run down the standard equipment you get with every Human Being. First of all you get a precision body built to last many times the life span of most other animals on the market. Various colors of hair, eyes, skin, as well as types of bone structure and weights, combine to give our product one of its most important assets—individuality. Other companies offer individuals in body styles, but we offer individuals in mental capabilites and personality as well. Personalities, by the way, are a feature available in no other line of animals.

Another standard item which sets Humans above their competition are their beautifully unpredictable emotions. These, together wtih the highest IQ offered anywhere, enable our men to actually help one another and even help other animals. The high IQ of which I spoke before not only enables Humans to communicate effectively, but also enables them to reason things out for themselves, thus removing part of your work as God. Their tremendous capacity for loving can even be channeled toward You!!! Imagine, a creature that can return the love of a god. Notice I said return the love; You've got to be nice to them and maybe work for a few miracles, but they're not hard to keep in line. . . . What!!!!!! You say You're thinking of giving them a soul!???? Going to make them part of You?!!!?! Good grief, aren't they good enough already?!!?? Gee. . . . if You did give them a soul, You could never trade them in. . . . heck, they'd be priceless.

So we see that biologically, man is nothing more than the most intelligent animal on Earth. But by giving us a soul, God put a little of Himself in us. Think of that the next time you're going to hurt someone.

[From the Norwalk Reflector, Tues., May 12, 1970]

BALANCE PRIDE, HUMILITY

(By Charles Derby)

(EDITOR'S NOTE: Charles Derby, a Norwalk High School junior, won a $25 prize for this essay on "The Worth Of An Individual", written for the Dollars For Scholars competition. A winner from St. Paul's High School will be announced Sunday.)

Every person in this world has certain standards by which he is judged in the eyes of his fellow men. Although some individuals do not care about what the rest of the world thinks of them, the majority of people desire to be well liked by others.

Certain characteristics of an individual reflect one's worth in society. Without these certain virtues, a person will have difficulty in obtaining his goals in life. Social life is an important function in this world and to live happily one must get along with other people by using his personality.

Pride is the most important virtue. A person who takes pride in himself will also take pride in his school, his community, his church, his work and everything he undertakes in life. Pride, however, can be a fault as well as a virtue if a person is too proud. Humility is a virtue to balance with pride.

Ambition is necessary for an individual to progress in life. Striving to attain one's goal, be it in work, athletics, or learning, calls for ambition. To get a task done well, a person uses ambition, will power, and determination to overcome the urge to quit. Determination serves as a good foundation in preparing for responsibilities to come later in one's life, a determined person is usually, a reliable person.

A person who contributes to society is marked by still another trait—concern and respect for other people. Such a person has few enemies, and gets along well with other people; he tries his best to make his work enjoyable.

All of these factors help to mold a person's attitude toward life. Too many people consider themselves forgotten and unimportant to others. These people would benefit greatly if they would raise their goals higher in life and try to develop standards that other people admire.

CONTROLLING INFLATION

HON. JOHN KYL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. KYL. Mr. Speaker, we cannot have it both ways.

We cannot control inflation while we spend our way into huge deficits.

The Democrats have been trying this sleight of hand nonsense for two generations now and all they have done is give us inflation, wars, and fancy programs that do not work.

It is time now that they joined the Republicans in facing up to the economic facts of life.

It is time they exercised the responsibility that their majority status calls for.

It is time at last that they began to serve all the people instead of trying to buy them.

Our Nation will be better off if they do.

SCHWEIKER SPORTSMAN AMENDMENT TO EXPLOSIVES LEGISLATION

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1970

Mr. SCHWEIKER. Mr. President, on June 23, 1970, I submitted an amendment to S. 3650, a bill designed to strengthen Federal legislation concerning the illegal use, transportation, and possession of explosives. I have been shocked by the use of bombs and explosives to kill and injure innocent and helpless citizens. President Nixon proposed legislation to crack down on this distressing increase of violence in this country and I fully support this objective. We must have effective tools to fight crime and legislation which will deter these vicious criminals.

The broad scope of this legislation, however, would result in needlessly penalizing law-abiding sportsmen who, because of the expense involved in purchasing ammunition, and as a hobby, handload their own shells which are used for legitimate sporting activities. Many Pennsylvania sportsmen, and I am certain many others around the country, engage in this type of recreation. I am interested in seeing that the much-needed strengthening of Federal law have the effect of deterring criminals from crimes without penalizing sportsmen.

My amendment exempts a reasonable amount of smokeless powder and black powder which is used for sport shooting purposes from the provisions of the proposed legislation. The amendment exempts from the coverage of the legislation up to 25 pounds of smokeless powder and up to 6 pounds of black powder. I am pleased to say that, in addition to Senator SCOTT, who was an original cosponsor of the proposed legislation, the following Senators have joined me as cosponsors of my amendment: Senators BENNETT, BURDICK, CANNON, COOK, COTTON, DOLE, EAGLETON, EASTLAND, FANNIN, GORE, HANSEN, HARTKE, HATFIELD, HOLLINGS, MCGEE, MONTOYA, MOSS, MURPHY, PEARSON, SAXBE, SCOTT, STEVENS, THURMOND, and YOUNG of North Dakota.

CAPTIVE NATIONS

HON. SAM STEIGER

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1970

Mr. STEIGER of Arizona. Mr. Speaker, in 1959, the United States first proclaimed Captive Nations Week, established through an act of Congress. The purpose:

Resolved by the Senate and the House of Representative of the United States of America in Congress assembled, That the President of the United States is authorized and requested to issue a proclamation designating the third week in July 1959 as Captive Nations Week and inviting the people of the United States to observe such week with appropriate ceremonies and activities. The President is further authorized and requested to issue a similar proclamation each year until such time as freedom and independence shall have been achieved for all the captive nations of the world.

"Freedom and independence" are the key words. Each people should have the opportunity to, by majority rule, choose its form of government.

This Nation publicly has stated and states that freedom of choice regarding form of government should be available to all. Free choice is essential. At least 17 other nations share this sentiment and have special observances to show their abhorrence for there being captive nations. In 1967, the World Anti-Communist League, comprising membership from more than 80 countries, adopted a resolution advocating an expansion of efforts to show solidarity with the legitimate aspiration of the captive nations to be free.

Since its inception, after the revolution, the Soviet Union has been an aggressive, expansionist nation. It has forcefully brought once proud, independent nations within its orbit, dominating every aspect of their nationhood, internal, and in foreign affairs.

Various nations, formerly loosely a part of Czarist Russia, were incorporated into the U.S.S.R. after the Bolsheviks took power. Subsequent to World War II, many independent nations were absorbed into the block. Twenty-seven countries have now been forcedly brought within the Communist sphere. Only Burma has ever elected a national Communist government; I do not count that within the 27.

Dominance by the Soviet Union through force has been clearly displayed for years. More than 1 billion individuals live under the sway of communism in the captive nations. The unwillingness of citizens to live under communism has been amply demonstrated. As examples: Ukrainians have long evidenced their unhappiness at absorption into the Soviet Union. The same is true of Latvian, Estonian, and Lithuanian citizens. Between 1953 and 1956, East Germany, Poland, and Hungary all tried to gain a degree of independence. All efforts were crushed. Czechoslovakia is the most recent example showing the length of the Soviet Union's leash—it is not very long.

Thousands of individuals have independently decided to flee their homelands at great personal sacrifice and, usually, danger to themselves—Tibetans, Hungarians, East Germans, and so forth. They have swum, climbed barbed wire fences, crashed through barricades, dug tunnels, or defected through a third nation, as did the former Svetlana Alliluyeva—Stalin's daughter. More than 4 million East Germans alone are estimated to have fled the suffocating embrace of Communist government.

Imposition of Communist will upon residents of these nations is heavy-handed. Those who have read of life in Siberian concentration camps, heard of the Katyn Forest massacre, learned of the flight of Vietnamese from the north to the south, cannot believe otherwise. Czechoslovakia's Dubcek, removed from membership in the Communist Party, and the Soviet Union's Andrei Amalrik, sent to jail, or Zhores A. Medvedev, sent to a mental institution, clearly show the lack of basic freedoms.

It can give no one pleasure to participate in Captive Nations Week observances. It is my hope that there will be no need for such observances soon. Each country should be allowed the right to determine, freely, its own form of government. I am convinced that the repressions of communism are such in all phases of life—political, economic, religious, and so forth—that it would not survive honest elections.

The Soviet Union has frequently displayed its displeasure at the publicity given observances by this Nation and others of Captive Nations Week. The focusing of attention upon the lack of freedom given these nations and their citizens has been beneficial to those United States' citizens that would too easily dismiss the rights and responsibilities of our citizenship and to other nations that have been wooed by communism.

While these nations are enslaved, the likelihood of achieving lasting peace is slender. Therefore, all free men have a vested interest in seeing these injustices eliminated. It is hoped that the Communist system of government will evolve into one displaying true freedom of choice for the peoples and nations involved.

THE DOUBLE STANDARD

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. WALDIE. Mr. Speaker, seemingly there is often times a double standard employed in rendering decisions concerning military court matters. Two of my constituents, Mr. and Mrs. L. R. Hardisty of Rodeo, Calif., were prompted to write me after having seen the two succeeding articles which I am about to call to your attention. The articles were printed in the June 28 edition of the San Francisco Chronicle and concern two different trials.

On one hand, two marines had been tried for the killings at Que Son; one marine was acquitted and the other received a life sentence at hard labor. In another article, my constituents point out that a brigadier general and a major were cleared of charges that they attempted to cover up the alleged Mylai incident.

The articles follow:

Military justice was meted out to the first two Marines tried in Da Nang, South Vietnam, on charges of murdering 16 women and children near Que Son in cold blood. Two more Marines still face trial. Pvt. Michael Schwartz, 21, was found guilty on 12 of 16 counts, sentenced to life in prison at hard labor. A constantly weeping Pfc. Thomas Boyd, 19, who insisted he did not participate in any killing ever ("I was taught 'Thou shalt not kill.' It is never right to shoot at anybody") was found not guilty, and returned to his apparently peaceful Marine life.

In Washington, D.C., Brigadier General George Young, Major Robert McKnight and Colonel Nels Parson were cleared of charges by the Army that they helped cover up the alleged My Lai massacre in South Vietnam two years ago.

A MARINE LIEUTENANT TELLS WHY HE IS FIGHTING FOR HIS COUNTRY

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. LANDGREBE. Mr. Speaker, I would like to insert in the RECORD a portion of a letter that was sent by 1st Lt. Tom W. Swihart to his parents, Mr. and Mrs. Wayne Swihart of Valparaiso, Ind. Tom is presently serving in Vietnam and is, as all can see who read his comments, a very dedicated and patriotic American. In the interest of supporting the brave men now serving in Vietnam, I place this letter in the RECORD and urge my colleagues' attention to its contents:

JULY 4, 1970.

Now I will try to explain why I extended to fight in Viet Nam. It is very hard to express in words. It is not so much for the people over here. I don't think they are environmentally or mentally advanced to the level it takes to understand the democratic process. They are aware of the benefits, but they cannot maintain the means. I cannot justify the why's of being over here as a government. I will say (and I believe strongly in this) that I am an American and an officer in the Marine Corps. I love both my country and my Corps, and I will if necessary give my life for them. The U.S. has given me freedom and opportunity that very few countries can offer. People (especially young people) are not willing to pay the price required to maintain the benefits that the United States gives its citizens. The young people do not realize what it is like to be without the freedom that America offers. A good comparison is an individual working for a firm. The firm offers you vacations, stock options and other benefits all on the condition that one works and maintains the standards and policies of the firm. I work for the Marine Corps. The

Marine Corps works for the U.S. Government. I am in Viet Nam because my Commander-in-Chief says that to maintain the freedom of America we must stop the spread of Communism. I hope that you can understand my way of thinking. I have a job to do! When I feel that I have accomplished all that I can do, I will come home.

1st Lt. T. W. SWIHART.

INFLATION—THE ENEMY WITHIN

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. HELSTOSKI. Mr. Speaker, I believe that many in this body recognize that I have time and again called attention to the damage being done to our Nation, families and individuals by the ever-increasing inflation.

The inflation of this era is one that threatens every program of Government directed at improving and developing all facets of life and endeavor in the United States of America for all of our citizens and the present and future of our Nation.

It is an inflation that is driving people to despair as they dig into their pocketbooks and wallets to pay the everyday costs of living. They see the value of the cash assets they have carefully and prudently assembled over the years for educations, homes, retirements and some of the better things of life drop, drop and drop and with the growing realization the goals they set for themselves and their loved ones cannot be reached because of inflation.

The sleeping national administration may not realize what is happening because many in key positions are people of great wealth. Thus, it is the duty of the Congress to feed, by legislative force if necessary, awakening pills to the President and his financial and economic advisers.

Our constituents are demanding action that will throttle inflation, and I cite just one example of how one citizen feels about the situation by placing in the RECORD an article written by Mr. Leo E. Schwarzstein of Englewood, N.J., in my congressional district:

INFLATION—THE ENEMY WITHIN

(By Leo E. Schwarzstein)

Inflation, the enemy within, is a far more serious threat to our society than would be another nation or ideology against whom we would marshal all our forces, military, social and technological, perhaps even suspending civil rights and liberties for the common aim of defeating said enemy. It is far more dangerous because of its insidious nature wherein the total population of the United States is affected, whatever the color, whatever the religion, whatever the politics.

The common denominator of our society is money—our economic system, indeed, even our government is built on it. But it is the people who are caught in the vise of inflation, for even as they sleep, their money is disappearing. It is not even safe in banks where there are forty million families represented (well over 100 million people). Tens of millions of persons dependent upon Social Security checks (who have spent a lifetime contributing to their personal fund), as well as those on pensions and living off annuities, life insurance, corporate bonds, and veterans' disabilities are finding themselves strangled by the grasp of inflation. Even a man who works all week finds that his Saturday paycheck will not buy the groceries they could have bought on Monday. Patriotic citizens who purchase government bonds find, in seven years hence, that the money they receive from them (which of course includes the interest paid) will not buy what the original investment could have bought at the time of purchase. But what is the government doing to correct this situation?

First of all, why doesn't the government call in all the bonds and stop paying out interest? The savings from the payment of interest would add about nineteen billion dollars to the national budget. Simultaneously there should be a freeze on all prices, profits, wages, and interest, thus halting the continuity of inflation. In addition, taxes should NOT be reduced and the monies used for the control of air and water pollution and in cleaning up the ghettos. Bank interest should be lowered to one or two, thus encouraging larger lending to big corporation for their expansion, which in turn, would supply more jobs, thus reducing the welfare payrolls. One must realize that we haven't been collecting interest in the recent past. Let us compare the national debt of ten years ago with that of today—the larger sum of now does not include the interest that was paid in each of the ten years, so you haven't paid any debt, you haven't paid any interest.

As far as the average working man is concerned, there ought to be profit-sharing as an incentive which would improve not only the quantity of work being put out, but undoubtedly, the quality as well.

Even if these ideas are unacceptable or impractical for some reason I have overlooked, at the very least, wages and prices must be controlled or frozen until the government decides just what it does want to do. But something must be done—the government cannot continue to do nothing, to close its eyes to the agony of the people and deceive us with "cost-of-living index only went up one-half of one percent" nonsense. You have only to go to the market to find out how much things have gone up. And we, the people, must save the government. We must save the economic situation. We must save ourselves—and most of all, we must stop being the silent majority and become very vocal indeed!

The unions recently indicated their diminished faith in the integrity of the greenback by demanding cost-of-living adjustments for their membership, so that no matter what the government does or does not do about the economy, the union member will be protected. Even the mild-mannered postmen were recently driven to desperation by inflation and struck against the government they are obligated to serve. This, alone, should have been a danger signal to those at the helm.

History teaches us that inflationary trends portend extreme reactions—either to the left or to the right. A pauperized people may start to feel that there should be a general distribution and equalization of property, or failing this, a nationalization of same. In case you don't recognize this—it's communism. On the other hand, the German inflation of 1923 produced Hitler, for the nice people had lost faith in their politicians. Sweet words and big promises had failed to tranquilize the situation—as it is beginning to do here. Do we have to wait for a Pied Piper—who may not be benevolent?

In my judgment, both the government and the economic system under which we are functioning will perish unless something is done, and that something done soon. As an ordinary citizen representing no organization, but concerned as all persons of good conscience must be I have some ideas as to possible steps that could be taken to cure this disease called "inflation". But before dealing with specifics, let me say that I consider the present organization of our government, that is, government by elected representatives of the people, as the only truly intelligent and safe form of administration and control—but we may have to give up something to keep it. When a man is stricken and the doctor orders him to bed, restricting his activity and diet, he doesn't talk about civil rights! He has to make a decision—live or die! So it is with us—we may be confronted with the need for such a decision in regard to our economic system. It won't be easy, but it may have to be done. As I said, I have some ideas on how to improve our economic health; I leave it to others to decide on their practicality.

THE NATIONAL BLACK SILENT MAJORITY—THIS IS THEIR COUNTRY, TOO

HON. JACK EDWARDS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. EDWARDS of Alabama. Mr. Speaker, we all realize that the black revolutionaries are a small, though vocal portion of our black population. It is therefore heartening to learn that Negroes who stand for solid American principles have organized a committee called the National Black Silent Majority.

The goals of this committee are admirable, not only for blacks but for all Americans. The purpose of the group and the character of the people who comprise it are recognized in a recent editorial in the Chicago Tribune entitled "This Is Their Country, Too." For the benefit of my colleagues, I request that it be printed in the RECORD:

[From the Chicago Tribune, July 8, 1970]

THIS IS THEIR COUNTRY, TOO

A National Black Silent Majority Committee has been organized in Washington to speak for all those who disavow black revolutionary and militant action. Clay J. Claiborne, newspaper publisher of Atlantic City and national director of the new organization, described its aims as follows:

"We believe that black revolutionaries and militants, upon whom some segments of the news media seem to dote, are not dedicated to progress for our people. Blacks don't want to burn America down. We want to build America—and, like all patriotic Americans, earn enough money to own part of this great nation."

The committee said in a statement, "There are millions of black Americans who work every day, keep their kids in school, have never been to jail, pay their taxes, shop for bargains, have never participated in a riot—but are being shouted down by a handful of black militants."

Constructive activities planned by the Black Silent Majority are to develop a strong two-party system within black voting districts; to support candidates who adhere to principles of constitutional government, law, order, and justice; and to recognize that while no country is perfect, the United States is by far the finest country available to blacks. The organizing members, coming from 22

states, oppose forced busing and communism, as well as crime.

It is gratifying news that there is now a group professing admirable principles which can give expression to what we have always believed to be the outlook of the great majority of blacks who understand that America is their country, too.

RUSSIA'S OVERALL GLOBAL GOALS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BOLLING. Mr. Speaker, I commend to my colleagues the following interesting piece concerning Russia's overall global goals. Written by Ray Vicker, it appeared in the Wall Street Journal of July 21, 1970:

SOVIETS LOOK BEYOND THE MIDDLE EAST

(By Ray Vicker)

CAIRO, UAR.—In the office of one West European diplomat here a map of the eastern hemisphere stretches on a wall beside an air conditioner which doesn't work. Dozens of pins with colored heads are stuck into capitals of various countries: Green for an unaligned nation, light red if the slant is toward Moscow, dark red for a Peking orientation and blue when the pull is Westward.

Dar-Es-Salaam, Tanzania's capital, has both a green and a dark red pin, reflecting Tanzania's increasing coziness with Communist China. Pretoria, South Africa, has a blue pin only. "A map is a wonderful instrument," says this one time geographer who now serves in his country's diplomatic corps. "Here you can see visually how the Soviet Union and Communist China are both thrusting into the Indian Ocean area confronting each other just as both are confronting the West."

THRUSTING SOUTHWARD

The Soviet Union is indeed thrusting southward in a many-pronged campaign which may be obscured because of the current furor over the Middle East. To be sure, the Middle East does play an important role in that drive. Should the USSR obtain any influence over Arab oil either directly or through providing "advisers" for Arab national oil companies, it would be in position to influence Western Europe's energy supplies. That hope is reason enough for the Soviets to inject themselves into the Middle East.

Yet the Middle East thrust is only part of a broader whole. In the Middle East the Soviets are, first, interested in retaining their position as champion of the Arab cause even should peace come. Second, they want the Suez Canal reopened in a way that doesn't prejudice this first interest.

When this is understood, the overall global goals of the USSR become clearer. Those goals summarized are:

To increase USSR influence in Africa and Southern Asia including the Middle East.

To counteract Communist Chinese influence in that area.

To isolate America and its allies from this area in a sort of John Foster Dulles-style policy of encirclement and isolation. Anything which denied raw materials from this area to the United States or which increased prices of those materials for the U.S. would be a plus for the USSR.

The Soviets realize that to be successful in this policy they must have nuclear parity or superiority to the United States. This they already have achieved, many observers believe. Strategic Arms Limitation Talks in Vienna, if successful, would assure that this situation continues without the need for an arms race which might make it economically impossible for the Soviets to undertake other tasks in its global campaign.

Kremlin leaders realize too that to conduct this campaign the Soviets also must become a naval power equal to or superior to the U.S. While both Britain and the U.S. have sometimes seemed to be downgrading their navies in this nuclear age, the Soviets have been busily expanding first their merchant marine and now their navy. Navies are only obsolete in the nuclear age if nuclear weapons are to be the number one line of defense. The Soviets are gambling that this will not be the case, but that conventional weapons may be a decisive factor in world power relationships for a long while to come.

It is certainly easier to use gunboat diplomacy in a place like Dar-Es-Salaam, for instance, than it is to attempt any nuclear threats. So the highly publicized Soviet Mediterranean fleet is only one part of an expanded navy which steadily grows larger.

Already the nucleus of a Soviet Indian Ocean navy is shaping up too. For years Soviets have used their large deep sea fishing fleet as the eyes and ears for their navy, and last year the Russians gained a foothold at Mauritius, the small Indian Ocean island state which resembles the popular concept of a south sea isle.

Under an agreement, the Soviets are providing Mauritius with modern fishing vessels and personnel to train the Mauritians in deep sea fishing. There are now signs that the Russians would like to get harbor facilities at the Mauritian dependency of St. Brandon island. Currently a cluster of Soviet naval vessels already is located on the broad expanse of the Indian Ocean, though the ships are somewhat handicapped by their distance from home bases.

Certainly, the trend of events in Africa and western Asia has in recent years improved the atmosphere for whatever extension of influence the Soviets contemplate.

In North Africa and the Middle East, leftist governments now rule in the United Arab Republic, Iraq, Syria, Libya and Algeria. In those nations the United States now is associated with "imperialism."

In Aden, capital of South Yemen at the base of the Red Sea, the Soviets already have filled the vacuum left by the departure of Britain. This vital seaport overlooks the entrance to the southern end of the Red Sea. The Soviets through Arab clients support Eritrean guerrillas who are trying to establish a new leftist state on the west side of the Red Sea. Eritrea currently is a province of Haile Selassie's kingdom of Ethiopia.

Russian influence played a role in last fall's leftist revolt in Somalia, the dirt poor, dry nation at the horn of Africa. Somalia's 8,000-man army now has Russian "advisers." The revolutionary council which took power has declared its intention "to develop socialism."

Close to 500 Russian technicians and advisers now are in the Sudan, a nation which also experienced a leftist coup. A $100 million arms deal has been concluded in Khartoum, Sudan's capital, and Soviet military equipment already is pouring into the country.

Thus it is evident that Soviet clients have just about encircled Ethiopia, long a strong American friend in this part of the world. One of the biggest air bases maintained overseas by the United States Air Force is at Asmara, Eritrea. Somalia claims Ethiopia's coastal strip, a contention which the Soviets are likely to support.

CEYLON AND INFILTRATION

At the southern end of the Arabian peninsula Russia is supporting rebels in Dhofar, a province of Oman. This sultanate is strategically located in a position to dominate the southern entrance to the oil rich Persian Gulf. A recent electoral swing leftward in Ceylon has opened that island nation to Communist infiltration from both Russia and Communist China.

The Soviets seem to have the inside track in developing India's Gulf of Cambay oil, while India consistently leans more to the Communist than to the Western camp. Singapore considers granting port rights to the Russians while Russia courts Malaysia using rubber purchases as a lever in political discussions.

It is the growing Soviet influence in that part of the world which helped prompt Britain to reconsider its policy on selling arms to South Africa. The U.S., however, still seems less concerned about the situation, for the Nixon Administration reports it has no intention of following Britain's lead in dropping the arms embargo to South Africa.

Communist China-Russian competition intensifies Soviet interest in the whole vast Indian Ocean area. In East and Central Africa Communist China is building a railroad from Dar-Es-Salaam to Zambia. It is the biggest foreign aid project Red China has ever attempted. With the railroad, one may expect propaganda specialists who will try to undercut both the West and the USSR in that part of the world. The Soviets have been trying futilely to counteract the project with warnings about the dangers of Chinese infiltration.

Recently, President Nyerere of Tanzania laid the foundation stone of a new naval base to be built with Red Chinese help at Dar-Es-Salaam. A diminutive Tanzanian navy consisting of six armed patrol boats already has been supplied by the Chinese. Its crews currently are being trained by Chinese instructors.

Any reopening of the Suez Canal would greatly strengthen the Soviet hand not only in its competition with Red China but with the West. Currently the Soviet east of Suez campaign must be conducted via the long haul around the southern tip of Africa. This slows Russian aid shipments to North Vietnam and inhibits development of the Indian Ocean fleet.

The scope for Soviet troublemaking in this part of the world is virtually unlimited. Kenya may see a struggle for power when elderly Jomo Kenyatta, the nation's first and only president, dies. The Soviets have lost ground lately in jockeying for position there but have not given up hope for a leftist swing.

Ethiopia, too, may see a power struggle when Emperor Selassie passes from the scene. This may be the time when Eritrea flares into a much broader rebellion while Somalia asserts its claim to a big chunk of Ethiopia. Soviet and Red Chinese arms feed rebellions in the white states of South Africa and Rhodesia and in Portuguese held Mozambique and Angola. Saudi Arabia and sheikdoms of the Persian gulf make prime targets for Soviet supported would be rebels.

A BARRIER TO RED CHINA?

The USSR still has not abandoned hopes for creating a southern Asian defense tier as a barrier to Communist Chinese expansion in that part of the world. It will be a lot easier to exert pressure in that direction once the Soviet Indian Ocean fleet becomes a more formidable force. This all adds up to a picture much broader than that supplied only by the Israel-Arab war. The war though, to be sure, has provided a wonderful opportunity for the Soviets to press a broader drive which might be decades behind its schedule had there been no Israel in the Mideast to arouse Arab passions.

The Soviets seem little interested in crushing Israel in the present conflict, some knowledgeable observers here contend. The

Soviets have been clearly emphasizing that nobody now wants to drive the Israelis into the sea, but the Soviets undoubtedly will want to make sure that once peace comes, Suez Canal traffic will never again be subject to an Israeli veto.

It would not surprise some sources here if the Soviets demanded a right to station some troops along the canal, with Egyptian acquiescence of course, when hostilities cease. Failing that, Russia may offer the UAR technical assistance in clearing the canal, and those technicians might wind up on the canal indefinitely.

Having already gone so far as to station some of its military forces in the UAR, Russia is not likely to be turned easily from its overall global goals.

INCREASED RIGHTS AND RESPONSIBILITIES FOR AMERICAN INDIANS

HON. ED FOREMAN

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. FOREMAN. Mr. Speaker, the Nixon administration has recently initiated an interesting, innovative program for the benefit of the American Indian. The gist of the new proposals can perhaps be summed up in President Nixon's special message to Congress when he states that the "Indians can become independent of Federal control without being cut off from Federal concern and Federal support."

The reactions to the President's recommendations have been overwhelmingly favorable. In one such editorial, "More Rights for U.S. Indians," the Sioux City Sunday Journal goes into various facets of this legislation, noting that its adoption would be a giant step forward. I believe that this editorial published July 12, 1970, merits special attention and therefore include it to be printed in the RECORD at this point:

MORE RIGHTS FOR U.S. INDIANS

President Nixon has put his finger on what could well be the right road to improving the status of the American Indian. In a special message to Congress, the President said he was proposing legislation that would empower Indian tribes or tribal groups to take over control and operation of federally-financed programs for their benefit—programs now operated by government employes.

In similar vein, Mr. Nixon also proposed that "every Indian community wishing to do so should be able to control its own Indian schools" by setting up school boards like those in other communities.

Additionally, President Nixon called for increases in federal funds for a number of Indian aid programs and asked Congress to set up a new position of assistant secretary of the interior for Indian and territorial affairs.

"We must assure the Indian that he can assume control of his own life without being separated involuntarily from the tribal group," the chief executive said. "And we must make it clear that Indians can become independent of federal control without being cut off from federal concern and federal support."

Over the years, numerous government programs have been instigated to help the American Indians. Most proved unworkable. Few basic problems were solved. But the approach by President Nixon—to give the Indian tribes the right to control and operate the federally-financed programs affecting them—offers the Indians a real opportunity to guide their own destinies.

Certainly a tribal council would be more alert to the needs of its people than would a bureau in Washington. Responsible tribal leaders acutely are aware of what needs to be done to improve living conditions and opportunities for tribal members.

As we understand it, the Nixon proposal would place in the hands of the tribes or tribal councils the decisions on where and how federal funds should be spent on their reservations. This makes sense. The tribes would be given local autonomy, to a large extent, which they have not heretofore had.

Some sort of federal auditing would be necessary, obviously. But the bulk of the responsibility should be left to the Indian leaders.

This would be a giant step forward. It would encourage more interest on the part of Indians in directing their own affairs; it would give them a chance, which in most instances they have not had before, to spend federal funds where they would do the most good, rather than having them flaked off in salaries for a bureaucracy that historically has shown an inability to do much about improving the Indians' future.

The course has been charted promising change in the direction of the United States policy toward its Indian population. Its implementation is long overdue.

TAKING POLITICS OUT OF THE POST OFFICE

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. SNYDER. Mr. Speaker, I suppose that the same thing means different things to different people.

For example, the administration's policy of taking politics out of the Post Office apparently means that political mail should not be delivered in one post office in the Fourth Congressional District of Kentucky—the district I am pleased to represent.

I offer as evidence a page 1 article from the July 18, 1970, Kentucky Post:

CLARK JUNKS SNYDER'S MAIL—U.S. INSPECTORS PROBE "A STUPID MISTAKE"

(By John Murphy)

Possible negligence and improper conduct in the Newport Postoffice's handling of Congressman Gene Snyder's primary election campaign mail is under investigation by a postal inspector.

Cong. Snyder confirmed yesterday he asked for the investigation several weeks ago when Campbell County constituents complained of late delivery or no delivery at all.

Newport Postmaster James (Bus) Clark admitted to The Kentucky Post yesterday he ordered the discarding and destruction of a portion of undelivered Snyder campaign mail after the May 26 primary.

Told of Clark's order, Snyder declared:

"I am shocked, and think disciplinary action by the Postoffice Department is in order."

Clark, the $15,700 a year postmaster since 1963, told me in an interview, he realizes now his post primary decision to throw out rather than deliver what he considered "useless mail" was a mistake.

"It was a stupid mistake," Postmaster Clark added.

Snyder observed the postmaster does not judge which mail should or should not be delivered.

Postal inspector Howard Hunter spent two days three weeks ago questioning Newport Post office employes about the discarded political mail.

But C. A. Maddux, chief Postal Inspector of the Cincinnati division, said the probe is incomplete and that he could not discuss it.

Snyder disclosed, however, he has received an "interim report" from the Postoffice Department that "negligent and improper action by the Newport postmaster and members of his staff was under investigation, and that appropriate disciplinary action would be taken where warranted."

Until The Kentucky Post talked to Postmaster Clark and then to Snyder, the latter said he was not formally aware that a part of his campaign mail had been destroyed.

"All I knew up to this point," he said, "is that some of it had not been delivered."

Jack Porter, Wilders, outgoing distribution supervisor at the Newport Post Office, said he noted the Snyder bulk mail had been marked received May 25, a day before the primary.

He said he made this discovery on primary election night, May 26, and that he and another postal clerk had distributed 1000 or more of approximately 1800 pieces for May 27 delivery.

"The remainder were gone when I reported to work on May 27," Porter disclosed.

Assistant Mail Superintendent James Merling, Ft. Thomas, a 34-year postoffice veteran, said he noticed several hundred of the Snyder mailing pieces had not been taken from holding trays and sorted for delivery by mail carriers May 26.

But the carriers were already on their routes, he added.

Postmaster Clark said he was notified of the mixup on May 27, the day after the primary, and decided the election mailing piece at that date "was useless."

"There was no political motive involved," said Clark four times elected Campbell County Commissioner as a Democrat. Snyder is a Republican.

Clark continued:

"I'm out of politics, I can't even talk politics since I've been postmaster.

"It was just a stupid mistake. I don't know why, really, I ordered the mailing piece thrown away, except that I considered it at that point of no use to anybody."

Clark said he has never before nor will ever again, make such a decision, even though mail is delayed.

Postmaster Clark explained he talked about the mailing with Merling after the primary and Supt. Harold Wilcox, Ft. Thomas.

"The decision, however, was mine," Clark said, "I don't want to involve these two fine gentlemen."

Clark said another Snyder mailing piece had been received and delivered promptly prior to the Primary.

Cong. Snyder told The Kentucky Post, however, he had alerted some Campbell County constituents after his own investigation revealed his first class mail "News Letter" needed one to two days for delivery in other counties of the Fourth Congressional District, while the delivery required 10 to 12 days in Campbell County.

Clark says normal procedure at the Newport Post Office is to give First Class and "political mail" of any class top priority.

He added, obviously Snyder's primary election mailing piece was not handled promptly, but that he had not been aware of this until after the primary election, which Snyder won 10-to-One.

Stan Sears, Ft. Thomas, a Newport Post

office clerk and president of the United Federation of Postal Workers Local 352, said similar instances of late delivery of third class bulk mail have occurred, but that it always was delivered.

Snyder said he mailed the primary campaign piece to Republican-registered families in Campbell county.

The total could have been more than 10,000, but the majority apparently was delivered, for only about 1800 appear to be involved in the late delivery or discard.

"Somebody owes me some postage," Snyder said.

Merling conjected there are a number of "subs" working in the Post office and that they are not trained in the handling of mail, and could have contributed to the Snyder mail delay.

Clark said to the best of his knowledge the undelivered Snyder mail was thrown into a scrap paper baler and disposed of along with the scrap, which is sold to dealers.

SECRETARY OF AGRICULTURE CLIFFORD M. HARDIN'S ADDRESS AT THE AGRICULTURAL HALL OF FAME AND NATIONAL CENTER

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. MIZE. Mr. Speaker, I was honored to welcome Secretary of Agriculture Clifford M. Hardin to the Second Congressional District of Kansas last Sunday for a tour of the Agricultural Hall of Fame and National Center. Secretary Hardin joined many national agricultural leaders at Bonner Springs to pay tribute to American agriculture—past, present, and future.

While at Bonner Springs, Secretary Hardin delivered a timely and warm address, which I should share with all Members and readers of the CONGRESSIONAL RECORD. The text of the Secretary's address, delivered July 19, 1970, at the Agricultural Hall of Fame, Bonner Springs, Kans., follows:

Chairman Keeler, distinguished members of Congress, ladies and gentlemen:

I am delighted to be with you today, here in the heartland of America, where this shrine is being created for the agricultural industry.

The planners and sponsors, many of whom are present, are to be commended on their decision to build a living memorial to the role of agriculture in the lives of Americans.

This site will be more than a tribute to agriculture's inspiring past, even though historical accomplishment will be shown in the Hall of Fame, in the exhibits and replicas, and in the Pioneer and Indian villages.

Nor will it be solely a representation of agriculture as it is today, although modern farm living and the latest and best in agricultural technology will be depicted.

More importantly, an effort is being made to establish a workable, useful National Center for agricultural progress, I understand, for instance, there are plans for a professional associations office building, and a transportation building, for the use of nonprofit organizations concerned with various aspects of agriculture.

Also, of course, there will be a library and auditorium where agricultural groups of all kinds can meet, hold conferences and exchange information.

A National Center along these lines can offer a balanced blending of historical interest, educational and informational value along with entertainment and recreation, plus a working base for constructive future efforts on behalf of the agricultural industry. This would seem to me to be in keeping with the intent of the Congress when both the House and Senate voted unanimously to grant a Federal charter to this undertaking.

To bring this about is going to take time and patience, plenty of hard work, and lots of money—donated funds, since no governmental financing came with the Federal charter. Somehow, a long-term method of obtaining sustaining funds will need to be worked out. I am convinced that all the effort will be well worth while.

The plans we see coming into reality here are certain to produce benefits of many kinds, not only for agriculture itself but also for the complex of enterprises that supply and serve agriculture or process agricultural products. In fact our whole Nation will benefit because when all is said and done, agriculture and agribusiness exist to serve the 205 million persons who constitute the consuming public.

Agriculture comprises the largest single market for labor and industry. Agriculture employs 5 million people, more than the combined employment in transportation, public utilities, auto manufacturing and the steel industry.

Agriculture is a $50 billion customer of the American economy. Farmers pay more than $4.8 billion a year for tractors and equipment, for example. They pay an annual transportation bill of well over $4 billion to move crops and livestock to market. Out of the total of 17 million trucks in America, more than 3 million are used in agriculture.

Figures like these emphasize that agriculture is a dynamic, essential part of our total economy. It sustains hundreds of agribusiness enterprises that provide jobs for millions of people in cities and rural areas alike.

Much that farmers pay out goes for improved technology—new equipment, better nutrients and pest controls—so that more food of higher quality is produced from less acreage.

Higher performance in producing goods and services is sought by President Nixon's National Commission on Productivity. Agriculture has an incredible record in that regard. Its rate of output per person in late years has gone up twice as fast as that of nonfarm industry. This great increase in individual productivity is one of the reasons that the average American consumer buys his food supply, even today, with the smallest percent of his income in history.

We face a special challenge to see that this capability is maintained. Agricultural people can take pride in the efficiencies achieved in food production. But to the extent that this has occurred at the expense of farm incomes, we must try to obtain corrective action. We must somehow convince our urban friends that the primary function of farm programs is to help farmers share more nearly equitably in the benefits of expanding technology.

The center you are developing here can help bring the role, the accomplishments and the importance of agriculture into better national focus. Here that great story so important in the development of our Nation will be told constantly and kept updated.

And in this heartland region much of the future action will take place. Our population is likely to soar by another hundred million between now and the end of the 1900's. In just the next 10 years a half-trillion-dollar growth in economic activity is expected. It is imperative that people—not the Government—make plans and decisions right now to channel a substantial portion of that activity to rural parts of the Nation in a way to assure orderly, wholesome growth.

As President Nixon says, we have much in America to be proud of, and it's time we talked more about the good things that make America great. Here at this National Center is a good place to talk about, and show, and recreate the things that make agriculture great. This is a good place to bring America's national spirit into meaningful new perspective. I wish you the greatest success as you move ahead.

MAINE WELCOMES ALL ON HER 150TH BIRTHDAY

HON. WILLIAM D. HATHAWAY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. HATHAWAY. Mr. Speaker, I would like to extend an invitation to those of my fellow colleagues who are planning vacation time with their families and have not as yet decided where to go. I would like to make you aware of the fact that in my own State of Maine, events are taking place in which I am sure you would be very interested in participating.

This year, 1970, the State of Maine is celebrating its sesquicentennial year. Individuals, organizations, and communities from all of Maine's 16 counties are joining in numerous celebrations of this anniversary. Because of the natural beauty of Maine's environment, clean air, clean water, and miles and miles of rocky coast, our celebration is uniquely fitted to showing off our land.

I would like to point out just a few of the events which thousands of out-of-Staters have and will be able to view and participate in, in the sesquicentennial year. Such events as lobster boat races, fishing derbies, parades, clambakes, golf tourneys, concerts, flower and art shows, boat cruises, tours of historic sites, and fireworks displays are taking place throughout the remaining year and with each event, there is an opportunity for our visitors to meet and get to know many of the "Mainers" who make the State of Maine so delightful.

The State of Maine has a wealth of history to share with the rest of the country. One-of-a-kind events that have already taken place are such things as the "Pea Pod" races. "Pea Pods" were the first lobster boats and the people have rebuilt them and returned them to the sea. It was an exciting event and one which may not be available in any other spot but the State of Maine.

Another fun event which happens every Friday night until Labor Day is the old-fashioned clambake. If you have never been on a clambake, you know that this is an event not to be missed.

The summer theaters in Maine are famous for their productions, and this year they have dedicated their seasons to the sesquicentennial celebration. For example, the theater at Monmouth will feature the works of a number of great playwrights, with productions such as "The Tempest," "Twelfth Night," "The Lady's Not for Burning," and "Romeo and Juliet." Also, in the Bangor area, the Bangor Symphony Orchestra, which is

the oldest in the country, will premier a sesquicentennial chorale.

For those of you who would like to relax with a fishing pole in your hand, the Tri-State Fishing Tournament will be taking place from September 11 to 13, with the headquarters for registering at the Brunswick Hotel in Old Orchard Beach.

In the Portland area, there are daily cruises, interisland golf tournaments, a small boat regatta, and a log race for motor yachts.

The events are varied and much too numerous to mention here but I can assure you that they are exciting, unique, and enjoyable for the whole family—a genuine vacation special that can be enjoyed in the State of Maine. A few of many of the attractions are listed in a release prepared by the Maine State Sesquicentennial Commission, which appears below.

If you would like any further information on these events, please feel free to contact my office at any time. As a representative of the great State of Maine, and in behalf of the Maine people, I welcome you.

THE MAINE SESQUICENTENNIAL CELEBRATION

In 1776 the 13 American colonies won their independence from England and a new nation began its long and arduous process of social, cultural, and economic development.

At this time Maine was not a state, but rather the northern territory of the State of Massachusetts. And it was not until 44 years later, in 1819, that the people of the sparsely-settled territory voted to separate from the mother state. Soon after the vote took place, a constitutional convention was held in the First Parish of Portland. A constitution was drawn up, presented to the people and adopted. Then, on March 3, 1820, Congress accepted Maine as the 23rd State of the Union under the Missouri Compromise beginning March 15, 1820.

The emphasis this Sesquicentennial year has been on the "Past, Present, and Future." This year's celebrations were kicked off by a joint session of the legislature in January. Since then nearly every day has had Sesquicentennial events of one kind or another occurring throughout the State.

In keeping with the theme of the past, there are several highlights of this year. One of the most successful events to date was the presentation of "The Birth of the State" in March at the historic First Parish in Portland. This play, written by Bowdoin College professor Louis Coxe, reenacts the first constitutional convention in Maine with the actors placed throughout the audience. The play will be reproduced and will be available for distribution to Maine high schools who wish to present the play this fall.

The Sesquimobile, a museum on wheels, is another attraction which will be at Sesquiscentennial events throughout the year. The Sesquimobile, sponsored and funded by the Maine State Sesquicentennial Commission and constructed by the Maine State Museum, is a 40 foot van containing many artifacts and information—both written and audiovisual—about the State of Maine.

Also keeping with the past, numerous historical societies in the State have published historical books concerning Maine and its inhabitants. These publications include: the Pictorial History of the State of Maine, Maine: A Guide "Down East," History Calendar, and the Sesquicentennial Cookbook.

Old-fashioned clambakes are yet another typical Maine event which will be sponsored this summer. Each Friday until Labor Day an old-fashioned clambake will be held on House Island in Casco Bay. During the same period, daily tours will be conducted through historic Fort Scammel on House Island.

A highlight of the year occurred on July 9 when the Maine Statehood Commemorative Stamp was issued in Portland, launching the issuance of 120 millon stamps throughout the United States. The ceremonies featured a main address by Maine's Senator Edmund Muskie.

In contrast to these events linking us with the past, many fishing derbies, golf tournaments, parades and other such events have been scheduled from Aroostook County to Cumberland County.

Fishing derbies include: A Striped Bass Derby, from July 24 to August 2, in Kennebunkport; A Tuna Tournament from July 28 to August 1, in Harpswell; a fishing derby, August 8 and 9, at the State Pier in Portland; and the Tri-State Fishing Tournament, from September 11–13, with the headquarters for registering at the Brunswick Hotel in Old Orchard Beach.

There are four parades scheduled in August. The first is in Kittery on August 2. Two will be held on August 8; one being in Wayne and the other in Norway and South Paris. And on August 15 another will be held at Washington in Knox County.

Golfers will also be able to participate in the celebrations when two golf tournaments will be held in the middle of August. The Maine Sesquicentennial Gold Tournament is planned for August 12–14 at the Riverside Municipal Golf Course in Portland. The Chebeaque Island Golf Tournament will be held at the Great Chebeaque Golf Club on August 13 and 14.

The Maine people are keeping the spirit of the unique alive in their observance of Maine's 150th birthday. There will be a Tailboard Flea Market in Kittery on August 6, a Whaleboat Ocean Race at Kittery on August 1, a reenactment of the Means Massacre at Flying Point, August 2 to August 7 in Freeport, and the Sesquicentennial Covered Bridge Motor Rally starting in the Portland area on October 11.

Unusual and old-fashioned celebrations will be aplenty at Wiscasset, when Fun-Cassett day arrives on August 15. The celebrations include a Nautical Action, Horse Show or Horse Pulling, A Beanhole supper, and an old-fashioned Country dance, an old-fashioned political rally, and tours through historic homes.

In sponsoring many of the year's events, the Maine Sesquicentennial Commission has financed the production of Sesquicentennial glassware, ceramic ware, and jewelry along with a cookbook and a book of the pictorial history of Maine. These first four items may be bought at many gifts shop throughout Maine, while the pictorial history, which is in the process of being printed, will be distributed to various outlets in the State.

The past events and the planned events of this Sesquicentennial year in the State of Maine—from Kittery to Bangor to the towns of "Down East" to Madawaska—has seen man joining man and community joining community in the proud celebration of their State, its beauty and its heritage.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1500 American prisoners of war and their families.

How long?

MRS. VLACHOS VS. THE JUNTA

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. YATES. Mr. Speaker, Mrs. Helen Vlachos recently escaped imprisonment by the present government of Greece and has written a book to describe her experiences. That book has been reviewed by my good friend Christopher G. Janus in the Boston Herald Traveler for July 5, 1970, and I attach it hereto:

". . . BUT WHAT'S A NON-PERSON?"

(By Christopher G. Janus)

(House Arrest, by Helen Vlachos, 183 pp. Gambit $6.95.)

"I see by the papers," said Alice, sipping her morning tea, "that Helen Vlachos, the Greek newspaper publisher and author of 'House Arrest,' has become a non-person in the Greek dictatorship. In absentia, of course."

"Fascinating, absolutely fascinating," exclaimed the Dormouse who was still half asleep but who never wanted to miss anything especially if it sounded like a game. "But what's a non-person, and how do you become one?"

Alice wasn't exactly sure herself but she didn't want to appear ignorant of something she was reading, and anyway she was glad to get a conversation started: "Well, a person becomes a non-person in Greece, in Russia or wherever there is dictatorship by doing something that displeases the dictators—like calling for free elections. They proclaim that such a person's name must never be mentioned in the press or on the air and in very severe cases must not even be spoken in private. If you disobey the dictators you are in danger of becoming a non-person your self."

"This really sounds like cats and mice," said the Dormouse somewhat joyfully, "but what did Helen Black Horse do?"

"It's not Black Horse, though she says that's how many people pronounce her name and it really was her code name when her friends planned her escape from Athens. Her name is Vlachos, and she is one of Greece's most courageous, dedicated women; and she is an excellent writer, too."

By this time the Mad Hatter, who usually felt rather superior at these parties, became interested and he, too, wanted more details.

"First of all," Alice was glad to continue, "Helen Vlachos greatly displeased the Greek dictators because she refused to publish her widely-read morning and afternoon newspapers in Athens so long as there was press censorship in Greece. And at the time she was the only newspaper publisher in Greece who refused to publish."

"Oh, Alice," said the Dormouse, "this is such a puzzlement. Why would the dictators object to her not publishing? I thought all real dictators objected to people doing some things but not usually to not doing them!"

"Let me answer that," volunteered the Mad Hatter somewhat pompously, "it's the kind of a conundrum I like: By not publishing her newspapers, Helen Vlachos vastly in-

creased her non-subscribers. That is, instead of having some 200,000 subscribers who normally read her papers everyday, she had nearly the whole 2 million population of Athens as non-subscribers talking about her because her papers were not there to read. And non-subscribers in England and the United States talked about her too. This of course displeased the Greek dictators very much and made them very mad for with everyone talking about her more and more it became impossible for them to keep her a really genuine and respectable non-person like the hundreds of other well behaved non-persons in Greece."

"Oh, dear," said Alice "this is a very strange conundrum, but since it's Greek, I suppose it's understandable. But I know this made the dictators very angry indeed because they put Helen Vlachos under house arrest for being a non-publisher and that is when she began to write her book 'House Arrest.' "

"But that can't be the end of the conundrum," said the Dormouse somewhat disappointedly, "what else did she or didn't she do?"

"She did something apparently very, very bad," continued Alice. "Instead of being quiet and meek and inconspicuous like you'd expect a proper non-person to be, she somehow managed to get a story printed in an Italian newspaper in which she called Dictator Stylianos Pattakos a clown!"

"Now what's so bad about that," remarked the Hatter, "every day somebody may call Spiro Agnew a clown or something worse and he doesn't mind. He just calls them some name right back like 'effete snobs.' "

"Oh, but it's different in a dictatorship," said Alice feeling quite proud of herself because she had the answer in Helen Vlacho's book. "You can call a dictator a strongman, a brute, a torturer—even a murderer. Those are good, strong words and instill fear in the people, and dictators can't rule unless the people fear them. But if you call a dictator a clown, and if he is Brigadier General like Pattakos who is in charge of all the tanks in Greece—why, that is very serious. For no dictator can risk being laughed at anymore than he can live with the truth. And, he, too, must sleep at night."

The mention of the word sleep was the Dormouse's undoing: "Dear Alice, can you tell us another little story, but softly?"

Alice put down her book and went back to her newspaper, but it semed there was no getting away from the Greek theme. There it was, a report on President Nixon's brother, F. Donald Nixon, and his trip to Greece to conclude a business deal with the Junta. One of his hosts was Stylianos Pattakos, the deputy dictator who led the tanks in the takeover against the legal Greek government in 1967 and who, incidentally, placed Helen Vlachos under house arrest. He described Mr. Pattakos as "very kindly—he was a nice gentleman."

"I wonder," mused Alice, "whether Donald Nixon will be decorated by Mr. Pattakos or will he be made a non-person like Helen Vlachos. True, he didn't call Pattakos a clown, but who ever heard of a 'very kindly, nice gentleman' leading a tank corps. A dictator has got to be careful of his image!"

POEM TO PROTESTORS

HON. ALBERT W. JOHNSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. JOHNSON of Pennsylvania. Mr. Speaker, one of the young men in my district; namely, Sp5c. Clifford R. Srock of Bradford, Pa., has recently returned from Vietnam. While in Vietnam, he found time to write various poems about the war and other related matters, and he very kindly sent me one of his poems, which I think is very well written and represents a true story. I am presenting it because I want to share it with other Members. The poem follows:

TO THE PROTESTORS

As I stand here today at this outpost,
The one we call freedom's frontier,
I think of my girlfriend,
And the ones that I love so dear.
I think of the days that lie ahead,
And my family so far apart.
I think of the things we used to do,
And it causes a hurt in my heart.

My mind goes back to another time,
And I think of another land,
And then my mind returns to now,
And the job we've got on hand.
There are those back in the United States
That hate our presence here.
They hate the war and all the things
That most of us call dear.

They walk the streets and hold up signs,
And damn our presence here.
But when the guns began to shoot,
It's protestors to the rear.
Well, we're not a bunch of heroes,
We're just ordinary men
Standing up to meet the force
Of good old Ho Chi Minh.

Well, if some day we're bombed in war
And their sons are called to go,
They'll look the other way and say,
"Well, son, I didn't know."
"I didn't know that the reds would come
And hit our motherland.
I didn't know that you'd have to die,
In California's sand."

They won't say they marched in streets,
And held up protests signs.
They'll just think of some other way
To hide behind the blinds.
They can't say that they fought in war,
To keep the reds in place.
They'll just say that they did their best
To slow down freedom's pace.

Their sons will go, and some will die
To keep their fathers free.
What an awful thought to bare,
I'm glad it won't be me.
If we have another war,
And I'm too old to go,
I guess my sons will pack their bags
And carry on the show.

But I can look them in the eye,
And never turn aside
And in the final moments
With a heartache deep inside,
I'll just try and hide my grief
And take it all in stride.
I can say to my boys,
"Son, I really tried."

HELICOPTER LANDING FACILITY AIDS ST. ROSE HOSPITAL IN PROMPT TREATMENT OF EMERGENCY PATIENTS

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. MILLER of California. Mr. Speaker, St. Rose Hospital, a relatively new institution which has quickly become a center for health care in southern Alameda County, has recently inaugurated a helicopter landing facility on the hospital grounds to aid in the prompt treatment of emergency patients. In cooperation with the California Highway Patrol, which provides helicopter ambulance service from the scenes of accidents, the hospital has installed a "helispot" landing pad to receive injured motorists.

This innovative facility is just another fine addition to the already outstanding emergency service at Saint Rose Hospital. In the 8 years since the hospital first opened its doors in 1962, the number of cases handled monthly in the emergency room has quadrupled.

The hospital, which is located in Hayward, Calif., adjacent to the heavily traveled Nimitz Freeway, is often called upon to provide care for traffic accident victims as well as for other emergency cases.

The new helicopter service was inaugurated on February 18, when the CHP crew and hospital emergency team demonstrated the new service with the help of a mock emergency patient. Since that date it has been a valuable service to the people of my district, and points the way toward imaginative, efficient emergency care.

The hospital's able administrator and president of the board of trustees is Sister M. Antoinette, CSJ. Her guiding hand has been largely responsible for the development and growth of the hospital services.

I would like to include the following article, which originally appeared in the View from St. Rose Hospital, outlining the expansion of the emergency treatment facilities and fine staff at St. Rose:

EMERGENCY ROOM—A STORY OF GROWTH AND TEAMWORK

As St. Rose Hospital reaches out into the community to provide services, local residents look to the hospital as the center for health care. This is particularly evident in the accelerated growth of emergency and outpatient usage by the community. In 1963, the emergency room staff treated approximately 330 patients each month. Over the past seven years, that monthly figure has steadily risen to 1340 patients.

The helicopter landing facility is the latest extension of the services offered by the hospital's Emergency Department which began functioning on the hospital's opening day in 1962. At that time, the department was staffed by nursing personnel with physicians on call 24 hours a day. Within three months, physicians were added to the house staff covering the emergency room from 7 p.m. to 7 a.m. on week days and 24 hours a day on weekends.

In 1969, Dr. John McGiff was appointed director of the Emergency Department with responsibility for providing round the clock physician coverage. Prior to his appointment, Dr. McGiff had been in General Practice of medicine in McLoud for nine years and in San Leandro for seven years. He recently completed a two week course for physicians in emergency medicine conducted by the Harvard University Department of Continuing Education. Offered twice a year, the course is designed to keep physicians current in new developments in emergency room techniques and care. During the course, Dr. McGiff worked daily in the emergency room at Massachusetts General Hospital in Boston.

The St. Rose emergency room, located on

the north-east corner of the hospital, is equipped to handle most all medical emergencies. A heart lung resuscitator, cardioscope, detibrillator, apparatus to treat eye injuries, and an area for minor surgery are included in the vast array of equipment available to treat patients.

Equally vital is the ER team on duty 24 hours a day and especially trained to administer treatment in emergency situations. Backing up the medical staff in the department are Registered Nurses Joanne Cerruti, Eloise Anderson, Norah Bieniewicz, Jean Meacham, Barbara Reeder, Sandy Graham, and Joyce Pettey.

Orderlies Dave Johnson, Al Baca, Kenneth Graham, Thomas Wamer, and Gary Dickson; and Ward Clerks Patricia Pawloski, Linda Carter, Sharon Collett, and Joann Schwertscharf.

THE FULTON-BROYHILL BILL: NATIONAL HEALTH INSURANCE THROUGH THE "MEDICREDIT TAX INCENTIVE PLAN"

HON. RICHARD FULTON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. FULTON of Tennessee. Mr. Speaker, to say that the Nation faces a crisis in health care is neither startling nor original.

We have heard this assessment from President Nixon; from former Secretary of Health, Education and Welfare Robert Finch; from various Members of Congress; and from a host of editorial writers, news commentators, academicians, and health professionals.

There are, in fact, few Americans who would argue the point any longer.

Despite burgeoning governmental programs; the tremendous growth of private health insurance plans in recent years; a $60 billion a year health industry; and a $38 billion outlay annually in private expenditures for their own health care, the people of this country are viewing—with mounting concern—the widening gap between the promises and the realities.

We say that health care is a right, not a privilege.

But the difference between a right denied and a privilege withheld is of little moment to a person who needs health care and either cannot get it when he needs it or cannot afford it when he finds it.

And so we are far from the point where the goal that all of us share—adequate health care for all Americans—seems readily attainable.

But the search for solutions is on.

The problem is no longer whether we assure the right to adequate health care to those who expect it and demand it.

The problem is how we should go about it.

Let us be thankful that there is no shortage of ideas on that score. Already we have a double handful of proposed solutions and the likelihood of a dozen more being introduced in the months ahead.

And whether we are talking about the Rockefeller approach, the AFL–CIO approach, the Kennedy approach, or the approach taken by the Committee of 100, all of them advocate sweeping changes in our health care system.

For all propose, in one form or another, a national health insurance plan.

These plans deserve the most careful scrutiny, Mr. Speaker, as will the alternatives they are certain to generate. For no thornier problem confronts us on the domestic scene, none cries out for a workable solution with more urgency, none poses a greater need for hard, original thinking.

As Victor Hugo once wrote:

> Greater than the thread of mighty armies is an idea whose time has come.

The idea of national health insurance is an idea whose time has come. The question is no longer whether or not we need a national insurance plan. The question is what plan? And when can we develop one that works?

Early in this session—to be precise, in January a year ago—I introduced a bill which seemed to me to have considerable merit.

It stemmed from an American Medical Association concept and was drafted after extensive discussions with AMA spokesmen.

Essentially, my bill took a split-level approach to the problem.

The first part was designed to meet the needs of those presently covered under the title 19 medicaid program. Under the plan, each low-income person or family would receive a certificate for the purchase of a qualified and comprehensive health insurance plan.

This protection would be made available to those unable to pay for health care without cost or contribution to themselves, since the cost of the program would be borne entirely by the Federal Government.

At the second level, tax credits would be granted on the basis of the individual's gross income for the purchase of qualified health benefits coverage. These credits would be based on a sliding scale of gross income and would be larger or smaller according to need.

Since the introduction of that bill, a great deal has happened, Mr. Speaker.

We have held continuous hearings on the Ways and Means Committee from October last year until May of this year.

We have listened to hundreds of witnesses, heard dozens of ideas, and exchanged uncounted hours of dialogue.

Not surprisingly, my own thinking has been modified and rechanneled as a result of the experience.

If it is possible to identify a common concern, shared it seems to me by most, if not all of my colleagues on the committee, that concern is how we are going to control the costs of these programs.

Medicare and medicaid, for example, are beset by soaring costs. And they are limited programs.

How, then, are we to control the costs of an across-the-board national health insurance plan without bankrupting the Nation or wasting billions of tax dollars?

Mr. Speaker, I am introducing today another national health insurance bill which represents, in my view, a vast improvement over its predecessor by reason of the fact that it encompasses a built-in mechanism for cost control.

I am being joined in this by my committee colleague, Representative JOEL T. BROYHILL of Virginia.

Let me outline the measure for you briefly.

"Medicredit," as the AMA has christened it, recognizes that our population falls roughly into three categories.

In the first are those who are unable to pay the cost of adequate health care for themselves or their families.

In the second are those who can pay a portion of this cost—small or large, but depending upon their respective abilities.

The third category consists of those with a reasonably full ability to pay.

For those unable to afford health insurance, the Federal Government would buy basic comprehensive health coverage by providing the individual, or head of the family, with a certificate that could be used to buy hospital and physicians' services.

Similar certificates would be provided for those with a law tax liability—say, $300 or less.

Those with a tax liability above that amount would be given income tax credits upon their establishment of expenditures for qualified health care plans. The amount of the credit would vary with tax liability. For example, a taxpayer with a $500 tax liability would receive 70 percent of the annual premium cost as a credit against the taxes he owed. A family with a $1,200 tax liability would receive 20 percent against its tax liability.

Let me stress that this bill is based on net taxable income rather than gross income, as provided in my original bill. This seems to me an improvement, in that net taxable income screens out inequities in tax liability—thereby reflecting more fairly a taxpayer's ability to pay—and for that reason furnishes a better yardstick of need than gross income.

In order to receive his tax credit, the taxpayer would need to show that he has purchased a qualified insurance or prepayment plan.

A qualified plan would be one where both the benefit package and the carrier or group had been approved by the appropriate State agency, which would follow established guidelines in developing this qualifying program.

A Health Insurance Advisory Board, to be chaired by the Secretary of Health, Education, and Welfare and to include the Commissioner of Internal Revenue and public members, would provide the guidelines necessary to carry out the program; plan and develop programs for maintaining the quality of medical care; oversee the financial aspects of the program; and concern itself with the effective use of available health manpower and facilities. The Health Insurance Advisory Board would report annually to the President and the Congress.

As basic benefits under any qualified plan, medicredit requires 60 days of in-

patient hospital services, including maternity services; all emergency and outpatient service provided in the hospital; and all medical services provided by an M.D. or a doctor of osteopathy, whether performed in the hospital, home, office, or elsewhere. Supplemental benefits could also be provided under the plan and paid for either with tax credits or, in the case of those unable to pay, with certificates.

This approach does away with the need for medicaid, Mr. Speaker. Under title 19, we have been saying—even to the self-sufficient who can clothe, house, and feed themselves—"spend yourselves to the point of indigency, and then we will move in to help."

Medicredit reverses that thinking. It says, in effect, "the Federal Government will see that you get insurance protection against the cost of illness so that you will not be reduced to indigency."

An advantage to the plan is that it takes into account the varying costs of health care from region to region by dealing with commercial insurance companies, Blue Cross, Blue Shield, or any prepaid group plan operating in any part of the country, on the basis of an acceptable program reflecting regional costs.

Before going into the third element of this legislation, Mr. Speaker, let me express my conviction that the use of the insurance mechanism is essential to any successful program of national health insurance. Without Blue Shield, Blue Cross, and the commercial carriers under contract to the Social Security Administration, medicare would have been an administrative nightmare. In fact it becomes increasingly clear that the private sector should be involved even further in the medicare program, as should any other program that seeks to deliver adequate health care at a price Americans can afford.

To summarize, then, the bill does away with the need for medicaid and places all those presently covered by medicaid in the mainstream of health care.

For the higher income individuals and families, the bill offers realistic incentives to purchase comprehensive health care coverage on a voluntary basis.

The bill utilizes to the fullest extent the private carriers and plans and allows the competition of the marketplace to operate in maintaining cost control and insuring quality of care.

Medicare would be unaffected by this bill's passage, for only those under 65 years of age would be covered by medicredit.

Briefly, now, a word on costs and cost controls.

As wealthy as this country is, there are limits to what we can undertake.

An across-the-board national health insurance plan, operated regardless of need, will carry a price tag of sobering size. And no such plan I have yet seen includes—at least to my satisfaction—a mechanism which promises effective cost control of the taxpayers' money.

This brings us to an essential element of medicredit—its provision of peer review.

This bill calls for a constant and unremitting policing mechanism.

The appropriate medical societies would be charged with establishing a peer review mechanism that would, among other things, review individual charges and services, wherever performed; review hospital and skilled nursing home admissions; review the length of stays in hospitals and skilled nursing homes; and review the need for professional services provided in the institution.

The process of ongoing review can have nothing but a salutary effect on the providers of services, thereby cutting down on the occasional or unintentional abuses that would otherwise occur.

Patterns of abuse would be detected, and the abusers either suspended from or excluded from the program. Exclusion could follow action by the Secretary of Health, Education, and Welfare upon the recommendation of the peer review committee.

In the case of fraud, or other clear intentional misconduct, the peer review committee would be expected to bring charges before the appropriate licensing body.

And in the event that a peer review committee was not established by the medical society within a reasonable time, or if established was not functioning, the Secretary of Health, Education, and Welfare, in consultation with the medical society, would be empowered to appoint a peer review committee that would function.

I am frank to admit, Mr. Speaker, that I am chary at this point of offering cost figures on medicredit or any other of the plans now under discussion. We have seen the cost estimates of medicare and medicaid, for instance, drastically underestimated in the past.

I will say this, however:

Medicredit will cost a third as much, or a half as much, as some of the alternatives we have heard proposed. And its total net cost will reflect tax savings to the Federal and State Governments of the money spent on medicaid—about $5 billion a year presently, about $7 billion in projected increases.

Mr. Speaker, I am requesting that this measure be laid on the table for 10 days in order to allow others to study it and, if they see fit, join Representative BROYHILL and me as sponsors.

Let me now summarize briefly the provisions of the bill I introduce—the "Health Insurance Assistance Act of 1970":

HEALTH INSURANCE ASSISTANCE ACT OF 1970—SUMMARY OF PROPOSED LEGISLATION

It is proposed to incorporate in a single bill programs for: (1) the financing of health care for low income persons; (2) cash incentives through tax credits for the acquisition of comprehensive health insurance coverage; and (3) a structured statewide system for peer review of utilization, charges and quality of services. The first two are incorporated under Title I, the last under Title II.

TITLE II—FEDERAL FINANCING OF VOLUNTARY HEALTH INSURANCE

As to what the first two parts of the proposal, the federal government would assist in the financing of medical and hospital care for individuals and their dependents through participation in the cost of insurance policies of their choice—100% premium payment for the low-income groups, and graduated participation in the payment of premiums for other persons, based on their federal income tax liability.

Entitlement to benefits would be determined with reference to federal income tax liability of an individual in a particular year (base year). A health care insurance policy would run for a 12-month period beginning in the calendar year following (benefit year).

PART A—HEALTH CARE PROVISION FOR LOW-INCOME GROUPS

Certificates for health insurance

An individual having a tax liability of $300 or less in a base year would be entitled to a certificate acceptable by carriers for health care insurance for himself and his dependents. Insurance purchased with such a full-pay certificate would require no beneficiary participation in health care charges.

The carrier, as defined in the bill, would present the certificate to the federal government for redemption.

PART B—INCENTIVES FOR PURCHASE OF HEALTH INSURANCE

Election of tax credit or insurance certificate

Federal contribution to insurance purchased by individuals under this part of the program would be scaled in favor of low-income taxpayers—from 98% if the taxpayer's base year income tax is between $301 and $325, to 10% when his tax liability exceeds $1,300. A table of allowable percentages for related tax liabilities is included in the bill.

As an example: If in 1970 a family of four has $6,500 of income, and uses the standard tax deduction its tax liability will be $493. The family would receive a tax credit of 73% of the premium cost. If his premium for a qualified health insurance plan or policy is $600, the taxpayer could reduce his income tax liability from $493 to $55 ($493 less $438). The same family with an income of $10,500 would receive a 20% tax credit and reduce the tax liability by $120 (assuming the same $600 premium cost).

A policy purchased under this program will contain deductibles: $50 per hospital stay, and 20% coinsurance on the first $500 of medical services.

Qualification of participating carriers

To participate in the plan any carrier would have to qualify under state law, provide certain basic coverage, make coverage available without preexisting health conditions, and guarantee annual renewal. An assigned risk insurance pool among carriers would be utilized as appropriate.

Health insurance coverage

Basic benefits in a 12-month policy period would include 60 days of inpatient hospital care. To encourage utilization of less expensive facilities, two days in an extended care facility would count as one day of the 60 days allowed. Other basic benefits would include emergency and outpatient services, and all medical services provided by a doctor of medicine or osteopathy. These are minimal requisites to any qualified insurance policy under the program.

A supplemental coverage could provide, in addition, one or more of the following: prescription drugs not otherwise covered, additional days of inpatient and extended care services, blood in excess of three pints, personal health services when furnished or on written direction of a physician, diagnostic and therapeutic services, and catastrophic coverage of all hospital and medical costs, up to $25,000, after the first $300 of incurred expenses borne by the beneficiary.

Health Insurance Advisory Board

A health insurance advisory board of eleven members, including the Secretary of HEW and the Commissioner of Internal Revenue and other persons qualified by virtue of education, training, or experience, would be appointed by the President with Senate consent. The Board would establish minimum qualifications for carriers, and in consultation with carriers, providers and consumers would develop programs designed to maintain the quality of health care and the effective utilization of available financial resources, health manpower and facilities. It would report annually to the President and Congress.

PART II—PEER REVIEW (PRO)

Peer review would be employed as a system of review of utilization, charges and quality of services. As proposed in the bill, the Secretary of HEW would enter into agreements with State Medical Societies for the establishment by the societies of peer review organizations.

In establishing administration within a state, the State Medical Society would appoint a five-member Commission and a nine-member Advisory Council. The Commission would then divide the state into administrative areas, and appoint a three-member Local Review Panel and a five-member Local Advisory Council for each such area. All members of the Commission and of the Panels would be doctors of medicine or osteopathy. The Advisory Council would have consumer, provider, and carrier representation. If the State Medical Society would not or could not establish a peer review organization, the Secretary would create the Commission and carry out the peer review organization provisions within the terms of the act.

Hearing and review

Each Panel would consider and review information supplied by individuals, institutions, hospitals, government agencies, and carriers. Random selection would also be employed for peer review.

When the facts as alleged so warrant, the Panel would have authority to order a hearing of a provider, and the provider would have the right to counsel. If the provider is a member of a specialty or allied health service, a person representing such service would be required to sit with the Panel in an advisory and consultative capacity. On the basis of its determinations on the hearing, the Panel could recommend, but not impose, disciplinary action.

Any recommendation for disciplinary action would be reviewed by the Commission, which could accept, reject or modify it. If the Commission finds that disciplinary action is warranted, it will make such recommendation to the Secretary.

Disciplinary action

The Secretary will review and act upon a Commission's recommendation for disciplinary action and may impose a penalty no greater than that recommended by the Commission, providing, however, that in the case of a first-time penalty, the provider may be suspended from participation in the program for a period no longer than one year. Continued violations giving rise to a subsequent hearing and recommendation for disciplinary action would be punishable by longer suspension or complete exclusion by the Secretary from participation in the programs. Upon showing of course, however, the Secretary could reinstate a provider or reduce the period of exclusion.

The provider would have a right to judicial review of a determination of suspension or exclusion.

Evidence in other proceedings

Evidence and information adduced under PRO and determinations made with respect thereto would not be admissible in any other action, civil or criminal.

Notice to patients

An individual under suspension or exclusion would be required to take steps to advise his patients that medicare (or other federal health program) will not pay or reimburse for his services during the period of his ineligibility.

Protective action and communication

Action of a Commission or Panel member, or the supplying of information in carrying out the purpose of the PRO program, would not be a basis for legal liability.

Reimbursement of expenses; termination of agreement

Expenses of PRO would be reimbursed by the federal government. An agreement to establish and operate a PRO would be terminable by the Secretary if the State Medical Society failed to discharge its obligations and responsibilities thereunder; or by the Medical Society by giving reasonable notice.

WHAT'S GOOD FOR BUSINESS IS GOOD FOR AMERICA

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. COLLINS. Mr. Speaker, who was it a few years ago that made the statement, "What's good for General Motors is good for the country"?

He was a GM executive and proud of his company. But even more he realized that for America to prosper, it is essential to have healthy, dynamic business. Factories must be booming to keep folks busy on full-time jobs.

My friend George Heit in Houston sent me a copy of a speech made by Mr. Geneen of ITT. I read and reread the message last Saturday afternoon as I was working in my office. Mr. Geneen asks a good question, "Who speaks for business?"

We have a good man in Secretary Stans of the Commerce Department. Yet we never have him present testimony or recommendations to the Labor Committee. I have heard many officials from the Labor Department come before the House Labor Committee and explain a bill's effect on labor. But what effect the bill would have on business is not presented by a Government official.

It seems like a sound proposal to have Secretary Stans outline some points. How will the new rules affect production costs? Will it have any inflationary reactions? Does it help us in sales in the world competitive market? Are all Government regulations and redtape necessary?

In Congress a major target for criticism is business. The favorite internal enemy today is bankers. We want to know why bankers charge high rates of interest. We never explain that excessive Government spending is a major cause. We never say that the Government spends and spends and the private sector has only the residual balance. We do not mention that the United States with the best credit has climbed to a rate of 8 percent so industry has to pay more.

Bankers built my hometown. Men borrowed money, built business, worked hard, repaid the loan. Bank loans are essential and good bankers are a community's best assets.

Read the headlines. Who did we blast today? Are we after the oil companies? How many committees are working over the automobile manufacturers? How can the railroads operate their unprofitable passenger business?

Congress does give business some special attention. As a Christmas present last year, we gave American business a most repressive, negative tax burden bill to carry on their sore backs. So, is it a wonder that this spring there is talk of possible recession, narrow operating margins, tight money, and employment layoffs?

Mr. Speaker, I would like to quote some excerpts from the sound address made back in January before the conference board at the Waldorf in New York City by the president of International Telephone and Telegraph, Mr. Harold S. Geneen:

Today we are already into a new decade, but an adjective to be applied to the 1970's has yet to be coined. The "Insatiable Seventies" might be appropriate. The U.S. population now has an unparalleled desire for a higher standard of living, more conveniences, better accommodations, more luxuries and more leisure, and this will have profound effects on the changes businessmen will have to manage.

This insatiable demand results in increased pressures on government, both Federal and state, and on the American businessman. It results in such things as rising interest rates and a tightened money supply, on the one hand, and proposals for a guaranteed annual wage and increased Social Security benefits on the other.

These pressures sometimes produce highly charged and biased emotions, and with few exceptions this certainly has been true in our Federal government recently. We have witnessed threats of wage-price controls, accusations of economic concentration, unfair competition, reciprocity—real or imagined—and reprisals against price rises in basic industries. One glaring exception is the curious silence when labor demands, and often gets, contract settlements far above any increase in productivity.

Those in our society who just want "more" very seldom, if ever, realize that increased productivity is the only method of balancing the books for getting more of anything. With this in mind, we must—at the very outset of the Insatiable Seventies—look at what is really happening before, perhaps, it is too late.

One must step apart from our domestic economy and look at our position in the competitive environment of world competition; that is, competition against other nations and other people; competition which is not fostered, blinded or protected by our own government's internal beliefs or restrictions.

There is a serious lesson to be learned from such a review—a lesson that is particularly pertinent at the outset of the 70's because it implies changes that we have *not* contemplated. That lesson, harsh as it may sound, is that the United States is no longer and has not for some time been winning the war of economic competition in the "arm's length" arena of world competition.

In Europe, the last few years have seen the gorwth of a common market and an EFTA market involving some 300 million people, which is at least 50% larger than our own internal market. Not only have trade and custom barriers within this

market been eliminated, but advanced technology and mass marketing to match the market's size have come into being.

All of this has happened at the same time that improving productivity in these areas has to a large degree maintained its pace with ever increasing labor rates. In Japan, for example, labor rates have moved up explosively in the last 8 to 10 years, rising at 10% a year or more, but productivity in Japan has been improving at roughly the same proportionate rate. Thus, from 1960 through 1967, nominal wages in Japan were up over 200%, and labor productivity was up just under 200%. The result is that labor cost per unit of output in Japan has been roughly constant, and so have Japan's export prices.

The situation in West Germany has more or less paralleled the Japanese story. Wage increases there have not been as rapid, although they have been high, but the important point is that German wage increases have also been approximately matched by productivity gains. As a result, labor cost per unit of output in the German economy has risen only very slightly—at an annual average rate for all industry of 0.8% for the years between 1965 and 1968. So Germany's export prices have also been correspondingly stable.

THE U.S. LOSS OF COMPETITIVE ADVANTAGE

Unfortunately, the United States cannot point to a similar record. We did reasonably well in the first half of the Sixties with regard to the relationship between labor cost increases and productivity gains, but since 1965 wage increases in the United States economy have been higher than productivity improvement by an increasing—and now alarming—amount. As things stand today, labor cost per unit of output in manufacturing (where we should have the best performance) is rising by at least 5% a year and perhaps more. As a result, U.S. export prices have risen nearly 15% since 1962, as a broad average.

In fact, the United States is way down the scale on unit cost performance due to a high absolute dollar increase in labor cost per hour and a very low accompanying relative productivity. The Bureau of Labor Statistics published figures in October showing the increase in productivity for the first 9 months of 1969 to be the lowest in any period since 1956. World market competition as a result has been going increasingly to more competitive economies; the share of the market traditionally belonging to U.S. enterprise is shrinking.

Nor is this competition limited to areas outside the United States. Increasingly we have seen the import, for example, not only of Japanese radios and TV sets, but now increasingly larger ticket items such as automobiles. Moreover, these products are produced at labor rates in many cases approximately one-quarter to one-half those of our Detroit workers, and with productivity effectively balancing their increases in labor costs throughout this period.

GOVERNMENT SUPPORT FOR BUSINESS DECISIONS

Under the circumstances, faced with these alternatives, one would expect that government and labor would be supporting the American businessman both morally and in substance. Perhaps, indeed, there is a lesson to be learned from Japan and Germany. If there is, it is surely the fact that their governments work very closely with their businessmen, supporting them in both risk and entrepreneurial ventures abroad, and in such innovative changes in form, size, and methods of business as they need at home to compete in world markets.

This philosophy of support by government coincides with sound management principles. Government noninterference has a parallel in the way that well-run corporate headquarters give relative autonomy to the line divisions, which have to "carry the ball" and perform, to make their own decisions.

Here in America, however, while the demands of a growing and affluent society increase, and business is further restricted and regulated, the real problem, in my view, is the lack of dialogue between business and its critics. There is in many quarters, I believe, a complete lack of understanding of the pivotal position that the businessman must play in our future, as we move from our former position of unchallenged economic ascendency into the highly competitive world environment of the Seventies. So the future of the American standard of living must rest largely on how successful all businessmen are in meeting the critical problem of unbalanced demand and productivity.

Leadership, intelligence and an understanding of the importance of the success of business' vital role in our future should be coming from our government. But the fact that government often does not lead the electorate with understanding of business is not necessarily strange in our democratic process. Voters vote for people. They do not vote for corporations. And, of course, neither do corporations vote, nor do they have the influence ascribed to them.

MOTIVATING EXECUTIVE PERFORMANCE

We think of America as a nation of entrepreneurs; the phrase "Yankee trader" is a symbol of an enterprising spirit of our people. Enterprise and merit were once the only limits to personal fortune. This "free enterprise" system made America great and powerful. As the world changed, the corporate system evolved, providing a means of amassing strength through a diversity of risks and security.

But mounting inheritance and income taxes weakened the entrepreneurial zing, and Congress was led to provide "professional management" with the incentive of actual ownership through the stock option plan. Today, in meeting increased world competition, we need this incentive more than ever, but we find instead a new tax bill that will penalize the profits of stock options; it will be far more rewarding to become a salaried worker than to identify with risk and performance in the future. Under such philosophy, we may well become a nation of expectant pensioners. The U.S. has dulled its competitive edge, and I am not sure it was even intended—but again, there was no dialogue.

I am not referring to any particular administration, nor to any political party. This tax revision is only one example. What I suggest is that a critical breakdown has developed in the meaningful relationship and dialogue between government and business. So perhaps it would be well to ask the question: *Who in government does speak for business?*

A BUSINESS SPOKESMAN IN GOVERNMENT?

We have a Department of Labor which is readily identified and prominent in the support of labor. We have blossoming varieties of consumer representatives—including a new branch of the Department of Justice—which act in the interests of consumers. We have many bureaus, probes, hearings, commissions and others that act unabashedly for government. But, in a period studded with plans for housing, for civil rights, for beautification, for minimum wages, higher taxes and lots more, where is there any government program of similar scope set up to help business? This is, when you think about it, a strange omission.

We do have a Department of Commerce with a very worthy Secretary as its head, but it acts basically for all of commerce and its many participants. Historically the Department has not represented business, nor interceded for it, with the other branches of the government and Congress. Historically there is even a question as to whether it has been or would be allowed to act in such a capacity.

What business needs is someone who will restore the balance in government by acting specifically for business—creating a forum and a dialogue for the businessman in government—and being wholly supported in this effort by the government itself.

And so I would like to propose that the government recognize the importance of the probelm by making either the Secretary of Commerce or an equivalent cabinet office fully and solely responsible for and responsive to the needs of business. This I believe, could restore the necessary balance.

I make this proposal because I think it is now necessary that a collective voice be given business in this and future administrations, on a level with its peers in government and in the form of a cabinet-level department that will unabashedly and openly speak for business and solely represent it in government. Let the dialogue finally commence—this is nothing less than sound economics and good management, and a necessary step to good planning. For we must prepare for the changes that will take place in the Insatiable Seventies if they are to be managed.

FBI STRUCTURE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. DERWINSKI. Mr. Speaker, Mr. Walter Trohan, the distinguished bureau chief emeritus of the Chicago Tribune, is a close friend of J. Edgar Hoover and is probably as familiar with the operations of the FBI as any newsman in Washington. This is reflected in his laudable column of Wednesday, July 9, on the retirement of Cartha D. DeLoach from the FBI. I believe that Mr. Trohan's personal emphasis as well as his objective comments on the FBI structure is based on thorough knowledge of the subject covered and the obvious respect for the great accomplishments of Mr. DeLoach:

[From the Chicago Tribune]

WASHINGTON REPORT—FBI'S NO. 2 MAN ENDS PUBLIC LIFE

(By Walter Trohan)

WASHINGTON, July 14.—Today marked the first day in private life of a good and faithful public servant—Cartha D. [Deke] De Loach, the assistant to FBI Director J. Edgar Hoover, and a member of the Federal Bureau of Investigation, with time out for Navy service during the war, for 28 years.

No doubt he will be a fish out of water for a time—but a goldfish, as a top executive with the Pepsi-Cola Co.—because the FBI has been a way of life for him for so long. He was a son to J. Edgar and a brother to every good FBI man, and there have been few bad ones, largely malcontents.

When Deke announced his impending retirement, which came on his 50th birthday yesterday, there was a splashing of speculation in liberal circles as to what this might mean to the world's No. 1 law enforcement agency. Many of the deep thinkers on the Left agreed that this could only mean that the FBI was turning in their direction, as tho Deke were responsible for FBI policy.

Nothing could have been more ridiculous, but this nonsense was widely accepted. So long as Director Hoover runs the FBI—and make no mistake about it, he does—the organization will continue to let none but Americans stand guard over our safety to the best

of its ability. Deke would be the first to say this, but he did not choose to become embroiled with men who are forever lunging into thought and generally missing.

The heavy thinkers said DeLoach was ruling himself out as a successor to Hoover. Yet there is no reason why Mr. Nixon or any other President could not pluck De Loach from private life, if he considered his appointment as serving the best interests of the country, and he couldn't be far wrong.

Deke is leaving, as he had planned, for eight reasons—his beautiful wife and their seven children, including an Air Force pilot. One can hardly raise and educate seven children on an FBI salary. So when he became eligible for his FBI pension, after more than 25 years of service and on his 50th birthday, he elected to accept a post which Donald McIntosh Kendall had been holding open for him for some five years.

This day is not entirely Deke's, because much of him will always belong to the FBI and to Hoover. He is the embodiment of the loyalty, the sportsmanship, the personal presence and the devotion to duty that mark the FBI man generally. It is true that he had some fine qualities in a greater degree than his fellows, or he would not have gone so far so fast and enjoyed the trust and confidence of three Presidents and any number of Supreme Court justices, members of the cabinet, senators, representatives and a host of lesser officials.

For his farewell salute at the American Legion, where he has been chairman of the national public relations committee since 1959, men came from all walks of life, from all faiths and of all races. In the interests of accuracy it must be noted there wasn't a single Communist present, nor anyone left of center.

Deke is gone but the FBI is carrying on. His post is being filled by William Cornelius Sullivan, another man of ability and charm. And, if Sullivan should go, Hoover has ranks of dedicated and competent men to choose from. This is the way every good organization should be run but too frequently isn't. There is only one indispensable man in the FBI, and he is the FBI. But we can be thankful he is continuing to make so many capable heirs.

THE ARTS MEAN BUSINESS

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. HANSEN of Idaho. Mr. Speaker, Mr. Robert V. Hansberger of Boise, Idaho, is not only one of the great leaders of business on the world scene today but an equally effective exponent of the arts and the humanities. It was fitting that the Rotary Club of Salt Lake City, home of the world-famous Mormon Tabernacle Choir and Utah Symphony Orchestra, would ask Mr. Hansberger to talk upon business and the arts recently.

I include the full text of his talk in the CONGRESSIONAL RECORD in the hope that Members of Congress and the general public will realize what many businessmen, such as Mr. Hansberger, are doing to business and the arts:

"THE ARTS MEAN BUSINESS"

(By Mr. Robert V. Hansberger, President, Boise Cascade Corp.)

(A speech given before the Salt Lake Rotary Club on Tuesday, May 26, 1970.)

MADAM and GENTLEMEN: It's mighty good to be back. I've always enjoyed talking especially to Rotarians because throughout the countryside, in fact, throughout other countrysides, I've found this is a group that makes things happen.

Maurice, I want to thank you especially for that very warm and very stirring introduction. As a matter of fact, as I listened to you, I decided it was almost the best one I've ever had. The only one that I could think of that might have nosed it out a bit was one that took place several years ago in the mountains of Idaho when I had the privilege and honor of being the commencement speaker for one of our local, small high schools. This was a school in Grandview, Idaho. I left Boise in my automobile for what was supposed to be about a two hour drive. It was a very un-Idaholike day: it was raining; and so it took me just a little bit longer than I expected; and I got to the local gymnasisum just as the ceremony was about to begin only to find that the master of ceremonies, the man who was supposed to introduce me, couldn't get to town because of the weather, and I had to introduce myself. And, Maurice, there were things said about me that night in public that have never been equalled either before or since.

I'd like to make a few comments here—you're kind of a quasi-captive audience—about the relationship between *making* our living and *doing* our living. I think as we have managed to obtain a greater, ever greater *quantity* of human life in our country, the time is here—maybe it's a little more than here—when many of our people are beginning to worry about the *quality* of life.

Not very long ago, business, the arts and community problems were regarded as separate areas of concern. Yet during the recent two years of its operation, the Business Committee for the Arts has gathered considerable evidence to indicate that these supposedly separate fields are being effectively merged.

On the national level, business involvement with the arts has been increasing rapidly. And meetings such as this one today—of businessmen interested in the arts in the Salt Lake Valley—have been held in hundreds of communities throughout the country.

Yet the popular image of the businessman still too often makes him out to be a *boor* and a *philistine*. A recent cartoon, for example, shows one of our mighty captains of industry barging into a sedate gallery and bellowing out, "All right, let's see some of that art that's been beating the hell out of the Dow Jones Averages." Now, as a lot of you who followed the market the last few weeks would agree, that doesn't take very much doing today. Unfortunately, there is a little too much truth in that image. For example, it is now possible for those with no interest in art whatsoever to speculate in programs devoted exclusively to the timely trading of paintings and sculpture.

There is no question that as individual philanthropists, American businessmen have been a sustaining economic force in the arts for a long time. And businesses—more or less consciously—have employed the arts in marketing and manufacturing since the beginning of commerce. However, in the past few years, there has been an increasing recognition that the corporation, itself, has an interest in the condition of the arts in America.

It hardly seems radical now to say that the equality of life, enhanced by the arts, that is available on the community level to our young people, to the disadvantaged, to the elderly, and the great majority with increasing leisure time, should be the concern of *all* segments of society, including business.

In this light, most corporate leaders no longer regard the arts as frivolous or peripheral. Just as the concept of public affairs has expanded beyond simple concern for the corporate image, the potential of the arts is being understood in broader terms than advertising and interior decoration.

Kaiser Industries, for example, undertook a program to recruit, train and dress about two dozen young people as subscription salesmen for the Oakland Symphony Orchestra. These trainees, mostly from ghetto areas, and mostly black, were given contacts with businessmen on all levels. They brought back over 1,400 subscriptions and donations. And their period of training and canvassing gave them contact with the business world they might otherwise never have experienced.

There are two equally important steps for a business to take toward the arts. One is to see the arts as essential functions—as means and ends—of corporate involvement with the life of the community. This is the thrust or the point of the Kaiser idea, and of many other projects that have been undertaken by companies of all sizes across the country.

The second is to recognize that involvement with the arts, when tailored to the needs of a company and a community, can be good for business. While many business leaders are impressed with the importance of the arts in any effort to enhance the quality of life, they are also impressed with the practical ways in which the arts contribute to business itself.

Dr. Frank Stanton, president of CBS and a board member of the Business Committee for the Arts, put this point very well, I think, when he said: "I have never felt it to be a matter of corporate altruism for a company to erect its buildings, or print its publications, or manufacture its products in accordance with high standards of design . . . More is derived of time and effort spent in congenial surroundings than in ugly ones. More attention is invited by the well-designed publication than by the haphazard one. More hospitality is extended by the purchaser, however utilitarian minded, to the beautiful object than to the ungainly one . . . And so," he concludes, "the company that strives for quality in design, that respects the eye of those upon whom it is dependent—employees, stockholders, customers and the community—ultimately benefits most of all."

Many businesses have found that their arts programs helped them to recruit and retain personnel, particularly their highly educated employees who demand adequate cultural facilities for themselves and their families. The design and quality of company properties themselves were naturally an important factor. Many firms making direct sales to the public have long been aware of the usefulness of their involvement with the arts as far as packaging and marketing their products are concerned. In some cases the company's products themselves have been used as materials by artists, who in turn have explored new possibilities for their use.

Any regular reader of magazines over the years has picked up some good quotes from the ads entitled "Great Ideas of Western Man," which have been run by the Container Corporation of America out of Chicago. The relation of these impressive spreads to the aims of the company is no secret. Nor is it anything to apologize for. Container Corporation long has had a very *profitable* history of partnership with the arts in design, manufacturing, and advertising. Its chairman, Leo Schoenhofen, a man I used to work for, says, "A strong association of Container Corporation with fine arts, good design and great ideas helps us to sell our product. It elevates our salesman in the eyes of the people he calls upon, and it predisposes at least some customers to do business with us."

Not all corporations, however, define their interest in the arts in terms of sales. Most companies who are rooted in a community recognize the stake they have in making it an attractive environment. An arts organization which will help to enhance the community, encourage new business develop-

ment and perhaps even attract tourists and the press merits the attention of business in that area. Few companies will now consider a new location which does not offer adequate cultural opportunities. In fact, those communuities with outstanding artistic attractions have used them successfully in advertising and negotiating for new industry. An improved community, which attracts new residents, can only be to the advantage of both business and arts groups.

The Air Preheater Company, for example, initiated a series of live performances by concert artists in the remotely situated community of Wellsville, New York. The series was the first in the town's 110 year history, and was for many residents their only contact with live performing arts. In addition to the regular series, Air Preheater required each of the groups to give a matinee performance for high school students which was paid for by the company. A large number of Air Preheater employees are college trained engineers, and the series was conceived by the company to be an aid in recruiting and retaining and motivating skilled personnel in a community of only 8,000 people.

John E. Sheehan, president and chief executive officer of Cohart Refractories Company, Inc., a subsidiary of Corning Glass Works, reported that Cohart had brought into the Louisville area a number of outstanding young executives and that the "quality of life" in that city had been a fundamental factor in attracting them to the community—it had also helped to prevent other corporations from attracting away the men who comprised the current executive staffs of Louisville's business organizations. Furthermore, he reported, it helped to keep in Louisville, or bring back, the city's maturing youth who go to graduate schools and who, in former years, frequently decided to go to other cities after graduation.

He asked Louisville business people to recognize that support of the arts in Louisville was not a charitable act. "It ought," he said, "to be thought of selfishly by the business community as a way of maximizing profits. It is, in reality, a business expense—not a charitable contribution."

Leaders in the retail industry have also found involvement with the arts to be a natural consequence of their stake in the vitality of the community. Foley's in Houston, The Outlet Company in Providence, and many others across the country offer assistance to the arts in one way or another. Here in Salt Lake City, A. G. Stores has twice received an Honorable Mention in Esquire's contest "Business in the Arts" Awards. By tying the arts in with their advertising, Abraham & Straus and Macy's in New York provide a substantial lift to local cultural organiztions for whom the cost of full page in the New York Times is simply out of the question. And, of course, the ad itself is more interesting for its additional artistic content.

The Reader's Digest has found that support of the arts can play a part in employee, as well as customer, relations. Individual staff members are allowed to designate the recipients of a portion of the Company's donations.

The New York City Center reports that a large number of those who have contributed for the first time under this plan, continue to do so on their own and, in fact, tend to increase the size of their personal gifts as they become more involved with the activities of the Center.

Seen on a national scale, business involvement with the arts has reached impressive totals. For many years, the National Industrial Conference Board has conducted triennial surveys of corporate contributions to all philanthropies. In 1959 and 1962, gifts for cultural purposes were not considered important enough to rate a separate category in the triennial survey. They were included under the heading of "Civic and Cultural Causes"—a category which accounted for only three percent of total corporate giving in 1959. In 1965, the first year in which "Culture" was assigned a separate column, the arts alone received three percent of the total. In that year, 540 companies surveyed gave about $6 million to the arts. In the 1968 survey, published this year, 400 corporations reported grants to the arts of over $13 million, or about five percent of their total giving.

A rough translation of these figures into national terms can be obtained by applying the five percent figure to the estimate for total corporate giving of $900 million computed by the American Association of Fundraising Council. The resulting figure—$45 million—may be a reasonable estimate of philanthropic support of the arts by business in 1968.

However, even this considerable sum is only part of the total, as the triennial survey includes only those commitments to the arts which were reported as contributions. A more detailed survey was sponsored by the Business Committee for the Arts and carried out by the National Industrial Conference Board. The results, published in Business in the arts alone received three percent of the for they indicated that projects in the arts, reported as business expense in 1968, apparently involved expenditures of about $40 million—almost as much as was reported as contributions.

I travel a great deal in connection with my work. I just got back from Iran and Turkey. I travel throughout the country a great deal and frankly, I could say to you from some knowledge here in the Salt Lake Valley, I don't know of another community anywhere that really does as much in promoting and supporting outstanding cultural organizations in proportion to the size of the area as you do right here.

I'm aware of the fact that the very first statewide Arts Commission, or, as you call it, the Utah State Institute of Fine Arts, was established here, the first of any state throughout the country was back in 1890. The next one came along (New York State) as late as 1961. To me, this is an indication of how important the people here in this State and in this Valley feel about an involvement in the cultural quality of life of the area.

You have a great many world-renowned organizations in the arts headquartered here in Salt Lake. Your Utah Symphony is one of the best—certainly one of the best in the world. I had the privilege of hearing it in Boise; I think it's one of the outstanding success stories in the arts of the country.

I want to commend the people here in this area. I think you've set some examples for the rest of the country including Idaho. I hope you keep it up. Thank you.

One firm conclusion of these studies is that business *is* involved with the arts to a substantial and increasing degree. Another is taht support of the arts is not the exclusive property of a few well-known companies. Eight out of ten corporations surveyed contributed operating funds, and four out of ten made capital gifts to the arts. And it is interesting that smaller companies tended to assign a higher percentage of their contributions to the arts than did the large companies.

It would seem to appear from these figures that a substantial beginning has been made. According to the surveys, some eight percent of American corporations made a contribution to the arts in some form or another. The total amount made available in support of the arts in 1968 alone, was something in the order of $85 million, a figure close to that of support by the foundations, and considerably greater than that provided by the Federal government.

But I think it is important to remember that these impressive figures are the result of thousands of instances of local cooperation between business and the arts, such as have taken place here in Salt Lake City. A few national arts orgnaizations, no matter how celebrated, cannot fill the artistic needs of an entire country.

In the final analysis, it is the quality and quantity of the arts that are actually available to people where they live and work that will determine whether the arts can play an effective role in our society. Communities such as Salt Lake City can offer further proof of the proposition that in both an immediate and broader sense, the arts mean business.

DOWN THE BIG ROAD—BY THEIR VOTES YE SHALL KNOW THEM

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. STOKES. Mr. Speaker, William O. Walker needs no introduction to my Ohio colleagues—particularly to those on the minority side of the House. As publisher of the Cleveland and Columbus Call & Post, public servant, and exemplary citizen, he has been the conscience of the Ohio Republican Party for half a century.

On July 11, Mr. Walker devoted his entire syndicated column to a discussion of the shameful record our State delegation assembled on the recent vote to extend the 1965 voting rights bill. Over half of our Representatives were recorded against this measure which has been almost unanimously acclaimed as the most effective civil rights legislation ever passed. Twelve of the 13 Ohio "no" votes were cast by Republicans. Mr. Walker was not proud. Mr. Lincoln would not have been, either.

Mr. Speaker, I include herewith the aforementioned article in the RECORD at this point:

[From the Cleveland and Columbus (Ohio) Call & Post, Saturday, July 11, 1970]

DOWN THE BIG ROAD—BY THEIR VOTES YE SHALL KNOW THEM

(By William O. Walker)

In this day and time, it is hard to believe that 13 Ohio Congressmen would vote to withdraw protection from Negro voters in the South, and support Alabama and Mississippi in denying the Federal government the right to supervise registration and giving protection to Negro voters.

But the 13 did. All but one of the 13 were Republicans.

Some weeks ago, Cong. William McCulloch (R) of Piqua, Ohio complained that Ohio Congressmen were not supporting him in his effort to get the Voting Rights Act of 1970 through the House Judiciary Committee and onto the floor for a vote. It is easy now to see why he felt so deserted.

The Voting Rights Act of 1970, was a special target of the George Wallace faction in the South. For it was the original of this 1970 bill that added nearly a million Negro names to southern voting rolls during the past 5 years. It was this increase in Negro votes that made the election of Charles Evers mayor of Fayette, Miss., and, all the other Negroes elected to public office in the South during the past 4 years.

Since one of the sections of the bill provided for Federal monitors at voting booths on election day, thus insuring protection for

Negro voters, the bill was especially repugnant to the old line southern politician, who, for years, has had a free hand in determining who can or will vote.

How any Ohio Congressman, knowing the importance of this bill to the rights of American citizens to vote, could oppose the bill, is beyond me. The only explanation I could figure out was that these Congressmen were either personnally racist, or, are part and parcel of President Nixon's "Southern Strategy" program, which is almost the same thing.

It is interesting to note in checking the voting by state delegations, that Ohio Congressmen furnished the second largest vote against the bill. Texas led with 14 and Ohio was second with 13. Illinois, out of a delegation of 24, cast only 8 against. California cast only 11 against out of its 32 total votes. Pennsylvania cast only 8 against out of its 27 votes. New York state with 41 votes, cast only 5 against.

It is also interesting to note that the states that cast solid votes against the bill, were: Alabama 8; Georgia 10; Kansas 5; Mississippi 5; Nebraska 3; New Mexico 2; North Dakota 2; Oregon 4; South Carolina, 5, 1 absent.

Kentucky, although a southern border state, cast all of its 7 votes for the bill.

The vote on the Voting Rights Act of 1970, is positive proof that the voters of Ohio had better take a good, investigative look into the records of these 13 Congressmen this year. All of them are up for reelection.

The vote of these 13 Ohio Congressmen, indicates the extent the white backlash is permeating this state and the nation. The vote by the states also indicates the source of support Mr. Nixon is getting for his "Southern Strategy program." For instance, Gerald Ford of Michigan, the Republican leader in the House, and a close adviser of Mr. Nixon, voted against the bill. So did Cong. Arends of Illinois, another top Republican leader. Cong. Morton of Maryland, Republican National Committee Chairman, voted against the bill.

Both Congressmen from Columbus, Chalmers Wylie and Samuel Devine, voted against the bill. Buz Lukens, of Middletown, who made such a bid for Negro support in the recent Ohio gubernatorial campaign, voted against the bill. So did Frank T. Bow of Canton. Cincinnati voters should remember Donald D. Clancy, for he too voted against the bill.

The one Ohioan who did the real work for the bill, is Cong. William McCulloch of Piqua. In a letter to me after the bill had been signed into law by President Nixon, Clarence Mitchell, Director of the NAACP Washington Bureau, said:

"Our mutual friend, Congressman William McCulloch, has again demonstrated the power of a good man who is determined to achieve goals that will help his fellow humans. We could not have obtained passage of the bill extending the 1965 Voting Rights Act's ban against literacy tests if Mr. McCulloch had not very early decided that he would seek the extension, even though the Attorney General of the United States did not want a simple extension."

"The Congressman is a great friend to those who are working for civil rights causes, but he is a far greater asset to the Nation, to Ohio and to all who believe in fair play. He is a constant reminder that good will and compassion are enormously effective in bringing about constructive change when they are a part of the make of a man's integrity, skill, intelligence and great personal courage."

So, while some Ohio Congressmen did all they could to keep Negroes from voting, it was another Ohio Congressman who did all he could to not only get the bill passed, but saw to it that it contained the essentials for real protection of Negroes who want to and should vote in the South.

By their votes you should remember them in November.

"A SENSIBLE SOLUTION"

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. HOGAN. Mr. Speaker, as cosponsor of a bill introduced by Representative ANCHER NELSEN of Minnesota, I was particularly pleased to read an editorial appearing in the Washington Post on July 20, 1970.

Congressman NELSEN'S bill (H.R. 18305) would direct the Secretary of State to transfer certain real property owned by the U.S. at the old Bureau of Standards site off Connecticut Avenue to the District of Columbia to be used as a permanent home for the Washington Technical Institute.

The distinguished gentleman from Minnesota, Mr. NELSEN, made a significant contribution to the problems confronting the District of Columbia when he carried the burden in the House during the 89th Congress of enacting into law the District of Columbia Public Higher Education Act, Public Law 89-791, that resulted in the creation of the Washington Technical Institute.

The students of this Institute are, from all reports, getting a good education and the graduates are getting good jobs.

I believe that Congressman NELSEN'S bill is a sensible solution to the problem of insuring that the Washington Technical Institute will have the permanent kind of physical plant to provide growth to the Institution and broad availability to its training and programs. Accordingly, I commend the Post editorial to my colleagues as informative reading matter.

A SENSIBLE SOLUTION

Rep. Ancher Nelsen's (R-Minn.) proposal to let the Washington Technical Institute stay on the former National Bureau of Standards site, along with the proposed new building of the Organization of American States and the foreign chanceries that are to be built there, strikes us as eminently sensible. The institute, which is now only temporarily housed in the old, but still serviceable Bureau of Standards buildings off Connecticut Avenue at Tilden Street, is training young people, most of them from the ghetto, for technical work in the trades, crafts and service industries. From all we hear, it is quitely doing an excellent job under difficult, makeshift circumstances. (All of the first students the institute graduated this June, we are told, are finding employment at good salaries.) Its lease, however, is up in another two and one-half years, which, even in an ideal situation, is obviously not enough time to build a new campus. And the situation that has been officially ordained for the institute at 14th and U Streets in the Shaw area is far from ideal.

A brand new campus would cost anywhere around $70 or $80 million, and where is that money going to come from? The U Street location would displace a large number of people who now live and do business there, and where are *they* to go? Tearing down their homes, furthermore, would deprive the city of the taxes the businesses at the U Street location now pay, and shouldn't the city seek to increase rather than decrease its tax revenue? And to put a predominantly black institution into a predominantly black ghetto area would futher harden segregation, and when are we going to start to integrate this city?

To let the institute stay along Connecticut Avenue right next to the Van Ness subway station (that would reduce the needed parking space), renovate the old Bureau of Standards buildings and build such additional ones as are needed, would save about half of those $80 million and heaven knows how much time and agonizing uncertainty. There is still ample room on the 34-acre site for the OAS and the chanceries, particularly if you add the roughly 30 acres of the Diamond Laboratory across the street that will soon become available. Present plans would use the remaining space for new federal offices for some 5,000 employees. But these plans are still vague and there is no appropriation to build the offices. There is thus no harm done by letting feds look for another site, while the potential harm of buffeting the city's only vocational school about from pillar to post, as Congressman Nelsen put it, could be fearful.

HONOR AMERICA DAY

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BROYHILL of Virginia. Mr. Speaker, most of us have been talking about the success of the Honor America Day which was held in Washington, D.C. The hundreds of thousands of people who came to participate and particularly those who contributed their time, talents, and efforts to promote it, deserve gratitude and appreciation on the part of all Americans as it was a successful day to that extent.

Unfortunately, however, there was a darker side to this Honor America Day experienced by only those who were present. It was disgusting and unforgivable. I am referring to the action of some filthy young punks and misfits who do not appreciate or understand what America is all about and are trying to undo the efforts put forth by loyal Americans on this great day.

Under leave to extend my remarks, I am inserting into the CONGRESSIONAL RECORD for my colleagues and all Americans to read a letter I received from one of my constituents which very vividly describes the unfortunate experience she had on that day. In my reply to her, I stated that while there were many things we are trying to do to solve this problem the best solution, and maybe the only solution, is strict police enforcement of the law to protect the public from disorderly conduct, indecent exposure, and wholehearted support of this police protection by all Americans. If we continue to tolerate this type of activity, we will indeed become a sick America.

Representative JOEL BROYHILL,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE BROYHILL: I feel that you, as the representative from our district should be aware of how my family spent "Honor America Day" July 4, 1970. As members of the tax paying, hard working, law abiding citizens, my husband, family and I decided to go to Washington, D.C., to participate in the "Honor America Day" activities. Our four-year-old looked forward to the celebration as she convinced her grandmother to join us. We also invited two

female Mormon missionaries to go with us as they had never seen Washington.

The first thing we saw after leaving the parking lot were three filthy youths with wet, dirty American flags around their necks. They alternately swung them at trees and bushes and then stopped to wipe their feet with them or sop up the sweat on their bodies. My little one wanted to know if she could wet her flag like the big people. My husband asked an officer to do something and he refused.

We reached the monument grounds and settled with people like ourselves who had brought family and friends to join in the festivities while filthy, half dressed and even half nude dissenters who were demanding their rights paraded among us. We were soon joined by a couple who commenced to lie down and demonstrate sex in the raw before 30,000 disgusted onlookers. This was hardly the show I had brought my two children to see and then it started, noise and jeering, beer bottles (one which missed my infant by inches) and then that horrible smell and the pain in our throats as we ran from the tear gas with our screaming infants and our gasping children.

Well, they have had their fun now, we decided as we resettled ourselves for the remainder of the program which we could not hear because of all the noise they were making. Then it began again, louder and with fireworks being tossed flaming into the crowd making it necessary for us to hold our children to prevent their being hurt while the young missionaries made mental notes to write home about and Mr. Hope spoke of 2 billion people around the world viewing the telecast.

Before we could gather our belongings together again, the gas hit us with renewed force & we were forced to leave in the same painful gasping rush as before. We returned home in disbelief. We had to promise our terrified four year old that she would never have to go to "Honor America Day" again before she would sleep.

That is how we spent honor America Day.

I would therfore like to know when the socalled *silent majority* will be heard. When will I be able to sit in the shadows of the Washington monument without exposing my children to flag desecration, nudity, filth, vulgarity and bodily pain & harm.

When will laws be enforced. Or is there no law to protect us from these animals? Is there no law against liberating a truck by pushing it into the pool.

When will my rights be as important as their safety? I too want to be heard. Or do only they have rights?

Until I have the answers to these questions I must join the ranks of "sick America." I will stay away from the district because I am afraid. I don't want to risk my children's safety or expose them to the filth that walks the streets.

What are you doing about this?

CONGRESSIONAL VOTING AND HOW TO CONCEAL IT

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. JACOBS. Mr. Speaker, I insert the following editorial broadcast by WFBM–TV in Indianapolis, Ind., on July 13, 1970:

CONGRESSIONAL VOTING AND HOW TO CONCEAL IT

Centuries ago, members of England's House of Commons worked out a plan which prevented kings from knowing how each of them voted.

By 1832, royal reaction was no longer a cause for personal concern and member's votes were made public.

One hundred thirty-eight years later, House members in our own Congress are using the same plan to keep the public just as much in the dark as English kings were long ago.

It's true that you often hear or read how your Congressman voted. And under our Constitution, one-fifth of members present can demand a House roll call—a record vote.

The catch is that the House can instantly convert itself into a committee—the Committee of the Whole—to decide on amendments to important bills. Once this is done, a roll call *cannot* be demanded. There are voice votes. There also are division and teller votes, in which members stand or file past tellers to be counted. But no record is made of how individual members vote, and the standing or marching is done with Congressional backs to the press gallery. Few responsible reporters try to overcome that handicap.

These committee votes are not final, of course. But after the switch back to full-House status, only amendments *which have been approved in committee* are eligible for a final vote.

At this point, if a roll call is demanded many a lawmaker who wasn't present for the *real* decision making hurries to his seat and casts a vote which he thinks will please the folks back home. There's even a system of bells to signal when the critical time has come!

Fifty Congressmen—members of both parties—will try this week to change the rules so that amendments *turned down* in the Committee of the Whole also can be submitted to the full House and a record vote demanded.

We can think of no reason why the public shouldn't know where House members *really* stand on all important issues. If you agree, we suggest you wire your Congressman, or write him at once, and say so.

If you happen to have heard the argument that additional roll calls would take too much time, you might add that Indiana's Legislature has long employed push-button, instant, roll-call voting.

Let's hope that won't take Congress another 138 years.

NATIONAL SERVICE ACT GAINS SUPPORT

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BINGHAM. Mr. Speaker, I am reintroducing today the National Service Act of 1970 (H.R. 18025) with 16 additional cosponsors. This brings to 26 the number of Members who have joined together in supporting this drive for a comprehensive revision of the draft.

Those Members who are joining me today in reintroducing this bill are:

BROCK ADAMS, Democrat, of Washington.

SHIRLEY CHISHOLM, Democrat, of New York.

JEFFERY COHELAN, Democrat, of California.

SAMUEL N. FRIEDEL, Democrat, of Maryland.

SAM GIBBONS, Democrat, of Florida.

MICHAEL HARRINGTON, Democrat, of Massachusetts.

WAYNE L. HAYS, Democrat, of Ohio.

MARGARET M. HECKLER, Republican, of Massachusetts.

ROBERT L. LEGGETT, Democrat, of California.

RAY J. MADDEN, Democrat, of Indiana.

JOSEPH M. MCDADE, Republican, of Pennsylvania.

LLOYD MEEDS, Democrat, of Washington.

JOHN E. MOSS, Democrat, of California.

BERTRAM PODELL, Democrat, of New York.

HOWARD POLLOCK, Republican, of Alaska.

ROBERT O. TIERNAN, Democrat, of Rhode Island.

The original cosponsors who joined me on the initial introduction of this bill on June 10 are:

DANIEL E. BUTTON, Republican, of New York.

JAMES D. DINGELL, Democrat, of Michigan.

JAMES G. FULTON, Republican, of Pennsylvania.

SEYMOUR HALPERN, Republican, of New York.

WILLIAM D. HATHAWAY, Democrat, of Maine.

HENRY HELSTOSKI, Democrat, of New Jersey.

THOMAS M. REES, Democrat, of California.

JAMES H. SCHEUER, Democrat, of New York.

FRANK THOMPSON, JR., Democrat, of New Jersey.

Chaos is presently infecting our Selective Service System and it is essential that the Congress enact comprehensive draft reform now. The National Service Act provides such a reform. I have had reprinted the speech I gave on June 10 in which I outline the proposal and include the text of the bill. I would be glad to provide a copy of this reprint to anyone who wishes more details.

Mr. Speaker, draft resistance in the United States has become so widespread and so sophisticated that the Selective Service System seems barely capable of drafting anyone who does not wish to be drafted. Young men with intelligence or education are so keenly aware of draft deferments that they can easily avoid induction while the poor and the uneducated end up fighting the war.

One of the most flagrant areas of draft resistance is New York City. Last year, local boards in the city had to send out twice as many induction notices as there were spots to fill. In the end, after mailing nearly 14,000 induction notices to fill 7,700 spaces, the draft boards were still short 524 men. These figures once again underscore the need for drastic revision of the Selective Service Act this year.

Furthermore, these young men who fail to show up for induction most likely will not be prosecuted and will not end up in the Army. According to Major Thomas M. Maher, head of the legal division at New York Selective Service headquarters, the Federal prosecutors have such a backlog of cases that only a few can be prosecuted. Consequently, about 2 percent of these delinquents will end up in the Army and less than 1 percent in court. The remainder will ulti-

mately submit to the draft process and, strangely enough, virtually all of them will be rejected for physical or mental reasons.

In addition, there are many perfectly legal methods now being employed to avoid service. More people than ever across the country are being rejected for medical reasons. The Nationwide failure rate is running now about 50 percent. In areas of greater antiwar feeling, the rate is even higher. For example in the first four months of 1970, about 67 percent of the people taking draft physicals in New York City failed them. Far from representing a degeneration in public health, the statistics show the increased willingness of young men to use medical reasons, even as minor as certain scalp conditions, to escape induction into the Army. During World War II an object of shame and disgrace to many, the medical deferment has now become a cherished goal of registrants.

There are many other methods now being employed by young men, involving appeals, C.O. status, stretching student deferments, and more complicated medical and psychiatric reasons to avoid induction. I need not elaborate on them. It is evident that, despite the claims of Draft Director Curtis Tarr to the contrary, our present Selective Service System is not working. Each extra day that we in the Congress let this system run will only create more confusion and exacerbate the frustrations of all our young people.

The National Service System, H.R. 18025, represents a workable alternative to the Selective Service System. Young men strongly opposed to a war could choose to serve their country in a useful civilian capacity, resolving the legal dilemma surrounding conscientious objection. Through our experience with such programs as the Peace Corps, Vista, Neighborhood Youth Corps, and others, we know that we can effectively utilize the resources, energies, and abilities of young men. Furthermore, much of the dissatisfaction surrounding the draft could be channeled into productive areas of our society serving an important social purpose.

Mr. Speaker, as the statistics demonstrate, it is evident that the Selective Service System is not working. For the Congress to do nothing to provide a workable system would be a tragedy of lasting importance. Steps must now be taken to halt the increasing student revolt against our inequitable draft system.

The National Service System is a constructive answer to our present draft crisis. Unlike the present system, it is both workable and equitable.

HOME LOAN ACTION HAILED

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BIAGGI. Mr. Speaker, the action by this body yesterday to increase the availability of guaranteed home loan financing for veterans and of mortgage credit for home financing in general will be welcomed by the vast majority of Americans who are in the middle- and low-income brackets.

Both of these measures represent steps forward in the continuing effort to help many of our fellow Americans buy their own home. However, further measures are necessary if the tight mortgage money market is to be eased soon.

I am particularly pleased that new mortgage funds will be made available to our veterans. In recent years, returning Southeast Asian war veterans were unable to purchase new homes due to a lack of funds in the mortgage market. This was particularly unfortunate since these veterans were generally in the lower income brackets and could least afford to go to the conventional loan markets.

With this bill, if the Senate concurs, these defenders of peace and freedom will be able to return home and start to participate in the GI benefits to the same extent that those serving in World War II and the Korean war before them were able to do.

The need for housing across the country is reaching a critical stage. Day by day the demand for new housing outstrips new housing starts. However, tight mortgage money has also been a major problem and hopefully these two measures will be a step toward easing that situation.

HON. CLIFFORD DAVIS

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1970

Mr. ABERNETHY. Mr. Speaker, the passing of our former colleague, Clifford Davis, came as a great shock to me and to the Members of this body.

Although Cliff served here as a Member from the great State of Tennessee, down in Mississippi we always looked upon and considered him as much a part of our own State delegation as if he were elected from our midst. He was Mississippi born and Mississippi educated.

Cliff Davis was a highly effective and valuable member of the Committee on Public Works. His interest and activity in flood control, river transportation, harbors and conservation was of tremendous importance and value to my State. In fact, Mr. Speaker, his service on this committee was of great value to the entire Nation.

He was neither partisan nor sectional. He was always ready to consider programs and projects of this kind irrespective of what part of the country was to benefit therefrom. And whenever there was merit and need, Cliff Davis came through with this powerful aid and influence.

Cliff Davis was an attractive man in person, manner, and conduct. He was exceedingly pleasant. He always had a good word, an interesting story, or a warm handshake. He was so interestingly entertaining that there was never a dull moment while in his presence. His political success was not only attributable to the fact that he always served his people well, but he loved to be among people. He undoubtedly knew more people by name than any other public official ever to serve the citizens of the great city of Memphis; and indeed, they all knew Cliff and loved him.

In his passing Mrs. Abernethy and I have lost a great and true friend. We share the sadness that has come to his charming wife, Carrie, and to his family. We deeply sympathize with them.

JOCKO CLARK COMMENTS ON MODERN CONCEPTS OF SEAPOWER

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. RIVERS. Mr. Speaker, one of the acknowledged experts on seapower in the world is the famed Adm. Joseph "Jocko" Clark, USN retired, a renowned carrier commander in World War II and author of two successful books, "Carrier Admiral" and "Sea Power and Its Meaning." In a recent issue of Counterattack, Admiral Clark discusses some important aspects of "Modern Concepts of Seapower."

Because he puts the importance of control of the seas and the importance of the aircraft carrier so simply and so lucidly, I would like to place in the RECORD for the benefit of Members of the House some excerpts from his outstanding discussion:

We have a great sense of pride in the fact that an old friend, Admiral Thomas H. Moorer, the Present Chief of Naval Operations, has been appointed by President Nixon to be Chairman of the Joint Chiefs of Staff. Admiral Moorer, as an advocate of seapower and balanced forces, brings four decades of invaluable military expertise to the top military billet in our armed forces.

The primary mission of the United States Navy is, in summary, to gain, maintain, and assure continued control of the seas, and the air over the seas, as required in our national objectives. This control of the oceans and their airspace is absolutely essential to the security of the United States. This country is an island. We have only two international borders. Two of our states lie overseas. More than 99% of our overseas trade travels by ship. Our nation's military strategy is predicated on a forward posture, with critical reliance placed upon our overseas allies and our own forward deployed forces. Of the 43 countries involved in treaties with the United States, only two of them share a common border with us. There is no current plan for overseas military operations which does not depend on our free use of the seas. In Vietnam to date, over 97% of the supplies have gone by sea. Without free use of the seas, our entire politico-military posture loses its credibility.

The attack carrier is the principal ship of the surface fleet through which our Navy maintains its supremacy at sea. The attack carrier fills this role because it represents air power at sea. History has conclusively demonstrated that naval surface forces cannot survive in the face of a strong air threat without air superiority. The second basic mission of the attack carrier is derived from the principal collateral function of the Navy: to provide tactical airpower for the land bat-

tle. This collateral mission of the attack carrier is shared with the U.S. Air Force within our military strategy. Land-based tactical air is used where protected and provisional bases are available within tactical air range of the objective area. Sea-based tactical air is required where such bases are not available, or to reinforce land-based air where the tactical air requirements exceed that level which can be supported from available land bases. All overseas tactical air support, whether land-based or carrier-based, has at its prerequisite our free use of the seas. The great payload capacity of modern tactical aircraft requires for extended operations the continuous resupply of combat consumables in such bulk that they must come by sea.

The attack carrier provides the means by which airpower can be taken to sea. The carrier can be moved any place on 70% of the earth's surface covered by the oceans, without any international agreements or basing rights, within a radius of more than 600 miles a day and at speeds up to 30 knots. The attack carrier is a floating air base, complete with aircraft, ordnance and jet fuel, required to fly them; command and control facilities to deploy them; shops to support them; and men to maintain and operate them. When carriers are deployed in a trouble spot, they are ready on arrival for a show of force and to carry on limited war, general conflict with conventional weapons, or even nuclear war.

Our new carriers will have an important feature, nuclear propulsion with the advantage of steaming at high speeds for unlimited distances. The Nimitz class will have twice the capacity of the Forrestal class for aviation fuel and fifty per cent more aircraft ammunition.

At the end of World War II the U.S. Navy was supreme on the seas. The Axis fleets had been destroyed and our allies' navies were severely reduced through wartime attrition and post-war economies. The Soviets had no modern forces capable of sustained operations at sea. Since 1950, the Soviet Union has been embarked on a program which reveals an awareness of the importance of seapower and an unmistakable resolve to become the world's most powerful maritime force. For the first time in history, the Soviet Union is using a deployed naval force in support of foreign policy in areas not contiguous to its borders. Its force in the Mediterranean includes warships armed with surface-to-surface and surface-to-air missiles, amphibious ships with naval infantry embarked, and torpedo and missile-armed submarines. In the event of war with Russia, Soviet submarines would constitute a formidable force threatening our use of the seas. We must continue to develop our anti-submarine warfare to deter any overt aggression by the enemy's enormous underseas fleet.

The area of the world covered by our overseas land bases is constantly shrinking. At the end of the Korean War, we had 531 overseas bases. Today we have less than 170. Operational U.S. air bases overseas have declined in number from 105 in 1957 to 50 in 1970. The recent loss of Wheelus Air Force Base in Libya has eliminated the last of an extensive complex of U.S. air bases in North Africa.

The trend towards an erosion of overseas bases indicates that the attack carrier's role in providing overseas tactical air may now be substantially emphasized. The growing capability of the Soviet fleet is an expanding threat to our continued supremacy at sea. Today the attack carrier force is the margin of difference between the two navies. To preclude obsolescence and to maintain the capability of our seapower require a continuous infusion of new ships. The survival of the free world in a nuclear era does not come cheap. Our Navy's unique technology in operating self-sufficient and self-protecting carrier task forces is the foundation of the free world's seapower.

PRICE OF "FREE" TRADE

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. EILBERG. Mr. Speaker, during recent days, no one has felt the pinch of our Nation's inflationary spiral more than the American laborer. With rising prices and the prospect of unemployment ever present, hard working men and women have cried out to the Congress to lessen their plight.

Two such groups seeking our aid are the textile and apparel workers: Two and a half million Americans who live in constant fear of losing their jobs because of the unrestricted flow of imports into the United States from abroad.

Last May, after 14 mouths of intensive discussions during which our Government attempted to establish voluntary limits on rising Japanese textile and apparel imports, the Japanese delegation left for home, refusing to conclude an agreement. This action leaves the Congress no choice but to approve the legislation which has emerged from the Ways and Means Committee designed to limit exports and institute an orderly marketing approach for American products.

In the July 1 edition of Justice, the publication of the International Ladies Garment Workers' Union, an editorial entitled "Price of 'Free' Trade" appeared which deals with this problem. With the unanimous consent of my colleagues, I enter into the RECORD the above-mentioned editorial:

PRICE OF "FREE" TRADE

The collapse of U.S.-Japanese talks last month ends a 14-month effort to establish voluntary limits on rising Japanese textile and apparel imports. Over the past months we have documented in detail the spectacular rise of those imports and their increasing threat to jobs and earnings in this country.

Some two and one-half million Americans—many of them women workers, black workers, minority workers—derive their livelihood from jobs threatened by the flood of imports from Japan and other nations. Although they are not the highest earners in our land, their wages are like mountains compared to earnings of their foreign counterparts.

The unbending, take-it-or-leave-it stance of the Japanese negotiators who came to Washington was a great shock to the Nixon Administration. Indeed, it had opposed import quotas and insisted that voluntary limitation could be negotiated. On May 12, Commerce Secretary Maurice H. Stans expressed optimism before the House Ways and Means Committee.

It couldn't be done. After three days of futility, the Japanese headed for home and Commerce Secretary Stans headed back to the committee to tell Chairman Wilbur Mills and his conferees that all had been in vain and that the need for legislated limitations was urgent.

Champions of "free" trade are victims of a beautiful fiction. It exists nowhere in the world; foreign nations are enmeshed in webs of regulations, controls, tariffs, quotas, voluntary limitions and reciprocal deals which they defend in the name of their national interests.

Not the least of these is Japan herself. Largely through our open trade policy and other help, she has admirably lifted herself from the ashes of war to become the world's third largest industrial power. In seeking import limits we are not denying largess to a struggling, impoverished nation. We are seeking to safeguard an average U.S. rate for apparel workers—union and non-union—of $2.31 an hour against a Japanese rate of 39 cents.

Domestically, we have legislated such safeguards within our own nation, embodying concepts of decency into federal minimum wage and maximum hours prescriptions. Yet, it has been held that just because they exist in Japan—even though the product competes in the U.S.—we should accept work conditions worse than those that flourish in vestigial anti-union areas and against which we battled successfully in 1909.

The facts are that two-thirds of our $1.5 billion trade deficit with Japan is in textiles and apparel; that Japan has not been averse to establishing limitations on wool and man-made fiber textiles and products, such as we have sought, with the European Economic Community, Canada, the United Kingdom and other countries; that her own foreign policy is the most restrictive among the major powers.

The McIntyre bill in the Senate parallels the Mills bill in the House. Both should be approved speedily and without fuss. Both bills provide for sharing the market and establish a basis for subsequent voluntary agreements. It is a shame that in view of the import threat to New York's largest industry, the keystone to the state's economy, neither Senator Jacob Javits nor Senator Charles Goodell have come out for these bills.

"Free" trade does not mean chaotic or viciously competitive trade. Our international goodwill has long been clear through aid and good works throughout the world. It needs no defense. And it is not to be measured by a readiness to underwrite low wages and soaring profits for foreign capitalists—or bargain-hunting American retailers—with the bread and butter of American workers and their families.

BIRTHDAY OF HIS IMPERIAL MAJESTY HAILE SELASSIE I—JULY 23

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. DIGGS. Mr. Speaker, as chairman of the Subcommittee on Africa of the House Foreign Affairs Committee, I would like to take this opportunity to extend our warmest regards and best wishes to His Imperial Majesty Haile Selassie I, Emperor of Ethiopia on this his 79th birthday.

His Imperial Majesty has ruled Ethiopia for over 50 years. During his reign, he has proven to be one of the leading architects of African unity and world peace. He gave of himself unstintingly in an effort to bring an end to the civil conflict in Nigeria. His pioneer efforts led to the establishment of the Organization of African Unity in Addis Ababa.

As Emperor of Ethiopia, he has endeavored to achieve objectives which are common to nations dedicated to peace throughout the world. He has improved health and educational facilities and extended the communication system within Ethiopia. These and other comparable efforts have profoundly affected the economic and social development of his proud and ancient nation.

He has also endeavored to strengthen the bonds of friendship and mutual respect which exist between our two nations, a relationship which dates back to 1903 when the first treaty between our two nations was signed. Thus, I take special pleasure in sending greetings and the best wishes of the American people to this dynamic leader who has proven to be one of Africa's truly great statesmen and a guiding force in mankind's quest for world peace.

CAPTIVE NATIONS WEEK—AS RELEVANT TODAY AS 11 YEARS AGO

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1970

Mr. ANDERSON of Illinois. Mr. Speaker, we recently celebrated the 194th anniversary of our Nation's birth. What were we honoring? Why honor America?

Mr. Speaker, we were attempting to do honor to those most fundamental principles which, over the decades, have made this country great and strong and free. We were honoring the determination of our forefathers, the determination of men and women from the most diverse of racial, religious, and ethnic backgrounds who struggled to build a country based on the principles of equality, justice, and humanity—priceless rights which cannot and should not be denied to any living human being.

Yet, as these words are spoken there are 1.1 billion people in over 25 nations who are being denied these basic human rights. These nations, all under Communist domination, are the captive nations of the world.

In July of 1959, the 86th Congress of the United States adopted the Captive Nations Week resolution, now Public Law 86–90, to dramatize the plight of the many European nations which at that time were helpless pawns of the Soviet Union. The 86th Congress was acutely aware of an expanding Communist threat in the world, but at that time we could not predict that the observance of Captive Nations Week would be as relevant today as at any previous time in its 11-year history.

For years we have watched the Soviet orbit of influence grow to a point where their leaders could publicly state that their ultimate goal was complete world domination. I need not dwell on the ruthless suppression of uprisings in Poland and Hungary in 1956. Only 2 years ago the free peoples of the world watched in horror and indignation as Soviet tanks and troops crushed the brief but gallant surge toward freedom by the people of Czechoslovakia. The condemnation which resounded throughout the free world in 1968 had little effect on the Soviet Union, except to allow them the opportunity of expounding the Brezhnev doctrine of limited sovereignity which they used to justify this breach of the Slovak people's human rights.

As we view the world today, the Communist leaders persist in oppressing these nations and encouraging the repression of their people's God-given human rights. Today the threat of communism shadows not just the people of Europe and Asia. Communist influence is spreading also in South America and Africa. We are constantly reminded of the classic Communist tactics of subversion and infiltration with which they still hope to conquer the entire world. We have been told by many world leaders that communism holds no threat to peace, yet there has been no evident change in the nature of Communist control, of its totalitarian trappings, or of its imperialistic tendencies.

For these reasons, the week of July 12–18 was a week of rededication for all of the free people of the world. We must not only rededicate ourselves to the principle that all people should be free, but we must work to give this purpose active and concrete expression here in Congress. It is not enough for us to say that we recognize the problem and then sit by and let this cancer infect countless others. Now is the time to use the force of world opinion to change the lives of millions of captive people.

It is time that the free nations of the world reexamined the nature of Communist domination in those countries which remain under the heel of Soviet oppressive might. It is time we reexamined the kind of life which is characteristic of a Communist-controlled country. We have seen—but too often we forget—the stark border zones, the minefields, the barbed-wired barricades, the armed guardtowers, and watchdogs, combining to create the impression of a nationwide concentration camp. These realities of Iron Curtain life should remind us that the autocratic rule of Communist leaders continues and that the physical, moral, and spiritual enslavement of these people does nothing more than subordinate basic human values to the requirement of maintaining unrepresentative minority regimes in power.

I urge the President and my fellow colleagues to implement this legislation by bringing these atrocities of human denial to the attention of the entire world. The observance of Captive Nations Week is a moral obligation for all of us who profess our belief in freedom, equality, and equal opportunity. We have made progress in achieving civil rights for minority groups in our own country, but let us not forget that our goal is freedom and self-determination for all mankind. The people of the oppressed nations deserve our every effort, through pressure on the United Nations and through pressure on individual governments, to help them gain their inalienable right of independence.

MAINE'S VACATION CRUISES—A NEW ERA

HON. PETER N. KYROS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. KYROS. Mr. Speaker, a new era is beginning for all of our citizens who would enjoy vacationing in Maine: cruising her coast and visiting her villages. I refer particularly to the boom in coastal cruising, as noted in the July issue of a foremost Maine publication, Down East magazine. More exciting blue water cruises are being planned, as articles in the Maine Sunday Telegram also explain. At this point in the RECORD, I would like to include the articles on Maine cruise vacations from Down East magazine and the Maine Sunday Telegram:

[From Down East magazine, July 1970]

NORTH BY EAST

When the oceangoing ferry, *Prince of Fundy*, sails June 20th on her maiden overnight voyage from Portland, Maine to Yarmouth, Nova Scotia she will be inaugurating a new era in water transportation along the down east coast.

Reservations for 1000 passengers and 175 vehicles aboard the new 393-foot, Swedish-owned vessel were booked weeks in advance of her initial run 200 miles across the Gulf of Maine. Not since the "Boston Boat"—the steamships *Camden* and *Belfast*—stopped sailing from Boston to Bangor in the early 1930s have such luxurious accommodations been offered the maritime traveler to Maine. *Prince of Fundy* has cabin berths for 500, two restaurants, dance orchestras, cocktail lounges, gift shops and a casino.

After Eastern Steamship Lines ceased operations in Maine, it was more than twenty years before another large passenger vessel again plied the coast. Then, in 1956, the Canadian National Railway's ferry, the 346-foot *Bluenose*, with a capacity for 600 passengers and 150 vehicles, began her run from Bar Harbor to Yarmouth. She continues to provide daytime service, although in recent years she has had to turn away customers during the peak summer months.

Bluenose and *Prince of Fundy*, however, will not be the only large motor vessels carrying passengers in Maine waters this summer. The *Mount Vernon* of the American and Canadian Lines is due down east in late August on a "mini-cruise" from Rhode Island. She is the first of such cruise ships that may become a familiar sight on the Maine coast. At the instigation of James V. Day of Brewer and Kennebunk, a member of the Federal Maritime Commission, a research firm in Washington, D.C. is studying the feasibility of other large vacation cruise ships operation in Maine and the Maritimes during the summer as they do in Florida and the Caribbean in the winter months.

All signs indicate that the transportation cycle of steamship to railroad and railroad to automobile may be coming full circle; that once more a journey to Maine by water will be as much a summertime pleasure in this modern day as when a steamer's whistle signaled the early morning arrival of the Boston Boat a generation ago.

[From the Maine Sunday Telegram, Oct. 12, 1969]

MAINE'S BUSINESS—STEEL CRUISE SHIP RUNS LIKELY ALONG COAST IN 1970

(By Frank Sleeper)

Maine is likely to have at least one steel cruise ship making one or two runs along its coast next summer. It will be the 110-foot, 98-ton Mount Hope of the American Canadian Line Inc.

Authority for that statement is Luther Blount, president of Blount Marine Corp., Warren, R.I., and also head of the American Canadian Line, who has moved into the cruise business after years of building craft in his big Warren shipyard. He's also considering the construction of a second similar vessel and, if that's built, the Maine Coast will have more American Canadian Line cruises.

Blount says the vessel will stop at Port-

land, Boothbay Harbor, Rockland, Castine, Camden, Bucks Harbor, Seal Harbor and perhaps go on to Bangor.

Actually, Blount had planned a 12-day island hopping Maine coast cruise for the past summer—but because of procedural problems which no longer exist it never came off.

It appears that the Mount Hope arrival on the Maine coast scene is going to be the first tangible result of a speech by James V. Day, vice chairman of the Federal Maritime Commission, March 28, in Portland, in which he proposed a cruise vessel for the Maine coast. But there may be more results.

Edward Langlois, general manager of the Maine Port Authority, and Robert O. E. Elliot, head of the Department of Economic Development's Vacation-Travel Division, set out to look over the field after Day made his suggestion.

On May 7, the two met with representatives of the Moore-McCormack Line at New York. The feasibility of setting up a passenger cruise service starting in Boston and covering a two-week trip along the Maine coast was discussed. The meeting determined the need for a market survey to estimate traffic for such a venture. That survey would be up to someone other than Moore-McCormack, possibly the state.

Later in May Langlois and George W. Garrett, executive secretary of the Greater Portland Chamber of Commerce, met with representatives of American Export Industries Inc. There was some discussion of choosing the Independence or Constitution, not now in use, for such a cruise. Here again, it appears that a feasibility study would be required.

On June 3, Elliot and Langlois met with members of the Diners-Fugazy Sales Corp. to discuss any interest that firm might have in a cruise service along the coast of Maine. Louis V. Fugazy, president of the firm, was among those attending.

Diners-Fugazy officials asked for as much literature as possible about the Maine coast. And they agreed with the other firms that a market study would have to be made before any "major" financial investment was undertaken. It was felt that a smaller vessel than the large Moore-McCormack Argentina or Brazil should be used. The Meteor, 296 feet long and capable of carrying 160 passengers, was suggested.

The matter was also discussed with John W. Harrington, Washington, of Seven Seas Agency Inc., a research consultant firm. Harrington is a friend of Langlois. He recommended a feasibility study, pointing out some of the questions to be asked in such a study. And Harrington further said that the cruise should probably be available yearround, tying in with winter sports.

Then Blount came forward with something more concrete. Obviously, the Mount Hope would show what the demand is for a Maine cruise ship.

There still might be the need for a feasibility study for larger vessels, though Blount might eliminate the need for that by expanding as the demand warranted.

What has happened is that the efforts by Langlois and Elliott have been sidetracked temporarily for the Blount effort. Those efforts, however, may bear added fruit in the long run. Moore-McCormack, American Export, Diners-Fugazy all know that Maine is interested in the possibility of a cruise along its coast. These companies may also see other possibilities involving Maine.

Much credit must be given to Peter T. McLaughlin, vice president of Casco Bay Lines, Portland, for Blount's getting into the act. McLaughlin was at the meeting at which Day spoke and told him of Blount's Mount Hope. And McLaughlin alerted Blount of the desire for a Maine coastal cruise. Blount has built many of the ferries used by Casco Bay Lines.

The Mount Hope went into operation June 1. It took about a year to design it and another year to build it at a cost of about $400,000. The second vessel will probably cost around $600,000, Blount believes. He has had surveys made which show the Mount Hope has a gross revenue per passenger slightly higher than that for an ocean liner.

Falling under regulations for T boats, craft of under 100, the Mount Hope can also be "The larger the vessel is, the more costly it is per passenger," he explains. "The Mount Hope is a better investment than the larger cruising ocean liner. And some of the larger steamship companies are getting interested in it as a result."

Built into the craft is a ramp which is put down on beaches so that swimmers can go directly on the beach. That's in the bow. In the stern is a swimming ramp. Windows go all around the bow in the lounge so you can sit about anywhere in the lounge and see straight ahead. Both vessels will carry 149 passengers, with the Mount Hope sleeping 42 and the new craft, 30.

The coastal cruise wouldn't be in competition with Maine windjammer cruises, Blount says, as it would offer more comfortable and more expensive accommodations. Twenty couples from this state traveled on the Mount Hope the past summer, he reports.

Langlois and Elliot feel such a cruise ship would open up a new market potential here. Those who are more than 60 seem quite interested and, at the same time so do the swingers. An effort would be made to attract foreigners by flying them, for example, to Bangor International Airport and then driving them to the vessel.

Elliot says that some Germans have shown an interest in acreage in Maine to be set up as a hunting and fishing preserve such as they have in their country.

In a survey some time ago, Dynamics Associates of New York showed that the principal classes taking vacations in Maine were relatively well-off middle-aged persons and those who are over-all sportsmen.

Wait a few years and you may see cruise vessels of one kind or another up and down the Maine coast. Mount Hope could be the start of something big.

[From the Maine Sunday Telegram, Apr. 12, 1970]

MAINE COASTAL CRUISE SET FOR AUGUST 30–SEPTEMBER 11

AUGUSTA.—Americans who nostalgically recall cruising from Boston, Mass. to Bangor on regularly scheduled trips of the Eastern Steamship Lines, will have an opportunity this summer to experience its pleasures all over again.

"You can go back," says Luther Blount, Warren, R.I., shipbuilder and owner of the Mount Hope, a modern, Coast Guard approved steel vessel, "and in greater comfort than you enjoyed in those good old days."

Blount, who has operated inland waterway cruises in Florida, as well as from Rhode Island to New York to Florida, and northern trips from Warren, R.I. to points in Canada's Quebec Province, is adding the Maine cruise to his schedule. The dates are Aug. 30 to Sept. 11, 1970.

"Our course is such that we can put into snug harbors each night and, should a storm hit, we can lie at anchor until it blows over," says Blount.

The tentative schedule calls for the trip to begin the evening of Aug. 30, with a cruise through the Cape Cod Canal, from Warren, R.I. The next day's termination point will be Boothbay Harbor, followed by a leisurely run to Rockland, the self-styled "lobster capital of the world."

The fourth day, with the Mt. Hope at dock, there will be side trips on Maine State ferries from Rockland to islands such as Vinalhaven and North Haven. Then, the cruise ship will continue to nearby Camden. Rockport Harbor will be viewed en route, and the vessel will tie up at Lok Marina that night.

On the fifth day the route will be south of 700-Acre Island, with a view of Gilkie harbor. Belfast and Searsport harbors will be circled and Castine will be the overnight destination. That will be followed by a run through Eggemogin Reach to Bucks Harbor. (Nautically, a "Reach" was a stretch of water where a vessel could be sailed on course, with the wind forward of the beam but not enough to compel tacking.) Overnight will be at either Blue Hill or the lobster fishing village of Stonington.

Bar Harbor will be the seventh day's destination and Seal Harbor, the eighth's. The Jordan Pond House in Acadia National Park on Mt. Desert will be visited.

The ninth day's run will be by way of North Haven, Tenants Harbor, Port Clyde or Bath, whichever is the more favorable. The Mt. Hope will be in Portland the next day and will continue toward the home port the day after. The vessel is due to return to its home port about 10 a.m. Sept. 11.

Additional information on the 12-day voyage is available from: American Canadian Line, Inc., P.O. Box 360, Warren R.I. 02885.

THE LEADER IN THE DEED, A WOMAN

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BRAY. Mr. Speaker, the above title is a quotation from Virgil, the first century B.C. Latin poet, and I believe it is an appropriate opening for the subject about to be discussed.

August 28, 1970, will be the 50th anniversary of proclamation of the 19th amendment to the Constitution, which gave women the right to vote. The suffrage amendment had passed the House of Representatives of the 65th Congress on January 10, 1918, but was defeated in the Senate on October 1, 1918. It was passed again by the House in the 66th Congress on May 20, 1919, and by the Senate on June 4 by exactly the needed two-thirds majority.

Ratification by the States had taken an additional 14 months' campaigning. The 36th State was won only after a long and bitter struggle in the lower house of the Tennessee Legislature which ratified by a majority of one vote on August 18, 1920.

The history of the suffrage movement in the United States is not really a long one (historians usually date it as beginning in 1848, when a woman's rights convention meeting in Seneca Falls, N.Y., produced a far-reaching declaration of principles). But it had bitter opposition; the following definition of "woman," written by the caustic American writer Ambrose Bierce and included in his "Devil's Dictionary," was about the mildest ever cited by opponents of the suffrage movement:

"Woman, n. An animal usually living in the vicinity of Man, and having a rudimentary susceptibility to domestication. It is credited by many of the elder zoologists with a certain vestigial docility acquired in a former

state of seclusion, but naturalists of the post-susananthony period, having no knowledge of the seclusion, deny the virtue and declare that such as creation's dawn beheld, it roareth now. The species is the most widely distributed of all beasts of prey, infesting all habitable parts of the globe, from Greenland's spicy mountains to India's moral strand. The popular name (wolfman) is incorrect for the creature is of the cat kind. The woman is lithe and graceful in its movements, especially the American variety. (Felis pugnans), is omnivorous, and can be taught not to talk."

The actual women suffrage movement really began centuries ago, in a variety of ways. Women moved early in history to assert themselves as being a useful, needed, and worthwhile part of the processes and systems that governed them. Lack of official and legal recognition did not seem to bother them a great deal.

One of the earliest examples I can think of is found in the Bible, in the Book of Judges, the fourth chapter. Sisera, commander of a defeated army, was in flight, and sought by the children of Israel. He hid in the tent of Heber and confronted Heber's wife, Jael; but let verses 20–22 tell the story:

Again he said unto her, Stand in the door of the tent, and it shall be, when any man doth come and enquire of thee, and say, Is there any man here? that thou shalt say, No.

Then Jael, Heber's wife, took a nail of the tent, and took a hammer in her hand, and went softly unto him, and smote the nail into his temples, and fastened it into the ground: for he was fast asleep and weary. So he died.

And, behold, as Barak pursued Sisera, Jael came out to meet him, and said unto him, Come, and I will show thee the man whom thou seekest. And when he came into her tent, behold, Sisera lay dead, and the nail was in his temples. . . .

The fact escapes us and may be hard to believe, but even in ancient Rome there was pressure for women's equal rights with men. For examples of this, and other ages, I turn to quotes from Will Durant's sweeping, monumental "Story of Civilization." From volume III, Caesar and Christ:

. . . Even in government the role of women grew. Cato cried out that "all other men rule over women; but we Romans, who rule all men, are ruled by our women." In 195 B.C. the free women of Rome swept into the Forum and demanded the repeal of the Oppian Law of 215, which had forbidden women to use gold ornaments, vari-colored dresses, or chariots. Cato predicted the ruin of Rome if the law should be repealed. Livy puts into his mouth a speech that every generation has heard:

"If we had, each of us, upheld the rights and authority of the husband in our own households, we should not today have this trouble with our women. As things are now, our liberty of action, which has been annulled by female despotism at home, is crushed and trampled on here in the Forum . . . Call to mind all the regulations respecting women by which our ancestors curbed their license and made them obedient to their husbands; and yet with all those restrictions you can scarcely hold them in. If now you permit them to remove these restraints . . . and to put themselves on an equality with their husbands, do you imagine that you will be able to bear them? From the moment that they become your equals they will be your masters."

The women laughed him down, and stood their ground until the law was repealed. Cato revenged himself as censor by multiplying by ten the taxes on the articles that Oppois had forbidden. But the tide was in flow, and could not be turned. Other laws disadvantageous to women were repealed or modified or ignored. Women won the free administration of their dowries, divorced their husbands or occasionally poisoned them, and doubted the wisdom of bearing children in an age of urban congestion and imperialistic wars. . . .

Back in the 13th Century it was considered quite a step forward in advancement of women when the "Laws and Customs of Beauvais" bade a man beat his wife "only in reason." Volume IV, The Age of Faith has this interesting paragraph:

As usual, despite theology and law, the medieval woman found ways of annulling her disabilities with her charms. The literature of this period is rich in records of women who ruled their men. In several respects woman was the acknowledged superior. Among the nobility she learned something of letters and art and refinement, while her letterless husband labored and fought. She could put on all the graces of an eighteenth-century salonniere, and swoon like a Richardson heroine; at the same time she rivaled man in lusty liberty of action and speech, exchanged risque stories with him, and often took an unabashed initiative in love. In all classes she moved with full freedom, seldom chaperoned; she crowded the fairs and dominated the festivals; she joined in pilgrimages, and took part in the Crusades, not only as a solace but now and then as a soldier dressed in the panoply of war. Timid monks tried to persuade themselves of her inferiority, but knights fought for her favors, and poets professed themselves her slaves. Men talked of her as an obedient servant, and dreamed of her as a goddess. They prayed to Mary, but they would have been satisfied with Eleanor of Aquitaine.

And in Volume V, The Renaissance, we find Durant writing:

The Renaissance woman of the upper classes raised her sex out of medieval bondage and monastic contempt to be almost the equal of man. She conversed on equal terms with him about literature and philosophy; she governed states with wisdom, like Isabella, or with all-too-masculine force, like Caterina Sforza; sometimes, clad in armor, she followed her mate to the battlefield, and bettered the instruction of his violence. She refused to leave the room when rough stories came up; she had a good stomach and could hear realistic language without losing her modesty or her charm. The Italian Renaissance is rich in women who made a high place for themselves by their intelligence or their virtue: Bianca Maria Visconti who, in the absence of her husband Francesco Sforza, governed Milan so capably that he used to say he had more confidence in her than in his whole army, and who at the same time was known for her "piety, compassion, charity, and beauty of person"; or Emilia Pio, whose husband died in her youth, but who so cherished his memory that she was never known, through all her remaining years, to encourage the attention of any man; or Lucrezia Tornabuoni, mother and molder of Lorenzo the Magnificent; or Elisabetta Gonzaga, or Beatrice d'Este, or the maligned and gentle Lucrezia Borgia; or the Caterina Cornara who made Asolo a school for poets, artists, and gentlemen; or Veronica Gambara, the poetess and salonniere of Correggio; or Vittoria Colonna, the untouched goddess of Michelangelo.

"The educated women of the Renaissance emancipated themselves without any propaganda of emancipation, purely by their intelligence, character, and tact, and by the heightened sensitivity of men to their tangible and intangible charms. They influenced their time in every field: in politics by their ability to govern states for their absent husbands; in morals by their combination of freedom, good manners, and piety; in art by developing a matronly beauty which modeled a hundred Madonnas; in literature by opening their homes and their smiles to poets and scholars. There were innumerable satires on women, as in every age; but for every bitter or sarcastic line there were litanies of devotion and praise. The Italian Renaissance, like the French Enlightenment, was bisexual; women moved into every sphere of life; men ceased to be coarse and crude, and were molded to finer manners and speech; and civilization, with all its laxity and violence, took on a grace and refinement such as it had not known in Europe for a thousand years.

The point is this, and one which I wish to hammer down in the balance of my remarks, through some historical examples: There has existed throughout history a real contradiction, in that women have always been the models to represent liberty, victory, peace, wisdom, justice, to name a few. Practically all major world religions, regardless of the sex of the figure at their head, have a very strong matriarchal, feminine figure somewhere in the upper pantheon. And, as the following examples show, there are uncounted occasions when women have stepped into a breach that men would not fill, with varying results. The important thing, though, is that they did step into the gap, and they did act, and they did lead men when no other man would do so. Or, like the American Molly Pitcher, at the Battle of Monmouth, they moved in smaller but still highly significant ways—when her cannoneer husband was killed, she took over his position. There is, in the history of the Napoleonic wars, a similar, but much more tragic, incident. After the Battle of Waterloo, in 1815, as the victorious English and Prussians swept over the field, they discovered the body of a beautiful young girl amidst the dead and the wreckage of a French cavalry charge. No one knew then, and no one knows to this day who she was, or why she was there. She was dressed in full uniform and armor of a French hussar. From where her body was lying, it was obvious that she had charged, with the cavalry, at full gallop. She died in a last futile, suicidal rush when Napoleon sent Milhaud's horsemen against the fire and steel of the British infantry, drawn up in those deadly squares that could not be penetrated. Centuries ago a Vietnamese woman led her countrymen in a struggle that ousted the Chinese from Vietnam.

Commanding thousands, or acting alone—it makes no difference, the spirit was there, the spirit has always been there, the spirit always will be there. The following accounts are of four women who left their mark in world history, who stood with courage no one else—man or woman—could or would match:

BOADICEA OF BRITAIN: RUGGED, EARNEST, TERRIBLE

Rome thought Britain was a subjugated land, but now the cry was for revolt, and messengers flitted swiftly over forest paths, while signal beacons flamed from the hilltops.

Tales of Caesar's hasty invasion and re-

treat of one hundred years before were told and retold in the hills and valleys. Now the hated Imperial Eagles had once again come to Britain but this time they had stayed for twenty years. Two decades of smoldering hatred and resentment suddenly flamed up, and the fire spread.

Prasutagus, last king of the tribe of the Iceni, had died. Before his death, hoping to win favor from the Romans, he had bequeathed his kingdom to the Roman state and designated the Emperor Nero as joint heir, along with his two daughters. This was appeasement, 1st Century A.D. style; let us see what the Roman historian Tacitus had to say about Rome's response:

"But things turned out differently. His kingdom was plundered by centurions, and his private property by slaves, as if they had been captured in war; his widow Boadicea was flogged, and his daughters raped; the chiefs of the Iceni were robbed of their ancestral properties as if the Romans had received the whole country as a gift, and the king's own relatives were reduced to slavery."

Revolt! The infuriated Queen Boadicea shrieked the summons; the Iceni had been at one time the most powerful of all tribes, and hitherto the most submissive. No longer; nearly every Briton within reach rallied to her standards. War chariots, so feared and dreaded by Julius Caesar, clattered along the roads; Druids wailed and chanted deep in the sacred groves.

Tacitus, writing of the event, says that "In the year A.D. 61 a severe disaster was sustained in Britain." No one knew at the beginning that 70,000 Roman lives were about to be snuffed out. As Sir Winston Churchill described it: "There followed an up-rush of hatred from the abyss, which is a measure of the cruelty of the conquest. It was a scream of rage against invincible oppression and the superior culture which seemed to lend it power."

One hundred and fifty thousand Britons, maddened with hate for everything Roman, were on the march. In all Britain, there were at the most twenty thousand Roman soldiers, in four legions. And two of these were a good month distant, with the Roman Governor Suetonius Paulinus, off on an expedition to the island of Mona (Anglesey) far to the West.

The British army bore down on its first target, Camulodunum (Colchester), the center of Roman authority and religion. Omens of victory were good—for the Britons. The statue of Victory fell face forwards, as if fleeing from the enemy. Shrieks and cries were heard in the Roman council chamber. The sea turned red; shapes resembling corpses were left on the seashore by the outgoing tide; at the mouth of the Thames a phantom settlement had been seen. And in Camulodunum, a handful of old soldiers, Roman officials, business men, bankers and usurers, with their British collaborators, waited the onslaught. There was not even protection of a wall; again, Tacitus: ". . . it had no walls. That was a matter which Roman commanders, thinking of amenities rather than needs, had neglected."

The Roman imperial agent, Caius Decianus, sent barely two hundred men, incompletely armed. The defenders did not evacuate non-combatants; they placed their reliance on the protection of the temple but built no ramparts nor trenches. Tacitus: "Their precautions were appropriate to a time of unbroken peace."

After two days' seige, the temple fell by storm and the town was put to the torch. Now the Ninth Legion was close at hand, coming up by forced marches from Lincoln, one hundred and twenty miles away. Howling in triumph and drunk with victory. Boadicea's forces swept with a wild scream into the Roman lines. The infantry was massacred to a man; the commander, Petilius Cerialis, was content to escape with his cavalry and take shelter behind the defences of its camp. Catus Decianus, horrified at what had happened, fled to Gaul.

And, by now, on the Island of Mona, Suetonius had paused from his labors in wiping out this last main Druid stronghold to hear the horrible news from exhausted, trembling messengers. The camp was struck, and Suetonius with the Fourteenth and Twentieth Legions moved out through hostile country—at the most, ten thousand men.

Suetonius reached Londinium (London) with but a small mounted detachment and wondered whether to fight there. (This is the first mention of London in all literature, in Tacitus' account.) The commander of the Second Legion, at Gloucester, had been ordered to join him, but, appalled by the slaughter of the Ninth, had not complied. London was large, but undefended, full of Roman traders, British associates, dependents and slaves. There was but a handful of legionnaires.

The citizens begged for Suetonius' protection, but then the news came that Boadicea had wheeled her army towards Lincoln, after Cerialis. Slogging up the road from Wales behind Suetonius were the main forces of the Fourteenth and Twentieth Legions; he had nothing to face Boadicea's hordes, and there was no choice but to move out and leave London. The despair of the inhabitants was frightful to behold; they knew what Tacitus was to write:

"For the British did not take or sell prisoners, or practise other war-time exchanges. They could not wait to cut throats, hang, burn, and crucify . . ."

To this very day, earth-moving equipment, digging into the soil of London for deeper foundations for higher buildings, come upon traces of the holocaust that descended upon the unhappy city, borne with the fury of Boadicea's army. No one was spared; as at Colchester, the slaughter was universal and the city put to the torch. With the smoke of the burning city at its back, the army next stormed into Verulamium (St. Albans) which suffered the same fate. According to Tacitus, in these three cities upwards of seventy thousand were killed.

But by now Suetonius' two legions had joined him, and they prepared for battle "in a defile, with a wood behind him. * * * On the British side, cavalry and infantry bands seethed over a wide area. Their numbers were unprecedented, and they had confidently brought their wives to see the victory, installing them in carts stationed at the edge of the battlefield. * * *" (Tacitus)

Tacitus has also recorded Boadicea's last appearance, and her last words:

Boadicea drove round all the tribes in a chariot with her daughters in front of her "We British are used to women commanders in war." I am descended from mighty men! But I am not fighting for my kingdom and wealth now. I am fighting as an ordinary person for my lost freedom, my bruised body, and my outraged daughters. Nowadays Roman rapacity does not even spare our bodies. Old people are killed, virgins raped. But the gods will grant us the vengeance we deserve! The Roman division which dared to fight is annihilated. The others cower in their camps, or watch for a chance to escape. They will never face even the din and roar of all our thousands, much less the shock of our onslaught. Consider how many of you are fighting—and why! Then you will win this battle, or perish. That is what I, a woman, plan to do!—let the men live in slavery if they will!

On both sides, it was all or nothing, but Roman discipline and tactical skill won the day. It was no quarter—for anyone—Tacitus says 80,000 Britons were slaughtered. Boadicea herself, still regal in her war chariot, with her daughters beside her, took poison.

Sir Winston Churchill summed up Boadicea and the revolt in these words:

Her monument on the Thames Embankment opposite Big Ben reminds us of the harsh cry of "Liberty or Death" which has echoed down the ages. . . . This is probably the most horrible episode which our Island has known. We see the crude and corrupt beginnings of a higher civilisation blotted out by the ferocious uprising of the native tribes. Still, it is the primary right of men to die and kill for the land they live in, and to punish with exceptional severity all members of their own race who have warmed their hands at the invaders' hearth. . .

THEODORA OF BYZANTIUM: WITH HER DEATH THE DARK AGES BEGAN

Her husband, the Emperor Justinian, was the last of the Roman Emperors, seated on the throne of the Caesars, and has gone down into history as "the Great." But Theodora, his wife and Empress, is known as "the Notorious." There is probably not another more mis-named pair in all recorded history, for it was Theodora's hands that grasped the reins of Empire and State when Justinian's faltered, and let them slip from his grasp. It was Theodora's will that refused to break or bend; it was Theodora's voice that lashed the Imperial Council, where men cringed in fear of the howling mobs in the streets of Constantinople that had already turned a good portion of that great city, the "Second Rome," into smoking ruin. It was Theodora who crushed the rebellion within, that threatened to bring disaster greater than that of the barbarians from without.

It was Justinian's misfortune to have selected, for his two top officials, men of undoubted capacity and brilliance on one side, but of a greedy, grasping venal nature on the other. Tribonian, Quaestor of the Sacred Palace, and John of Cappadocia, Praetorian Prefect of the East: an immensely able jurist and greatest scholar of the day, and skillful administrator and a real statesman, respectively. Under their combined mismanagement the provinces, according to an official document of the times, had become "quite uninhabitable." The country was barren of people; fields lay idle; complaints poured into Constantinople about "the wickedness of the officials." Steady immigration swelled the flow of hapless wretches into the capital, adding to the disorder and discontent already there. From this volatile mess sprang, in January 532 A.D., the bloody and nearly-disastrous (for the Empire and what existed of Roman civilization) "Nika" Riot, so-called for the shout of "Nika!" (Victory!) which the crowd roared out as they raged through the city.

On Sunday, January 11, 532, Justinian proceeded to the great Hippodrome for the usual ceremonies opening the season of the Consular Festivals. Muttering and discontent were rife in the streets. The two opposing political factions, the Greens and the Blues, had reached temporary accord, as there were rumors the throne might soon be vacated.

The ceremonies began, and Justinian was acclaimed Autocrator with the usual formulas, "Many years to Justinian Augustus! May you be victorious!" Then, from the Greens, a cry of oppression, and demands to be delivered from their miseries. This led to an acrid dialogue between Justinian and the leader of the Greens and at its completion, the Greens left the arena.

That evening the smoldering Justinian ordered the Praefect of Constantinople to arrest and make an example of seven persons, drawn from both factions. Four were

beheaded; the other three were hung. But the rope broke in the case of two of the latter; an outcry arose and some monks carried the men to the monastery of St. Laurence, and sanctuary. One was a Blue; the other was a Green; this cemented the two factions even tighter together.

The following Tuesday the ceremonies in the Hippodrome were resumed, but both factions clamored incessantly for release of the prisoners. Justinian did not respond; the crowd's passion rose to white heat; its leaders demanded extreme measures. By that evening the Praetorium of the City Praefect, the Chalke Palace, the principal buildings in the square, the Baths of Zeuxippus, the Senate House and the great church of St. Sophia had been set on fire and were reduced to ruins.

The next four days saw the riot swell to outright civil war. Deposition of Justinian was agreed upon and Constantinople, racked and ravaged by the plundering crowds, began to look like a city sacked by an enemy. A contemporary writer declared that "the Empire seemed on the eve of its downfall." An attempt by Belisarius, Justinian's Commander in Chief, to suppress the uprising with a force of barbarian mercenaries had failed and additional fires had consumed the Octagon, the Church of St. Irene, the Hospital of Sampson (with all its patients), the House of Lamps, and the Palace of Lausus, which was filled with irreplaceable art treasures.

By Saturday Justinian had prepared for flight, and a ship was filled with his most precious possessions. On Sunday he made one last appeal to the crowds packing the Hippodrome, but was screeched back to the Palace. The crowds wildly proclaimed a new Emperor (over the protestations of his wife, who saw disaster; over the objections of a Senator, who counseled patience, and over the new Emperor's own misgivings).

The Imperial Council sat in the Palace; Justinian half-heartedly began the debate. His advisors' opinions were half-hearted and contradictory. Then Theodora arose; her words have come down to us from that day:

"Even at this adverse crisis I think the alternative of flight is out of the question. Though he may be permitted to live in safety as an exile, the master of an empire should not survive the loss of his dignity. As for myself, may I never live to see the day when this purple mantle shall fall from me, and when I will no longer be saluted as Empress. Flee if you wish, Justinian; you have money, the ships await you, the sea is unguarded.

"As for me, I stay! I hold with the old proverb which says that the purple is a good winding-sheet, and the throne is a most glorious sepulchre!"

In an instant the mood of the Council changed, and the throne that had rocked so close to disaster was firm and steady once again. It is not known for certain whether or not Theodora gave the orders that followed, but her hand was now on the helm.

All depended on one bold stroke—all or nothing. The Hippodrome was packed with one hundred thousand rioters. There were less than five thousand loyal troops to send against them, and most of these were barbarian mercenaries under the command of Mundus the Goth. The available troops were divided into two brigades: Byzantines under Belisarius and barbarians (Goths and Herules) under Mundus.

Both generals made their way with some difficulty over the ruins of the city until they came to the Hippodrome. The northern gates were held by the rebels, but, on circling the arena, Belisarius saw the southern gates were undefended. On impulse, he hurled his soldiers forward. There is no eyewitness account of what took place, but it was short range, and Belisarius' archers were experienced. The carnage must have been terrible, as long as there were arrows in the quivers, then it was the flickering steel of swords, and the grim veterans of the Avar and Persian wars hacked their way into the enemy.

Mundus had not been idle. The moment he saw how Belisarius was engaged, he stormed through an opposite opening, known, grimly enough, as the Gate of the Dead. Belisarius' men before them; Mundus and his Goths and Herules, wild and fierce with their helmets and shields dressed with heads and skins of wild beasts, and swinging their terrible curved, razor-edge swords that killed at every blow, behind them; the rebels were cut off from all chance of escape.

It was still one hundred thousand against five thousand, the battle rocked back and forth, and then what had been solid unity among the rebels collapsed. The Blues turned from Belisarius and Mundus and fell with equal fury upon the Greens. When it was over, the city was quiet with the silence of 35,000 dead.

It is true, as historians have written, that a few thousand mercenaries provided the arm to establish absolute despotism in the Byzantine Empire. But looking beyond that, to the end of Justinian's reign, the Empire had almost been doubled, and the Mediterranean was once more a Roman lake. Tribonian produced the Justinian Code of Laws, the Pan dects, the Institutes, and the Novella, known together as Corpus Juris Civilis. They affected legal history then and are felt to this day in the legal systems of the world. And Athemius of Tralles, the architect, raised the crowning climax of all Byzantine art, a new St. Sophia, of such spendor that Justinian, gazing upon it after its completion, could say: "Glory be to God, who has thought me worthy to accomplish so great a work! I have vanquished thee, O Solomon!"

Theodora was a child of the streets who rose to the purple of the Empress, and was true ruler of the Empire for the last sixteen years of her life. It has been written of her that:

". . . she was thus responsible for that last brilliant outflaring which for a few years restored the glory of the Empire of the Romans. Before she breathed her last, she knew herself to be mistress of the western world. And with her death this flame of brilliance flickered out; the Dark Ages began from that hour."

Shadjar-al-Durr: Pearl Spray: She Was Sultana, She Was Queen

Sultan Es-Salih of Egypt was dead. The last of the dynasty founded centuries previously by the great Saladin, he had been out of the country when news arrived that the saint-king of the Christians, Louis IX of France, was preparing to invade Egypt in 1249 A.D. Rushed back to Cairo in a litter, he arrived only in time to die. The Egyptian throne was vacant and already the great French galleasses were bearing south from Cyprus towards the Egyptian coast, the oriflamme of France emblazoned on their billowing sails. Es-Salih's eldest son was hundreds of miles away; it would take months to find him and bring him back, and by then it would be too late. Except. . . .

In Arabic, her name was Shajar-al-Durr, translated as Pearl Spray. From either Armenia or Turkey, no one ever knew for sure, she was one of the two great romantic females of Egypt. But unlike her cousin in spirit, if not in blood, Cleopatra, Pearl Spray's life was even stranger, wilder and more tragic. Her first master, the Caliph Mustasim of Baghdad, had been last of a line which had endured for 524 years. Her second, Es-Salih, was last of Saladin's dynasty. But Pearl Spray was to be the first of the dynasty of the Mamelukes, a word meaning "owned," and applied to white, not Negro, slaves. This dynasty was to endure right up into the 20th Century.

She began her role in high circles at the court of Caliph Mustasim at Baghdad and soon, in the manner of the day, passed into Es-Salih's harem, in Cairo. Here she bore him a son, and this automatically made her a free woman, under Moslem custom. She never bore an official title, but she was Es-Salih's favorite, and as courtiers and slaves howled their grief around his catafalque, this remarkable woman was already planning ahead.

The Prophet Mohammed had declared it was a curse for a woman to rule a country, but once the Egyptian people knew they were without a ruler, the country would fall to Louis like a ripe peach.

Louis landed, off Damietta, almost unopposed. The Egyptian commander, the Amir Fakhr ad Din, had decided to withdraw towards Cairo. The officers of Damietta's garrison, disturbed by the retreat, followed him, after burning the arsenal, and Louis took Damietta without firing one arrow or drawing one sword. To Louis, this was a sign of divine favor, as Damietta had withstood his siege for a full year on a previous crusade. The Saint-King's victory was not without its flaws, however; his nobles began looting, and Louis complained bitterly to the Sieur de Joinville that "You could not throw a stone from my house without striking a brothel kept by my attendants."

Already, in Louis' camp, rumors of Es-Salih's death had reached them. So the army of France moved up the Nile, where the Moslems awaited them at the fortified camp of Mansura.

This was not to be another Damietta. Professional Moslem soldiers were superior in the art of warfare; there was the river itself to be crossed, and there was something new: Greek fire. Hurled amongst the French by great war engines, it wrought havoc in Louis' lines. De Joinville wrote of it:

"The Greek fire was like a great keg with a tail as long as a spear. The noise it made was like thunder, and it resembled a dragon of fire flying through the air. At night it gave so great a light that we could see objects in our camp as clearly as in the day."

Frontal assault by the French was bloodily repulsed. It seemed that the paladins of French and English chivalry were at a standstill, but then they found an Arab, who told of a ford below Mansura that would let mounted men cross the river. The great war horses moved out in a column.

Meanwhile, in Cairo, the street mobs were growing restless. They knew of the fall of Damietta, and the fact that fifty-seven of the garrison's officers had been strangled for deserting their post did not placate them. "Where is the Sultan?" they asked each other. "The King of the Franks is almost upon us."

The country must be ruled until the son arrived; so the ex-slave girl sat on the throne and if not in name was queen in fact. The lords of the Mamelukes came into her presence for direct orders; Ai Beg the Kurd, and Baibars the Panther, his one eye twitching, stood ready to receive her commands. When the faint-hearted protested the deception could not go on, she raged at them until they were either heartened by her show of courage, or terrified by her anger. Not since the day of the Prophet, when the wife of Mohammed had shared power, had a woman ruled over Moslems. But Pearl Spray ruled and Louis IX of France never dreamed he was making war on a girl.

Did the Mamelukes need food? She collected taxes and secretly sold jewels, to buy grain for them. What of Ai Beg and Baibars, these two unscrupulous rascals? She promised Ai Beg she would marry him—and never told Baibars. She played high and dangerous stakes, for the country and for herself. If her troops held firm, she might well become Queen of Egypt in name as well as in fact. But if the French broke through, she would be cast aside, like a harem girl who has lost her charm.

Louis' Arab had been right; there was a ford, and early in the morning of February

8, 1250, the King's brother, Robert of Artois, splashed across with his division, consisting of the Templars, the French and the English under William Longsword, Earl of Salisbury.

"Hold the causeway," Louis had ordered Robert, "and no farther." Fourteen hundred French and English were on the opposite bank, and the Moslem guard had fled. "Forward!" roared Robert. De Sonnac, Master of the Templars, grasped at his rein. "My lord bethink thee of the king's command. We must hold to our ranks."

"Abide where thou wilt," snarled Robert. "I shall not hold back."

Longsword spurred up. "My lord, the host of the enemy lies yonder. If we ride on, I warrant we shall not return."

Robert spun in his saddle. "Your crop-tailed English are valiant laggards!" he taunted.

Longsword flared. "No man may say that I dare not set my foot where he will go." He whirled and called to the English; at the same time De Sonnac gave the order to the Templars. With Robert of Artois and the French knights in the van, the heavy cavalry thundered down on the Moslem tents and the streets of Mansura.

For an hour, nothing stood before them. The mamelukes swarmed out of their barracks and were cut down as they tried to form. Fakhr-ad-Din himself dashed from a bath house, out of a barber's chair, where he had been having his beard dyed. Almost naked, he vaulted onto a horse—just as a swarm of knights swept down on him and hacked him to bits. A carrier pigeon was caught at the Nasr Gate, in Cairo, and the message was carried to the palace doors: "Woe to the Faith! The Franks have crossed the river. Fakhr-ad-Din is slain and the standards of the enemy are in the camp of the Faithful!"

It wasn't over yet. The mailed chivalry of Europe stormed into Mansura's narrow alleys, where the streets ended in blind walls, or tiny courtyards, swarming with hosts of Moslems. Crossbows snapped and whistled from rooftops; javelins hissed through the air; rocks and jars split shields and crushed helmets; arrows cut down horses. The crusaders were rapidly split up into small groups, fighting in an unknown town against a raging, ferocious enemy that knew every inch and corner of the battleground.

William Longsword was slain with his men. The Templars stood their ground and did not move an inch; three hundred of them perished with almost all the mounted archers. The Count of Poitiers led his horsemen into a running, slashing battle on a plain outside the town.

Down from Cairo like a thunderbolt crashed Baibars the Panther, one eye alight with the gleam of battle, leading his crack Mamelukes, known as the White Slaves of the River. His counter-attack sliced to pieces the French knights on the Cairo road, and pressed on into Mansura to lend a hand to the butchery there. Robert of Artois was slain; thanks to his rashness, half of the French cavalry was down, killed, missing or wounded. Louis' army had lost its power of attack, and once again carrier pigeons whirred for Cairo. But this time it was with tidings of victory.

The evening before, Turan Shah, eldest son of Es-Salih, had arrived at Mansura, after a long, hard ride from the other side of Syria. He had almost been taken captive at one point (the crusaders did not know he was there) but now, with Mansura won, Turan Shah took command.

Described as more cruel than the Mamelukes and already a prey to many vices at age 25, he was practically a stranger, yet his orders were obeyed without question. He prepared to move against Louis, who dug in and barely held his position.

There were six weeks of sheer horror left for Louis. His lines of communications were cut, and one truly hideous event delivered the final blow. It was Lent, and the Christians were catching Nile fish for their main staple of diet. The Nile was full of corpses; the fish had fattened on these; the crusaders fell ill in a mass.

The attempted break-through on the night of April 5–6, 1250, saw loss of the entire Christian force, either through being killed or taken captive. It was one of the cruelest defeats ever inflicted in all of North Africa. The natives claimed for centuries afterward that the earth was permanently stained crimson. Louis himself was captured and carried away as a prisoner, chained in the house of one Ibn-Lochman under guard of a eunuch.

Pearl Spray had "resigned" when Turan Shah had appeared at Mansura. But the young man's good sense and judgment, if, indeed, he ever had any, deserted him. In the words of the Egyptian historian Makrisi:

"The sultan had confidence only in a few favorities, to whom he gave the chief offices of the state, displacing the old ministers of the late sultan his father. Above all, he showed dislike for the mamelukes, although they had gained the last victory for him. His debaucheries wasted the revenues, and he forced the sultana Shadjar-ad-Durr to render him an account of the riches of his father. The sultana implored the protection of the mamelukes. These slaves, already angered at Turan Shah, did not hesitate to take her part, and resolved to assassinate the prince."

One month after the battle, at a banquet held on the battlefield itself, it was done. The banquet was over, Turan Shah rose and started for his own chambers, when his swordbearer hacked down at his hand, splitting it between the fingers.

"You have attacked me!" he cried in alarm.

"Indeed," was the grim response. "Now you will surely slay us, so it is better that you die!"

Turan Shah fled to a watch tower. His pursuers cast Greek fire into it, and as he fled again from the blazing structure, cut him down and flung his body into the Nile. One of them tore his heart from his body and brought it before the captive King Louis, saying "What wilt thou give me, who have slain thine enemy, who—if he had lived—would have put thee to death?" Louis did not answer.

This time Pearl Spray took over openly. A coin has survived, minted during her reign, with the inscription: "The former slave of the Caliph Mustasim and afterward of Salih, now Queen of the Moslems." She set about to deal with the vanquished enemy at once, in practical and humane fashion.

She collected ransom money for Louis (which was paid by Louis' queen; it is barely possible the two queens met, although this cannot be proven). What remained of Louis and his troops was sent out of Egypt at Pearl Spray's orders, and she began a reign of seven years.

At first she ruled alone, but Mohammed had written that according to tradition "no nation would ever prosper which put its affairs in a woman's hands." Caliph Mustasim of Baghdad was stunned to hear his former slave was now Queen of Egypt. "Had they no men?" was his sneering message to the Egyptian court. And there was still strong opposition from supporters of Saladin's dynasty to Pearl Spray and her supporters, the White Slaves of the River, the Mamelukes.

Ever the politician, Pearl Spray shared her throne with not just one but two male associates. One was Ai Beg; she made good on her promise to marry him. The other was a six-year-old lad of Saladin's line. But of the three, Pearl Spray was the real power.

The boy was kept for two years, then pushed aside, having served his purpose. Next, trouble began between Pearl Spray and Ai Beg. Ai Beg, as one writer put it, "both for pleasure and policy," decided to take for an extra wife a Near Eastern princess of high rank. The temper of the slave-girl who became queen was fiery as ever; Pearl Spray murdered Ai Beg in his bathtub.

Her base of support had always been the Mamelukes, but at this, they were horrified, and abandoned her. Her end came quickly. A gang of slave women fell upon her, battered her to death with their wooden clogs, and cast her body into the citadel ditch.

Her career touched all three continents of the known world: Europe, Asia and Africa. By sheer strength of will, she held together the shaky Egyptian court until it could rally and beat off Louis' attacks. It was her fate to share the intimate hours of the last of two dynasties: that in Baghdad, and that of Saladin, in Cairo; and to bring about the deaths of two more rulers: Turan Shah and Ai Beg.

There is today, still, in Cairo, a small mausoleum which bears her name. Within it is all that remains of the body of Shadjar-al-Durr, Pearl Spray, Armenian or Turkish slave who sat on a throne and whose strength and courage shattered the best of Christian chivalry. I am told that if you go to the market squares of Cairo, and ask of her, from the old men sitting in the sun, they will smile, and nod.

"Ay, verily, she ruled long ago. May Allah give her peace and rest, for, although she was but a woman, verily, she was Sultana, she was Queen!"

Mary Dyer: Faithful to Death

The Puritans were appalled at the arrival of Ann Austin and Mary Fischer, the first Quaker missionaries in Boston, Massachusetts, in July, 1656. To the Puritan, the Quaker expounded the rankest of heresies: God spoke directly to the man who waited quietly and expectantly for His word. As a result of the Puritan reaction to the Society of Friends' missionary activity the General Court of Massachusetts enacted anti-Quaker legislation on October 14, 1656. This legislation provided penalties of whipping, imprisonment and expulsion to members of the Society of Friends who dared to enter the jurisdiction of the Commonwealth; a fine of one hundred pounds levied against ship captains who brought Quakers to the colony; and fines of forty shillings for a first offense, four pounds for a second, and banishment as a third offense against those residents of Massachusetts who defended Quaker opinions.

Mary Dyer did not go to Massachusetts as a missionary nor did she know of the passage of the repressive legislation. She was merely passing through Massachusetts Bay Colony when she and Ann Burden were arrested and imprisoned by the authority of that statute. Ann Burden was in the Bay Colony to settle the estate of her deceased husband who had been a citizen of Boston.

The women escaped the prescribed whippings. However, Ann Burden's goods were confiscated and shipped to Barbados for sale and she was forced to return to England on the ship by which she had arrived. Mary Dyer was held in prison until her husband came from Rhode Island and promised to prevent her from speaking to anyone until they were beyond the Massachusetts boundary.

Almost twenty years earlier the Dyers and several others had been banished from Boston because they were not in harmony with the Massachusetts theology. In 1638, Mary Dyer took Anne Hutchinson's hand and walked out of the meetinghouse with her after Anne heard her sentence of banishment for her defiance of ministerial authority. They moved to Newport, Rhode Island.

William Dyer held several official positions there and became Attorney-General of the

colony in 1649. In 1651, the Dyers went to England where Mary remained after William returned to Rhode Island. There she joined the Society of Friends and became a recognized minister. It was during her return to Rhode Island in 1657 that she was jailed for violating the anti-Quaker statute.

Other Quakers began making visits to Massachusetts Bay and Plymouth Colonies. In the summer of 1657 eleven Quakers crossed the Atlantic in the ship WOODHOUSE. The Friends made repeated trips into the northern colonies, holding meetings and gaining adherents while operating from Rhode Island. In Salem, regular Quaker worship began to be held in the homes of members even though the local magistrates levied fines on the attenders.

Due to the failure of fines and punishments to stamp out the Friends' activity, the General Court passed a more stringent law in October, 1657. It provided that returning Quakers were to suffer for succeeding visits with the loss of one ear, then the other, and finally to have the tongue bored. Women were to be whipped rather than lose their ears. However, for the third offense they would receive the same treatment as that prescribed for the men. Those citizens giving lodging to a Friend were to be fined at the rate of forty shillings per hour of the lodging period. In May, 1658, another law was enacted which levied a ten shilling fine for the admission by any resident of Quaker ways, by either speaking, writing, or attending meetings.

In the following months, three Friends had their right ears cut off and one Friend was given one hundred seventeen blows on his bare back with a tarred rope. Rising public indignation compelled the town authorities to have a physician try to save the Quaker's life. Within a week all the Friends were released from prison.

This action led the clergy of the colony to demand the passage of a law which prescribed hanging for Quakers who returned after being banished. This extreme measure divided the General Court but it did pass 13-12 due to the failure to summon one of the members, who was ill at home, even though he had requested to be sent for if a vote was to be taken. He opposed the legislation on the grounds that a death sentence without a jury trial was against the law of England. An amendment for a trial by jury was added to allay these feelings. This was a mockery of English law since the only question the jury would have to consider was if the defendant was a Quaker—a point the defendants readily confirmed.

After prayerful consideration of the anti-Quaker laws of Massachusetts, four Friends felt an inner command to go to the Bay Colony. Marmaduke Stephenson, William Robinson, Patience Scott and Mary Dyer walked from Rhode Island to Massachusetts where they were apprehended and brought before the Court of Assistants on September 12, 1659. The Court would not recognize the contentions of the accused who claimed the right as peaceable and loyal subjects of England to travel throughout her dominions. The Friends were banished and warned they would be hanged if they returned. The men remained in the Massachusetts area but Patience Scott and Mary Dyer returned to Rhode Island.

On October 8, 1659, Mary Dyer was imprisoned upon her return to Boston. On October 13, Robinson and Stephenson were apprehended. Mary Dyer, Robinson and Stephenson were taken before the Court on October 19. They were asked why they had gone to Massachusetts to which they replied, "In obedience to the call of the Lord." They were sent back to jail and brought before the Court the next day and sentenced by Governor Endicott: "Hearken, you shall be led back to the place from whence you came and from thence to the place of execution, to be hanged on the gallows till you are dead."

Mary Dyer said, "The will of the Lord be done."

"Take her away, Marshal," said the Governor.

"Yea, joyfully shall I go," she replied.

October 27 was set for the execution. The community was stirred by the death sentence. A large crowd gathered for the execution, so large that a bridge broke under the weight of the crowd of spectators returning home.

The prisoners marched from the jail to the gallows accompanied by two hundred armed men, many horsemen, and beating drums to prevent the condemned from speaking to the populace. The three Quakers walked hand in hand, Mary Dyer between them.

"Are you not ashamed to walk thus between two young men?" Marshal Edward Nicholson asked.

"No," she replied. "It is an honor of the greatest joy I can enjoy in this world. No eye can see, no ear can hear, no tongue can speak, no heart can understand the sweet incomes and refreshings of the Spirit of the Lord which now I enjoy."

After the noose was fitted to their necks, one at a time William Robinson and Marmaduke Stephenson climbed the ladder of the "great tree" on Boston Common and the ladder was pulled away.

When Mary Dyer climbed the ladder, her arms and legs bound and her face covered with a handkerchief, she was told of her reprieve. Pleas from the governors of Connecticut, Acadia and Nova Scotia to not hang the Quakers and the plea of Mary Dyer's son for his mother's life had been received by the General Court. On October 18, the day before the execution sentence was pronounced, the Court had ordered: "The said Mary Dyer shall have liberty for forty-eight hours to depart out of the Jurisdiction, after which time, being found therein, she is to be forthwith executed. And it is further ordered that she shall be carried to the place of execution and there stand upon the Gallows with a rope about her neck until the Rest be executed, and then to return to the prison and remain as aforesaid."

She protested she should not live if the wicked laws were not annulled. She appealed again to the magistrates and churchmen but the issue was not resolved. Mary left for Rhode Island the next day "finding nothing from the Lord to the contrary . . . I came at his Command, and go at his Command."

Mary spent the winter on Long Island Sound but in the middle of May she left for Massachusetts, arriving in Boston on May 21, 1660. The law of banishment and the punishment of death for returning was still in force. She was taken before Governor Endicott on May 30 and he again passed the sentence of death on her. "But now it is to be executed. Therefore, prepare yourself tomorrow morning at nine o'clock."

She answered him: "I came in obedience to the will of God at your last General Court, desiring you to repeal your unrighteous laws of banishment on the pain of death; and that same is my word now, and earnest request, although I told you that if you refused to repeal them, the Lord would send others of His servants to witness against them."

On the gallows Mary Dyer was given a chance to save herself if she would promise to leave Massachusetts and never return. "Nay, I cannot. In obedience to the will of the Lord God I came and in His will I abide faithful to death," she replied. Firm in the conviction of her faith and in her mission to Massachusetts, Mary Dyer was hanged on May 31, 1660.

SPACE AND HUMAN VALUES

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. TEAGUE of Texas. Mr. Speaker, Mr. Dale D. Myers, Associate Administrator of Manned Space Flight, NASA, made a most penetrating commentary on the value of our national space program in a recent commencement address at Whitworth College, Spokane, Wash., on May 24, 1970. Dr. Myers discusses our national space effort as part of our society and its effects on all people of the United States and the world at large. Because of the significance of these comments, I am including them in the RECORD for the benefit of my colleagues and the general public. The address follows:

SPACE AND HUMAN VALUES

(By Dale Myers)

INTRODUCTION

Dr. Lindaman, members of the faculty, and students of the graduating class of 1970. It is a great privilege to be allowed to share in this eventful day for Whitworth College and for my good friend Dr. Lindaman. Commencement is an exhilarating experience and as I well remember at the University of Washington where I graduated—a great relief! And also a time of fond farewell, to friends who last as "best" friends for the rest of your life. And finally, a time to look forward and to project your own future, the future of your nation, the future of Earth, and now (although barely) the future of the universe. I don't plan to give to you the inspirational message which your distinguished President can give so much more competently than I can with respect to the philosophical aspects of space as it affects your life, but I would like to relate to you some of the parallels in circumstances of today's graduating class, and of your alma mater, and the Space Program of the United States, of which I am a part.

With today's commencement, you have accomplished a set of objectives and reached important goals, all of which will be abruptly replaced by a new set of objectives and new goals which now lie before you. Whitworth College shares in your achievement, and yet already it must anticipate the beginning of another undergraduate cycle, and look to its ever-increasing responsibilities to its students and the academic community.

The space program is much the same. The National Aeronuatics and Space Administration accomplished the national objectives set nearly a decade before when men from planet Earth, two U.S. astronauts, Neil Armstrong and Edwin Aldrin alighted on the magnificently desolate surface of the moon last July. In a sense, that landing on the moon was the graduation ceremony of the space program. Your diploma today attests to your readiness to proceed with your efforts to advance the objectives of society. The diploma conferred upon the space program by the President of the United States is now on the lunar module left on the moon and says "We came in peace for all Mankind." It recognized that this nation was ready to undertake more advanced objectives in space for the benefit of mankind.

Many of you in your newly won degree status will be joining with others in the field of education, in church-related pursuits, in government and business, as part of a team to help carry out one of various human endeavors. The space program is also

a team effort by groups of individuals doing myriad tasks. Today, more than 140,000 persons in industry, government, and the academic community (many in the State of Washington) are on the space team that numbered more than 400,000 at the peak of the Apollo Program effort in 1966.

As your academic career has been a major and highly visible undertaking in the eyes of your family and the faculty of Whitworth College, so has been the development of capabilities for the exploration of space a major and highly visible undertaking in the eyes of the nation and the world. And perhaps as a parallel to your own experience as students, the results of the space program have been measured on a scale that seems to proclaim a passing grade is not always good enough. I am sure you gladly accepted the academic challenge, as the space agency welcomed the research and development challenged of opening space to the people of earth.

While the United States, through its space program, has literally been learning how to operate in space, as even the latest moon flight demonstrated, there has been no moratorium on *results* as this nation developed and tested its spacefiring machinery and skills.

SPACE VALUES AND WORLD CHANGE

It is surely the hope of each of you that you will help to shape your community, your state and nation, and even your world. It is my belief that so long as you hold this objective, you cannot but succeed, because the impact of your efforts will be felt. In my judgment, the nation's space program also will succeed in the future as it has in the past, not only because we have carried out manned flights that took us to the moon, and unmanned flights to the vicinity of Mars, but because our space efforts are exerting a profound change upon this nation and the world in many wonderful ways.

Much has been made of the U.S. missions which have sent highly trained men soaring through the weightless void of space to accomplish specific space flight tasks. These missions have been reported on a world-wide scale as no other single events in modern history. From my responsibilities in the aerospace industry and in the manned space program, I am aware that the overall impact of developing the capability to carry out such missions has served to benefit mankind immensely. The public, however, has, in perfectly human fashion, been drawn to and has applauded these spectacular space feats, while less glamorous scientific and technological accomplishments generated by space flight have been quietly accepted or overlooked entirely.

The average citizen is acutely aware of the dramatic achievements of the space program. However, he has not grasped the significance of the overwhelming benefits and values derived from this great undertaking. I am reminded of a statement attributed to Dr. Edward Teller as he compared the potential practical value of space exploration to the voyage of Columbus. He said, "When Columbus took off, the purpose of the exercise was to improve trade relations with China. Now that problem has not been solved to this very day, but just look at the by-products."

The truth is that civilization has been changed by the phenomenon of space flight, both socially and scientifically, both academically and esthetically. The changes are evident in our teaching as well as our technology. Because the impact of space pervades all human endeavor, it will be worthwhile for us to reflect on some of the changes that have occurred because of our national space effort.

SOCIAL CHANGE

It is impossible to gauge the full extent of the human values of new horizons and of new hope for a better world that have resulted from the space program. You are perhaps familiar with the frequent observation that our flights to the moon have demonstrated that men and women of competence and good will can work together within our institutions to achieve almost impossible goals. I am aware of the vast differences and varying degrees of difficulty in achieving various goals of society. In my view, the problem of getting to the moon was easier to solve than many others that are still with us. Yet the space program did marshal some old-fashioned human responses and some tremendously effective management systems to reach its goal of the 1960's, and these inspiring achievements are a valid spur to the National will in other segments of this country's endeavor. Certainly the space effort has provided methods and encouragement to tackle the tremendous social problems around us.

In addition to raising the horizons of man's aspirations, the space program also clarified man's relationship to the universe and to his fellow man. Flying out a quarter of a million miles into space, man for the first time in his history has been able to see himself and his planet in true perspective. Now, through the Apollo flights, mankind perceives the earth as one entity rather than many, many political subdivisions. At the same time, man sees the earth as one small but precious blue gem in the cosmos rather than the center of the universe.

In 400 B.C. Socrates said, "We who inhabit the earth dwell like frogs at the bottom of a pool. Only if man could rise above the summit of the air could he behold the true earth, the world in which we live." Archimedes more than 2,000 years ago had wished "to stand poised in space" that he might view the earth. Yet in the twentieth century Einstein also imagined "an observer freely poised in space." Now, after these millennia, man has reached a vantage point in space from which to view his mother earth. I am convinced that our vantage point in space, the viewing of our "blue gem" in the Cosmos, triggered our sudden responsiveness to the cry for pollution control.

Your distinguished President has observed in his writings that man's ability to see himself and his blue planet will impact every discipline one could name, and will find its way into the thinking of every man concerned with designing the future. He has also noted that a deep moral perspective is needed today to assure that this country's endeavors in space are useful to humanity and not merely technological spectacles. I believe those among you who are becoming teachers must be farther ahead in sensibility and awareness than the industrialist or the engineer, to point out the true significance of our new perspective to the youngsters growing up in the era of space exploration applications.

Space flight, of course, had an immediate impact on education with the launching of the first earth satellite in 1957, the Soviet Sputnik. This first space exploit led to a national reassessment that provided a new impetus to learning for the educators and students of this country—an impetus which pervaded all levels from the earliest grades to the graduate school. Your class from early grade school on, received that impetus. The impact of space has also exerted a moral force, a striving for excellence in the quest of knowledge, that has helped to reshape the entire educational process.

While the U.S. space program has changed the outlook of our citizens, the openness of this country in exploring space also has had its influence upon the peoples of the world. I believe that Apollo 11 brought the people of the world together as never before in history, sharing the oneness of mankind and a pride in the achievement of the crew as members of the human race.

More recently, international unity and concern were generated by the difficulties encountered during the flight of the Apollo 13 spacecraft modules Aquarius and Odyssey on the way to the moon. Indeed, the flight of Apollo 13 was a true odyessy, which Webster defines as "an adventurous journey marked by changes of fortune." The changing fortunes of Apollo 13 rallied the peoples of the world to pray for the crew's safe return, and prompted many nations of different political ideologies, including the Soviet Union, to offer their assistance in recovery operations.

TECHNOLOGICAL CHANGE

The technology which allows our astronauts to venture 250,000 miles from earth was all but taken for granted by the time we flew Apollo 13. Actually great technological advances were needed to develop the aerospace equipment which can carry man reliably around the earth, and outward into new regions of the solar system. The new systems have to perform under conditions once deemed prohibitive, thus casting space in the role of a forcing function for innovation. The space program is actually serving as a cutting edge of technology today, and the space developments of the 1970's will extend this function into the future. In addition to the visible space vehicle systems, are advances in the form of new materials, new processes and techniques, and the advances in computers, communications, and data handling.

The impact of new space requirements on the computer industry provides an excellent example of space stimulated progress. The exploration of space demands is very large computer systems of great complexity, size and speed, plus new flexibility in the use of computers. Such uses include automated checkout for space hardware, real-time monitoring of space missions, aircraft and spacecraft simulator controls, computing planetary trajectories, and modeling global weather patterns. During Apollo missions, on a real-time basis, computers calculate the trajectory to the moon and back, compare three separate solutions for the lunar descent, record and analyze thousands of bits of telemetered spacecraft information, compare these to predicted values to detect trouble, and at the same time monitor the well-being of the crew. To illustrate how the space program's computer needs have grown, the Mercury computer program contained forty thousand "computer words" while the Apollo computer program needs one and a half million, 37 times more than Mercury. The computer industry has met this challenge.

The economic impact of space should not be overlooked, either. Using the computer example again, the U.S. computer industry does about $8 billion worth of business a year and U.S. computer exports have increased 1,400 percent in the first decade of the space age. Industry spokesmen credit the stimulus of space program requirements and space agency support of technological advances for this record. So not only did the space agency get full value from the computers it paid for, but the entire nation is benefiting from the economic and technological contributions of this industry.

The examples of technological progress made through the space program are seemingly endless, in electronics, in materials, and hundreds of other areas. Let me cite just a couple in connection with the automotive industry, perhaps more closely related to our daily lives.

In order to meet the new Clean Air Act, the Chrysler Corporation reworked its automobile ignition systems, designing distributors to operate within much closer limits. To assist in this they called in their own people who had developed the automated checkout and launch sequence equipment for the Saturn rocket that launches the Apollo spacecraft on its journey to the moon.

Today, at the Chrysler Indianapolis plant, every distributor is dynamically tested for final acceptance, on computer-controlled equipment derived directly from the Apollo program checkout equipment.

Another example is an automotive safety device which originated in the shock absorber that is used today on the couches in the Apollo spacecraft. The device is rugged, cheap, resettable, and reuseable. The Bureau of Public Roads has tested it in connection with highway guard rails and found that it cuts down a 60 mile-per-hour impact to the equivalent of a 5 mile-per-hour. Ford Motor Company is now working to incorporate this Apollo device into its automobile bumpers, perhaps on its 1972 models. Allstate Insurance Company already has announced collision premium reductions of 20 percent for cars so equipped.

MEDICAL CHANGE

Turning from aerospace technology to medicine, the biomedical field offers another example of how the nation's space program has impelled change which benefits every citizen. The relatively few manned flights already made have produced enough knowledge to create entirely new concepts of medical procedures and equipment.

Whether the astronauts are flying 200 miles above the earth or a quarter of a million miles out in space, the space agency needs to know how fast their hearts are beating, how much oxygen they are using, how their muscles are reacting to the stresses imposed by their tasks in a weightless environment. In every manned flight, information from a biosensor attached to the body of the astronaut is relayed to a computer, to data screening equipment, and through the space program communications network to the medical team at the Manned Spacecraft Center in Houston. You can be sure that during the first steps on the moon, the Apollo 11 astronauts received considerable attention.

The motive of the space agency in developing the monitoring system was to preserve the lives of the astronauts, but countless other lives are being saved as a result. A recent adaptation of this system is being used in many cities to increase the efficiency of hospitals. Radio-equipped ambulances transporting a heart attack victim use biosensors with spray-on electrodes to transmit an electrocardiogram to the emergency staff so that when the patient arrives both staff and equipment stand ready to administer the indicated treatment. At the hospital, the space-developed electronic sensors for monitoring astronauts now have been adapted to continuously measure the pulse and respiration rates, temperature and blood pressure of up to 64 patients and provide continuous display of the information at a central control station. This single development gives promise of revolutionizing hospitals throughout the world. The same sensors, incidentally, can be used to monitor a patient after he has returned home by communicating an electrocardiogram to his doctor by telephone.

Partially paralyzed patients or paraplegics can now operate a motor-driven wheel chair, turn the pages of a book, change a TV station or call for help—all with a switch which can be operated by eye movement. This switch operates on the principle of infrared reflection from the eyeball which was developed for use by the astronauts when high gravity forces might limit arm and leg movement.

GROWTH OF SCIENTIFIC KNOWLEDGE

Space related science is, of course, not confined to the laboratory. The growth of scientific knowledge afforded by our various space missions is, in fact, one of the primary values being returned by our national efforts in space. And it is very heartening to see our young people taking such an avid interest in this knowledge and in the scientific concepts we use to gather it. I am reminded of Christmas Day 1968 when the Apollo 8 spacecraft was zooming back toward earth faithfully obeying the laws of gravity and action/reaction after its historic moon-orbiting feat. Astronaut William Anders was relaying information back to earth when a ground controller mentioned that his young son had asked him who was "driving" the spacecraft. After a brief pause, Anders replied, "I think Isaac Newton is doing most of the driving now".

Moon and planets

The discoveries from Apollo 11 and 12 have taught us more about the moon than we had previously learned in our entire history. We learned more about Mars from the pictures sent back by the automated Mariner spacecraft last summer than we had previously learned since the invention of the telescope. We might ask if in the process we have subjugated romance to science—the "mysterious moon", the "canals" of Mars. Yes, but we have opened the mysteries of the universe. This newly acquired knowledge of the moon and other planets is helping us to understand more clearly both our own planet and the universe. The moon, in particular, has long been thought to have great potential for interpreting the history of the solar system. Since the surface of the moon has been spared most of the processes of change that occur on earth such as erosion, folding, and cracking, the record of its long history since the formation of the solar system some 4.5 billion years ago apparently has been preserved.

Astronomy

Space astronomy is giving astronomers powerful new tools for investigating challenging questions. Huge radio galaxies, quasars, pulsars, and numerous X-ray sources are still unexplained. This country's space satellites are providing the means for making observations in the radio, infrared, ultraviolet, X-ray and gamma-ray wave-lengths that cannot penetrate the earth's atmosphere. When we recall that our present day knowledge of nuclear energy stemmed from inquiries into how the sun produced its radiant energy, we can speculate that today's space astronomy may eventually also yield results of tremendous practical importance.

Earth resources

Space photography and earth sensors enable us to study the earth and its atmosphere in detail, to search for new resources, to monitor water resources, agricultural activity, and to explore the oceans.

A photograph taken by Gemini of the Western Desert of Egypt was examined by an Egyptian geologist working at the University of California. He saw photographic evidence that mineral deposits in this area (which he personally knew) were at least four times as large as earth-bound research had shown.

An earth fault, amazingly similar to faults in the oil-rich Arabian Peninsula, show up in space photos in Northeast Africa where oil has not yet been found. Considering the high cost of oil prospecting, it seems logical to expect that oil companies may use space investigation as a more economical means of finding oil deposits.

Yet we have just begun to fully realize the vast potential that earth resources satellites have for the betterment of life here on earth.

We now know that observations from space can answer the basic questions that must be answered if we are to make efficient use of the limited resources of our own planet. What causes ocean currents? What untapped food resources are in the sea? What is the status of food crops around the world? Where is the flood potential of snow cover in our mountain ranges? And of prime importance, what and where are the sources of air and water pollution?

METEOROLOGY

Perhaps in the field of meteorology we find the most dramatic example of how our space program is providing direct benefits to the man in the street. Early in the space program, new tools and information systems for weather forecasting were developed and put into operation. These included satellites to track storms, measure wind, record the temperature at different heights, and report on the moisture content of the atmosphere.

The first satellite merely took pictures of the clouds. Now, satellites take pictures not only in the visible light, but also in infrared, and show clouds during the night as well as in daylight. Last year a satellite was launched that could take the *vertical* temperature profile through the atmosphere. This year, the second satellite of this type was launched, with even more sophisticated instruments. Previously it had taken tens of thousands of balloon soundings to get the same information—information that is vital in long range forecasts.

Our weather satellites have the ability to detect and track major storms, hurricanes, and threatening weather patterns, early enough and precisely enough to permit timely warning and decision. Hurricane Camille, last August, was first observed and then tracked by satellite. The hurricane's path, force, and extent were predicted early and accurately enough to permit authorities to evacuate some 70,000 people from the Mississippi and Louisiana Gulf Coast. It is estimated that some 50,000 people might have perished in the devastating storm without early warning and without the credibility provided by actual satellite pictures and data.

United States weather satellites have watched every major storm threatening the nation since 1966. In 1969 alone, 12 Atlantic hurricanes, 10 Eastern Pacific hurricanes, and 17 Western Pacific typhoons were identified and tracked by satellites. In fact, we now have available the first atlas of Pacific cloud and weather patterns covering the period 1962–1969, assembled from data available only by satellite. The Navy uses weather satellite pictures for ice patrols and to schedule Antarctic resupply, and airline pilots at Kennedy Airport routinely receive weather photos of their transatlantic route.

One other point to remember about these weather satellites is that they are inherently global systems. By using automatic readout systems, every nation in the world can benefit from the systems onboard U.S. weather satellites. Over 50 countries are now using our satellites to view daily weather patterns over their own territory—a fine example of how the use of space encourages international cooperation.

COMMUNICATIONS

In the field of communications, we also have seen how the use of satellites has served to draw the world closer together and promote global cooperation. Today, communication satellites supplement cable, radio, or microwave links and literally interconnect every part of our world.

The INTELSAT satellites, controlled by an international consortium, have a capacity of 1,200 two-way telephone circuits or 4 color TV channels. Before satellites, a West Coast-to-Japan cable circuit cost $15,000 per month; today, satellites have reduced the charge of this service to $4,000 per month. Newer, more advanced satellites, to be launched next year, will increase this capacity to 5,000 two-way circuits for transoceanic traffic, providing economical links across the Atlantic, Pacific and Indian Oceans.

One of the more far-reaching effects these satellites will have for the betterment of man is in the field of educational television. In 1973, the United States and India will cooperate in an unprecedented experiment using a space satellite to bring instructional TV programs to some 5,000 Indian villages.

This experiment will be the first large-scale test of instructional television to demonstrate the potential value of effective mass communications in developing countries. India will be solely responsible for the television programming which will be directed toward such subjects as family planning and improvement in agriculture.

I would like to mention a pleasant aspect of the development of our communication satellites. The COMSAT Corporation, where U.S. commercial communications interests are pooled has for several years now ordered its own custom-made satellites and has refunded the space agency for launch services. A true pay as you go status has been achieved where the taxpayer's help is no longer required.

BENEFITS FROM FUTURE PROGRAMS

My discussion of the impact of space would not be complete without looking briefly at some of the future national programs planned for this decade. Today, the country's manned space effort is moving toward multiple programs and away from one single objective as in the 1960's and we are doing it with lower budgets. Our space program for the next decades will be a balanced program composed of reasonable schedules and will be a program responsive to our nation's many competing social needs. The new programs emphasize economy and additional uses of space technology for the benefit of man. These are in addition to the Apollo lunar science program to be completed in the first half of this decade.

The first of these programs is Skylab, which will place an experimental space station in extended earth orbit beginning in late 1972. Skylab will provide the first opportunities for a laboratory environment in space, allowing us to learn more of the earth's resources and the sun's energy. Crewmen will visit the laboratory for one to two months using the Apollo spacecraft for round-trip transportation. The laboratory itself is a modified Saturn rocket stage. Saturn launch vehicles will be used to launch the workshop and the crew separately. This program is based on using Apollo hardware not required for the lunar program.

The reuseable space shuttle, which combines performance characteristics of the airplane and the rocket, is a new development that will offer many economies and benefits later in the decade. The shuttle will be launched into space vertically with its own rocket engines, but will return to earth from space for a horizontal, airplane-type landing on a conventional airport runway. The space shuttle will reduce the cost of payloads by allowing retrieval or repair of satellites in orbit and the transportation of cargo and passengers to and from orbit. It will have a quick response time and significant space rescue capability. Its design will provide for 100 or more flights without major overhaul.

Another new program is the space station, planned for operations in the late 1970's or early 80's. In earth orbit, the space station supplied by the reuseable shuttle will provide additional economic gains and practical benefits. The station will reduce operating costs by its long life, up to 10 years in earth orbit, and its flexibility, combining many operations such as research, applications, and support of space flight operations. It will be designed so many of the crew of 12 people on board will be able to carry out their technical tasks without special flight training. The space station modules may be used in various earth orbits, and ultimately, in lunar orbit or on a planetary mission.

The operation of the space shuttle and the space station will put this country into space operations considerably advanced from today's mission. They will permit a major expansion in the flexibility of space activities and a steady increase in the number of visitors into space. It is possible that someone in this audience could be among those flying up to the space station of the not too distant future. The expanded and more economical flight activities made possible by the space shuttle and space station will open space to a broad range of public, private and international interests.

Progress is expensive—there is no question about that. The programs that I have described when added to the continued forward thrust of the unmanned programs, will cost about $17 per person next year. But the tobacco bill is about the same, and the liquor bill is $24 per person! But I'll guarantee space will yield more for you and your children than a cough or a hangover.

CONCLUSION

While most of my discussion today has focused on the changes that are taking place throughout our daily lives as a result of the national space program, it is tempting at this commencement to ponder the direction of the future. That space and human values are irrevocably linked in many ways has already been established. Yet, in my judgment, it would be impossible for me today to predict accurately the future impact of space on your lives. In 1915, the airplane was 12 years old, the same age as the space program is today. Could we have predicted in 1915 what the future of the airplane would be when enemy aviators in open cockpits were just emerging from the era of saluting each other as they flew by on their reconnaissance flights to the era of throwing bricks at each other. I can say with certainty only that the full impact of this country's progress in the space environment has yet to be felt or even predicted. Magnificent as some of our accomplishments in space have been, they must, in the long run, be considered but a mere beginning. What we learn tomorrow will be of much greater consequence.

Following the flight of Apollo 11, Neil Armstrong very eloquently summarized the first lunar landing mission and theorized on its significance when he stated, "We hope and think that this is the beginning of a new era, the beginning of an era where man understands the universe around him, and the beginning of an era where man understands himself."

Inevitably, as this nation continues the conquest of space, the knowledge gained will enhance the lives of those who receive degrees here today. To an even greater extent, it will enhance the lives of your children, and the lives of future generations on this planet and elsewhere on the frontiers of outer space.

Perhaps the finest note of all was struck by Buzz Aldrin during his return trip from the moon when he read to the listening world from the Eighth Psalm of the Old Testament. "When I consider thy heavens, the work of thy fingers, the moon and the stars, which thou has ordained; what is man, that thou are mindful of him?"

TOUGHER LAW NEEDED AGAINST SONIC BOOMS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. PUCINSKI. Mr. Speaker, when the Department of Transportation appropriations bill was up on the floor of the House recently, I voted against appropriating funds for the supersonic transport, which unfortunately passed.

My views through the years have been consistent in that I have always believed that the SST deserved further study due to a multitude of factors—the high cost of such aircraft whose usefulness to our citizens and a favorable balance of payments are dubious; the studies made by many atmospheric scientists, particularly the National Academy of Sciences, which warn that a fleet of 400 SST's flying an average of four flights a day would inundate the stratosphere with 150,000 tons of water vapor daily, wrapping the earth in a semipermanent cloud cover that would turn it into one big hot greenhouse; the lack of airport facilities to accommodate the SST's; the ecological changes; and the deafening noise.

Concerning the noise factor, I was encouraged to read about an organization called the coalition against the SST, which consists of 23 groups including the Sierra Club, Friends of the Earth and the United Auto Workers Union, which challenge the promises of the administration that we will not have to worry about sonic booms.

The coalition, through its spokesman, Dr. Karl M. Ruppenthal, himself a former marine pilot, has charged that a proposed new Federal antiboom regulation is "full of holes," and urged a tough law banning SST sonic booms over the United States.

Mr. Speaker, on January 3, 1969, I introduced H.R. 1292, which would make it unlawful to operate any civil supersonic aircraft in air transportation through the navigable airspace of the United States which would generate sonic boom overpressures exceeding 1 5/10 pounds per square foot on the ground directly beneath the flight path, and would also make it unlawful to operate any civil supersonic aircraft into or out of U.S. airports unless it can be demonstrated that ground noise levels generated by such civil supersonic aircraft is substantially lower than that generated by long-range subsonic jet aircraft.

This legislation has been pending before the House Interstate and Foreign Commerce Committee and it is my hope that the Committee will hold hearings immediately, for we can no longer wait to get minimum noise standards on the books before we are faced with operative SST's.

We can no longer afford to wait because as Dr. Ruppenthal states, the main result of the SST's, among other things will be the destruction of the few remaining quiet areas in the world, the islands and the seas.

Mr. Speaker, my bill would prevent the destruction of the few remaining quiet areas of the world, as well as the destruction of the United States and its citizenry, and I urge the earliest consideration of H.R. 1292 before it is too late.

WISCONSIN EDITORIALS SUPPORT ANTISECRECY AMENDMENTS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. REUSS. Mr. Speaker, a great many papers in Wisconsin have spoken out edi-

torially in favor of the antisecrecy amendments being offered to the Legislative Reorganization Act with bipartisan sponsorship. I insert a small selection of these editorials in the RECORD at this point:

[From the Wisconsin Press Association]

IMPORTANT ANTISECRECY AMENDMENTS

A group of 22 "Members of Congress, Republican and Democratic, liberal and conservative," are sponsoring a series of important anti-secrecy amendments to H. R. 17654, the Legislative Reorganization Act of 1970, which is scheduled for House action the week of July 13.

"These amendments include recording how members vote on major issues both in committee and on the House floor, opening committee hearings and meetings to the press and the public, and requiring the availability of committee reports and hearings before final House action on legislation," the congressman said in a letter to a number of editors.

"These are important reforms," they added. "But their acceptance will depend, at least in part, on the amount of public visability they receive and the extent to which the public—and the press—demands them.

"Unfortunately, in this regard, there is a tendency in many quarters to look upon reform of House rules and procedures as an internal 'housekeeping' matter of little concern to the public. We are sure you will agree that nothing could be further from the truth; that how the House conducts its affairs can have a significant impact on the lives of the American people and the well-being of the nation."

Standing behind the amendments are Republicans Edward G. Biester Jr. (R-Pa.), James C. Cleveland (R-N.H.), Barber B. Conable Jr. (R-N.Y.), John Dellenback (R-Ore.), John N. Erlenborn (R-Ill.), Charles S. Gubser (R-Calif.), Paul N. McCloskey Jr. (R-Calif.), Thomas F. Railsback (R-Ill.), Donald W. Reigle Jr. (R-Mich.), William A. Steiger (R-Wis.), and Robert Taft Jr. (R-Ohio).

Members of the Democratic Party supporting the amendments are Jonathan B. Bingham (D-N.Y.), John Brademas (D-Ind.), James C. Corman (D-Calif.), Donald M. Fraser (D-Minn.), Sam M. Gibbons (D-Fla.), Ken Hechler (D-W. Va.), Abner J. Mikva (D-Ill.), James G. O'Hara (D-Mich.), Thomas M. Reese (D-Calif.), Henry S. Reuss (D-Wis.), and Morris K. Udall (D-Ariz.).

We can think of nothing more important to the American public than a free flow of accurate information by which Members of Congress can be judged accordingly.

As it is today, the House rules and procedures allow a system which is confusing, unnecessarily secret and, therefore, in violation of the time-honored principle. "The public has a right to know what its government is doing."

We believe the amendments offered by the 22 bi-partisan Members of Congress, if accepted, will add teeth to the Legislative Reorganization Act of 1970.

The public should waste no time in urging their congressmen to support the series of anti-secrecy amendments. Write your representatives today and tell them you back an open government in a democratic society.

HOUSE SECRECY SHOULD END

Twenty-two House members of both parties, including Republican Rep. William Steiger of Oshkosh and Democratic Rep. Henry Reuss of Milwaukee, this week hope to do something about the way the House conducts much of its business in secret and about the methods in which the House often votes without votes being recorded by name. The congressmen have sponsored a group of amendments to a legislative reorganization bill and the amendments should be adopted.

Here are some of the things the congressmen are concerned about:

The House now considers most amendments to legislation while meeting as a committee of the whole when no record votes are taken. Such votes are taken either by voice or by a standing division of the House or as a teller vote as House members file between tellers who count the members. The voter back home, thus, has no official report on how his congressman voted or for that matter whether he was present when important business was being done.

Nearly half of the hearings and meetings of House committees are not open to the public. This includes all of the more than 300 meetings a year of the powerful Appropriations Committee in contrast to the Senate Appropriations Committee which holds about three-fourths of its meetings in public.

With few exceptions, committee votes on key provisions of legislation being drafted are not made public. This is despite a 1946 rule which requires a recording of votes whenever a committee member requests that this be done.

Committee reports are frequently filed too late to be of much use to House members before they are called upon to vote.

House-Senate conference committees, sometimes called the powerful third house of Congress, meet in secret and there is no record of roll calls. Under present rules, conference committee reports can be taken up by the House the next day despite their complexity and debate is limited to one hour.

The anti-secrecy amendments would require recorded House votes on amendments, would require that committee votes be made public, would require a two-thirds roll call vote to close a committee session, and would extend the period between the time House committees and conference committees report legislation and its consideration on the floor.

With its tradition of conducting the public's business in public, strengthened by an anti-secrecy law which applies to state and local government. Wisconsin stands in contrast to the way of doing business in the House. The handicaps to a congressman trying to be informed before he votes also are obvious.

The rules for voting by voice, division of the House, or teller votes in part result from the large size of the House. This explanation once made sense from the standpoint of saving time, but electronic means of recording votes as in the Wisconsin Assembly no longer make this excuse acceptable.

The anti-secrecy reforms probably will lose, ironically by non-recorded votes. But bringing the matter to public attention will be helpful for eventual reform and the effort should continue. Allowing the public to witness how legislation is drafted and informing the people back home how their representatives vote should be the first order of business before the House.

FIGHT AGAINST SECRECY IN THE HOUSE

Twenty-two House members of both parties, including Republican Rep. William Steiger of Oshkosh and Democratic Rep. Henry Reuss of Milwaukee, this week hope to do something about the way the House conducts much of its business in secret and the methods in which the House often votes with votes not being recorded by name. The congressmen have sponsored a group of amendments to legislative reorganization bill which should be adopted.

Here are some of the things the congressmen are concerned about:

The House now considers most amendments to legislation while meeting as a committee of the whole when no record votes are taken. Such votes are taken either by voice or a standing division of the House or as a teller vote as House members file between tellers who count the members. The voter back home, thus, has no official report on how his congressmen voted or for that matter whether he was present when important business was being done.

Nearly half of the hearings and meetings of House committees are not open to the public. This includes all of the more than 300 meetings a year of the powerful Appropriations Committee in contrast to the Senate Appropriations Committee which holds about three-fourths of its meetings in public.

With few exceptions, committee votes on key provisions of legislation being drafted are not made public. This is despite a 1946 rule which requires a recording of votes whenever a committee member requests that this be done.

Committee reports are frequently filed too late to be of much use to House members before they are called upon to vote.

House-Senate conference committees, called the powerful third house of Congress, meet in secret and there is no record of roll calls. Under present rules, conference committee reports can be taken up by the House the next day despite their complexity and debate is limited to one hour.

The anti-secrecy amendments would require recorded House votes on amendments, would require that committee votes be made public, would require a two-thirds roll call vote to close a committee session, and would extend the period between the time House committees and conference committees report legislation and its consideration on the floor.

With its tradition of conducting the public's business in public, strengthened by an anti-secrecy law which applies to state and local government, Wisconsin stands in contrast to the way of doing business in the House. The handicaps to a congressman trying to be informed before he votes also are obvious.

The rules for voting by voice, division of the House, or teller votes in part result from the large size of the House. This explanation once made sense from the standpoint of saving time, but electronic means of recording votes as in the Wisconsin Assembly no longer make this excuse acceptable.

The anti-secrecy reforms probably will lose, ironically by non-recorded votes. But bringing the matter to public attention will be helpful for eventual reform and the effort should continue. Allowing the public to witness how legislation is drafted and informing the people back home how their representatives vote should be the first order of business before the House.

CAMPUS ADMINISTRATORS, CAMPUS RADICALS: WHO IS IN CHARGE?

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. MINSHALL. Mr. Speaker, last May two pieces of correspondence came into my possession, one a letter from the chairman of the Communications Committee of New York University, the other, addressed to Mrs. Minshall, from the president of her alma mater, Connecticut College. We both were struck by the almost identical phrasing in the points made in both letters, as indicated by the portions I have italicized:

FINE ARTS DEPARTMENT, WASHINGTON SQUARE COLLEGE, NEW YORK UNIVERSITY.

DEAR SIR: The faculty and students of New York University's Fine Arts Department of

Washington Square College voted to cancel classes and final exams to support the demands of the National Student Strike as follows:

1. That the United States Government end its systematic oppression of political dissidents and release all political prisoners, such as the Black Panthers.

2. That the United States Government cease its escalation of the Vietnam War in Cambodia and Laos, that it unilaterally and immediately withdraw all forces from Southeast Asia.

3. That the universities end their complicity with the United States war machine by an immediate end to defense research, ROTC, counter insurgency research and all other such programs.

More importantly, the faculty and students did not use the crisis of recent events to gesture protest by closing down the department but, using its facilities, took a positive step toward organizing for peace, working politically and through our constitutional system. To realize this we have printed the addresses of our local representatives and Congressional Committee members, for departmental use and public distribution. To take this letter writing campaign into the community, students set up tables with stationary and these addresses at the Frick Collection, Whitney Gallery, Museum of Modern Art, Guggenheim and Jewish Museums to give visitors the opportunity of writing to politicians. To arouse the public conscience, we have organized exhibits of political art, drawing upon the city's art schools for material. The Chairman of the Fine Arts Department, Dr. Janson, has successfully urged the American Art College Association to communicate its concern over administration policy to the Government. The Curator of the New York University Art Collection, Mrs. Ruth Bowman, has dedicated three of her one hour radio programs over WNYC to discussing the duty of the art world to its society. A representative from our Department has voted in our interests before the University's Strike Coordinating Committee, while, within the Department, the faculty, students and staff have supported a movement before the University Senate to free two weeks in the fall, permitting the University community to participate in political campaigns. We have shared our materials with libraries, art galleries and publications, informing them of our activities; as a result, the staff of the Whitney Gallery has publicized its anti-war stand, the Donnell Library has organized an anti-war exhibit and numerous galleries have closed to register their anti-war view.

Our activities clearly indicate that we are willing and patient to work through the Constitutional and academic structures, and while there have been no formal classes, the joint efforts of students and faculty working for their society has proven to be a genuine part of our education. For this cooperation has done more to unite the generations to work for the national welfare than the attempted coercion toward blind patriotism through verbal intimidation as practised by certain members of the administration. We are convinced that in our times political dissent is the duty of conscientious citizens who have any regard for the sort of nation our posterity shall inherit. We believe that our government can work for the welfare of the people as long as the people make their opinions manifest; the worst we can do is to indifferently tolerate our government's present misguided policies.

JAMES ORTHMANN,
Chairman of the Communications Committee.

CONNECTICUT COLLEGE,
New London, Conn., May 11, 1970.

To Parents, Alumnae, and Friends of Connecticut College:

This is a short report on Connecticut College's participation in the events of last week which will probably enter current American history as "the nationwide student strike." Connecticut entered the protest movement as a college community on Tuesday, May 5. On Monday a dormitory referendum had been taken which demonstrated a large student majority for a strike. In various ways the students made it clear that by "strike" they meant a cessation of all academic routines so that the community could organize on- and off-campus activities to demonstrate its disapproval of, chiefly, the new direction of the Vietnam war. Later on Monday the Faculty voted by a large majority to cancel all classes for the remainder of the week "in order to express solidarity with students' concern over the events in Southeast Asia."

Miss Julie Sgarzi, the President of Student Government, and I appointed a joint steering committee and on Tuesday that coordinating group and its subcommittee on resolutions became the organizing center of our campus activities. At a meeting that filled Palmer Auditorium on Tuesday morning and early afternoon, the community, acting as a new kind of political entity in this college's history, approved of a three-plank platform for the strike.

"Resolved, (1) that the United States government end its systematic oppression of political dissidents, and release all political prisoners, such as Bobby Seale and other members of the Black Panther Party; (2) that the United States government cease its expansion of the Vietnam war into Cambodia and Laos; that it unilaterally and immediately withdraw all forces from Southeast Asia; (3) that the universities end their complicity with the United States' war machine by an immediate end to defense research, ROTC, counterinsurgency research and all other such programs."

The decision whether or not to accept the first part of this resolution was the most anguished moment of our week. When at the end of the morning a vote to amend part one succeeded, our black students and some others left the hall. After lunch the original language was restored, the community rift was healed and strike activities began.

Between Tuesday morning and this Monday morning our campus has been a busy scene of meetings, lectures, panel sessions, letter-writing sessions, and scenes of the comings and goings of student canvassers and visitors from the community and other campuses. Students collected more than 5000 signatures in the New London area to a petition addressed to the Connecticut congressional delegation. A climax was reached on Saturday when over 1100 family visitors came for Parents Day and entered into the debates at various levels of interest and approval.

As of this morning most of us are back at our desks and classrooms and laboratories ready to finish the semester in good order. Sunday afternoon and evening were spent in a community meeting and a Faculty meeting to determine how the nature and the momentum of the strike movement could continue during the last week of classes and the final examinations. The Faculty has offered a group of options for fulfilling the requirements in courses, which a student editorial in this morning's issue of our daily paper calls "extremely flexible!" Attendance at class today has been high.

Not all parents and alumnae will agree with what we have done. But I would defend as correct and straightforward our methods for trying to discover and express the reasonable response of our campus majority. I am aware as never before in the past eight years of the complexity of our educational mission in the sixties and seventies. What I would like especially to emphasize is that it was the collective expression of our purpose, the close, continuing relationships between teacher and student that gave our four days their special quality. I think we are better prepared than we have ever been to keep Connecticut College a vital place for teachers to teach and students to learn.

CHARLES E. SHAIN,
President.

Mr. Speaker, in pursuing this "coincidence" further, I obtained a copy of newsletter No. 3 issued by the National Strike Information Committee on May 5, which I am told on unimpeachable authority is composed of radicals who have created "regional centers" on Brandeis, Grinnell, and Berkeley campuses, their printing presses aided and abetted for almost instantaneous coordinating efforts across the Nation by various ham radio operators and college radio stations.

A copy of a portion of newsletter No. 3 of the National Strike Information Committee follows. The italicized portion reveals the source of those portions quoted earlier from New York University and from the president of Connecticut College. It follows:

NATIONAL STRIKE INFORMATION COMMITTEE
NEWSLETTER No. 3

The National Strike Information Committee has been established as a central clearing house for all information regarding strike activity at high schools, colleges and universities across the country. We are prepared to receive and disseminate strike information at Brandeis University: (617) 8946-000 Ext. 708 and 680. Ham radio communications will be received at K1WGM/1 (Frequency 14.294 MHZ).

The strike has been called in support of the following three demands:

(1) That the United States government end its systematic repression of political dissidents and release all political prisoners, such as Bobby Seale and other members of the Black Panther Party.

(2) That the United States government cease its expansion of the Vietnam war into Laos and Cambodia; that it unilaterally and immediately withdraw all forces from Southeast Asia.

(3) That the universities end their complicity with the U.S. War Machine by an immediate end to defense research, ROTC, counterinsurgency research, and all other such programs.

THE MEANING OF KENT STATE

The nature and context of the recent murders at Kent State bring into undisguised clarity the genocidal policy of the United States government. What is disturbing, however, is that it appears necessary that middle-class whites must be shot down before the revulsion required by innumerable similar acts against people of color can materialize. No longer is it news that politicians and the media respond only when such acts are committed against "clean people," i.e. middle-class whites.

That we can be so deeply repulsed by the murders at Kent State bring into undisguised clue to the pervasive racism of our country's culture. The significance of our present revulsion rests in our historic inability to see, believe, and understand that killing of whites is as much a conscious part of our domestic policy as is the killing of blacks or the despoliation of tiny Asian countries. Our present grief cannot be anything less than the groundwork for a commitment to the eradication of the present policies of the United States, both foreign and domestic.

WHO IS TO BLAME

The toll of death and destruction continues to mount across the nation:

At Ohio State University, where student protesters have been fighting National Guard troops for the last three weeks, 500 people were arrested and 30 hurt in campus disturbances today.

At the University of Idaho, 26 vehicles in

the Lewiston National Guard Armory were destroyed by fire. Arson is suspected.

At the University of California at Berkeley 4 people were arrested in a rockthrowing melee with police.

At Boston College ROTC files were ransacked in a night raid.

At Kent State University in Ohio the death toll stands at four. Three student protesters remain hospitalized in critical condition from gunshot wounds received during yesterday's massacre by the National Guard.

The establishment press, along with President Nixon and Vice President Agnew, have sought to pin the blame for this crisis on the student demonstrators. We reject this interpretation utterly. The responsibility for the present death and chaos across our land rests solely with the repressive posture assumed by the Administration which has clearly demonstrated that it intends to deal with dissent at home in the same way that it seeks to eradicate all traces of just rebellion in the Third World. . . . The recent events prove that the government cannot persecute an unpopular war abroad without the most brutal suppression of the anti-war movement in this country. If this policy necessitates the murdering of protesters on the nation's college campuses, the Administration has shown its willingness to do precisely that. An attempt to indict the victims of this repression for their militant tactics shifts the focus of blame from where it clearly belongs: with the Nixon-Agnew-Mitchell regime in Washington.

BRING THE PANTHERS TO YOUR CAMPUS!

If you would like a spokesman from the Black Panther Party to address a meeting, rally, etc. at your school, call the New Haven Panther Defense Committee at these numbers: (203) 436-1382, 865-6872, 865-6537.

Mr. Speaker, the idea that our young people are actually being encouraged, in some cases, by faculty and administration is appalling. These individuals who are supposed to instruct and to guide our youth too often are encouraging campus violence not just through spineless inaction but by openly calling for radical activity by the student body. This is not a tolerable situation.

I was very pleased to receive a copy of a letter to President Shain from a thoughtful, intelligent young lady, an alumnus of Connecticut College, class of 1959. It is an excellent response and is echoed, I am certain, not only by Americans everywhere but represents the convictions of a vast majority of college students who are trying to pursue a higher education despite the disruptive actions of a few of their classmates, instructors, and even administrators.

Mrs. Brasfield's letter follows:

LYNDHURST, OHIO,
June 8, 1970.

President CHARLES F. SHAIN,
Connecticut College,
New London, Conn.

DEAR PRESIDENT SHAIN: Only eleven brief years ago, I had the good fortune and great honor to serve as President of the Connecticut College Student Government. I was so immensely proud of the campus I served—our academic standards, our fine traditions, our spirit and enthusiasm. We were a patriotic and loyal group—questioning, but not demanding—idealistic, but not completely unrealistic—thinking, but aware of all there was to be learned by the experience which only life could offer us.

President Park, Dean Burdick, Dean Noyes—names I remember, not as "pals" or conspirators in our occasional activities, but persons who were deeply respected. We knocked at their doors with only the most severe problems; we knew their lives were most busy maintaining and enlarging the fine standards of our college. They, along with our parents, expected great things of us; we tried hard to live up to these expectations.

There is no generation gap between myself and the students of today; we are only a decade apart. Our ideas should, by all historical standards, be fairly well aligned. But, unfortunately, this is not the case in many instances; I wonder, in confusion and frustration, how this rapid change has come about.

I remember the gradual arrival of Communistic literature to my mailbox in 1959 and wonder if this became a bombardment of information by 1970. I recall with dismay the gradual withdrawal of rules and regulations from so many campuses in the last ten years; how sad, for we all need guidance in what is an acceptable code of behavior. I find myself forever grateful that my college years were such a good preparation for living my life.

But times have changed and, with them, the college campus. Now, eleven years after walking proudly between the Laurel chain, I receive a letter from my beloved campus on the hill, naming a platform so contrary to the philosophy which generations of Americans have fought to preserve.

I admire the students of today for their deep concern. They are the "Now Generation." But, unfortunately, their answers seem too often selfishly oriented to their "Now" existence than to the future.

For this, they are not completely to blame. I understand that the strike committee had volumes of information available for speedy circulation. Was this ever countered with an opposing philosophy? Students, as always, are so easily led, so carried away by idealistic emotionalism, so quickly caught up in the moment. Was there a calm voice somewhere to remind them that the role of an intellectual community is to study, in depth and with thoughtful deliberation, every aspect of the question at hand? Did they understand the future consequences of their resolutions?

"Resolved (1) that the United States government end its systematic oppression of political dissidents, and release all political prisoners, such as Bobby Seale and other members of the Black Panther Party;"

You state that "the community" accepted this resolution, demanded by a minority of members present, in order to receive unanimity. Do they understand that members of this party have broken the very laws paramount to the smooth running of any civilized society? Bobby Seale is under indictment on charges involving kidnapping and murder of another Black Panther; Eldridge Cleaver was imprisoned for assault with intent to kill! And the Connecticut students support them! Have they not heard that the ultimate goal of these "suppressed dissidents" is the eventual overthrow of our government, and, thus, our way of life? Perhaps posting the enclosed copy of some cartoons from the "Black Panther Coloring Book" would enlighten them on the motives of these people who receive such a generous share of their concern.

"(2) that the United States government cease its expansion of the Vietnam war into Cambodia and Laos; that it unilaterally and immediately withdraw all forces from Southeast Asia;"

I hope that the students understand that they share this deep desire for peace with every other rational American. But, how can they make such a statement unless they are willing to abandon the 1500 American prisoners still in North Vietnam? Have they considered the "immediate" consequences of this "immediate withdrawal". I am afraid that there would result in that country a blood bath which would remain on the conscience of the entire Western world for generations to come.

"(3) that the universities end their complicity with the United States war machine by an immediate end to defense research, ROTC, counterinsurgency research and all other defense programs."

Were the students made to realize that by withdrawing support from these vital areas they jeopardize our entire national security. Are they aware of how many students profit from ROTC and government research programs? Have they considered what the extinction of these forms of education would mean to their peers and to the future growth and security of our great nation?

I am concerned that these major questions were never examined. I wonder if the Connecticut "community" ever considered protesting Hanoi's treatment of American prisoners? Or Russia's invasion of Czechoslovakia? Or the Viet Cong massacre of the people of Hue? Have they ever thought of a resolution to North Vietnam asking:

Why the prisoners' families are not allowed to know the status of their men.

Why North Vietnam will not allow inspection of prisoner of war facilities by the Red Cross.

I am sending a copy of this letter to the members of our Cleveland Club of Connecticut College and to the graduating class of 1959. I am certain that some of them will disagree with the thoughts I have expressed here. But, perhaps my verbalization of a contrary opinion will encourage them to take an increasingly more active stand on the problems of "campus unrest" and the even greater issues of today.

Few people have an opportunity to play such a large role in the future of our country. Such an awesome responsibility demands great courage and wisdom. I pray that you will somehow receive special guidance in this extremely important position.

Most sincerely,

EMILY HODGE BRASFIELD,
Class of 1959.

CAPTIVE NATIONS WEEK

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1970

Mr. STRATTON. Mr. Speaker, today we mark the 12th observance of Captive Nations Week, a week set aside by unanimous congressional action in 1959 so that all Americans will be reminded of the plight of those freedom-loving people located behind the Iron Curtain.

Since 1920, when the Soviet Union forcefully annexed the Ukraine and seven other tiny nations, Communist powers have continued their drive to their announced goal of world domination. Twenty-three more nations have been placed behind the Iron Curtain, the latest being Cuba in 1960. And if it were not for the presence of the United States, many more peoples would undoubtedly be under the tyranny of communism today.

So it is appropriate to note that 2 weeks ago, the United Nations marked its 25th anniversary and, in spite of the U.N.'s great contributions to world peace, one cannot help but wonder what might have been accomplished if the Soviet Union had cooperated seriously and constructively in using that organization for the genuine maintenance of world peace. Instead, since the founding of the U.N., the Russians have liberally used their

veto power to undermine any peacemaking activities that they felt were detrimental to the Communist cause, and what is even more serious, they vetoed all efforts to give the U.N. the peacekeeping military forces which were obviously a necessary part of its effectiveness as originally envisioned.

Since we last observed Captive Nations Week, 1 year ago, Soviet despotism has shown its true colors with the recent ousting of Czechoslovakia's Alexander Dubcek finally and completely from all government and political positions, though they still have not broken his spirit nor have they apparently diminished his popularity with the Czech people. Mr. Dubcek dared allow a modicum of freedom to the Czech people before the brutal military invasion by the Soviets in 1968 deposed him as head of the Czechoslovakian Government. He now has a very uncertain future and it is anticipated that he may even be tried by the Soviets for various crimes against the people. The verdict of any such trial would, of course, be a certainty before it began.

In this past year, we have seen the Soviets fan the flames of war in the Middle East by their irresponsible action in providing Egypt with Sam II missiles, as well as additional military equipment. The dangers presented by the growing presence of the Russians in the Middle East cannot be overemphasized.

In Southeast Asia, also this past year, the communist powers have shown their determination to bring more people behind the Iron Curtain. The United States and South Vietnam have again been rebuffed after making concession after concession at the Paris talks in their attempts to bring about peace. The Communists are making military gains in Laos and Thailand. And Cambodia, overwhelmed by the North Vietnamese invasion, appears to be all but lost.

What will the world situation be when we observe Captive Nations Week, one year from now. Can anyone continue to doubt the international motives of the Communists?

During the observance let us take time to reassert our commitment to the brave peoples of Poland, Lithuania, Latvia, Estonia, the Ukraine, Byelorussia, Hungary, Czechoslovakia, all who suffer behind the Iron Curtain, and all other people who live under the threat of Communist aggression. The American people are committed to hasten the day that all people are free to speak as they feel, observe the faith they choose in their own way, and decide for themselves how they are to be governed.

UNEMPLOYMENT MAY BE CAUSE OF DISORDERS

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. KEITH. Mr. Speaker, as I am sure all my colleagues are aware, the city of New Bedford, in my district, was the scene earlier this month of serious civil disorders. One of the root causes of these disturbances, in my view, was the high rate of unemployment there. Presently, 8.3 percent of the work force is without jobs. This situation can only grow worse if a continually increasing volume of imports is allowed to displace more workers in the textile industry. The situation of shoe-workers in other parts of Massachusetts is equally precarious. Thus, in the absence of a fair and effective triggering device for enough tariff relief and adjustment assistance to be of real help to the shoes and textile manufacturers those of us representing workers in those industries must seek legislated quota relief. In this regard, I applaud the action of the Committee on Ways and Means in tentatively adopting import ceilings for foreign footwear and textile products.

However, Mr. Speaker, what the committee did for New Englanders with one hand, it took away with the other. On the day following the adoption of quotas for shoes and textiles, a majority of the committee voted to make permanent the current oil quotas. Thus, the legitimate needs of shoe and textile workers are being held hostage, pending the further solidification of the oil industry's privileged position.

There is no need for a ceiling on oil imports. It is economically unjustified and it is indefensible from a conservationist point of view. If we exclude petroleum products from foreign sources, then we'll use up our own domestic supply that much quicker.

In my view, the President should have acted on the recommendations of his Cabinet Task Force months ago and abolished oil quotas in favor of a limited tariff system. It is unthinkable that Congress, in the face of the task force's irrefutable logic, should tie the President's hands and wed this Nation permanently to the oil quota system.

Mr. Speaker, oil quotas are becoming increasingly intolerable to New Englanders. Heating oil costs continue to skyrocket. Each winter, it seems, we are faced with a shortage of domestically produced No. 2 oil. The quota exemptions granted by the Oil Import Administration are so limited that a fuel crisis will probably arise again next winter.

Furthermore, the inflated cost of petroleum products is indirectly passed on to consumers. I am informed that several utilities in southeastern Massachusetts are not only paying a king's ransom for crude oil this year but are also faced with shortages of that product. For example, Taunton Light & Gas Co. put out bids recently for crude oil. It could only be guaranteed one third of its needs, and that at a cost of $1 a barrel more than last year.

In another instance, an independent oil terminal operator in my district reports that there have been five increases in bunker oil prices since February, totalling 60 cents a barrel. Now this firm is unable to find bunker oil supplies anywhere. In yet another instance, the Massachusetts Turnpike Authority informs me that it is unable to complete its resurfacing program for lack of asphalt, of which oil is an essential ingredient.

Mr. Speaker, it is incredible that, in view of these shortages of supply and rapidly escalating prices, that the domestic oil industry clings tenaciously to oil quotas and even demands that they be made a matter of statute. I urge my colleagues on the Ways and Means Committee to reconsider their action of last week and strike from the pending trade bill this unnecessary and unjustifiable protection for the oil interests.

HEREDITY AND CANCER

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BURTON of Utah. Mr. Speaker, in the fight against cancer, every new discovery that will help to eliminate this dreaded disease is encouraging and worthy of note. I would therefore like to recognize the work of one of Utah's well-known scientists, Dr. Eldon J. Gardner at Utah State University. In the June edition of the Outlook, his work is described. The article follows:

CANCER RESEARCHER SEEKS ANSWERS FROM GENETICS

Twenty years ago a Utah State University geneticist began studying a form of cancer which appears to be hereditary within a Utah family. All fifty-one living descendants of one woman were studied at that time and six were found to have multiple polyps of the colon which tend to become cancerous.

Today Dr. Eldon J. Gardner, dean of the USU School of Graduate Studies and professor of zoology, is still working with the family, conducting new tests, attempting to answer the question: What is the basic cause of the cancer of the colon which claimed the lives of eight family members within three generations?

Several other abnormal traits associated with the cancer were identified by Dr. Gardner in the early 1950's in the same six people found to have multiple intestinal polyposis. In 1959 Dr. W. G. Smith of Mayo Clinic named Gardner's Syndrome, the only medical syndrome to be named after a geneticist.

Today one or more of these traits have appeared in 28 members of the kindred that now includes 163 members. The abnormal traits include bone tumors, skin lesions, connective tissue lesions as well as multiple polyposis (numerous tumors that often become malignant) in the lower digestive tract.

"A single dominant gene is postulated to be the cause," Dr. Gardner said. "The puzzle is how so many different traits can occur in the same person and be caused by a single gene."

The scientist explained that a single mutation is believed to be the origin because the abnormal traits are found in only one branch of the family—all descended from the woman who died with cancer in 1909.

The syndrome occurs only in families in which one parent has the single dominant gene. "If one parent has the dominant gene, about half of the children also will have it," he stated.

"While the usual high incidence cancer period is between the ages of 45 and 60, cancer occurs earlier in this family," Dr. Gardner said. The youngest family member to die of cancer was 29 and the oldest 54, the average age being 39.

The scientist became involved in studying the family while teaching at the University of Utah. One day he announced to his class

that studies had been made on the inheritance of cancer.

"After class a student said a family in his home town seemed to have an extremely high mortality from cancer of the colon. He offered to introduce me to the family," Dr. Gardner explained.

Dr. Gardner met the family and spent the next two summers, 1950 and 1951, surveying all 51 descendants of a woman in whom the first well-documented case of cancer had been reported.

The woman, who died in 1909, three of her children and four of her grandchildren had died with carcinoma of the colon over a period of 31 years.

"I studied several thousand people because this was once a polygamous family," Dr. Gardner said. Extensive family histories dating back to the 18th century were obtained, and all the evidence available concerning the incidence of cancer of the lower digestive tract was analyzed. Results showed that all cases occurred in one branch among the descendants of the woman who died in 1909, with cancer of the colon.

"I got well acquainted with the family members while driving all of them to Salt Lake City for examinations in the medical center. They have been very helpful and cooperative," the dean said.

He noted that the disease had created sociological problems, as well as medical problems. The deaths early in life caused some children to be reared by relatives and grow up without the usual family ties. "The diseases also have caused economic problems since many family members have had to undergo extensive operations," Dr. Gardner stated.

As a result of the medical tests, six family members, all of whom were found to have multiple intestinal polyps, bone lesions, connective tissue lesions and sebaceous cysts, were treated surgically for multiple polyps. Symptoms of the syndrome other than intestinal polyps were detected in some of the other 51 family members during the first clinical examinations. Most of these have since developed polyps in the colon. In 1962 the entire family was again checked, and symptoms were identified in 24, including several younger family members.

Dr. Gardner said the intestinal polyps did not appear until the teenage years, with the earliest appearing at age 12 in one family member. "The most serious aspect of the syndrome is the polyposis which is known to predispose to cancer of the colon and rectum," the dean stated.

However, the bone tumors and skin and tissue lesions seem to appear earlier than polyposis in the family, he said. The bone lesions can be detected at birth or shortly thereafter, so, a family member in whom these are not found can receive some satisfaction in knowing that he will not have colon polyps. Also, alert parents and physicians can thus arrange for appropriate treatment as soon as warranted.

"We're now trying to get a finger on the basic cause of the traits associated in this syndrome. We hope we're working toward an answer to the question of what this gene is doing to produce several different kinds of abnormal growths in the same individuals."

Research into the mystery is still ongoing. This spring the mouths of family members were X-rayed, and a study of the teeth was made. Results show that all of the family members who expressed the syndrome had serious dental problems—some with whole sets of extra teeth and others with false teeth before the age of 20.

Doctors from the National Institutes of Health are currently conducting tests on urine and blood samples to look for irregularities in the basic hormonal entities.

Two USU doctoral students are assisting Dr. Gardner with his research, Edwin W. Naylor, Gloversville, N.Y., and Allen A. Badgett, Los Angeles. Mr. Naylor has been working with Dean Gardner since winter quarter of 1967, and Mr. Badgett joined the project in 1969.

In its initial stages at the University of Utah, the study was supported by the U.S. Public Health Service. It has since been financed by the American Cancer Society and the Damon Runyon Memorial fund for Cancer Reesarch.

SEPARATE VIEWS ON H.R. 17880—THE DEFENSE PRODUCTION ACT

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. HANNA. Mr. Speaker, I support the extension of the present law and believe the section to expand the inflation fighting powers of the President is urgently needed.

Several persuasive arguments commend themselves to critical thought relative to the placement of such powers in the hands of the Chief Executive. It is clear from the position strongly and successively advocated by the President in the Senate and the House on the Cooper-Church amendment that the administration is unwilling to concede any degree of cooperative responsibility relating to the commitment of our military resources in Southeast Asia or any other troubled spot in the world. Even limited study of the current inflation finds its roots and prevailing strength emanating from heavy military expenditures.

Now, if one agrees that responsibilities should be commensurate with power and authority it follows that the President must be equally strong in commitments to the use of his office as the responsible agency to wield the weapons of inflation fighting which are provided in this legislation and in legislation previously passed by this Congress. It should be noted that the operative period for this legislation has been appropriately restricted to a period of far less than 1 year but within that short time frame great flexibility is allowed to the President. It should not be overlooked that having this specific authority even if it is not used, strengthens the President's authority to encourage voluntary restraints on the part of labor vis-a-vis wages on the part of management vis-a-vis prices. The discouraging experience of almost 4 years of a tight-money policy clearly indicates that further pursuit of this unproductive avenue cannot be justified. Knowledgeable economists and experienced and practical legislators, alike, recognize our present condition as a wage- and price-push inflation. Policies to promote economic stability are the proven answer to such inflation problems. I commend the committee for balancing in this legislation the powers proclaimed by the President with responsibilities now spelled out by the Congress.

In the statement I delivered to the committee, before casting my vote, I explained my opposition to the Uniform Cost Accounting Standards—UCAS—provisions of the original legislation. My statement is printed below. I would like to take this opportunity to commend the committee for their actions and to outline what I believe to be the reasoning behind those actions.

As I noted in my statement, some very serious reservations to the UCAS provisions were expressed by the accountants which appeared to testify on the Senate bill, S. 3302. I do feel the revisions voted by the committee have met these objections.

In specific, the committee has proposed the creation of a five-member board to develop standards and definitions for UCAS and to report their conclusions and recommendations back to the Congress by June 30, 1971. This board will be composed of the Comptroller General, two representatives from the accounting field—to include one with expertise in the field of small business, and two representatives from industry. This board will develop a coherent set of standards and a detailed set of rules which the Congress will then carefully review and consider before promulgating legislation to apply these provisions to the industry.

The instructions to this board also provide for a consideration of the Federal Government's bid procedures to establish what changes, and I am sure there are a number, need to be made in that aspect. With this broad mandate, the findings of this board will dovetail into the report of the Holifield Commission on Government Procurement which should be available at that time. The committee and the Congress will then be able to utilize the results and recommendations of both of these Commissions in their consideration of any future legislative proposals on uniform cost accounting standards.

The text of my statement to the committee follows:

In my judgment the provision for "uniform" accounting procedures should be dropped at this time from this legislation. Although I was persuaded he has made a great contribution to our awareness of practices in procurement that need attention, the present legislation does not, in my opinion, provide the assurance of improvement that matches the probability of new and undesired problems. Further testimony has demonstrated that many companies doing business with the United States Government do not adequately display their cost in a suggested "uniform" accounting as now drafted are of such wide range and serious depth as to dictate caution in accepting this shotgun approach on the twin thin pillars of the Admirals' charges and the G.A.O. blanket support that such accounting requirement is *quote* feasible *unquote*.

I am impressed by the lack of enthusiasm and the absence of positive support for the "uniform" accounting approach expressed by every substantial accounting organization asked to testify. The carefully qualified words to a critical reader clearly expose the lack of confidence generally entertained. Note these quotes from pertinent sources.

1. Dr. Howard W. Wright, Professor and Chairman, Division of Accounting, University of Maryland:

"While I concur in a finding of feasibility, I have grave doubts about the need for a new effort of the magnitude indicated by the proposed legislation and have significant reservations concerning some of the recommendations in the report."

2. The National Association of Accountants:

"We suggest that this effort should have two separate phases. In the first phase, the objective should be to develop a sound conceptual foundation. Standards should be developed as a second phase, which should not be started until the basic concepts have been formulated. If standards are written without reference to an explicit set of concepts, they are likely to be a hodgepodge of inconsistent statements, rather than a coherent set of standards.

"We assume, of course, that the objective is to develop standards, rather than a uniform accounting system of a detailed set of rules. Such straight jackets are completely unworkable."

3. The Financial Executives Institute:

"The uniform cost accounting standards that the G.A.O. believes are feasible have not been identified or defined adequately to provide an understanding of what is contemplated. There is no substantiation that such standards and advance agreements, as recommended in the feasibility study, are economically feasible or practical, or that they would solve the accounting problems associated with applying sound cost principles to government contracts."

Add to this the further problem of establishing the appropriate cut-off points for government requirements and I believe further study and a more restrained approach is both dictated and commended to responsible legislators.

It is with this in mind that I am in support of Congressman Rees' amendment to establish a 5-member board to develop standards and definitions for uniform cost accounting standards and to report their conclusions and recommendations back to the Congress by June 30, 1971. The board will be composed of the Comptroller General, 2 representatives from the accounting field (to include one with expertise in the field of small business), and 2 representatives from industry.

This board will develop a coherent set of standards and a detailed set of rules which the Congress will then carefully review and consider before promulgating legislation to apply these provisions to industry. The instructions to this board also provide for a consideration of the Federal Government's bid procedures to establish what changes, and I'm sure there are a number, need to be made in that aspect of this issue.

As I see it, we should not abandon either our interest in or our pursuit of an acceptable and reasonable method to eliminate the problems pointed out or to avoid the abuses outlined. To my mind, the establishment of this board meets this obligation as well as responsibly responding to the questions raised by the accountant witnesses, which I have noted above.

With this broad mandate, the findings of this board will dovetail into the report of the Government Procurement Commission established by legislation authored by my good friend and colleague, Congressman Chet Holifield. This Committee and the Congress will then be able to utilize the results and recommendations of both of these investigatory bodies in their consideration of any future legislative proposals on uniform cost accounting standards.

LIBERIA'S INDEPENDENCE DAY

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. DIGGS. Mr. Speaker, Liberia, the oldest Republic in Africa, celebrates its 123d anniversary July 26. On behalf of the Subcommittee on Africa, I am pleased to extend to President William V. S. Tubman and the people of Liberia congratulations and every best wish for the future.

The history of Liberia is linked to our own. Special ties date from 1816 when the United States and its people gave support to the establishment of Liberia as a home for former slaves. Since that time the American people have maintained a keen interest in Liberia and have been privileged to assist in its development. We have watched with particular admiration Liberia's progress over the last 27 years under the inspired guidance of President Tubman. We are confident of Liberia's future and of the continued close friendship between our two countries.

TAX POLICY

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BROYHILL of Virginia. Mr. Speaker, a friend and constituent of mine, Mr. Tom E. Moore of Springfield, Va., recently wrote to me to express his grave concern over what appears to be a tendency developing on the part of the executive branch of our Government to use tax policy as a form of punishment for those who disagree with official policy.

As I believe Mr. Moore expresses this concern quite well, I insert the text of his letter to me at this point in the RECORD:

SPRINGFIELD, VA.,
July 10, 1970.

The Honorable JOEL T. BROYHILL.

DEAR MR. BROYHILL: Several months ago I wrote to you of my concern for the proposal by Mr. Finch, then Secretary of HEW, to tax private schools which exclude negroes. His letter to you written by one of his underlings, was a classic in weasel-winding, explaining that he had no official part in establishing tax policy. Now Mr. Finch is the personal adviser to Mr. Nixon, has had his way, and the Executive Department is determining tax policy which takes the form of punishment for disagreeing with the official policies of the President and his staff.

The power to tax is the power to destroy, has often been said. As the framers of the Constitution were well aware of this truism, they built the safeguard into that document in providing that tax policies were to be set only by the House of Representatives. This safeguard has been pre-empted by fiat.

The basic principle involved in our system is that of representative government, representative of the majority of the citizens. The Nixon administration is unduly concerned about the interests of any noisy minority (blacks, and what have you) that looks as if they might be persuaded by the action and by some major miracle to vote Republican, and to hell with those whose confidence in his leadership and his feeling for Constitutional government put him in office in the first place. It appears to me that every step is moving us closer to a dictatorship. We surely aren't far from it at this moment.

We didn't elect this sort of government; we don't want it, and we will not tolerate it. The taxation of private schools, for any reason whatever, should be put down firmly by the Congress. Waving the flag, "getting together" on the 4th of July, and singing patriotic songs is window dressing, a kind of bread and circuses act, to lull us into complacency while the insidious business goes on unnoticed, like termites gnawing at our vital timbers.

Very truly yours,

TOM E. MOORE.

BRITISH TROUBLED BY CAMBODIAN ATTACKS IN U.S. SENATE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. DERWINSKI. Mr. Speaker, the distinguished international correspondent of the Copley News, Dumitru Danielopol, has just returned from an extensive factfinding tour of the Middle East and Europe and continues to emphasize the obvious fact that the President's effective handling of Southeast Asian problems is indispensable to leadership which is expected of the United States in world affairs. Thus, his commentary in the Thursday, July 9, Aurora, Ill., Beacon-News on British reactions to senatorial attacks on our involvement in Cambodia is extremely significant:

BRITISH TROUBLED BY CAMBODIAN ATTACKS IN U.S. SENATE

(By Dumitru Danielopol)

LONDON.—Even the imperturbable British are shaken by some of our "liberal" Senators.

For centuries it was the British who defended the "Judeo-Christian civilization." Now that the responsibility has passed to the United States, the British look at our actions with special awareness. The thinking Britisher knows from history that what America does will affect the freedom and well-being of the rest of the world.

Such Britishers are very much aware, too, that, had London acted in time in the first decade of this century and again in the 1930s to stop aggression, it might have prevented two world wars.

With their vast experience in the Far East and their first hand appreciation of Oriental psychology, the British are deeply troubled by the violent attacks on President Nixon's Cambodian action, by the Church-Cooper amendment to restrict the President's freedom of action and by the neo-isolationist ideas expressed by the Fulbrights, Mansfields, Hatfields, Kennedys and Pells.

The Cambodia debate in the House of Commons last May, held only a few days before Prime Minister Harold Wilson announced the general elections, reveals some thoughts held by men in power in Britain.

Wilson recalled that the territorial integrity of Cambodia had already been breached by the Reds "systematically and over a period of time."

"No one will underrate the extent to which the danger had escalated before the President was called to make his decision," he said.

Julian Amery, former Minister of Air and newly appointed to Prime Minister Edward Heath's sub-cabinet, pointed up British interests.

"The distance is only 20 minutes flying time between Vietnam and Singapore," he said.

Britain still has deep interests in the area which would be jeopardized if Vietnam was lost. A firm believer in the domino theory—that defeat in Vietnam would lead to the loss of other countries to communism—Amery went on to cite his own experience in the region.

"I was in Laos, in Cambodia, in Thailand,

in Malaysia, in Singapore, in Australia and in New Zealand, a clear consensus that if the Communists prevailed in Vietnam, still more if they prevailed in the rest of former Indochina, they would prevail in the whole area.

"I know that the domino theory is not popular in this country today. . . . (but) it is difficult to find any serious statesman anywhere in Southeast Asia who does not share it.

". . . It is clear that both in China and in the Soviet Union there are domino men, too. They think that if there is a breakthrough in Vietnam and Cambodia, it will spread through the whole area."

Some U.S. lawmakers should listen.

OUTSTANDING EDUCATOR RETIRING

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. HELSTOSKI. Mr. Speaker, 32 years ago a young man migrated from Pennsylvania into Bergen County, N.J., and it was one of the most fortunate things that ever happened for the people in my area.

The man who came to New Jersey is Dr. Patrick E. Tedesco who through a career as a teacher, athletic coach, and school administrator did much to help and inspire young people in his years of service at Lodi (N.J.) High School. Dr. Tedesco's work in all areas of community endeavor has been outstanding and particularly with young people.

Now, Dr. Tedesco has announced he will retire from the Lodi school system next year, and in tribute to him, I, as a personal friend and great admirer of his, place in the RECORD an article from the Lodi Independent of July 9, 1970, telling of his outstanding career:

TEDESCO RETIRING IN JUNE OF 1971

Dr. Patrick E. Tedesco, director of Audio Visual Aids at Lodi High School has notified the Board of Education of his plans to resign as of June, 1971. On April 17, 1971, he will be 60 years with 36 years experience in the school profession. He is also a public accountant.

Tedesco came to Lodi in 1938 as a teacher and as a wrestling champion coach. Prior to 1938, he was an assistant athletic coach at Bangor and Waynesboro High Schools, Pa. He introduced interscholastic wrestling at Lodi. He quit as coach in 1945.

Tedesco served as supervisor of secondary education at Lodi from 1948 to 1958. From 1958 to 1969, he served as director of curriculum, and currently he is serving as director of audio visual aids.

GRADUATED RIDER

Tedesco graduated Rider College, Trenton, with a BCS degree. He earned his MA degree at Montclair State in 1946 and his Ph. D. degree at Metropolitan University, California in California in 1959. In addition, he received an honorary degree of Doctor of Letters at Interamerican University, Mexico in 1964; an honorary degree of Doctor of Humane Letters at Philathea College, Canada in 1968 and an honorary degree of Doctor of Laws at James Martin Seminary and College, Hong Kong, China in 1969.

During his high school and college days, Tedesco was an honor student and an outstanding athlete in football, wrestling, boxing, baseball and track. Tedesco is considered one of the world's fastest typists. He established a speed typing championship record of 110 net words per minute at Rider in 1933, which record has not yet been broken.

Tedesco is certified and qualified to hold practically all administrative and supervisory posts in the public schools and colleges of the United States. He has also gained prominence and recognition in the United States as a writer and as a public speaker.

Dr. Tedesco is a well-known native of Roseto, Pennsylvania, adjacent to the Pocono Mountains.

He has also served as one of New Jersey's Democratic political leaders for over 30 years.

NO SHINE LIKE A KAUFMAN SHINE

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. MINSHALL. Mr. Speaker, the July 16 edition of the Wall Street Journal front-paged my friend Ralph Kaufman, who is famed as one whose good work literally shines from coast to coast. If any of my colleagues pass through Cleveland Hopkins Airport without obtaining a Kaufman shine, they are missing a great experience and the best shoeshine of a lifetime. Greg Conderacci's story, which follows, tells why:

A SHOESHINE PARLOR IN CLEVELAND ATTRACTS CLIENTS FROM ALL OVER—NO SHINE LIKE A KAUFMAN SHINE, SAYS FANS OF SHOP IN AIRPORT—CAN HE OUTDO NIXON'S VALET?

(By Greg Conderacci)

CLEVELAND, July 16, 1970—Sometimes it takes a great artist half a lifetime or more to discover his true calling. Joseph Conrad didn't begin writing novels until he was close to 40 years old. Paul Gauguin didn't turn to painting until he was 35.

And Ralph Kaufman didn't start shining shoes until he was 50.

There are those who might doubt that Ralph Kaufman ranks up there with Conrad and Gauguin. They are the people whose shoes Mr. Kaufman has never shined. But to the growing number of customers who frequent Mr. Kaufman's shoeshine shop at Cleveland's Hopkins Airport, there's no doubt that he stands alone as the master of his trade in a world of disappearing craftsmanship.

"Ralph gives the greatest shoeshine in the world—bar none," says John (Long John) Nebel, a New York radio talk show host who boasts of owning almost 50 pairs of shoes. "My shoes are so shiny (after receiving the Kaufman treatment) that they look like they're made of patent leather."

Indeed, Mr. Nebel and many others across the country are so convinced there's no shine like a Kaufman shine that they regularly bundle up their scruffy old shoes and mail them to his shop. There, for $5 a pair, footwear sent in from as far away as New York and California gets the Kaufman treatment.

LIFE INTO LEATHER

"It's like putting new life into a baby," says Jesse Winchester, one of 15 men (most of them part-timers) who work in Mr. Kaufman's parlor. "You have to take a lot of time and just rub life into leather."

Mr. Kaufman, who's now 62, has spent the better part of 12 years perfecting his "super shine" and teaching his 15 bootblacks how it's done. Now, like any man at the pinnacle of his profession, he handles mostly executive duties—riding herd on his workers, checking on a shoe repair shop he also operates, taking care of correspondence about shoes mailed in and assuring visitors that "there's no one who can give you a better shine—not even the President's valet."

Whether the Kaufman shoe shine is really more lustrous than that applied by President Nixon's valet is a question that may never be answered. A few months ago, after hearing recurring reports of the brilliance of Mr. Kaufman's shines, Doug Llewelyn, a Washington radio and television announcer, tried to promote a contest between Mr. Kaufman and the Presidential valet.

No dice, replied the White House. "I don't think the White House wanted word to get around that President Nixon doesn't shine his own shoes," says Mr. Llewelyn. The President's shoes, he says, "are the most highly shined shoes I've ever seen. They look like they're made of glass. I sure would have liked to put them up against a pair shined by Ralph."

Mr. Kaufman got into the shoeshine business when he bid on the lease for a game room concession and shoeshine stand at the airport in 1958. Prior to that, he had jumped from one field to another, working as a mailer in a newspaper plant, dealing in iron and steel scrap and running a hotel. He began his shine parlor modestly with one or two chairs and as his business grew so did his interest in the art of shining shoes.

LIVING HIGH

Clearly that interest has paid off. Mr. Kaufman won't say what he makes, but he's obviously prosperous. He lives in a comfortable apartment in the fashionable suburb of Shaker Heights, owns two cars, is a partner in a thriving three-store shoe repair business, is expanding a fledgling dry cleaning business and, with his three brothers, owns a restaurant.

Mr. Kaufman concedes the $5 price on his "super shines"—he also offers an ordinary 50-cent shine—is high, but he insists he loses money on almost every such job. That's because the $5 shine also includes any needed repairs such as stitching or new heels and soles. He offers that deal, he says, because people talk about it and that's "good advertising."

Harold T. P. Hayes, editor of Esquire, tells of sending a pair of weather-beaten suede boots to Mr. Kaufman with little hope they could ever be made to look respectable. When they were returned, he says, "my secretary put them on my desk and they looked so good I didn't recognize them."

Sometimes customers mail in footwear that taxes even Mr. Kaufman's expertise. James Crismond, a sales executive at a Washington radio and TV station, recently sent Mr. Kaufman a pair of polo boots caked with a mixture of mud, grime and horse sweat. The boots were in such dismal condition, Mr. Crismond says, that no self-respecting bootblack in Washington would touch them. "I told Ralph if they weren't worth fooling with to just throw them away," he says.

"Those boots were a challenge," Mr. Kaufman recalls. A bootblack spent eight hours removing dirt and then started applying brown polish. When the boots finally looked like a Kaufman product, Mr. Kaufman arranged for a high-class delivery man to return them to Mr. Crismond. "I was just passing through the airport and Ralph asked me to do him a favor," says Rep. William Minshall (R., Ohio), who has been a Kaufman customer for years.

Mr. Kaufman's "super shine" is based on the old-fashioned military spit shine, a process that calls for endless periods of circular rubbing over a small area with a damp cloth. First, a Kaufman bootblack removes all the old polish—Mr. Kaufman formerly used the leg bone of an elk for that task but has switched to an electric brush. Then a coat of carnauba wax, made from leaves of palm trees and one of the hardest waxes known, is applied and rubbed with a moist muslin cloth, until it gleams. That process—another

coat of wax followed by another spit shine—may be repeated five or 10 times before Mr. Kaufman is satisfied.

Finally, the finished shine is coated with a special spray that Mr. Kaufman concocted—it contains "alcohol and two other ingredients that I'm not going to tell you," he says—to seal the finish under a scuff-resistant glaze. The shine will last for months, Mr. Kaufman says, "but you got to wipe it off with a clean rag every morning—like religion."

Mr. Kaufman says that many savvy bootblacks use the same carnauba-based polish he uses. Its manufacturer, the George A. Kelly Co. of Lynn, Mass., is secretive about the formula, but says it has been making essentially the same polish since 1900. The trouble with most shines, Mr. Kaufman explains, is that the typical bootblack "thinks all you have to do is run a rag over a shoe." Moreover, he says, too many people use dirty shine rags. "I wouldn't hit a dog with some of the rags they use in New York," he sniffs.

THE QUESTIONABLE UTILITY OF NUCLEAR POWER

HON. WILLIAM D. HATHAWAY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. HATHAWAY. Mr. Speaker, as the national concern over our electric power situation continues to mount, some people are looking to nuclear power reactors for a solution; scholarly research, numerous articles in the news media, however, as well as the past performance and present condition of the nuclear power industry, make the nuclear solution dubious. In recent years, I have emphasized that hydroelectric plants offer a more feasible and viable solution to the power crisis. I maintain that contention today.

Last month, to my very great disappointment, the House refused to include the preconstruction planning funds for the Dickey-Lincoln School hydroelectric project in northern Maine in the public works appropriation bill for fiscal 1971. I am confident that the Senate Appropriations Committee will reinsert the $807,000 for Dickey-Lincoln and that this action will receive full Senate approval. In conference, however, Dickey will encounter the same arguments that private power utilities have advanced now for 5 years and the public need for low-cost, reliable power in New England will again face an extremely difficult test. An abundance of impressive evidence suggests, however, that Dickey's construction should proceed forthwith, not only because of hydropower's proven worth, but also because of the questionable utility of nuclear power.

Recently, another author, Ralph E. Lapp, writing in the New Republic, warned America of its power deficiency. In treating the diverse subject of resource development and in assessing the resource's contemporary condition, he maintained that nuclear-powered electric plants constitute a great challenge to the environment. I am submitting excerpts for inclusion in the CONGRESSIONAL RECORD:

"WHERE WILL WE GET THE ENERGY"

(By Ralph E. Lapp, The New Republic, June 11, 1970)

This summer's power brown-out reminds us that our energy affluence is subject to some restrictions. It should also drive home the fact that the energy providing our heat, light and power is largely gained by chemical destruction of nonrenewable resources. Lights go on, toasters pop, cars run and homes are heated because somewhere fossil fuels are taken from the ground and then made to release their primordial energy through combustion.

Hydropower, so important earlier in the century's electric power history, will probably supply less than five percent of the nation's electricity by the year 2000. This means that 95 percent of our power will be derived from nonrenewable resources, primarily from fossil fuels. It also means that power will continue to be produced through the generation of heat, and that all power plants will have to dispose of their waste heat. This necessity creates the thermal pollution hazard about which so much controversy has centered in the site location of new power installations.

A recent government study of generating plants to be built by 1990 shows that about 500 plants of more than 500,000 kilowatt capacity will be built. Sixty percent of these will be fossil-fueled, but these include most of the lower-powered plants. Nuclear power becomes more efficient in jumbo-size versions. Almost a hundred A-plants of more than two million kilowatt capacity are planned for the next two decades, and nuclear engineers talk enthusiastically about going to much larger power ratings. Unlike coal-fired plants that discharge some of their waste heat up stacks, nuclear plants have no such vent for their unused heat. All the latter must be gotten rid of by cooling water, and this means that nuclear-electric plants constitute a challenge to environmental safeguarding, especially in the huge plants that will turn out ten times the power of most coal-steam units built only a decade ago.

One consequence of the emergence of very high power of electric plants may be the coalescence of utilities into groupings of super-utilities controlling the flow of power over huge sections of the nation. Indeed this power complex may be manipulated by what Senator Lee Metcalf last month called the "galloping oligopoly in the energy industries". Oil companies, for example, have been acquiring interest in major coal companies and have also reached out into the nuclear fuel field. One wonders what kind of competitive spirit will be manifest in the year 2000, if most of the fuel sources are in the hands of a vast energy cartel.

Our society can no longer tolerate a laissez-faire attitude toward energy. Prudent policy requires that we consider not just the physical problems of reserves, conservation and pollution; we need to inquire into the legitimacy of our future energy demands. Most of all, we need to view the energy problem on a national and global basis, welding together an analysis to show how research and development may more suitably solve energy problems on a long time base. In a sense we have to emulate the Dutch who take a half-century look at land reclamation.

The failure to adopt a wise national energy policy may find the United States eventually becoming like Japan—a major importer of fuel to drive its economy. Our fuel reserves, bounded by Canada, Mexico and two oceans, are finite—as is the capacity of our air and water to absorb insult from combustion products. Our energy affluence is not at an end, but it is clearly approaching a crossroad unmarked by signposts, except one—Caution.

IMPORT QUOTAS AND INFLATION

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. BURTON of Utah. Mr. Speaker, there has been a great deal of concern about the effect of import quotas upon inflation. A July 14, 1970 article by O. R. Strackbein in the Washington Post points out that on those products which have had import quotas imposed there was no substantial increase in price, and in some instances there was even a decrease. The article follows:

IMPORT QUOTA THEORY IS EXACTLY THAT

(By O. R. Strackbein)

(Mr. Strackbein is executive director of the Nationwide Committee on Import-Export Policy, a group that advocates protection for American industry.)

Now that import quotas are receiving serious consideration by Congress a veritable chorus of caveats, warning against higher consumer prices fills the air.

The caution is, indeed, supported by classical economic theory which generally leaves itself a convenient escape hatch by way of a hedge. This is under the much-used phrase "other things remaining equal." In other words, import quotas will raise prices if other things do not upset the equation.

The trouble with the theory is that "other things" seldom remain the same. So, the economist is home safe.

One of the best ways to test a theory is to have recourse to pertinent facts in the premises. We may do this quite handily in this instance because the United States has only a handful of import quotas. They are confined with minor exceptions to sugar, wheat, wheat flour, raw cotton, dairy products, petroleum, cotton textiles.

If we trace the price trends of these products the simple pragmatic truth will reveal itself.

Sugar quotas, figured to a decimal point, have been in effect antedating World War II. The retail price of sugar in 1955 was 10.4 cents per pound. By 1968 it had risen to 12½ cents and reached 13.4 cents in April, 1970. This was an increase of 28.8 per cent over a period of 15 years. Consumer prices in general have risen 34.6 per cent since the 1957–59 period, a somewhat later period than 1955, but is the current base used by the Government. Food prices in general rose 32.4 per cent. In other words, the price of sugar lagged behind the general parade.

In the case of wheat and wheat flour both have been under a very strict import quota since 1941. The bushel price of wheat in 1950 was $2.22. In May, 1970, after a long period of decline, it was $1.53, or down a little over 30 per cent in price. Wheat flour also under a strict import quota, had a price of $5.49 per hundred weight in 1950, followed by general stability, ending in January, 1970, at $5.51, an increase of 2 cents in 20 years.

The price of raw cotton has also declined despite a stringent import quota that limits imports to about 5 per cent of domestic production. From a level of about 38½ cents a pound in 1955 the price declined quite sharply in recent years reaching 21.4 cents in April, 1970.

Here are four agricultural products that have been "protected" by import quotas for

years. The price increased in two instances, but in only one was the increase even near the general price rise. In the two other instances there was a sizable decline in price, thus going against the general upward trend.

In the case of petroleum, of which we hear and read constantly, the price increase remained far below the general level despite the import quota. On a base of 100 using 1957–59 as the starting point, the price of refined petroleum products had risen to only 104.2 in May, 1970, compared with a level of 116.8 for all commodities. Coal, a competing fuel on which there is no import quota, meantime rose to 146.9 in the same period.

As for cotton textiles about which much has also been heard recently, only a very modest advance in wholesale price has been registered. On the 1957–59 base as 100, the May, 1970 price was only 105.3, or again far below the general price advance to 116. Cotton textiles have been under an import limitation for about ten years. The price on woolen textiles, which are under no import limitation, rose to only 103.8 during the same period, thus leaving little to choose between their price level, and that on cotton textiles which were under limitation.

Dairy products (milk, butter, cheese) have also been under an import quota for a number of years. By May, 1970 the price stood at 135.4, where 100 represents the 1957–59 period.

This increase was greater than in the wholesale price of "farm products, foods and feeds," as a whole, which, of course, includes wheat and cotton which pulled down hard on the average.

Nevertheless the wholesale price of dairy products did not keep pace with that of pork (hogs) which rose 62 per cent since 1964, compared with 35.4 per cent. Yet pork imports were not restricted. If unlimited imports operate to keep prices down, why the greater rise in pork and coal prices than in petroleum, dairy products, wheat, sugar, etc., which were under import control?

Footwear imports zoomed greatly in recent years as all our ladies know. Imports are now supplying nearly a third of our market. There is no import quota. Yet what happened to footwear prices? They went well above the level for all apparel and distinctly above the rise in dairy prices.

What happens then to the economic theory? The answer: "other things" did not remain the same. Nevertheless the theory thrives and proliferates in the fact of overwhelming contrary testimony.

DAHOMEY

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. DIGGS. Mr. Speaker, on the occasion of the 10th anniversary of the independence of the Republic of Dahomey, I wish to extend the heartiest congratulations and best wishes to the members of the Presidential Commission and to the Government and people of Dahomey.

The United States takes pride in the friendly relations it has shared with Dahomey since 1960, and hopes this good feeling and mutual cooperation will continue throughout the coming decades as well.

This Independence Day celebration will be a very special one for Dahomeans. We hope it will be followed by much joy and fulfillment for Dahomey in the years ahead.

HOUSE OF REPRESENTATIVES—*Wednesday, July 22, 1970*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D. offered the following prayer:

True justice is the harvest reaped by peacemakers from seeds sown in a spirit of peace.—James 3: 18 (new English Bible).

O Lord, our God, who hast made this earth a grand place in which man can live, reveal to us Thy will and renew Thy love in us that responding to Thee we may learn to live together on this planet in peace and with good will.

Help us to feel Thy presence within us this day seeking to guide us as we determine our decisions and striving to assist us in leading our people along the roads to righteousness, our Nation along the ways of justice, and our world along the paths of peace.

"Incline our hearts with Godly fear
To seek Thy face, Thy word revere;
Cause Thou all wrongs, all strife to cease
And lead us in the paths of peace."

Through Jesus Christ, our Lord. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the amendments of the House to bills of the Senate of the following titles:

S. 3279. An act to extend the boundaries of the Toiyabe National Forest in Nevada, and for other purposes; and

S. 3889. An act to amend section 14(b) of the Federal Reserve Act, as amended, to extend for two years the authority of Federal Reserve banks to purchase U.S. obligations directly from the Treasury.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 3192. An act to designate the navigation lock on the Sacramento deepwater ship channel in the State of California as the William G. Stone navigation lock.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to announce that pursuant to the authority granted him on Tuesday, July 21, 1970, he did on that day sign the following enrolled bill of the Senate:

S. 3978. An act to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971.

PRIVILEGES OF THE HOUSE

Mr. STEIGER of Arizona. Mr. Speaker, I rise to a question of the privileges of the House.

Mr. Speaker, on March 31, 1970, during the present session of Congress, I was, while in Phoenix, Ariz., served with a subpena duces tecum to appear before the Superior Court of Arizona, the next day, on April 1, 1970, as a witness for the plaintiff in the case of *Yuma Greyhound Park Inc.* v. *Samuel Jenkins et al.* (case No. 28609) and to bring with me certain documents referred to therein. I appeared in that court on April 1, 1970, and advised that this was in violation of my privileges as a Member of this House, and in violation of the privileges of the House and its protection guaranteed under the Constitution of the United States.

On May 15, 1970, I was served by the Superior Court of Arizona in the same case with an order to appear and to show cause on May 26, 1970, why I should not answer questions as a witness pursuant to the earlier subpena. Under the precedents of the House, I was unable to comply with the order to show cause without the permission of the House, the privileges of the House being involved. I sent to the desk the order to show cause for the consideration of this body on May 19, 1970.

On May 26, 1970, the court was advised of the privileges of the House and the protection guaranteed under the Constitution of the United States and the court ordered the motion to compel me to appear and answer questions be denied under the above-mentioned privileges and protections.

On June 15, 1970, the Supreme Court of Arizona was petitioned to overrule the lower court's order and on June 30, 1970, the Supreme Court of Arizona saw fit to rule that there was no privilege and issued an alternative writ of mandamus reversing the lower court and ordering it to require me to be deposed at a time and place mutually convenient to the parties.

On July 2, 1970, a judgment was also signed by the chief justice which provided that the deposition should be noticed for a time certain at a place designated by the petitioner.

On July 2, 1970, the Superior Court of Arizona issued an order that compels me to appear in Phoenix, Ariz., on August 3, 1970, in further disregard of the rules of the House.

Mr. Speaker, just as I could not obey the original subpena without the permission of this House, or the order to show cause which flowed from it, I cannot obey this last order which is also the product of that subpena.

I will say that this whole matter is intended to harass me since I have made it abundantly clear that after Congress adjourns there is no privilege from the service of a subpena nor would I assert any privilege.

I will also say that on three separate, recent occasions when I have testified, under oath, concerning Emprise Corp., which has done and is doing business with organized crime, that I have been subjected to cross-examination for a total of over 7 hours by extremely com-

petent counsel including a member of the same law firm which seeks to depose me now.

I mention this because after such cross-examination it had to be apparent I knew nothing of the subject matter of the above captioned lawsuit.

If it is the will of the House that I respond to this last order to be deposed, I will, of course, comply.

I send to the desk the subpena duces tecum, the order to show cause, the order of the superior court of May 26, the order of the Supreme Court of Arizona, the judgment of the supreme court and the order of the superior court directing me to appear on August 3, 1970, for the consideration of this body.

The SPEAKER. The Clerk will report the subpena.

The Clerk read as follows:

[In the Supreme Court of the State of Arizona, No. 10082]

YUMA GREYHOUND PARK, INC., PLAINTIFF, *v.* HON. CHARLES L. HARDY, JUDGE OF THE SUPERIOR COURT OF THE STATE OF ARIZONA, SITTING IN AND FOR THE COUNTY OF MARICOPA, RESPONDENT, AND SAM STEIGER, REAL PARTY IN INTEREST

JUDGMENT

In accordance with the opinion of this Court filed on July 2, 1970.

It is herewith ordered, adjudged and decreed that the respondent, the Honorable Charles L. Hardy, shall enter a Rule 37(a) order compelling the Honorable Sam Steiger to appear for a deposition and to answer questions. Such an order shall notice the deposition for a time thirty days removed from this judgment at a place to be designated by the petitioner; but shall provide that upon five days' notice within that time by the Honorable Sam Steiger, the time and place may be changed to any earlier time and any place in the United States convenient to Mr. Steiger.

Done in open court this 2nd day of July, 1970.

LORNA E. LOCKWOOD,
Chief Justice.

Mr. ALBERT. Mr. Speaker, I offer a privileged resolution and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1155

Whereas Representative Sam Steiger of Arizona, a Member of this House, has been served by the Superior Court of Arizona, Yuma County, in the case of *Yuma Greyhound Park, Inc.* v. *Samuel Jenkins, et al.* (case No. 28609) with an order to answer oral interrogatories on Monday, August 3, 1970 at 9:00 a.m. in Phoenix, Arizona, or at such earlier time and at such place convenient to Representative Steiger upon five days notice to counsel for plaintiff; and

Whereas by the privileges of this House no Member is authorized to appear and testify in response to an order of a court but by order of the House: Therefore be it

Resolved, That Representative Sam Steiger of Arizona is authorized to appear in response to the order of the Superior Court of Arizona, Yuma County, in the case of *Yuma Greyhound Park, Inc.* v. *Samuel Jenkins, et al.* at any time when the House has adjourned to a day certain for a period in excess of three days; and be it further

Resolved, That as a respectful answer to the order of the court a copy of these resolutions be submitted to the said court.

The resolution was agreed to.

A motion to reconsider was laid on the table.

THE STATE OF THE ECONOMY

(Mr. KOCH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOCH. Mr. Speaker, yesterday I was on the floor when the distinguished minority leader, GERALD FORD, said, and I quote him:

The economy of the United States is healthy now.

I wonder about that, particularly when that remark was punctuated by the stock market's fall of 11 points yesterday. However, more important than that is the fact that there are too many blue-collar and white-collar workers still unemployed. There are stockholders who have suffered enormous losses in their investments. I get letters from these constituents and I speak with them and others every week. I am sure the distinguished minority leader also gets letters from and talks to his constituents. Mine are still distressed about the state of the economy and I would be surprised if his were not too.

EXPRESSION OF APPRECIATION TO SENATOR HOLLAND

(Mr. HALEY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HALEY. Mr. Speaker, in recognition of Senator SPESSARD L. HOLLAND'S long, distinguished service to the Nation and especially to the people of Florida, he has been honored in a resolution unanimously passed by the board of directors of the Peace River Electric Cooperative, Inc. I certainly agree with the following resolution and am happy to join in this expression of appreciation to Senator HOLLAND for his devoted years of service to our country:

RESOLUTION

Whereas, the Board of Directors of the Peace River Electric Cooperative, Inc., has met on this day, and

Whereas, said Board of Directors wishes to recognize Senator Spessard Holland for the many years he has spent unflaggingly representing the people of Florida and the United States of America, and

Whereas, Senator Spessard Holland has been a true friend of the Rural Electrification Program and the Peace River Electric Cooperative, Inc.,

Now, therefore be it resolved, that the Board of Directors of the Peace River Electric Cooperative, Inc. express their fullest appreciation to Senator Holland for his great service in the past, and for his continued personal friendship and good health in the future.

Signed this 14th day of July, 1970.

H. E. Durrance, President; J. Lynn Harrison, Vice President; Perry Bush, Secretary-Treasurer; W. V. Stephens, H. Grady Kickliter, Maurice Henderson, Matthew J. Toia, George Helms, Jr., Board Members.

SPENDERS AND NONSPENDERS

(Mr. JACOBS asked and was given permission to address the house for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. JACOBS. Mr. Speaker, yesterday the minority leader took time out from his busy duties—including two picture-taking sessions at the White House for which the House adjourned early yesterday and for which it will adjourn early again today—to attack Democrats in Congress as spenders.

Mr. Speaker, my curiosity got the better of me. Guess what I discovered about "spender" ANDY JACOBS and "nonspender" GERRY FORD?

For fiscal 1970 "nonspender" GERALD FORD supported $200 million more in appropriations than "spender" JACOBS.

For fiscal 1970: "Nonspender" GERALD FORD, $121,365,560,057; "spender" JACOBS, $121,081,036,000; "inflation fighting" administration—which has overspent its entertainment allowance by $100,000—controllable budget request, $135,190,-041,000.

Mr. GERALD R. FORD. Mr. Speaker, would the gentleman from Indiana yield?

Mr. JACOBS. I yield to the gentleman.

Mr. GERALD R. FORD. Of course, I would be very curious to get the figures and the detailed information that the gentleman uses to arrive at his comparison. I am sure that he will be very glad to cooperate and send them to me.

Mr. JACOBS. The gentleman from Michigan can be assured of that.

Mr. GERALD R. FORD. But I suspect, without having any prior information on the figures, that the gentleman has used various attempts at reductions in the Defense Department authorization on appropriations. Is that the case?

Mr. JACOBS. It is not.

Mr. GERALD R. FORD. If that is the case——

Mr. JACOBS. It is not.

Mr. GERALD R. FORD. If that is not the case, then will the gentleman please let me have the benefit of the figures he uses to arrive at his conclusion.

Mr. JACOBS. Delighted to do so.

Mr. GERALD R. FORD. The gentleman from Indiana voted to increase spending on two or three crucial issues, one on the veto of the education bill wherein he wanted to spend $1.2 billion more, and on the veto of the Hill-Burton legislation he also voted to spend additional money in the amount of approximately $350 million plus mandatory spending.

I am just curious to see the figures of the gentleman.

Mr. JACOBS. I do not blame the gentleman for being curious, but let me point out that in determining who supports the most spending, one must examine the total amount supported by each Member, not just individual items, some of which the minority leader supported and I did not, some of which I supported and the minority leader did not. And naturally one hates to admit

he has been beaten. But when it comes to total appropriation spending for fiscal 1970, the minority leader beats me by voting to spend $200 million more than I supported.

STATEMENT WITH REFERENCE TO CHANCES OF A RECESSION

(Mr. BOGGS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BOGGS. Now, Mr. Speaker, I am very much interested in my good friend from Michigan who recently made the statement on the White House steps that the chances of a recession were nil.

It just so happens that I happen to be a member of the Joint Economic Committee and a member of the Committee on Ways and Means. The revenue estimates of the Treasury Department are off well over $1 billion. Why? Because unemployment has increased.

One of the big increases in Government expenses this year is in unemployment compensation, because there are more people unemployed.

And, Mr. Speaker, when they are unemployed they do not pay any taxes. The Government supports them.

And how much in taxes do you think the Treasury Department collected from Wall Street today with a $300 billion loss in security values since Nixon became President?

KNOCK, KNOCK, WHO'S THERE?

(Mr. MIKVA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MIKVA. Mr. Speaker, Shakespeare—William, not Frank—once wrote that "a rose by any other name would smell as sweet." The Attorney General, however, tells us that certain provisions of the District of Columbia crime bill by any other name would smell sweeter.

I agree with Mr. Mitchell on one point—the current smell is less than pleasant. However, changing "no knock" to "quick entry" as suggested hardly changes the basic fact that police are being authorized to enter private homes without announcing purpose or authority.

Perhaps we can expect the Attorney General's "name game" to be carried even further. The bill's provision reducing the minimum age for adult criminal prosecution to 16 may yet become the Justice Department's "provision to bridge the generation gap"—or "accelerated maturation." And given the President's demonstrated affinity for football, "preventive detention" is likely to be termed "defensive holding." But if the administration backs the wiretapping provision because it literally "brings us together," it will bug a lot of people.

PERSONAL ANNOUNCEMENT

Mr. BRADEMAS. Mr. Speaker, on Monday, July 20, I was necessarily absent from the House while conducting hearings in Florida's 11th Congressional District on H.R. 17763, a bill to provide nutrition programs for elderly citizens.

Had I been present, I would have voted "yea" on rollcall No. 221 on H.R. 18253, a bill to provide national service life insurance funds to guarantee home loans for veterans.

Mr. Speaker, I would have also voted "yea" on rollcall No. 222 on H.R. 14114, a bill to redefine the area of administration of the National Park Service.

Mr. Speaker, I ask that my position on these two rollcall votes this week be printed in the RECORD.

The SPEAKER. The gentleman's statement will appear in the RECORD.

PERMISSION FOR COMMITTEE ON AGRICULTURE TO HAVE UNTIL MIDNIGHT, JULY 24, TO FILE A REPORT ON H.R. 18546

Mr. POAGE. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture have permission to file a report on H.R. 18546 by midnight, July 24, 1970.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

WE MUST INCREASE OUR EFFORTS ON BEHALF OF OUR AMERICAN POW'S AND MIA'S

(Mr. MONTGOMERY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MONTGOMERY. Mr. Speaker, I am sure the announcement by the South Vietnamese that they will demolish the so-called tiger-cages on Conson Island was welcomed by everyone. I would hope that we would become as concerned and up in arms over the plight of American prisoners of war as we have been over conditions on Conson Island. It would appear to me that if the North Vietnamese were sincere in their criticism of Conson as expressed at the Paris peace talks recently, they would now show good faith and begin abiding by the Geneva Convention themselves. The first step for them to take would be to allow periodic inspections of their POW camps by the International Red Cross. We should also press them to release the names of U.S. servicemen they hold captive and allow the free flow of mail between the prisoners and their families in America.

Three members of the select committee on Southeast Asia met with an official of North Vietnam in Vientiane, Laos, relative to the POW situation. We made a strong plea for humane treatment of Americans they hold. Unfortunately, we were ignored and given no hope our requests would be met.

Mr. Speaker, we must never relent in our efforts on behalf of our American POW's and MIA's.

AMERICAN'S INHUMANITY TO FELLOW AMERICANS

(Mr. WALDIE asked and was given permission to address the House for 1 minute.)

Mr. WALDIE. Mr. Speaker, I join in the concern of the gentleman from Mississippi relative to the lack of response from the North Vietnamese concerning our men held as prisoners of war. On a related subject, it does occur to me that the display we have in the Capitol of North Vietnamese prisoner of war cages demonstrating the cruelties and tragedies that are involved in the holding and treatment of our men by the North Vietnamese might be duplicated by a similar display in the Capitol of American migrant workers' quarters so that visitors to Washington would have a visual example of the cruelties and tragedies involved in the way some Americans are treated by some Americans in this country.

It is my understanding that the replica of North Vietnamese prisoner of war cages was constructed in the Capitol to evoke, from Americans who visited Washington, rage at the cruelty and barbarism of the enemy. That might be a worthwhile objective. It clearly would be equally worthwhile to evoke in Americans an equal rage at the cruelty and barbarism involved in the treatment of American migratory workers by some American growers and corporate farmers.

AMENDMENT TO HEW APPROPRIATION TO INCREASE CHILD WELFARE FUNDS

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BURKE of Massachusetts. Mr. Speaker, this afternoon if the opportunity presents itself, I intend to offer an amendment to the appropriation bill asking for an increase in appropriations under the child welfare provisions, increasing that amount from $46 million to the authorized amount of $110 million.

I realize there is a lot of talk around about excessive spending, but I wish to point out to the Members of the House that the administration is on record pledging to increase this amount.

The amount has been static for the last 2 years.

Mr. Speaker, this matter deals with the most underprivileged and most deprived children in America—the child welfare children. These are children who live in institutions and who are farmed out to homes in various houses for their upkeep and the Federal Government contributes 6 percent toward their upkeep while the AFDC—the Government contributes 75 to 83 percent.

There is no justification for this disparity in the contribution on the part of the Federal Government because the children we are talking about have no parents and no mother to take care of them and no relatives. They are wards of the State until they reach the age of maturity. They are just shuffled around and completely forgotten. They are youngsters without any political muscle. There is nothing exotic about helping them because nobody gets any publicity by helping these children. But

you and I have a moral obligation to take care of these children.

This Federal Government of ours has spent billions of dollars for lesser causes. Let those who want to oppose this amendment of mine today go home tonight and put their heads down on the pillows and sleep with a clear conscience. I do not see how they can do it. I do not see how the administration can do it. I do not see how anybody can do it.

Mr. Speaker, I certainly hope that we adopt this amendment this afternoon.

APPEARANCE OF RENNIE DAVIS, ONE OF THE "CHICAGO 7," AT THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

(Mr. SCHERLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCHERLE. Mr. Speaker, an incredible event, a classic insult to patriotic Americans, is scheduled to take place at the Department of Health, Education, and Welfare later this month. Rennie Davis, one of the infamous "Chicago 7," has been invited by Federal employees calling themselves "the Thursday Discussion Group" to expound his views on July 30 in room G–751 of the HEW north building.

The office of James Farmer, Assistant Secretary for Administration at HEW confirmed that they had made arrangements for the group to allow Davis to speak.

Davis, a convicted felon, was found guilty last February of crossing State lines to incite a riot by giving inflammatory speeches. In addition to receiving 5 years for this offense, the radical hatemonger was sentenced to 25 months and 14 days for 23 counts of contempt of court.

This repulsive revolutionist stated on the day he was sentenced:

> We're going to turn the sons and daughters of the ruling classes in this country into Vietcong.

Why should the Federal Government set the stage and provide the audience for Davis' tirades? If an individual wishes to indulge his taste for this vicious venom, let him do so on his own time and not at taxpayer expense. While the first amendment guarantees the right of free speech, nowhere does the Constitution direct the Government to subsidize such drivel. This project should be canceled.

CALL OF THE HOUSE

Mr. PELLY. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 227]

Ashley	Davis, Ga.	Teague, Calif.
Baring	Dawson	Lukens
Blanton	Dent	Meskill
Brock	Diggs	Monagan
Burke, Fla.	Dorn	Murphy, N.Y.
Burton, Utah	Edwards, La.	Ottinger
Caffery	Foley	Patman
Carey	Gallagher	Pollock
Celler	Gettys	Powell
Chamberlain	Gilbert	Rarick
Chisholm	Goldwater	Rhodes
Clark	Gray	Rivers
Clay	Hathaway	Rogers, Colo.
Colmer	Hébert	Roudebush
Cramer	Hunt	Ryan
Crane	Ichord	Skubitz
Cunningham	Kirwan	Symington
Daddario	Long, La.	Taft

The SPEAKER. On this rollcall 377 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

EXTENSION OF TERMINATION DATE OF DEFENSE PRODUCTION ACT OF 1950 TO AUGUST 31, 1970

(Mr. WIDNALL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WIDNALL. Mr. Speaker, I am introducing today a joint resolution to extend the termination date of the Defense Production Act of 1950 for 30 days to August 31, 1970. Although the Banking and Currency Committee has completed action on H.R. 17880 and will file a report on Monday, July 27, this extension is still needed. Without it the act will expire on July 30.

The other body has passed legislation—S. 3302—granting a 2-year extension, as our bill would also do, but there are two major points of difference in other provisions of the bill which will require a conference. Because these differences are likely to prove quite controversial, and because the other body has reported to us that it already has a heavy schedule for next week it seems highly unlikely that we can complete action on these bills before July 30, I, therefore, consider the prompt enactment of this resolution to be of the utmost importance.

CONFERENCE REPORT ON H.R. 17619, DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1971

Mrs. HANSEN of Washington. Mr. Speaker, I call up the conference report on the bill (H.R. 17619) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentlewoman from Washington?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of July 21, 1970.)

Mrs. HANSEN of Washington (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER. Is there objection to the request of the gentlewoman from Washington?

There was no objection.

Mrs. HANSEN of Washington. Mr. Speaker, the conference report on H.R. 17619, Interior and related agencies appropriation bill for 1971, provides total appropriations of $2,028,524,700. This amount is $311,968,400 over the 1970 appropriation and $6,346,900 below the 1971 budget estimate. The conference total is $227,298,000 over the amount approved by the House and $127,200 over the amount approved by the Senate.

Mr. GROSS. Mr. Speaker, will the gentlewoman yield for a question?

Mrs. HANSEN of Washington. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I thank the gentlewoman for yielding.

Do I understand that the appropriation for the arts and humanities ended up at more than $31 million?

Mrs. HANSEN of Washington. This is correct, $31,310,000. The conferees reduced the sum in conference for the Endowment for the Humanities by $2 million. This does not alter the Senate allowance for the Endowment for the Arts.

Mr. GROSS. That is an increase over the expenditure of last year of about $13 million?

Mrs. HANSEN of Washington. That is correct.

Mr. GROSS. It is $13,400,000?

Mrs. HANSEN of Washington. That is correct.

Mr. GROSS. And the conference report as brought to the House is some $311 million above the expenditures for the Department of the Interior appropriations of last year?

Mrs. HANSEN of Washington. Yes. I would like to explain that the major portion of the increase relates to four activities.

One is in the land and water conservation fund. The conference report provides full funding for this activity. This fund is to acquire recreation land over the United States, as the gentleman knows. The appropriation in 1970 was $131,100,000, and the 1971 appropriation will be $357,400,000. The accelerated funding will curb escalation of land prices, and it will, in the end, save the United States a great many tax dollars.

For the Indian health program, and the Bureau of Indian Affairs, there is a material increase over 1970. But I do want to remind the gentleman that previous appropriations for these activities have been instrumental in eliminating deaths from tuberculosis in Alaska among the Indian population, and I think this is very remarkable.

There is a large increase in the mine

health safety field, which was brought about because of the necessity to provide funding for the observation and supervision of mining.

For Geological Survey, the increase is $6,402,000. A large portion of this increase will be spent on inspectors and inspection procedures in connection with our offshore oil leases. It has seemed to me it is high time for our Government to have the same information that private industry has on those resources, to properly safeguard the leasing procedure.

Mr. GROSS. I might suggest to the gentlewoman there is also a sizeable increase in the amount of pay apparently.

Mrs. HANSEN of Washington. The House has voted increases in pay. May I say that in this bill we do not provide for the last 6 percent increase. This will come later in a supplemental.

Mr. GROSS. That was the next question I would have asked the gentlewoman, whether the last pay increase is included in this bill.

It ought to be apparent to the Members of the House what is taking place as the appropriation bills come through with respect to pay increases and those projected in the future. We are now beginning to pay the bills for the action of the House last year and earlier this year.

Mr. EDMONDSON. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. One of the increases which I believe is deeply appreciated by Indian people all over the country is the increase provided to meet the desperate needs and shortages in the field of medicines and drugs and personnel in the Indian hospitals which are operated by the Public Health Service. I want to thank the gentlewoman for her part in securing those additional funds as a result of this conference.

Mrs. HANSEN of Washington. I would point out that an additional $957,000 is included in the bill for drugs and supplies, which the gentleman discussed with the committee at some length earlier. There is also additional funding of $1,269,000 for hospital personnel. The committee feels not at all apologetic in recommending that this money be expended on behalf of our Indian people.

Mr. HOWARD. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield with pleasure to the gentleman from New Jersey.

Mr. HOWARD. I thank the gentlewoman.

On page 8 of the report of the managers there is an item for appropriation under this bill of $100,000 for research on the red tide in the New York Bight area. This has been a grave problem along the east coast for quite some time, and has been economically depressing to the entire resort area along the central New Jersey shore.

It has been estimated that for full research concerning this red tide menace approximately $400,000 might be needed. It is proposed that funds be requested for research money under the Public Works appropriation bill, under water pollution control.

Will there be enough flexibility with respect to this $100,000 so that it may be used in connection with or in conjunction with any other funds granted by the Federal Government for such a survey?

Mrs. HANSEN of Washington. I would say yes. Customarily good research, particularly in the Department of the Interior, is carried on in an interbureau manner. Therefore a maximum amount of information may come from the minimum amount of money expended, yet using all the money available in the fields of water pollution and water quality research in this field.

No one knows the scope of that problem which is a most difficult research problem.

And I would be remiss if I did not take the opportunity at this time to acknowledge the diligent and helpful efforts of the gentleman from New Jersey in bringing this matter to the committee's attention and obtaining funds for research on the problem.

Mr. HOWARD. I thank the gentlewoman for recognizing the problem and starting the momentum toward providing enough funds to research the problem.

Mr. FULTON of Pennsylvania. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I am delighted to yield to the gentleman from Pennsylvania.

Mr. FULTON of Pennsylvania. I should like to compliment the conference committee on two items; amendment No. 25, on the Bureau of Mines, and amendment No. 26, on the Office of Coal Research.

There has been some comment in newspapers and magazine articles, and some statements generally, that the administration was intending to close down the Office of Coal Research or to reduce it drastically, and as well to reduce research into minerals exploration and use. I recommend strongly that that not be done.

I would ask if it is not the intent of this committee and of this House that we continue the research which has produced so much in the field of coal and minerals and support for such good institutions as the Coal Research Institute in the Department of the Interior.

Mrs. HANSEN of Washington. Our committee hearings made it very plain that we expect the research to be continued.

Mr. FULTON of Pennsylvania. So there is not in prospect at the present time any particular plan or program within the Congress or, so far as we know, within the administration to reduce the research on minerals, the Coal Institute, or the various research programs in the Department of the Interior?

Mrs. HANSEN of Washington. I would certainly hope that the administration does not not have such a reduction in mind, because I believe it would be disastrous to our energy potential. I know of no such plan by the Congress to reduce research.

Mr. FULTON of Pennsylvania. We can say that specifically as to the legislative intent of the Congress?

Mrs. HANSEN of Washington. That is correct.

Mr. FULTON of Pennsylvania. I thank the gentlewoman very much. I compliment her.

Mr. HALL. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield with pleasure to the gentleman from Missouri.

Mr. HALL. I thank the gentlewoman from Washington for yielding.

I notice in connection with an amendment reported in technical disagreement, particularly amendment No. 42, that we plan to recede and concur in an amendment providing in one case for slippage for construction of one airport at Anchorage, Alaska, and in another case for apparently $712,000 for total construction of an airport at Jackson Hole, Wyo.

I can certainly understand the importance in an appropriation bill for the Interior Department and related agencies of many of these appropriations, but why are we in the airport construction business?

Mrs. HANSEN of Washington. We are not in the airport construction business. The Jackson Hole airport and facilities for the Anchorage airport were deleted from the bill in conference.

Mr. HALL. In other words, the gentlewoman's motion to recede and concur with an amendment will take that out of the report?

Mrs. HANSEN of Washington. That is correct.

Mr. HALL. I thank the gentlewoman.

Mr. MAHON. Mr. Speaker, will the gentlewoman yield to me?

Mrs. HANSEN of Washington. I yield with pleasure to our very distinguished chairman of the Committee on Appropriations.

Mr. MAHON. Mr. Speaker, I want to say that in my opinion the House of Representatives and the people of this country owe a big vote of thanks to the distinguished gentlewoman from Washington; to the distinguished gentleman from South Dakota (Mr. REIFEL) and to other members of the subcommittee for the grand job that has been done on this bill. I know that the gentlewoman from Washington has really afforded the leadership that has made it possible to get an excellent measure enacted into law. She has done a good job and those who have worked with her have done a good job. As chairman of the Committee on Appropriations, I want to offer a special word of thanks and appreciation.

Mrs. HANSEN of Washington. I thank the distinguished chairman of the full committee.

Mr. McCORMACK. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I am glad to yield to the distinguished Speaker of the House.

Mr. McCORMACK. Mr. Speaker, I want to join the distinguished chairman of the Committee on Appropriations in

congratulating the subcommittee on the fine work it has done and particularly in congratulating the distinguished chairwoman of the subcommittee for the excellent manner in which she has handled and always handles these bills and for the effective results she accomplishes. The people of her district are justified in being very proud of the service that the gentlewoman from Washington (Mrs. HANSEN) renders. I am quite sure that at the proper time, when the people go to the polls to vote, they will manifest their complete confidence in and respect for the gentlewoman from Washington (Mrs. HANSEN) by reelecting her by a tremendous majority.

Mrs. HANSEN of Washington. I thank the distinguished Speaker for those kind words.

Mr. ALBERT. Mr. Speaker, will the gentlewoman yield to me?

Mrs. HANSEN of Washington. I yield to the gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, may I echo what the distinguished Speaker has just said and add that the expeditious manner, and I might say the unanimous manner, in which the gentlewoman chaired and managed this bill through the House testifies to the confidence the entire House has in her leadership and the work of her committee.

Mrs. HANSEN of Washington. I thank the distinguished Members of the House for their cooperation and their work and service in the preparation of this bill.

Mr. DON H. CLAUSEN. Mr. Speaker, will the gentlewoman yield to me?

Mrs. HANSEN of Washington. I am glad to yield to the distinguished gentleman from California.

Mr. DON H. CLAUSEN. Mr. Speaker, I want to clarify a point with respect to amendment No. 5 in the conference report wherein it states:

> The reduction below the amount proposed by the Senate includes $300,000 for the California Rural Indian Health Board and $150,000 for the California Rural Indian Health Pilot Program.

Now, if I understand that correctly, the request for the $300,000 by the California Rural Indian Health Board is, in fact, included and they can expect the funds to be included in the appropriation bill.

Mrs. HANSEN of Washington. The $300,000 and the $150,000 are not included, but we have said in the conference report that proper guidelines should be established between the Indian Health Service and the Bureau of Indian Affairs and the States. The problem of Indian health in urban as well as rural areas is tremendous, but at the present time there are not sufficient guidelines to provide Indians the same assistance that any other citizen receives within the States.

So, in the conference report we tell them to explore the problem and to develop some guidelines. I can assure the gentleman that the committee will not turn its back on the Indians' health needs.

Mr. DON H. CLAUSEN. Mr. Speaker, if the gentlewoman from Washington will yield further, this does not represent a rejection of the need, but the gentlewoman simply wants to have better guidelines and then you will consider this matter later?

Mrs. HANSEN of Washington. There is not any question at all as to our awareness of the need, but where does the responsibility of the Federal Government in this field lie and where does the responsibility of the States lie?

Therefore, let us draw some guidelines which will give us an indication so to speak of what we should do. It is impossible to do the kind of job that needs to be done across the Nation without establishing these guidelines.

Mr. DON H. CLAUSEN. I want to join in what the distinguished Speaker and other Members have said with respect to the gentlewoman's chairing of this particular piece of legislation and to express my appreciation for the funds allocated for the Point Reyes National Park.

Mrs. HANSEN of Washington. I thank the gentleman from California.

Mr. PICKLE. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield to the gentleman from Texas.

Mr. PICKLE. Mr. Speaker, I simply want to add my thanks for the very efficient and capable manner in which the distinguished gentlewoman has handled this measure. The gentlewoman deserves the thanks of this entire House for this excellent job.

Mrs. HANSEN of Washington. I thank the gentleman.

Mr. KYL. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield to the gentleman from Iowa.

Mr. KYL. There are several appropriations in this bill totaling many millions of dollars for line item grants to colleges for study and research; is that not correct?

Mrs. HANSEN of Washington. There are many types of grants made to colleges in the field of forestry, commercial and sport fish, water research, mining, et cetera, which various bureaus have established with colleges and universities. For example, the bill provides $50,000 for a grant to Iowa State University for a coal research project.

Mr. KYL. Mr. Speaker, if the distinguished gentlewoman will yield further, is the distinguished chairman of this subcommittee aware of any grants to colleges from the Interior Department that are contained in the blanket appropriation for the office of the Secretary as categories which are not revealed by line item, such as water research and so on?

Mrs. HANSEN of Washington. In the regular bill there are items carried for water research which are cooperative grants to State water agencies.

Mr. KYL. Mr. Speaker, if the gentlewoman will yield for one further question, it is my understanding that the Department has for years had a standing, ongoing, repetitive grant program to colleges but which does not even show up as a part of the Office of the Secretary's expenses.

Mrs. HANSEN of Washington. In the training programs?

Mr. KYL. Yes.

Mrs. HANSEN of Washington. I am not aware of such a program and I trust that the Secretary will continue to be as forthright in the presentation of items of that nature as he has been.

Mr. KYL. Well, if the gentlewoman will yield for one final question, I think this matter might merit some investigation, because it is my understanding that it has been a regular practice year after year whereby the Department of the Interior has granted to a list of 40 colleges in the United States a certain grant each year without any justification whatsoever insofar as the Appropriations Committee is concerned.

Mrs. HANSEN of Washington. The committee will be very glad to investigate this, but I can assure the gentleman that he will undoubtedly find that those grants are for some specific purpose.

Mr. KYL. I hope the distinguished gentlewoman is correct.

Mrs. HANSEN of Washington. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER. The question is on the conference report.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. DEVINE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 387, nays 3, not voting 41, as follows:

[Roll No. 228]

Dorn	Kirwan	Rogers, Colo.
Eckhardt	Long, La.	Roudebush
Edwards, La.	Meskill	Ryan
Fish	Monagan	Taft
Gallagher	Murphy, N.Y.	

So the conference report was agreed to.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Bray.
Mr. Rivers with Mr. Crane.
Mr. Philbin with Mr. Cunningham.
Mr. Edwards of Louisiana with Mr. Taft.
Mr. Murphy of New York with Mr. Fish.
Mr. Monagan with Mr. Burton of Utah.
Mr. Blatnik with Mr. Roudebush.
Mr. Caffery with Mr. Burke of Florida.
Mr. Davis of Georgia with Mr. Hunt.
Mr. Dorn with Mr. Cramer.
Mr. Ottinger with Mr. Pollock.
Mr. Rogers of Colorado with Mr. Brock.
Mr. Gilbert with Mr. Rhodes.
Mr. Gallagher with Mr. Meskill.
Mr. Gray with Mr. Rarick.
Mr. Gettys with Mr. Long of Louisiana.
Mr. Ryan with Mr. Diggs.
Mr. Ashley with Mr. Powell.
Mr. Hathaway with Mr. Ichord.
Mr. Eckhardt with Mr. Kirwan.

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore (Mr. ALBERT). The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 3: Page 5, line 18, strike out "$218,645,000" and insert in lieu thereof "$218,678,500".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disengagement to the amendment of the Senate numbered 3 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$217,615,000".

The motion was agreed to.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 7 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 14: On page 10, line 23, strike out "$56,000,000" and insert "$95,000,000".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 14 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$96,600,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 25: On page 16, line 8, strike out "$45,122,000" and insert "$45,272,000".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 25 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$46,422,000".

The motion was agreed to.

The SPEAKER pro tempore. The

Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 26: On page 17, line 12, strike out "$16,200,000" and insert "$16,500,000".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 26 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$17,160,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

Senate amendment No. 33: On page 21, line 19, strike out "$56,356,000" and insert "$56,705,000".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 33 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert: "$56,840,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 34: On page 22, line 1, strike out "$4,175,000" and insert "$3,497,000".

MOTION BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 34 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$4,983,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 38: On page 24, line 7, strike out "$57,670,000" and insert "$58,035,000".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 38 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$57,990,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 39: On page 24, line 7, insert: "*Provided*, That $54,000 of the funds herein provided shall be available only upon enactment into law of H.R. 12758, Ninety-first Congress, or similar legislation".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 39 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 40: On page 24, line 10, insert the following: "*Provided further*, That not to exceed $100,000 shall be advanced to the Plymouth-Provincetown Celebration Commission upon enactment into law of S. 2916, Ninety-first Congress, or similar legislation."

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 40 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 42: On page 25, line 6, strike out "$16,385,000" and insert "$17,583,000".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 42 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$16,259,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 53. Page 31, line 16, insert:

"CONSTRUCTION

"For construction and acquisition of buildings and other facilities required in the conservation, management, investigation, protection and utilization of national forest resources and the acquisition of lands and interests therein necessary to these objectives, $14,188,000 to remain available until expended: *Provided*, That not more than $1,300,000 of this appropriation may be used for acquisition of land under the Act of March 1, 1911, as amended (16 U.S.C. 513–519)."

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 53 and concur therein with an amendment, as follows: In lieu of the first sum proposed by said amendment, insert "$15,467,700".

The motion was agreed to.

The SPEAKER pro tempore. The clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 56: Page 37, line 9, strike out $1,070,000" and insert "$941,000".

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 56 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$891,000".

The motion was agreed to

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 57: Page 37, line 9, insert:, and in addition $229,000 of the balance of the appropriation granted under "Land acquisition, National Capital park, parkway, and playground system" are transferred to and shall be available for salaries and expenses:

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

MOTION OFFERED BY MRS. HANSEN OF WASHINGTON

Mrs. HANSEN of Washington. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mrs. HANSEN of Washington moves that the House recede from its disagreement to the amendment of the Senate numbered 63 and concur therein.

Mr. GROSS. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield to the gentleman.

Mr. GROSS. Is it correct that there is still no authorization for this particular item?

Mrs. HANSEN of Washington. That is correct.

May I point out to the gentleman that time is of the essence in this connection. The 200th anniversary date is very rapidly approaching and there must be a great deal of planning to be successful in bringing to the country the kind of birthday celebration that this Nation merits and wants.

We felt we should expedite this as much as possible.

I hope the gentleman will accept the committee's explanation and accept our recommendation.

Mr. GROSS. Mr. Speaker, if the gentlewoman will yield further, I simply arose to make the record here today that this has not been authorized and that the House is pursuing, as was attempted in the original appropriation bill in the House, to take unusual action, in fact action that is in violation of the rules.

I simply rose to make the record for to further contest this item would serve no useful purpose. I thank the gentlewoman from Washington for yielding.

Mrs. HANSEN of Washington. I thank the gentleman from Iowa.

Mr. REIFEL. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield to the gentleman from South Dakota.

Mr. REIFEL. There are two points I wish to make. First, I join in the complimentary remarks that have been directed to my distinguished chairman by other Members of the House. I wish to say, on behalf of Mr. MCDADE and Mr. WYATT, my two colleagues on the subcommittee, from this side of the aisle, that the record shows that she has always been completely impartial in considering the requests and the needs of the Members on this side of the aisle who have come before our committee.

I believe the record vote of 386 to 3 for adoption of the conference report eloquently speaks to the manner in which this bill has been handled by the distinguished chairman, the gentlewoman from Washington.

My second point involves the concern and interest, and rightly so, in the Indian Americans of this country. President Johnson, when he was in office, made an excellent statement to this body. An equally fine statement has been made by President Nixon concerning the conditions of life of the Indian population and what is needed for them. The distinguished chairman of this committee has no peer in this or the other body with respect to her concern and effectiveness in appropriating necessary funds for Indian programs.

I hope the people in her district and her State, as well as all American Indians across the Nation are aware and deeply appreciative of her interest and concern for them.

Mrs. HANSEN of Washington. I thank the distinguished gentleman from South Dakota, the ranking minority member of the subcommittee. May I say it is with genuine regret that we see him leave the House of Representatives and leave our committee at the end of this session of Congress. It has been a joy and a pleasure to work with him for the people of this Nation, for he has represented the entire cross section of our Nation.

Mr. HALEY. Mr. Speaker, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield to the gentleman from Florida.

Mr. HALEY. I concur in the statements made by the gentleman from South Dakota in relation to the gentlewoman from Washington. She has certainly acted as fairly as she could in considering the many problems with which she has been confronted. They are varied. We have been trying, and I think we have made progress in this particular field of matters relating to Indians. I have repeatedly said that probably the darkest pages of the history of the United States contained the treatment of the American Indian. I am glad to see that the President of the United States has now come forth with a statement as to the policies of his administration insofar as Indians are concerned. I know that the gentlewoman is well aware of the fact, however, that these are merely the beginnings of programs that we should have had for a long time.

Mrs. HANSEN of Washington. I thank the distinguished gentleman from Florida.

Mr. Speaker, I include at this point pertinent tables relating to the funds provided in this conference report:

INTERIOR AND RELATED AGENCIES APPROPRIATION BILL, 1971

(H.R. 17619)

Agency and item	New budget (obligational) authority appropriated, 1970	Budget estimates of new (obligational) authority, 1971	Allowances			Conference allowance compared with—

The SPEAKER pro tempore (Mr. ALBERT). The question is on the motion offered by the gentlewoman from Washington.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the various motions was laid on the table.

GENERAL LEAVE TO EXTEND

Mrs. HANSEN of Washington. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days

in which to revise and extend their remarks on the conference report just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from Washington?

There was no objection.

DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATIONS, 1971

Mr. FLOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Pennsylvania.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 18515, with Mr. HOLIFIELD in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday, the Clerk had read down to and including line 7 on page 2 of the bill. If there are no amendments, the Clerk will read.

The Clerk read as follows:

UNEMPLOYMENT COMPENSATION FOR FEDERAL EMPLOYEES AND EX-SERVICEMEN AND TRADE ADJUSTMENT ACTIVITIES

For payments to unemployed Federal employees and ex-servicemen, as authorized by title 5, chapter 85 of the United States Code, and for necessary expenses to carry out the responsibilities of the Secretary of Labor in connection with trade adjustment assistance activities, as provided by law, including benefit payments to eligible workers, $200,100,000 together with such amount as may be necessary to be charged to the subsequent year appropriation for the payment of benefits for any period subsequent to March 31 of the current year.

Mr. WHITTEN. Mr. Chairman, I rise in support of the bill.

Mr. Chairman, on the 14th day of April 1970, the House adopted the provisions which I had offered, and which had been accepted in committee, to the bill making appropriations for the Department of Education, after refusing to strike them out by instructing the conferees by a vote of 191 to 157. These amendments are as follows:

SEC. 209. No part of the funds contained in this Act may be used to force any school or school district which is desegregated as that term is defined in title I of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students; to force on account of race, creed or color the abolishment of any school so desegregated; or to force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent.

SEC. 210. No part of the funds contained in this Act shall be used to force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students; to require the abolishment of any school so desegregated; or to force on account of race, creed or color the transfer of students to or from a particular school so desegregated as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school.

Subsequent to this vote, in conference with the Senate these provisions were retained and when the matter came back to the House, the conference report, containing the language, was approved by a vote of 357 to 30.

Mr. Chairman, this makes quite clear the feeling of the Congress with regard to the use of force in the areas which these amendments cover, as well as the use of the power of the purse to withhold funds truly needed for education, which the Congress has provided, in order to force schools to voluntarily do that which is not required by the Civil Rights Act of 1964, a right not even claimed to be provided by the administration or the courts.

After consultation with members of the Committee on Appropriations, these amendments are not offered here because they are quite clear and for the Secretary of HEW or other officials to use funds in this bill, appropriated for other purposes, to attempt to evade the intent of the Congress as expressed in these provisions of the bill making appropriations for the Department of Education would be to break faith with the Congress and would certainly not be in line with the reputation for integrity which the Secretary enjoys.

After discussing this matter with members of the committee, it has been decided that, whatever we have provided or should provide, we have to rely on the good faith of the executive department and the courts to carry them out; for, if they cannot be relied on, it is to be doubted if any language could be written which could force them to leave the schools alone or parents and students alone where schools are completely desegregated, as that term is defined in the Civil Rights Act of 1964, because, after all, it is to the executive department that we must look for the carrying out, and the Federal courts to support, these provisions which are set out above and which appear in the conference report of the bill making education appropriations.

Any reading of these provisions would clearly show that they are completely sound and I feel will be followed by this administration not only because of commitments but because the system of education is essential to any organized society; and, unless we return again to putting education first, as these amendments would do, soon we will go down the drain as have other societies in years past.

Mr. Chairman, I thought it well to call these facts to the attention of the Members of the House at this time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

HEALTH SERVICES AND MENTAL HEALTH ADMINISTRATION

MENTAL HEALTH

For carrying out the Public Health Service Act with respect to mental health and, except as otherwise provided, the Community Mental Health Centers Act (42 U.S.C. 2681, et seq.), and the Narcotic Addict Rehabilitation Act of 1966 (Public Law 89-793), $368,516,000, of which $15,900,000, shall remain available until June 30, 1972, for grants pursuant to parts A, C, and D of the Community Mental Health Centers Act: *Provided*, That there may be transferred to this appropriation from the appropriation for "Mental Retardation" an amount not to exceed the sum of the allotment adjustments made by the Secretary pursuant to section 132(c) of the Mental Retardation Facilities Construction Act.

AMENDMENT OFFERED BY MR. BOLAND

Mr. BOLAND. Mr. Chairman, I offer an amendment in the nature of a substitute for the text of the paragraph which begins on line 12 of page 11; and I hereby give notice that if such amendment is adopted I will at the proper time move to strike out the paragraph beginning on line 4 of page 13, the paragraph beginning on line 15 of page 14, the paragraph beginning on line 17 of page 16, the paragraph beginning on line 22 of page 18, the paragraph beginning on line 26 of page 18, the paragraph beginning on line 22 of page 19, and the paragraph beginning on line 6 of page 20.

The Clerk read as follows:

Amendment offered by Mr. BOLAND: On page 11, strike out line 12 and all that follows down through line 2 on page 12 and insert in lieu thereof the following:

"HEALTH SERVICES AND MENTAL HEALTH ADMINISTRATION

"MENTAL HEALTH

"For carrying out the Public Health Service Act with respect to mental health and, except as otherwise provided, the Community Mental Health Centers Act (42 U.S.C. 2681, et seq.), and the Narcotic Addict Rehabilitation Act of 1966 (Public Law 89-793), $388,516,000, of which $15,900,000 shall remain available until June 30, 1972, for grants pursuant to parts A, C, and D of the Community Mental Health Centers Act: *Provided*, That there may be transferred to this appropriation from the appropriation for "Mental Retardation" an amount not to exceed the sum of the allotment adjustments made by the Secretary pursuant to section 132(c) of the Mental Retardation Facilities Construction Act.

"MATERNAL AND CHILD HEALTH

"For carrying out, except as otherwise provided, section 301 of the Public Health Service Act and title V of the Social Security Act, $261,159,000: *Provided*, That any allotment to a State pursuant to section 503(2) or 504(2) of such Act shall not be included in computing for the purposes of subsections (a) and (b) of section 506 of such Act an amount expended or estimated to be expended by the State: *Provided further*, That $4,750,000 of the amount available under section 503(2) of such Act shall be used only for special projects for mentally retarded children, and $5,000,000 of the amount available under section 504(2) of such Act shall be used only for special projects for services for crippled children who are mentally retarded: *Provided further*, That $5,820,000 of the amount available under section 502(1)(B) of such Act shall be used pursuant to section 510 of such Act for special projects for dental health of children.

"MEDICAL FACILITIES CONSTRUCTION

"To carry out title VI of the Public Health Service Act, and, except as otherwise provided, for administrative and technical services under parts B and C of the Mental Retardation Facilities Construction Act (42 U.S.C. 2661–2677), the District of Columbia Medical Facilities Construction Act of 1968 (Public Law 90–457), and the Community Mental Health Centers Act (42 U.S.C. 2681–2687), $261,521,000, of which $252,200,000 shall be available until June 30, 1973, for grants pursuant to section 601 of the Public Health Service Act for the construction or modernization of medical facilities, and $5,000,000, to be deposited in the fund established under section 626, shall be available without fiscal year limitation for the purposes of that section of the Act.

"NATIONAL HEART AND LUNG INSTITUTE

"For expenses, not otherwise provided for, necessary to carry out title IV, part B, of the Public Health Service Act, $193,479,000.

"HEALTH MANPOWER

"To carry out, to the extent not otherwise provided, sections 301, 306, 309, 311, title VII, and title VIII of the Public Health Service Act, $399,888,000.

"Loans, grants, and payments for the next suoceeding fiscal year: For making, after March 31 of the current fiscal year, loans, grants, and payments under section 306, parts C, F, and G of title VII, and parts B and D of title VIII of the Public Health Service Act for the first quarter of the next succeeding fiscal year, such sums as may be necessary, and obliagtions incurred and expenditures made hereunder shall be charged to the appropriation for that purpose for such fiscal year: *Provided,* That such payments pursuant to this paragraph may not exceed 50 per centum of the amounts authorized in section 306, parts C and G of title VII, and part B of title VIII for these purposes for the next suceeding fiscal year.

"CONSTRUCTION OF HEALTH, EDUCATIONAL, RESEARCH, AND LIBRARY FACILITIES

"To carryout part B of title VII, and part A of title VIII of the Public Health Service Act with respect to grants for construction of facilities, $226,100,000; including, for dental facilities as authorized by subsections (2) and (3) of section 720 of the Act, an amount equal to 20 per centum of the appropriation for construction of teaching facilities for medical, dental, and other health personnel; to remain available until expended.

"NATIONAL LIBRARY OF MEDICINE

"To carryout, to the extent not otherwise provided for, section 301 with respect to health information communications and parts I and J of title III of the Public Health Service Act, $20,269,000 of which $1,842,000 shall remain available until June 30, 1972."

Mr. YATES. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 229]

Alexander	Corbett	Gilbert
Anderson, Tenn.	Cramer	Gray
	Crane	Hansen, Wash.
Ashley	Culver	Hathaway
Barrett	Cunningham	Hébert
Brock	Daddario	Horton
Brooks	Davis, Ga.	Hunt
Burke, Fla.	Dawson	Ichord
Burton, Utah	Diggs	Kirwan
Caffery	Dorn	Long, La.
Camp	Edwards, La.	Lujan
Carey	Eilberg	Meskill
Clark	Gallagher	Monagan
Murphy, N.Y.	Rarick	Sikes
Nelsen	Reid, N.Y.	Steed
Ottinger	Rhodes	Taft
Patman	Rivers	Teague, Calif.
Pollock	Rogers, Colo.	Widnall
Powell	Roudebush	
Price, Tex.	Ryan	

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. HOLIFIELD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 18515, and finding itself without a quorum, he had directed the roll to be called, when 374 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. When the Committee rose, the Chair had recognized the gentleman from Massachusetts (Mr. BOLAND) for 5 minutes.

Mr. BOLAND. Mr. Chairman, at the outset let me say that this amendment is a package amendment. It is not the intention of myself or others who will be speaking to specific amendments in the package—to offer any backup amendments—if this package amendment fails. I am sure that will be good news to a great many members of the Committee.

Mr. Chairman, the package emergency health amendment that I have offered increases the amount recommended by the HEW subcommittee in nine areas. The total amount of the increase is $360,454,000. The programs for which this increase provides are detailed on page H7006 of yesterday's RECORD. Other members of the committee will speak to specific amendments.

Let me dwell on the amendment that goes to the medical manpower institutional support and student loans. This is broken down into three categories.

First. Institutional support of health schools.

Second. Loans for health professions students.

Third. Traineeships for health professions students.

Under the program for institutional support of health schools, formula grants and special project grants are awarded to schools of medicine, dentistry, osteopathy, optometry, podiatry, pharmacy, veterinary medicine, nursing, public health and the allied health professions.

The purpose of these grants is to increase the output of health professionals, rescue schools in financial difficulties and improve the quality of instruction.

It has been repeatedly stated, and acknowledged, that of all the problems, that combine to constitute, what the President, and many others, have referred to as the "crisis in health," the shortage of trained manpower is generally acknowledged to be the most acute.

The Assistant Secretary of Health and Scientific Affairs, Dr. Robert O. Egeberg, has repeatedly emphasized that—

We—

And he is talking of this administration—

we place the highest priority on the need to overcome the grave manpower shortages that are literally crippling the American health care system.

The amendment I have offered seeks to establish that priority.

The institutional and special project grant programs provide the only direct Federal support to offset the increasing operating costs of medical schools—thus enabling them to expand their enrollments and to improve their educational programs.

Testimony before Mr. FLOOD's subcommittee indicates that the institutional and special project grants are the very lifeline for the advancement of medical education.

This program assists schools in serious financial straits. Sixty-one medical schools, more than one-half of the total in the Nation, have been awarded special project grants on the basis of some condition of financial distress.

Dr. John A. Cooper, the president of the Association of American Medical Colleges testified to the HEW subcommittee that—

The perilous financial structure of our medical schools has now reached such a degree of instability that the whole structure is gravely threatened, particularly the private schools which make up about half of all the medical schools in the country.

Many medical schools have been forced to go into debt. Most medical schools applied to HEW for emergency assistance grants to avoid financial disaster. Several have announced they will be forced to close their doors, if increased aid is not forthcoming.

The amendment I have offered gives them this assistance.

The legislative authority for these programs authorizes a total of $255,500,000 for fiscal year 1971. The administration requested only $147,966,000 and the committee increased this request by just $2,700,000.

The amendment now pending would fund these programs of institutional support to the full amounts authorized, resulting in an increase of $104,834,000.

LOANS FOR HEALTH PROFESSIONS STUDENTS

The program of direct loans to students of medicine, dentistry, nursing, and the allied professions provide students with much needed funds for their professional education.

Fifty-six million dollars is authorized for these loans in fiscal year 1971. The administration requested only $21,610,000—a sharp reduction from the previous year. The committee increased the request by $16 million—still far short of the amount needed and authorized.

The health emergency amendment would fully fund these loan programs by increasing the appropriation by $18 million.

TRAINEESHIPS FOR HEALTH PROFESSIONS STUDENTS

Traineeships are provided to selected students of public health, nursing, and the allied professions.

Thirty-eight million dollars is authorized for these traineeships in fiscal year 1971. The administration requested $22,-

270,000, and the committee made no change in this request.

The health emergency amendment would increase this appropriation by $15,730,000.

Mr. Chairman, this Nation is now facing the stark reality of severe shortages of trained health professionals.

According to information supplied to the committee by the Department of Health, Education, and Welfare, we need now: 50,000 more doctors, 17,800 more dentists, 150,000 more nurses, 266,000 more allied health personnel, 45,000 of them in environmental work.

The crisis is severe and is worsening every day.

If we continue as we are going, the Public Health Service estimates that, by 1980, we will have a shortage of 26,000 doctors, 56,000 dentists, 210,000 nurses, 432,000 allied health personnel.

The amendment I have offered seeks to meet this crisis. It would close the gap—the ever-widening gap—between what we now have and what we need in the health professions.

> People are getting nowhere near the quality of health care they have a right to expect.

Those are the words of former Secretary of Health, Education, and Welfare Robert E. Finch.

HEW officials estimate that 64 percent of the children of the Nation's poor have never seen a dentist. Fifteen million of these children generally receive little health care and little, if any, preventive health care.

The Nation's medical schools can double their enrollments by 1973 without adding to their medical facilities and without hiring more teaching personnel.

The doctor shortage is one reason why people in 17 other countries have longer life expectancies than Americans and why the United States has a higher infant death rate than 13 other countries.

Ninety percent of the problems facing American medicine—inability to get care, high cost of medicine—result because there are not enough doctors.

Mr. Chairman, the amendment I have offered and which will be supported in specific areas by other members of this committee seeks to fill very important and essential needs that we have in the health area.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this pains me—one of my best friends since he and I have been here is my friend, the gentleman from Massachusetts. He knows it, you know it and I know it.

I saw his amendment. I have read it and, of course, heard it read just now by the reading clerk. It is very lengthy and, from the point of view of draftsmanship, very well done. But may I refer to Bobby Burns, a great writer and a great friend of the people from which we spring. I refer more precisely, to Holly Willie's Prayer.

After calling on the Lord not to heed the prayers of others, Holly Willie says:

> But, Lord, remember me and mine wi' mercies temporal and divine.

The context is—and I think you will follow me—yes, I think you will, indeed. There are scenes behind scenes—things behind things.

So I quote:

> Lord, in Thy day o' vengence try him!
> Lord, visit him wha did employ him!
> And pass not in Thy mercy by them,
> Nor hear their pray'r,
> But for Thy people's sake destroy them,
> An' dinna spare!
>
> But, Lord, remember me and mine
> Wi' mercies temporal and divine,
> That I for grace an' gear may shine
> Excell'd by nane;
> An' a' the glory shall be Thine—
> Amen, Amen!

And Amen—Bobby Burns. I hope you want to hear why I oppose the amendment. Certainly I want to tell you.

Mr. Chairman, it pains me to have to oppose the proposals of my good friend from Massachusetts, especially when he has selected such worthy programs and objects. However, the fact is that this bill already makes ample provision for the items which he wishes to increase; in fact, the committee itself increased many of them over the President's budget. Mr. Chairman, we increased the appropriations for the Public Health Service by $208 million over the President's budget request. This bill already increases the Public Health Service appropriations by $313 over the amount available for 1970.

A large part of the money in the gentleman's amendment is for aid to medical schools. We are told that the medical schools are in serious financial difficulty. There is an enormous amount of money in this bill which will ultimately go to the medical schools. There is $150.6 million for institutional support, compared with $147.9 million in the budget, and $128.9 million available in 1970. There is $91.9 million for student assistance, compared with $75.9 million in the budget, and $68 million available for 1970. And there is $126.1 million for construction of teaching facilities, which is the same as the budget request and the 1970 appropriation.

But that is not all, Mr. Chairman. That is far from being the full amount in this bill for medical schools. There is $1,107,048,000 in this bill for the NIH Research Institutes. That is $72.5 million over the budget request, and $131 million over 1970. A very large share of that research and training money goes to medical schools.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

(On request of Mr. YATES, and by unanimous consent, Mr. FLOOD was allowed to proceed for 5 additional minutes.)

Mr. FLOOD. I thank the gentleman.

Mr. Chairman, the Federal Government now provides the funds for over 50 percent of the annual expenses of the Nation's medical schools. Yet, we are told, the medical schools are going broke. Obviously, money alone is not the answer. Something else is wrong. I believe that there should be a careful study and a report to Congress on the financial problems of the medical schools, so that we can take appropriate action. The way things are going now, the Federal Government is giving the medical schools more and more money each year, but the schools are getting poorer and poorer.

Now, on some of the other specifics of this amendment:

The amendment would add money for student loans. The committee has already added $16 million over the budget request for medical and nursing student loans.

This amendment would increase funds for traineeships. The bill includes $22,270,000 for traineeships, an increase of $1.6 million over last year.

The amendment would add money for the National Heart and Lung Institute. The committee has already added $6,732,000 over the budget for the National Heart and Lung Institute, and we are $17,430,000 over the 1970 level.

The amendment would add money for a special children's dental program. There is already $180,000 in the bill to get this program started. As a matter of fact, Mr. Chairman, the committee tried to get this program started last year. Last year's report stated—
